FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, JULY 4, 1896.

VOL. XLVII.—No. 1. No. 346 BROADWAY, NEW YORK.

For Prospectus and Advertising Rates see Page x.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, **$5.**
Forest and Stream *6 months and any two of the pictures*, **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

SNAP SHOTS.

The Michigan license system for deer hunting applies to both residents and non-residents. The fee for residents is 50 cents and for non-residents $25. One purpose of the law, as we understand it, was to discourage non-residents from invading the State for deer. The statistics sent to us by State Game and Fish Warden Osborn seem to show that the law had this effect, for while 15,877 deer hunting licenses were issued to residents, only twenty-three were given to non-residents. This is an astonishing showing, when we consider the loud and long-continued complaints that the deer of the State were being exterminated by non-residents. If the figures given show the actual number of those who went deer hunting or thought that they might want to go deer hunting, the supply of venison was destroyed, if destroyed at all, by citizens of the State. The number of resident licenses in itself is surprising in the revelation it gives of the extent of the interest in deer shooting in Michigan. We are accustomed to complaints of the decrease of the game supply, but that which is really remarkable in Michigan and in all our covers is that with such a numerous army ever in pursuit of the game there should be any of it left. Each license authorizes the holder to kill five deer in a season. If every one of the 15,900 licensed hunters of 1895 had got their full quota of venison, the deer killed in one year would have been 79,500. But perhaps some of them did not get their full five deer. Mr. Osborn tells us that although the Michigan statute is inconsistent and incomplete in certain portions it has worked very well, and it will probably be made more effective by changes in the next Legislature. The license system has taken such a hold in Michigan that the law doubtless will be amended so that all kinds of hunting and shooting will be included in it.

We print in our game columns this week the first instalment of our third annual report of game parks in this country. As there pointed out, the facts given are of special interest because they show the success of rearing game in confinement. Every year is giving its quota of experience in this field, and game preserves are rapidly passing beyond the stages of experiment. The game park is now a recognized institution of this country, and it is one which we believe will fill a larger place in the sportsman's economy of the future.

Minnesota was prompted by the terrible Hinckley forest fire experience to adopt a system of forest fire protection. The work is assigned to the State auditor as forest commissioner, and its practical conduct is in the hands of a chief fire warden, by whom local wardens have been appointed to the number of 1,000 or more. A systematic study has been undertaken of the causes of forest and prairie fires and the best means of preventing them. Very strict fire laws have been adopted, one provision of which relates to the kindling of fires and the use of other than incombustible wads for firearms:

SEC. 10. Any person who shall kindle a fire on or dangerously near to forest or prairie land and leave it unquenched, or shall be a party thereto, and every person who shall use other than incombustible wads for firearms, or who shall carry a naked torch, firebrand or other exposed light in or dangerously near to forest land, causing risk of accidental fire shall be punished by a fine not exceeding one hundred dollars ($100) or imprisonment in the county jail not exceeding three (3) months.

From September, when the season opens on feathered game, through the autumn months the fields and woods are frequented by thousands of sportsmen and campers, and the presence of each one of these individuals is a menace to prairie and woodland. Under these conditions the Fire Warden points out that extreme care should control every gunner and camper. The stump of a cigar cast upon the dry ground may start a fire destructive of property and life; the embers of an abandoned camp-fire may be fanned into a holocaust. Some of the local wardens urge as preventive measures that in dry seasons hunters should be prevented from going into the woods. This would not be practicable; but it is not unreasonable to ask that every hunter should appreciate the danger of forest fires started by carelessness, and that he shall exercise the utmost precaution to prevent the kindling of the flame.

In reading the fugitive literature of the day we see frequent examples of how language is made, how gradually one word may come to be substituted for another, which originally had an entirely different meaning. One of the most common examples of this in the literature of sport is the way in which the proper name Winchester has come to be almost synonymous with rifle. Sometimes the misuse of terms leads one into ridiculous blunders. It frequently results in absurdities. The New York *Sun* is now running a series of articles by Cy Warman which profess to tell of the adventures of one Nat Creede, after whom the town of Creede in the Cripple Creek mining district was named. These stories are founded on real events, but the hero of them was not Creede, although he had a real existence, being known at that time as Billy Harvey, and being a good scout, though rather too lazy for any use. In one of the most recent of these stories is given an account of a certain fight in which two white men and five Pawnee scouts were surrounded by Sioux, and the writer in telling of the shooting of the surrounded party speaks of the "Winchesters bark ing." Now at that time the Winchester rifle had hardly begun to be manufactured, and there were no Winchesters on the plains. The individuals who participated in th s fight were in Government service and were armed with cavalry carbines, which, of course, were single-loaders. Another example of this sort was seen during the Centennial of Washington's inauguration in this city, when the firm of R. J. Dunlap & Co. had on exhibition, before their store in Fifth avenue, a large and very handsome picture, which represented the landing of Columbus. One of Columbus's soldiers, who stood prominently in the foreground of the picture, was armed with a Winchester rifle and wore a belt of cartridges. If newspaper writers continue to grow careless and to write such twisted history, we may expect before long to read of the way in which Lewis and Clark and their men fought the grizzly bears with their Winchesters while they were crossing the continent, in the very first years of this century.

We are gladdened to note in a late issue of the Fort Meyers *Press* that a party of excursionists cruising in May among the keys of the Gulf Coast of Florida found on Panther Key the FOREST AND STREAM'S ancient friend Juan Gomez, hale and hearty, and but for certain rheumatic twinges still holding to the buoyant faith that life is worth the living, even when one has attained the ripe old age of 118 years. Gomez has more than once figured in these columns in the records of parties who have cruised in those sunlit waters and among those favored Florida isles. As a boy in France he saw Napoleon on dress parade; came to Charleston, S. C., when he and the century were both young together; lived in St. Augustine when the Spanish flag waved over the old Fort San Marco; and now when the '90s are almost done is continuing his even-tempered and uneventful existence on Panther Key, gaining year by year an accession of new fame for his wonderful longevity. A few years ago, when we had occasion to allude to the old man, we claimed for him a place in the very front rank of the aged; but there came several competitors who claimed a more venerable antiquity than his own. That was years ago. Now it is time to call the roll once more. How many persons are there in all North America who can count more winters and summers than this Juan Gomez, of Panther Key on the Gulf Coast? One of the most pathetic things we ever printed was a description of the wife of Gomez as she stood one day on the shore of the lonely key and watched the receding sail of a party of ladies and gentlemen who had come into her life for a few brief hours to break up the monotony of the island solitude.

The Duke of Portland has a shooting preserve of 80,000 acres or 125 square miles. It is reserved exclusively for his own gun and for such friends as he may invite to share his sport. We would like to see more than one such game park in this country, not owned by a single individual, nor by an association, but by the State. The provision of a game preserve on a large scale is not an enterprise to be left to individual control; it should be undertaken by the people for their own benefit. There is not a State in the Union where large areas of wild lands might not be set apart, to be stocked and protected. The expense would be inconsiderable; the benefit, present and future, would be incalculable. Maine should be one of the first to move in this direction. What has become of the project of making a State game park of Katahdin? The protective system of Maine is inadequate to put a stop to big game killing out of season; the summer butchery goes steadily on. But it might be profitable to protect with efficiency and complete success a limited area set apart and warded by a special force of wardens. This would prove a haven of refuge, and from it the supply would overflow into other parts of the State.

The newspapers often give us examples of the meanest man in the world, and the last one hails from Montana. There are two of them in the persons of two poachers, who by this time have been tried for and we hope convicted of killing game in the strip of the National Park lying north of the Yellowstone River. These men were employed in the Park last autumn as Government scouts, and so, of course, were at liberty to come and go within the reservation and to learn all that they could about the haunts and the habits of the game there. Having secured this information while in the Government pay, they proceeded, as soon as they were discharged, to poach in the Park and to slaughter the game. It is to be hoped that they have been convicted and that they may be sentenced to a term of imprisonment as well as to pay a fine. Leniency is wasted on men of this sort. It is useless to try to appeal to their better feelings. This is a where the extreme penalty should be applied, and these unworthy scouts be shut up where for the time they can do no harm.

The address of the FOREST AND STREAM is No. 346 Broadway; but when one seeks that number he is likely to be confused by finding there the under surface remains of a demolished building. We are in the New York Life Building, which is now in course of construction. When completed it will front on Broadway and extend through to Elm street. The entrance for the present is on Leonard street. Our friends who come to town are invited to call and to look out from the FOREST AND STREAM'S windows upon the landscape of brick and mortar and tin and tile.

The salmon are in such supply this season in the Canadian rivers that we hear of club members returning home long before their anticipations, because they have already taken their quota of fish permitted by the club rules. Moreover, those fishermen who were publishing libels on the salmon's game qualities are making haste to enroll themselves again among those who trumpet the praises of the king of game fishes.

It is foolish and silly to stock the Hudson with salmon and then to neglect the provision of fishways for giving the fish access to their spawning grounds. Who is responsible for the delinquency in this?

The Sportsman Tourist.

LABRADOR SKETCHES.

The Trappers' End.

"WHERE did you pass last winter?" old Pierre asked me as we sat smoking around the fire.

"At Vachon River," I replied.

"Then you have not heard that my cousins Gonzague and Frederic both died in the woods?"

"No, I have not heard it. How did they die?"

"Well," said Pierre, "last winter Philippe, Gonzague, Fred and I were trapping together. We started about the middle of September to go to Lake Kou-Kou-Mesh or Touradi (the *touradi* is the fork-tailed trout), situated a little this side of Moose Factory. We had to go 350 miles in canoes or hauling our toboggans. That is why we started so early. About the middle of October we were camped at the head of a lake and had set our traps. Snow had already fallen and we found plenty of marten tracks.

"Everything went well, and at the end of November we had thirty."

"All of a sudden Gonzague was seized with a violent fever, with pains in all his limbs. We did everything we could for him, but it was of no use. He would not lie down because he was afraid he would never get up again. On the fifth day, overcome by weakness and pain, he lay down, but it was only to die. On the morning of the sixth day he breathed his last, but before doing so he said:

"'You will take me back to my wife and children.'

"We French-Canadian and Catholic trappers do not mind dying in the woods, but we don't like to be left there sleeping our last sleep; we wish our bodies to lie in the graveyard, near the church which the priest has blessed. Therefore the fulfillment of Gonzague's request was a sacred duty for us. We decided to return, and after lashing his body to one of our toboggans we sorrowfully retraced our steps toward the sea. Frederic, however, would not come with us, and in spite of our remonstrances he decided to remain there.

"'If we all go,' he said, 'our trapping is all lost, and there are women and children at home who want food.'

"We left him with regret, for something told us we would not see him again alive. Ah, sir, it is a difficult task to haul a corpse in winter on a toboggan, and we did not get home till the end of January. In a few days we started off again for Lake Touradi, as we were anxious to see Fred. We walked and walked, taking but little rest, and at last we reached our camp. We were only a few paces from the little clump of trees in which we had built it; soon we were right on it. We could see nothing but snow—no smoke, no snowshoe tracks, nothing but the end of the stovepipe sticking out, and nothing coming out of it. Philippe and I looked at each other; pale we apprehension, we hardly dared take another step. At last we plucked up our courage, removed the snow from the door, opened it and rushed in.

"Fred was dead. He was kneeling, his rosary in his hand, near his extinguished fire.

"Poor Fred! After a short prayer we carried him outside. He was frozen as hard as a rock, and the fire we had to make to keep ourselves from perishing of cold would have thawed the body; so we took it outside. Neither of us had any heart left for trapping; so on the following day we started on our journey, taking him back as we had taken Gonzague. Ah, sir! what a sad sight it was to see the body in its kneeling attitude lashed to the toboggan. He looked as if he were praying all the time. We reached home half dead with fatigue and sorrow.

"When the spring came I went to sea; I hated the sight of the woods. But you know how it is, you can't tear yourself away from the life, and are bound to go back to it. Here we are at it again, and so it will always be."

While Pierre was filling his pipe I began to think. I thought of poor Fred dying alone and dragged home on a toboggan; I thought of my wife and children, and felt a cold shiver through my frame. I was about to renounce the life I loved so much; but I was soon sorry for my weakness. What matters it, I thought, whether I perish in the waters of the gulf or in the woods—it is all in God's hands.

H. DE PUYJALON.

OUR HIRED MAN.

"I WAS workin' on a farm in Exton, down East, when I j'ined in a bear hunt. There wasn't supposed to be any bears in them parts, and when one day in summer a parcel o' boys and gals come skurryin' in from Blueberry Swamp sayin' they had seen 'a bear! a bear! a big bear!' it made consider'ble excitement, I tell ye.

"We was all busy, it bein' hayin' time, and seein' as none o' us was hunters and Blueberry Swamp was over two mile from the village, some was fer lettin' the bear stay right where he was. So nothin' was done about it for some days, but the wimmen was oneasy and the gals and boys couldn't go arter the berries, which was plenty, and on Sunday the minister he took fer a tex': 'Bear ye one another's burdens;' so a number o' us made up our minds ter drop work till the bear was got out o' the way.

"There was Silas Parker, Joe Lee, Abe Peters, Charley Tasker and me that made up the committy o' action, as some o' the wimmen folks called it, and we planned ter start out Tuesday mornin' 'arly. Silas Parker was capt'in and we agreed he should giv' all orders. We was ter meet at Abe Peters's house, he livin' nighest Blueberry Swamp, at 4 o'clock in the mornin' all ready for a day o' huntin'.

"I didn't have no gun, so I set off and borreyed one o' Nathan Gibbs. It was an old pattern Springfield muskit. 'Ye see,' says he ter me, 'she was made to carry a heavy charge. Jest put in a handful o' powder with plenty o' waddin', and then a handful o' shot, and she'll surprize ye. I've got the bay'net somewheres about here if ye want that.'

"I bought a pound o' powder, three pounds o' buckshot and a box o' caps, and was all ready.

"Charley Tasker he lived nighest ter our place, and him and me was out in the road waitin' when Silas and Joe come along, and we started for Abe's.

"Abe he was a sound sleeper and awful hard to wake up mornin's, he said, and he had fixed it ter tie a line ter his arm and have the end hangin' out o' the winder. Ye know there's most always some sort o' jokin' goin' on among a lot o' young fellers, and Charley Tasker told us ter watch him when he came ter the house and see some fun. 'Ye jest let me pull the rope,' says he, 'and I'll yank Abe clear out o' bed.' So he goes under the winder and gives a pull and down comes a bucketful o' water over him, and then we see Abe a-lookin' out o' another winder all dressed and ready.

"Charley he was kind o' huffy, as I've noticed most jokers is when the laugh gits on them, but he was a good-natured feller and soon got over it and off we started for the swamp.

"'We'll all have the credit o' this thing ekally, boys,' says Silas, 'so we'll move in a line and surround the bear and no man fires till he gits the word.'

"At the edge o' the swamp we formed in line about 10ft. apart and keerfully moved forrard. In about a quarter o' an hour we come ter where the berry bushes was thick and knowed it was nigh where the bear was seen, fer there was four baskits, a dipper, three tin pails and a straw hat that the children had abandoned in their race fer life. Pushin' on, we come ter some risin' ground formin' a knoll, and on top o' the knoll at the foot o' a big tree we see the bear a-layin' down.

"'Stiddy, boys, wait fer the word,' says Silas, and we closed in on the bear. He was a big un, as the children had said, and soon's he see us he riz up and stood on his hind paws. 'Ready! aim!' says Silas, and we all drawed bead on the critter. And then we was all took by surprise, for the bear was a-dancin' with his arms a-danglin' before him and a solem' look on his face. 'Muzzles up!' bawls Silas, 'don't fire. No man mean enough ter shoot a tame bear hails from Exton!'

"He went up ter the bear and giv' him a hunk o' bread and some meat, which the critter took j'yfully. Arter we'd fed him the most o' the rashuns we'd brung, we rigged up a muzzle with a strap and led him along with us contented and good-natured as a big dog.

"In about a week the facts o' the case come out. A furriner who was what they call a bear leader had wandered inter Ashbury sick with pneumony, which had made him light-headed, and they took him in at the almshouse and keered fer him. He'd left the bear on the road and the animil had made fer the swamp, where he could find berries and things ter eat. Soon's the chap got well enough he looked up his bear."

A SERMON OF THE WOODS.

TEXT: "And he left his business for a brief period, to gain health and inspiration by a close communion with nature."—(*Chap. 12, "Duties."*)

THAT there is need for occasional relaxation from the stern duties and demands of business there is no question. That a companionship with nature offers the most substantial benefits, and recuperates the mind and body more rapidly than any other form of recreation, business men are fast finding out.

At this season of the year the Maine woods receive with open arms many a tired mortal, give him a two weeks' round of more than pastoral pleasures, and return him to his desk a new man, with rested body and senses all alert.

Perhaps it will interest the readers of FOREST AND STREAM if I spin a little yarn incidental to my last year's trip to Piscataquis county in quest of an appetite, repose and—fish.

Starting from Boston at 7 P. M., arriving in Bangor in the early morning following, and after breakfasting with mine host Woodbury, taking the train for Greenville at the foot of Moosehead, I arrived at Monson Junction, connected at that point with the narrow gauge for Monson, and was met by Dick, who had driven over from his home in Eliotsville to meet me. Our mountain pony and the conventional buckboard took me as far as the home of the Mediator, otherwise known as Dr. Brown, a sort of recluse having his lonely dwelling on the mountain side and at a point where the trail begins. This trail is now quite a beaten path, and leads directly to Long Pond and to Brown's Pond by an intersecting pathway. My destination was Long Pond, where friends of mine had gone the week before, and were making their headquarters at the twin camps on the thoroughfare. Inquiring of the Doctor if he had heard from the party, I was informed that my friends had just come out of the woods by his house on their way to Indian Pond, and, expecting me, had left word for me to either await their return or push along alone to camp, as I preferred. Deciding that I would like to establish myself in camp as soon as possible, I struck the trail, expecting to find a canoe there with which I might shorten the journey and avoid tramping over an obscure spotted line to the camps, which were on the second pond.

Blithely I tripped along with about 25lbs. of dunnage strapped to my back, my rod case and haversack depending from my shoulders. How beautiful the woods looked, how fragrant the odor from the evergreens and how quiet and restful everything seemed.

I wasn't thinking of my load just then, you know, for my journey was only begun. It was too early to appreciate that a six-mile tramp up hill all the way would magnify my load to a ton ere I had reached my destination. So I went on and on, and, with my muscles soft from disuse, it occurred to me quite soon that I had better sit down awhile and hit the pipe. Unslinging my pack, I sprawled on the ground with a feeling of complete freedom from all earthly cares, filled the old briarwood, and, after applying the match, looked around me. I looked just about one second, when I espied an object that filled me with terror. Surely it was a bear—I felt it was a bear. It was apparently climbing up over a log, or resting thereon in such a position as to command the pathway and possibly use me for sinister purposes. What in the world to do I knew not. I had a revolver with me which represented my whole arsenal, but, making the best of the situation, decided to hold it in readiness and sell my life as dearly as possible if it came to open war. I forgot to puff my pipe and it went out. I waited, and the bear did too.

I did not know whether to be ashamed or frightened, or both.

I have been in the woods and over this trail many times, but I had never seen a bear before "close on," and, never having posted myself on a bear's peculiarities, did not know whether he would attack me without provocation or not. Time sped on. Did I say "sped?" It did not "sped," it "sodjered." Remember, all this is occurring in one short afternoon (by the clock), but I swear I am not exaggerating when I say that I waited four weeks that solitary afternoon until—I heard a crackling in the underbrush, and discovered Henry, our mentor, guide and *chef*, bowling along to overtake me. It seems that he had gone back to Brown's for something the party had need for, and, finding I had started along alone, decided it would be better if I had company, knowing that there was no canoe at the lower pond and that the roundabout trail from that point to the camp was a very blind one.

I did not exactly rush into Henry's arms—that would have been undignified and ridiculous—but I believe I lost no time in mentioning the pertinent fact that a big black bear was just around the corner, and that he had better unsling his trusty Winchester. "What!" says Henry, "did you take that old stump for a bear? I must chop up that old tenderfoot killer, it has scared too many good men, and is likely to ruin my business." Didn't Henry put it nicely?

Of course I did the honorable thing.

A. T. BOND.

A RIDING TOUR IN SOUTHERN SPAIN.

"You cannot carry out your intentions of riding from Gibraltar to Malaga by Ronda, because the Internationalists are established in force in the Sierra, and none of the horse-hirers of the Rock will trust his animals in the clutches of these men and brethren."—*Saturday Review.*

A BRIGHT vista of days long ago!

Four young subs of a marching regiment, with a more abundant stock of life and energy than of that experience which is said to teach, sat in the mess room of the South Barracks, Gibraltar, sipping coffee after an unusually good dinner (a saddle of mutton having been received by the P. & O. mail steamer, and it took the place of the usual goat cutlet). English papers had also been received, and the above paragraph caught the eye of one of the party, ever ready for anything with a spice of adventure in it.

On hearing of the difficulty above referred to each sub at once resolved to take the trip in question. We could not, however, all secure the necessary leave of absence; we therefore drew lots to decide who should make application for leave to our good commanding officer. It thus came about that it fell to the lot of the writer of these notes, with one of the subs aforesaid, the best and most genial of companions, to take this trip, and if possible to extend it to Granada.

A word before proceeding further about "Gib.," the hotbed of British soldiers, the point of concentration of the British navy, the home of the sportsman, the "jumping-off place" of the globe trotter.

The Rock is as well known as is the Tower of London. The two Pillars of Hercules—Gibraltar and Centa—are as familiar to tourists as is Temple Bar to the man born within sound of Bow Bells.

No one who has climbed the Rock can forget the scene. One sees the Mediterranean on one hand, the Atlantic on the other, Africa before, Europe behind. The eye ranges over a boundless extent of mountain, land and sea; you stand on the confines of civilization and barbarism; a narrow strip divides the two physically, morally, a vast gulf lies between them. There are many sights of interest about Gibraltar: the galleries, the seaward batteries, the immense caves by which apes are said to come and go between Spain and Africa; the Alameda, or park, where every conceivable nationality is represented; the library, etc.

It is, however, of "Gib." as a "jumping-off place" for the globe-trotter that I now propose to speak. Our proposed route lay through Andalusia, whose ancient history is full of interest. The story of the Moors in Spain alone fills many a page. For nearly eight centuries under her Mohammedan rulers, Spain set to all Europe a shining example of a civilized and enlightened State. In 1492 the last bulwark of the Moors gave way before the crusade of Ferdinand and Isabella, and with Granada fell all Spain's greatness.

Moorish castles and towers remain in good state of preservation in all the principal towns, notably at Cadiz, Seville, Cordova, Granada and Malaga. To see these places was our first resolve. The only means of locomotion in those days, before railroads, and without carriage roads, was that valuable animal, "shank's mare," or on horseback. The former I had, on a previous occasion, resorted to; the latter was, as shown, dangerous in the extreme. However, we two rash youths, having secured horses, started one bright summer morning at gun-fire to "do" southern Spain.

How delightful this feeling of freedom, as we rode along over the neutral ground and along the well-known path to St. Roque! No longer are we shut up within the strictly kept limits of the fortress; now we are free men; we expand our chests and drink in the clear air of heaven, as if we were lords of all we survey. We wound our way considerably to the right of the cork woods, our happy hunting grounds with Calpe hounds, and in a few hours, having passed over mountains, where we saw herds of cattle in great numbers, and shepherds with the sling—peculiar to this part of Spain—we entered a smaller cork wood. Here we found several parties of muleteers packing their loads in a very smuggler-like manner.

These muleteers gave us no friendly greeting, and they expressed surprise at finding us without an armed escort.

Toward evening our route lay through extensive valleys, with orange groves in abundance, and nightingales singing their sweetest songs. After this we ascended a high hill, on which Gaucin is situated. Here we put up for the night at the Posada de la Paz.

Having assisted in the capture and death of the fowl on which we afterward dined, we were led by a small boy to the governor, to whom the boy introduced us, and from whom we received a permit to see the Moorish castle, a splendid sample of that style of architecture. The view from the castle is very fine: on the Ronda side high mountains, rising mountain above mountain; on the Gib. side apparently a vast plain, fertilized by the rich streams which irrigate it—Gib. in the distance; and beyond "Ape's Hill," in Africa, barely perceptible. The convent and chapel are worth seeing.

At night we had the usual "Spanish fight" with innumerable active and energetic "hoppers." In the morning the usual, not less real, contest about the excessive charges for board and lodging of ourselves and horses. Having handed the señora a reasonable amount, half the sum charged, señoras and señoritas charged us in a different manner, and as the sling is used by men for cattle, so we found that without the sling women and children made accurate practice in stone throwing at us; we left amid a volley of stones.

Our ride to Ronda was interesting in the extreme; every one we met seemed astonished at seeing us without guides and cavalry escort, as there were many *malo gente* in this part of the country—the headquarters of Andalusian smugglers. At various intervals we passed through small Moorish towns, which hang, as it were, on the sides of naked rocks. The Moors sought, in these almost inaccessible mountains, retreats where they might be secure from attacks of the Christians. They have since become the haunts of robbers and smugglers.

The first view of Ronda is rather disappointing, an irregular town standing on high ground, encompassed with a double inclosure of rocks. We passed over the old bridge of St. Miguel, built over a deep chasm in the rock on which the town stands. It is, however, only from below the bridge near the mills that the picturesquenes of the scene becomes unrivaled. The arch which joins the Tayo hangs some 600ft. above. The river, heard, but not seen, in the cold shadows of the rocky prison, now escapes, dashing joyously into light and liberty, the waters boil in the bright, burning sun, and flow in a gentle stream through the most beautiful valley of orange groves. There is but one Ronda in the world—the cascade when full is splendid.

The Alameda is picturesquely situated. The Plaza del Toros and Dominican caverns are well worth seeing, and there is a peculiar old stairway, cut in solid rock, the "Casa del Rey Moro," by which we descended to the river below from the Alameda above; an old man with a lighted candle led us, saying at each step, "*Poquito poco*"—"step by step." The climate of Ronda is considered the best in southern Spain, owing to the refreshing breezes from the surrounding mountains; hence the proverb "*En Ronda los hombres a ochenta*"—"men live to be eighty." Women too have fresh and ruddy complexions.

We could spare but one day at Ronda, and soon were *en route* to Malaga via Casarabonela, over wild mountain paths. It is said that "those who ride these mountain routes must indeed rough it; attend carefully to the provender, for, however satisfactory the banquet of Alpine scenery, there is more food for the painter than for the body."

Casarabonela, five leagues from Ronda, is in a lovely valley at the end of a long chain of mountains. Here, for the first time, we found orange groves and vineyards in a high state of cultivation, and the ride through these was most enjoyable. Here we put up at the only *venta* in the place.

Besides the usual nightly unsuccessful hunt after the domestic hoppers, we had, when about to start next morning, an equally interesting hunt; for our horses, which we had carefully attended to on the previous evening, were now conspicuous by their absence.

Bleeding freely seems to be quite the thing of the country. The barber's sign is connected with the bleeding process. He, instead of asking whether you wish to be shaved or have your hair cut, first asks you how many ounces of blood you wish taken. Aware of this, imagine our disgust on finding that evil-disposed persons had taken our horses and bled them "within an inch of their lives," in order that they might bleed us freely—make us "pay our footing" at the *venta*. There was no redress; we had to lead our horses for many miles over the mountain roads; they were too weak to carry us.

We had another mishap on this day, owing, I suppose, to necessary Sunday traveling; torrents of rain came on and we spent not a "bad quarter of an hour," but twelve bad hours, plodding along the worst road, with the knowledge that on arrival at Malaga we had not in our saddle bags a change of clothing in which to appear in that fashionable city. On arrival we put up at the Fonda de l'Alameda, and on getting out of our wet and dirty clothes had to get into bed. Now, however, came the dilemma: we had had no food since early dawn, dinner could not be sent to our bedrooms, we must go to the *table d'hôte*. How to do this we failed to perceive until a friendly waiter came to the rescue; he lent us a couple of suits of his livery, and it was a sight to behold the way Mrs. Grundy "turned up her nose" in disgust as two liveried servants (?) sat down at table beside her daughters. Happily we soon met a friend, who introduced us as two "British officers from 'Gib.'" She was thus prevented from having a "fit," and she could, if she wished, learn the lesson that "it's not the coat that makes the man." Oh, the luxury of that hotel, after the discomfort of the *venta* and *fonda* of the country, with their inhabitants, men, women, children, and —. Our horses, too, were here refreshed after the bleeding process and the rough riding. Malaga is the chief port of Granada, the position is admirable. The convent, La Trinidad, and the noble Moorish Castle, built in 1279, are all worth seeing (the Alameda is, of course, the fashionable resort). There is a splendid specimen of a Moorish horseshoe gateway.

Time and space fail in which adequately to describe Granada, the capital of the province, with its unique Alhambra, its ever-flowing fountains, its "Gate of Judgment," its watch-tower and silver-tongued bell. There are numerous Moorish buildings, all under the shadow of the snowy Alpujanas, with the Sierra of Alhama in the distance; all this and much more than this is a scene for painters to sketch and for poets to describe. There is but one Granada and but one Alhambra on earth. Fain would we linger in these parts, but we must turn our backs to poetry and the picturesque and return to the prosaic routine of duty in the fortress of Gibraltar. There is nothing to notice in the return journey to Malaga, except that at that place we found ourselves in a not infrequent position of the "gay and festive" sub, viz.: short of funds. It was a question to us which was better, the chance of imprisonment for debt at Malaga, or of imprisonment without debt at our next stopping station, Marbella, which had the bad name of being infested with robbers. Happily a fellow countryman appeared on the scene at Malaga in the person of the British Consul, Mr. Marks, and lent us five sovereigns. Never before or since has the "needful" been more needed. We saddled and sallied forth with full purse and light hearts, *en route* to "Gib.," via Marbella and Estaphona, the shore road—about eighteen leagues. How we enjoyed this day's riding slowly along the sea coast, with its charming scenery, every valley with its orange groves, then in full blossom, the vine-clad hills beside us, sloping down to the Mediterranean Sea. The sun was sinking fast as we entered the village of Marbella aforesaid.

Suddenly six or seven men, armed with stilettos (long knives), rushed upon us, unhorsed us and led us, weary and sad and worn, into a temporary prison, in order to extract blood money from our kinsfolk after prolonged imprisonment. (This has more than once since been accomplished with British officers.)

From practical experience I can say that prison life has not all the charms of the modern hotel.

Our only course, however, was to "rest and be thankful" in this dismal, dirty hole.

If our next of kin could but see us in this place, how freely would he bleed to secure our freedom.

Success comes at last, if we but wait for it. The day and hour arrived when our sentinels were off their guard—some through drink, others through sleep—and during a dark night "on saddles and off" was effected without word of command.

The clicking of knives and the volley of oaths caused us the more to hasten our retreat.

Once more we breathed freely, and in two days after this mishap we made our entry into Gibraltar, without the expenditure of blood. MICMAC.

FREDERICTON, New Brunswick.

ON NEWFOUNDLAND MARSHES.

BY THE KID.

I HAD always kept in touch with the sportsmen of the country through the columns of the FOREST AND STREAM, and dreamed of the day when I would not be "chained to business." Early in the spring of '94 I was awakened from my dream by a letter from my brother, Dr. S. T. Davis, of Lancaster, Pa., author of "Caribou Shooting in Newfoundland," inviting me to accompany him on a hunting expedition in the White Hills of Newfoundland of six weeks' duration. What! I leave business for six weeks! I guess not. "Yes, you can," said my wife, to whom I had been reading the letter. "You have been faithful to business for ten years, and a good vacation would add many years to your life. The Doctor is an old campaigner, and you will be in good hands." I always believed my wife was in league with my elder brother. However, that settled it.

On the 29th day of September, 1894, I met at the Astor House, New York, my brother and that veteran prince of sportsmen, A. C. Kepler, of Lancaster, Pa. Six hours later we sailed out of the harbor on the steamship Portia, of the Red Cross line, Capt. Ash, who was ice pilot on the Bear during the expedition which rescued Greely and his companions.

After a stormy passage of one week we reached St. Johns, N. F., forty-eight hours late. Five days' delay was caused here waiting for the Costal steamer going north. Two weeks in all from the time we left New York, one lovely Indian summer morning found us steaming in and out the coves around the rocky islands into the harbor at Pilley's Island, where we met our guide. Rich. Lebuff. Kind-hearted, jovial Capt. Taylor, of the Virginia Lake, asked us to remain on board and take dinner with him while the steamer was unloading. Dinner over, we transferred our baggage to the steam launch Nipkin, placed at our disposal through the kindness of Mr. Herbert, of Pilley's Island. At 3 P. M. we started on our twenty-five miles' sail up Hall's Bay, at the head of which stood the cabin of our guide. Hall's Bay reminds one of an American river. It is narrow and high mountains rise on all sides. The trees had put on the golden garb of autumn. The entire panorama was bathed in the resplendent glory of the setting sun. Far away to the southeast our guide pointed to the White Hill range and remarked reverently, "There you will find plenty caribou, please God." Two-thirds of the way up darkness overtook us and we were glad to retire to the cozy cabin and listen to the hunting yarns of our guide until great herds of deer paraded before me, and I wondered if I would get the 'buck ague" and miss everything I fired at, and tried to imagine what a wild Newfoundland caribou would look like. Such were my thoughts, though I wisely kept them to myself.

That night we spread our blankets on the floor of our guide's cabin, expecting to start about 5 A. M. for our camp, twenty-five miles further on, but at 4 A. M. a terrific rainstorm set in, which did not abate until sunset. Next morning we awoke at 3 A. M. and by 5 were ready for our march. Each carried his gun, 25lbs. of personal baggage and a few rounds of ammunition. By our side stood our five faithful men, each with 75lbs. of duffle on his back.

Old man Goodyear, sixty-eight years old, was our cook. Many delicious caribou steaks did he set before us and he was still able to pack his 75lbs. Martin Williams, blue-eyed and blond-whiskered, a skillful man, whose hands prepared all our specimens, but who could not boil a kettle of water without burning it, so he says. James Sanders, short and stocky, always faithful to his duty. Indian Jim, twenty-three years old, 6ft. 2in. in height. Woodcraft has no tricks that he did not know. Sly as a fox, agile as a panther and strong as an ox; always hopeful that we would "find big stag by un by, sir." Last of all, Richard Lebuff, a French-Canadian, hunter and trapper, who knew all the haunts of caribou and never failed to show you deer, but you must do the rest. As none of our men carried guns, twenty-five miles over barrens, rocks and swamps was no small matter for a tenderfoot, and at 12 M., when we "boiled the kettle," I was ready to call it a day. But I did not come to Newfoundland to kick, so I held on. The last three miles over marsh, into which you sank to the ankle, I believed I wished I was at home then, and my courage had not reached a point that I could believe I would be able to kill a caribou. After a supper of hard tack, tea and bacon my spirits revived somewhat, but I soon sought my bed of pine boughs.

The next day it was raining, and though we saw nineteen deer we got no shots. At daybreak Indian Jim came running, crying "Deer on the marsh." And there was a rush to get out, and Kepler and the Doctor each soon had a doe in camp. I reserved my fire just to see how the old hands did it; besides I did not care to have them around when I killed deer.

Lebuff and I started down the marsh to watch a crossing half a mile from camp. He climbed a tree and scanned the country with a field glass. All at once he began to slide down that tree as though it had been greased, exclaiming, "There is a big stag down on the marsh coming this way." We ran down the marsh half a mile to meet him. If any one thinks running in a Newfoundland marsh is fun let him try it—every step to the ankle in muck and often to the knee. At this point we had to get down on all fours in the wet marsh and crawl to a clump of bushes, where we could see that he was coming directly toward us, but still a mile away, coming slowly, cropping grass as he came, shaking his great horns in the air; truly a monarch and a sight calculated to give a young hunter the "buck ague."

This interval enabled me to get my wind, which was very much out of repair after running nearly a mile.

The guide cautioned me to be calm. "Don't shoot until I tell you." But his warning was not needed, for I can truly say I was never more calm and determined in my life. If I kill that stag my reputation will be made; if I missed it was no disgrace, being the first deer I ever tried to shoot. When he came within a hundred yards I arose on one knee and took a careful aim. "Wait," said the guide, "until he turns his head, then shoot for the shoulder, aiming well in front." When within 60yds. he paused on the brink of a little brook, took a mouthful of moss, shook his antlers, sniffed the air and turned his head to the left to go down the brook. That was the fatal movement; I pulled the trigger and the bullet crashed through his shoulder, passed through his heart, dropping him on his side like a flash. Lebuff, my faithful guide, jumped to his feet, grasping me by the hand, exclaimed, "He's down, he's down. Ain't that bully? An old hunter could not do it better." As we ran toward the fallen deer I slipped another cartridge in my gun, and asked Lebuff if I should give him another. "No," he answered, "he will never get up again." Sure enough he never did. There lay the great gray stag I had come so many miles to slay.

I felt doubly repaid for my long journey. Then, I must confess, I did feel a little bit like "buck ague" as I thought of the pride I would experience in after years when head and antlers would grace the walls of my home. I then could look at them with a thrill of satisfaction and think that I, who had been nick-named the kid of the party and cautioned about "buck ague," should be the first to bring down the antlered monarch of the White Hills. I don't think I would have called Queen Victoria my aunt just then, and though I afterward killed larger deer with finer horns, this incident will ever remain a green spot as the memories of the pleasant days spent in the wilderness filt by.

I want to say something about female caribou horns. We saw during our three weeks' stay in the White Hills 954 deer by actual count, and had many opportunities to observe that peculiar trait. We found that horns are the exceptions and not the rule. I one day fell in with twenty-one deer—two stags (one an old warrior, and a young fellow) and nineteen does, three of which had horns. I killed the old stag and one beautiful, almost snow-white, barren doe, whose head and antlers look down from the wall while I write.

One day while lying in ambush with Indian Jim a barren doe passed within 20ft. of us. She had but one horn, which grew perpendicular from her forehead, and was the exact shape of an old-fashioned wooden spoon. We both noticed it and talked about it, and I had just raised my gun to kill her when a magnificent stag, with a loud snort, broke from cover within 50yds. and stood gazing at the doe. For all I know that doe is still roaming over the dreary swamps and barrens of Newfoundland; but the stag was added to my trophies of the hunt.

Natural History.

HOW I SAVED SOME CHERRIES.

I HAVE twelve cherry trees of different varieties that ripen at different times, and I have also a variety of cherry-eating birds. The birds took the early fruit before it was ripe. In the trees next about to ripen I put strings, pieces of cloth and strips of tin hanging on the flexible branches. The birds sat on these limbs and ate cherries, while the tins jingled under them, and at last stripped the trees. The next trees in succession I covered with large sheets of cheese cloth, but the next day I found three or four birds under the cloth and several on the outside eating the cherries that rested against it. This was last year, and but few cherries were saved.

Having more leisure this summer I started earlier, and leaving all but two trees for the birds, directed all my efforts to protect these. First I put a dinner bell in one of the trees, with a string attached running to the rear of the house, from which it was rung at short intervals during the day. This was effective for a short time only. I then took a sheet of zinc about 4ft. square and hung it in the tree. Resting against it was a long piece of iron, which, when pulled by a string attached to it, fell back against the zinc, making a loud report. This too soon lost its terror for the birds.

Then put a stuffed hawk, well exposed, between the two trees I was trying to save. The kingbirds fought this dummy for a day or so, but it made little impression on the other birds. As a last resort, I bought some large cannon firecrackers, exploding them two or three times a day under the trees. This, with the boom of the zinc between the firecrackers, had the desired effect of keeping the birds away without injury to them.

In this way I saved about two bushels of cherries from the two trees, while the birds got at least four from the other trees. It may be easier to buy cherries, but then never did cherry pies taste as did those made from the cherries the birds didn't get. But I would rather do without cherries than lose the birds and their songs.

The Copperhead.

THE description of the copperhead given by Coahoma in reply to Forked Deer's inquiry is all right as far as it goes. Forked Deer can make no mistake when he meets this nasty little snake. A rattlesnake will get out of man's way (except in the month of August) if he is given an opportunity, but a copperhead will fight every time. When he is approached he pugnaciously coils up and the horseshoe-shaped spot on his head takes on a metalic coppery color, and he is mad all over, probably at the fact that any one has dared to disturb him. At this time he emits an odor not unlike freshly-cut cucumbers. I do not know if any of these snakes are found in California, but if Forked Deer ever comes East he may satisfy his curiosity by simply trusting to his sight and smell. Any trout fisherman of the New England or Middle States can assure Forked Deer that the copperhead does exist. ANGLER.

THE JACK RABBITS.

AN interesting paper by Dr. T. S. Palmer, on The Jack Rabbits of the United States, has recently been issued by the Department of Agriculture as Bulletin No. 8 of the Division of Ornithology and Mammalogy. The paper will have an especial interest for those whose homes are between the Missouri River and the Pacific Ocean.

The paper is written with particular reference to the injury done by jack rabbits to the farmers' crops, and with this purpose it gives a general account of the distribution and habits of the various species found in the United States, shows the methods which have been used to exterminate the animals and to protect crops from their depredations, and brings together facts and

THE BEGINNING OF THE END.

figures concerning the economic uses of rabbits in general for the purpose of indicating how our native species may be more generally utilized.

The jack rabbits, as is well known, inhabit the great plains and deserts of the Western United States and are large hares. Their distribution is quite general from Mexico into the British Possessions. They are quick to take advantage of the cultivation of the ground and the growing of green crops, which has followed the settlement of the West and the methods of irrigation practiced by the farmers, and their depredations in many places are important. Before the plains were cultivated, these hares no doubt subsisted largely on buffalo and grama grass, and in the more arid region of the great basin they are known to feed on certain species of greasewood and cactus. Wherever found, jack rabbits usually seem in good condition, except that from time to time, like many other hares, they are destroyed by epidemic disease, which may periodically almost exterminate them over a large region.

Dr. Palmer states that jack rabbits may be seen abroad at almost any hour of the day, but our experience is that as a rule they move about but little in the daytime, and when seen it is usually because they are frightened. On the other hand, just before sundown in the evening rabbits may often be seen in great numbers coming down from the hills toward favorite feeding places, such as wet meadows along the little streams. During the day they are likely to sit still and doze under the shadow of bushes, or even in the shade cast by a telegraph pole.

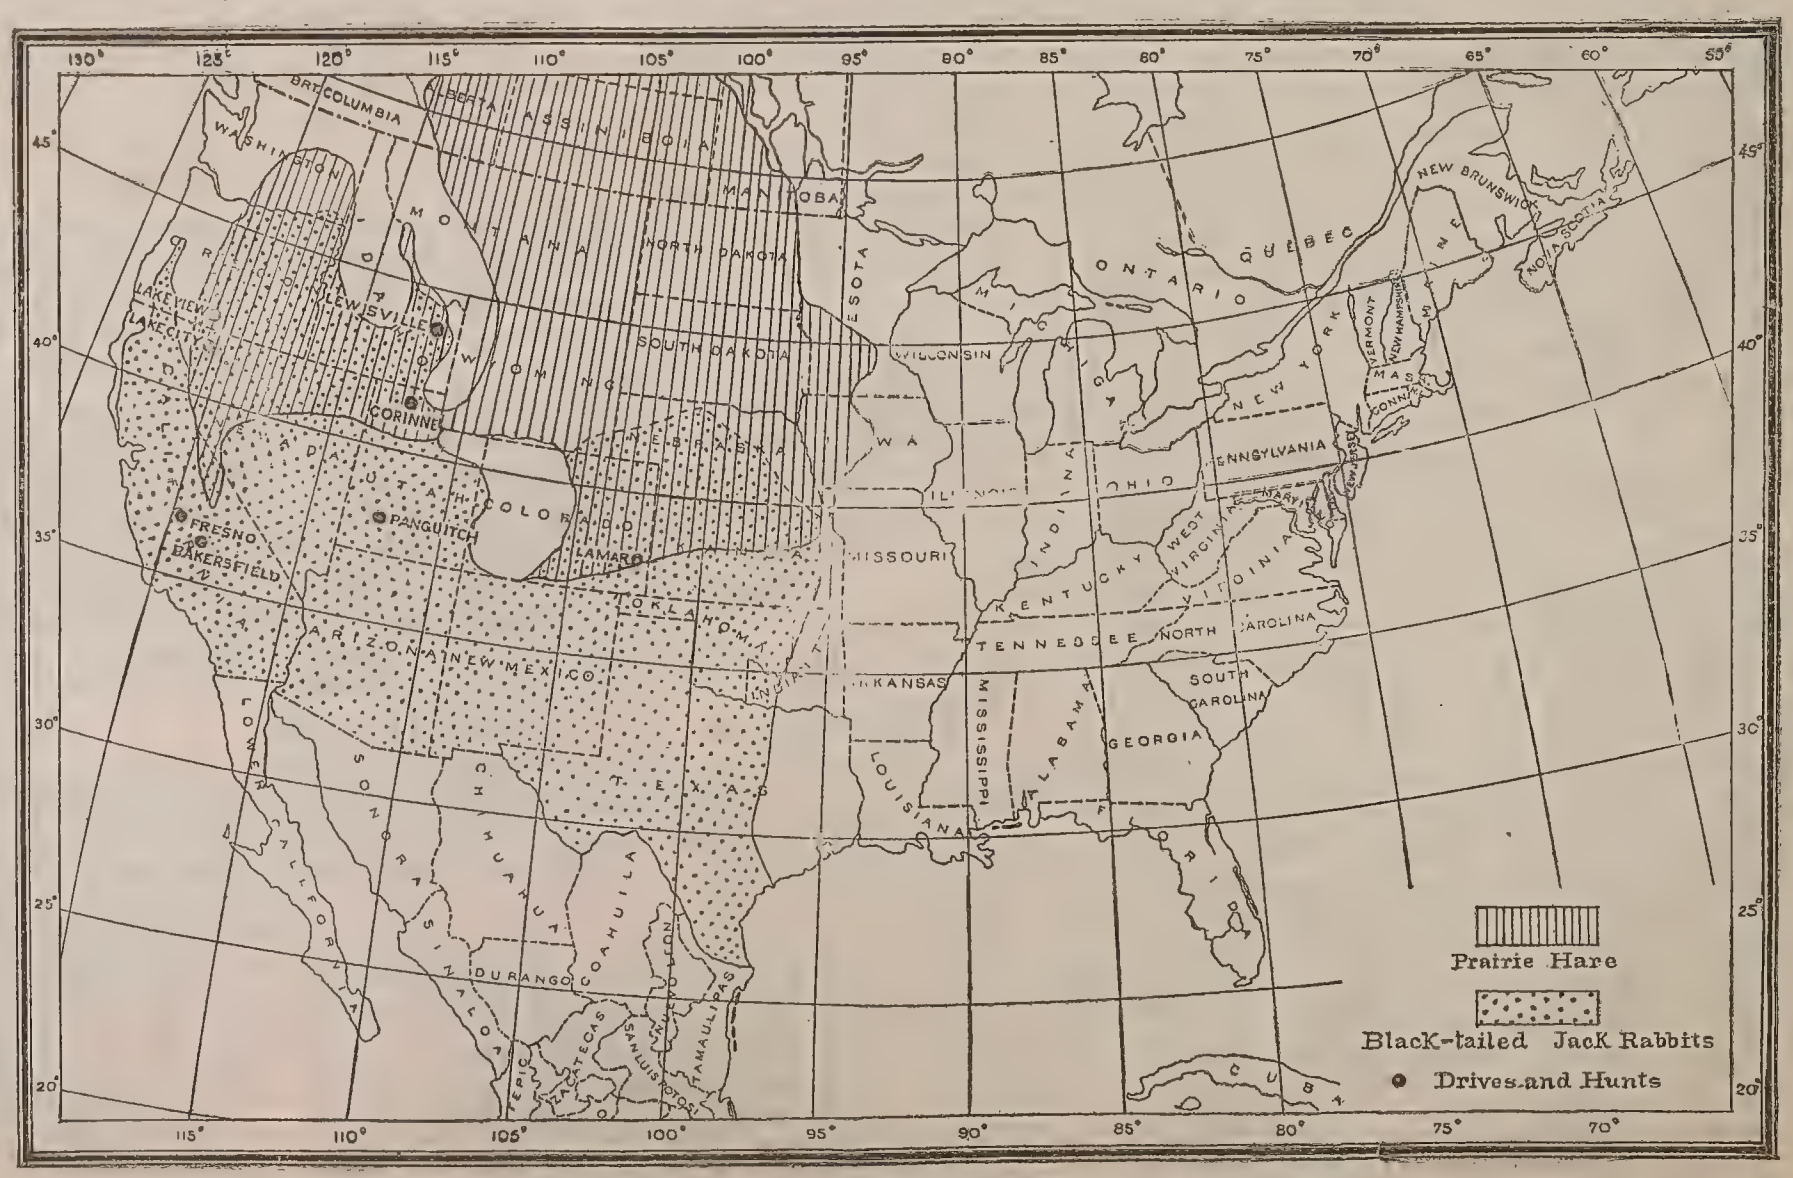
In many sections where the jack rabbit was formerly rather scarce the species has increased enormously as soon as the land was settled. This increase may be regarded as having two causes: (1) The destruction of their natural enemies, and (2) the greatly increased food supply. Some idea of the extent of the injury which they do to crops can be formed when it is said that the damage caused by jack rabbits to the crops in Tulare county, California, during a single year has been estimated at $600 000, and that one county in Idaho has actually expended more than $30,000 in bounty on these pests.

Dr. Palmer gives five species of these rabbits, which he divides into two groups, one including the prairie hare or white-tail rabbit (*Lepus campestris*), and the other group containing the black-tail jack rabbits (*Lepus californicus, melanotis, alleni, texianus*). All these are described and some account is given of their habits. A short chapter is devoted to the abundance and rapid increase of the species, and another to injury of crops and means of protection.

In the chapter on Methods of Destruction, inoculation is referred to; but so little seems to be known about this that it does not promise any important results until further experiments have been tried. Poison also seems to be of little value where the animals are numerous, and bounties, of course, are quite hopeless. The fostering of the natural enemies of this rabbit might seem to promise more than any of the methods under consideration, were it not that the rabbit is so large an animal that many of its enemies will be regarded as likely to do harm to the farmer's poultry and small stock. Shooting by wholesale and driving seem to be the only methods which have as yet accomplished much toward the destruction of these animals.

The statement is given that in 155 drives, made in California, 370,195 rabbits were killed, an average of 2,400 in each drive. The largest number given as killed in any one year in California is a little over 65,000 rabbits in twelve drives, but it is said that 20,000 have been killed in a single drive. In the year 1895 the number fell to 11,000 rabbits killed in twelve drives. Dr. Palmer is of the opinion that the settling up of the country, the value of the rabbits as food, of their skins as articles of trade, and the practice of coursing them, will have a tendency to keep down the increase of these animals to the point where they will not be unduly destructive.

He concludes, among other things, that the best means of protecting crops from the attacks of rabbits, and in fact the only method which can be relied upon, is the use of rabbit-proof fences, and that commercial utilization is the most promising and least expensive method of keeping these pests in check in localities where they are unusually abundant; but that returns from this source will only partially offset the losses sustained on account of injury to crops.



We present with this cuts taken from Dr. Palmer's paper on the jack rabbit, which we owe to the kindness of the Biological Survey of the Agricultural Department. The first is especially interesting as showing the method of constructing the corrals and the way of driving.

COLOR OF THE SCARLET TANAGER.

DURING the months of April and May, 1896, my son collected and preserved fifteen specimens of the scarlet tanager (*Piranga erythromelas*) in Montgomery county, Maryland, immediately beyond the northeastern boundary of the District of Columbia. Of these birds thirteen are males and two are females; and the first one, a male, was shot on April 17, all of the others being taken upon different dates during the following month.

Now the off-hand, routine method of describing the plumage of the male of this species is well exemplified by Coues in his "Key," where he says: "♂ adult: crimson or scarlet; wings and tail black; bill and feet dark horn color. * * * Adult males often show abnormal coloring, the body being yellow, orange, or flame color; or red patches appearing on the wing coverts; ♂ said to change back to plumage of ♀ at each fall molt (?)" (p. 318, 2d ed.) In this description there is not a word said about the outer tail feathers being tipped with white in many specimens, a fact observed long ago by Wilson, who speaks of it in his work, where he also calls attention to "the interior edges of the wing feathers [being] nearly white." Wilson observed, too, that "it is also probable that the old males regularly change their color and have a summer and winter dress; but this further observations must determine." Darwin, quoting Audubon, says: "In the United States some few of the males of the scarlet tanager (*Tanagra rubra*) have 'a beautiful transverse band of glowing red on the smaller wing coverts,' but this variation seems to be somewhat rare, so that its preservation through sexual selection would follow only under unusually favorable circumstances" ("The Descent of Man," ed, 1882, p. 424).

Of all the scarlet tanagers collected by the present writer, perhaps a hundred males or more, I recollect but one specimen wherein the red on the wing was represented by a "transverse band" of the smaller wing coverts, though a few scattered scarlet feathers in that locality were not uncommon. Sometimes this was to be seen only upon one side, occasionally it was only a single feather; or other variations might be presented. In the thirteen specimens now before me (males) there are but two of them that show a few scattered scarlet feathers among the smaller wing coverts, and these are irregularly placed. The most unusual feature here, however, is that in one of these birds these features are not entirely scarlet, but are so only upon one side of the rhachis, the other side being entirely black; in other words, each of the small feathers in question is scarlet and black, and not entirely of the former color. In further examining these specimens, I meet with a color phase not elsewhere noticed by me before, nor do I find it anywhere described in the books. Two individuals show it, both very nearly full plumaged, breeding males. In the one where it is the least apparent it simply consists in a tingeing of the ends of the scarlet feathers in the interscapular region of the middle of the dorsum with black. This peculiar shading in the second individual is quite pronounced upon the capital and nuchal regions, while in the interscapular area of the dorsum one or two of the feathers are actually black, scarlet edged with black, or black and scarlet, giving this particular specimen in reality a black and scarlet back. As the two colors are very distinct in some instances upon one and the same feather, this remarkable variation not only becomes interesting as such, but it has an added interest, due to the fact that at the present writing the molt of birds is attracting not a little attention of naturalists both here and abroad. That this peculiar color phase is not as frequent as some would suppose is easily proven by examining series of male scarlet tanagers in large collections. This the writer has done. Through the courtesy of Mr. C. W. Richmond, of

MAP SHOWING DISTRIBUTION OF PRAIRIE HARES AND JACK RABBITS.

the ornithological department of the U. S. National Museum, I was enabled to examine thirty-nine adult male scarlet tanagers, representing the museum's study series. Among all these there is not a specimen that has distinctly black feathers upon its dorsum. With a similar purpose in view, Mr. William Palmer, of the same institution, permitted me to examine fifteen adult males of this species in his own private collection. Of these again none exhibited the plumage in question, although one individual (shot May 10, 1883) exhibited a marked general tingeing with black over the scarlet, like one of the specimens in my son's collection, only more decided. Of the sixty-seven examples examined, then, only one presented the plumage phase described above, where there is a black tingeing of the scarlet feathers, and none where there was black feathers in the interscapular region of the dorsum.

Unfortunately we have ornithologists among us who contend that these noteworthy variations are unworthy of note, whereas the careful recording of this very class of variations in the plumage of birds often leads, when sufficient material has been collected, to the most important generalizations. DR. R. W. SHUFELDT.

MAY 31, 1896.

A Mother Woodcock on the Nest.

MR. ANDREW NEALEY, of Franklin, Mass., sends us a photograph made by him of a sitting woodcock in the early part of May. The local paper says of the picture: "Probably one of the most unique pictures ever taken was that secured by photographer Andrew Nealey, of Franklin, last week. A couple of sportsmen, Charles Healey, of Lynn, and Frank Shiner, of Franklin, discovered a woodcock's nest, the bird setting on four eggs. The idea occurred to them that a photograph would be a

NESTING WOODCOCK.
Photo by Andrew Nealey.

fine thing, and accordingly the artist took his camera to the pasture where the maternal bird was exercising her functions as a home-made incubator. Notwithstanding there was no posing, the artist got an excellent picture of his subject, and he and his friends take no little pleasure in showing it. They are naturally proud of it, and well they may be, as it is doubtless the only one of the kind on record, and the bird enjoys the distinction of being the pioneer in this respect."

We gave in our issue of June 13 two photographs taken by Mr. G. Hills, of Hudson, N. Y., of a ruffed grouse nest, and two or three years ago we published a photograph sent by Mr. Hills of a nesting woodcock. Mr. Nealey's bird is hardly a pioneer, but this should not detract in the least from the artist's very great satisfaction in securing such a picture.

The Bobolink in West Virginia.

CENTRAL CITY, W. Va.—Anything but unpleasant memories were awakened a few weeks since as that cheery little black and white songster, the bobolink, flew before me over the meadow in West Virginia, joyfully warbling, as if he had come to stay. I saw him twice, but think he has left us. Doubtless he was a stray waif, as I saw neither companion nor mate. I have been in Cabell county, W. Va., eighteen years, and have seen the bobolink but twice. The first time, about ten years ago, I saw a pretty large flock of them on the ground and in the trees migrating northward. They did not sing, but merely twittered as they do in their migration south in the fall. I felt that I would like to have a West Virginian hear the notes of the one I heard sing here, as the people born on this soil seem to have no idea of this bird or the unique character of its song. I regard no bird as the superior of the bobolink to cheer the plowman in his weary toil. It seems a pity to me that as a "rice" bird he should be so ruthlessly slain. N. D. E.

Food for Young Quail.

Editor Forest and Stream:

In feeding his young quail (if he should be fortunate enough to get any), if Mr. Furguson will mix with the hard-boiled egg about an equal proportion of cracker crumbs he will find it a good food for the chicks. A mixture of boiled potato is also good. Insect food of some kind, however, is almost indispensable, and here is a suggestion that may be of service to him and to others. The common house fly will furnish the desired article about as readily and conveniently as anything within ordinary reach, and they are eaten with avidity by the young birds. My plan was to use one or two of the common cone-shaped fly traps made of wire netting, and when these were nearly filled and it was desired to get out the inmates, to submerge it for a few minutes in water, or hold it very briefly over a gas jet. The chicks are very quick to appreciate this kind of addition to their bill of fare, and in a few days mine would crowd eagerly into my hand in their anxiety to get their individual share. A few angle worms now and then, chopped fine, will be relished.

It would seem that the difficulty with which Mr. Furguson is likely to have the most serious trouble is that of having his quail nest dry out, so that the eggs will not have sufficient moisture to insure the escape of the chicks at the proper time. If this should occur, when the shell breaks the integument lying next to it will simply cling like a rubber garment to the young bird, and it will die before it is able to extricate itself. If the sod under the nest could be kept reasonably moist the four or five days before hatching that mishap would in all probability be avoided. With my first quail nest I was in the habit of turning the lawn hose over it every day or two, and though the hatching was delayed some three days in consequence (the nest being kept so cool) every egg brought out its chick. JAY BEEBE.

Birch Bark Stationery.

Editor Forest and Stream:

The Boston *Herald* in its issue of June 16 has the following: "W. S. Howard, of Burlington, Vt., received from his daughter Saturday a letter written on birch bark from Rainbow Lake in the Adirondacks. The bark is about the thickness of heavy brown wrapping paper, and it looks as if it had gone through a process of manufacture, but such is not the case. The bark was peeled off and dried, after which Miss Gertrude wrote almost 500 words with a lead pencil and sent it to her father, folding the two pieces like a sheet of commercial note paper. The saying that 'novelty is the great parent of pleasure' seems true in this case, as the parent has been afforded much pleasure by the novelty of an ingenious daughter."

The *Herald* must have deemed this a noteworthy matter, yet there is no especial "novelty" about it.

In June, 1894, while on the fishing trip I wrote you of several weeks ago, our party, walking from Haines Landing to Rangeley, cut a lot of birch bark, and returning to camp we "manufactured" sheets for the letters and envelopes for the carrying of the letters, and sent over a dozen such through the mails. I have now in my possession the letter and envelope, the latter stamped and postmarked, which I sent my wife at that time. I have no doubt the same thing had been done many times before we dreamed of doing it. NOVICE.

Another Buck without Horns.

AU SABLE, Mich., June 6.—*Editor Forest and Stream:* In your last issue you have an article from J. B. McW. about killing a buck without horns. He wants to know if any of the FOREST AND STREAM hunters ever killed one. I shot a buck without horns, weight 160lbs., in November of 1879, in Alcona county, Mich. I have killed over 200 deer, and this was the only buck I ever saw without horns. F. H. K.

Game Bag and Gun.

IN JACKSON'S HOLE.

In Four Parts—Part Four.

THE morning of the 25th found us all ready to start at daylight. We had no drones in our party. Bob Cooke, Frank and Will started on a hunt together, and Ed, Sam and I went back to the cañon to get my horns and the meat and hides from all three elk. My set of horns were in a terrible place, but old Ed said he would stick to me if it took all fall until we got them out. We carried plenty of rope and an axe. Our plan was to pack the meat and horns down to the lake on our backs and then make a raft and ferry across the lake. In this way we saved chopping a path for our horses for about four or five miles around the edge of the lake.

We rode until we reached the mouth of the cañon, taking a couple of pack horses with us. Here we dismounted, and after tethering our horses securely made our way around the edge of the lake on foot and finally reached the carcass of my elk. My horns and meat that had been hung up were all right. The wild animals had been at work on the part of the carcass that was on the ground. I saw a marten sitting in the fork of a tree just over the elk and shot his head off. It was a beautiful little animal about the size of a rabbit, and its fur was as soft and glassy as satin. We had a rough time getting the large hams and side of ribs and head and horns down the mountain cañon to the edge of the lake. We slipped and stumbled and swung ourselves down step by step, and if it had not been for old Ed's almost supernatural strength and endurance we would hardly have succeeded. Did you ever try to lug or carry a head of elk horns that were about 5ft. wide and weighed over 100lbs. down a rocky mountain cañon? If you have not you cannot appreciate what I am writing. Sam and I were both in favor of leaving all the meat and taking nothing out but the horns, but old Ed was so anxious to get a good supply of meat to carry home that we agreed to help get the meat out for his benefit. We finally succeeded after five or six hours of extraordinary labor in landing the head of horns, both hams and a side of ribs from my elk on the lake shore.

We sat down upon a rock to eat our lunch and rest. Sam was looking up the beach and scanning the beautiful scene, when he suddenly exclaimed, "Look yonker!" Both Ed and I looked in the direction pointed by Sam and saw a large cinnamon bear walking up the beach, smelling the sand as he progressed. He was coming toward us, but was out of range, being probably 500 or 600yds. from us. He was close enough, however, for us to see that he was a big one, and we began to hope that we were going to have a bear fight to mix with the excitement of elk hunting. We got behind a rock and waited to see what old bruin would do. The bear came on toward us for about 100yds. and then sat up on his haunches as straight as a poodle dog. He seemed to be meditating what course to pursue. Ed said he smelled blood and was endeavoring to locate it. The smelling faculties of a bear are exceedingly acute. Ed tells us that they will take an air line to a carcass one mile distant as soon as it becomes tainted. Well, we waited for some minutes very impatiently and bruin did not move; so I proposed to Ed that he and I step around and try to get a shot at him. We started and made a wide circuit, so as to get on the other side of the bear and drive him to Sam. When we came out of the woods about 100yds. from where the bear had been sitting he was gone. When we got back to Sam he told us that the bear sat still for several minutes after we started, then got down and slipped into the brush. He evidently got a whiff of us, and knew it was time he was going. We never saw him any more.

We now applied ourselves to building a raft and in an hour launched a good raft 12×6ft. made of dry fir logs. Sam left us, and going to the carcasses of his two elk managed to get some of the meat and the skin of the cow to his horse. So when we arrived on the other shore of the lake with our raft and cargo Sam was waiting for us with the horses. We took the trail to camp, arriving about dark. The other boys were all in. Will McKamy had killed a black-tail deer and brought it in whole. We now had more meat than we knew what to do with, so old Ed began to dry and salt down in earnest.

On the morning of the 26th we all started at daylight excepting Ed; he remained in camp to allow Will Johnson to go hunting. On that day Ed rendered out his big pile of elk fat and made it into cakes, also made several more smoking racks and put on about 1,000lbs. of elk meat to dry. He was making hay while the sun was shining, and we were only too glad for him to have the meat. Sam and I went back to the carcasses of his two elk, but found that the meat had slipped out of the tree in some way and the bears and wolves had torn it to a thousand pieces. So all we saved out of Sam's two elk was one ham that he had secured the day before. I killed a black-tail doe during the day and we carried it in whole. Frank Gardenhire also brought in an antelope.

The 27th we all remained in camp. Sam and Bob rode over to Snake River, about three miles from our camp, and fished until noon; they came home loaded down with as fine a string as I ever saw. Several of the trout weighed 5 and 6lbs. each. Will Johnson went out on the plain and brought home an antelope.

The morning of the 29th we were in the saddle at daylight. We packed all our goods in the wagon and then drove it to a dense thicket two miles away and hid it in the bushes. We hung up all of our hides and horns so the animals would not get them. We were going on a short hunt up the Gros Ventre River and then were going to start homeward. Crossing Snake River, we turned in a northeasterly course toward the mouth of the Gros Ventre. In crossing the open plains to the east of Jackson's Lake we met another hunting party. They were two gentlemen from Chicago guided by a Mormon. They had not enjoyed themselves much, only having killed a few antelope and a deer or two. They had not killed a single elk and were in the heart of the elk country. I suppose the guide either did not know how to find elk for them or was too lazy to hunt. We passed on and did not see them again.

We got into the Gros Ventre Valley in the afternoon, and after following this stream up for ten or twelve miles camped for the night. We were all delighted with the country and anticipated a great time. The country was wild and rugged and covered with dense fir trees, but not too rough to ride. Next morning we continued our course up the river and traveled until about noon, when we unexpectedly came upon a deserted Indian camp Old Ed was almost beside himself with rage. We counted the deserted brush huts or tepees and found there were forty of them; that meant at least 200 Indians. We also knew from the piles of bones and feet of elk and deer that the country had been hunted out. There was no use in going any further, as we would only be hunting in the rear of a tribe of Indians, so we wheeled our horses and retraced our steps. Next day about night we camped on the bank of Snake River near our old camping ground. We had not killed anything excepting two antelope as we crossed the plains. We were all sore over it, as the Gros Ventre River is noted for its fine elk hunting, and Ed said it was by far the best he knew of in the whole West. The Indians also knew it was a good place, and had got there ahead of us. Old Ed abused the Indian agent for allowing them to leave their reservation, but there was no use of crying over spilled milk. I really think we were a trifle selfish, as we had already had magnificent sport and had no cause to grumble.

On Oct. 3 we started for home. We toiled over the mountains for the next two days, and on the evening of Oct. 5 pulled up in front of Ed Trafton's house. The next morning we were early on the trail to Rexburg. Ed was to accompany us to the railroad station and see us off. We had our last day's shooting this day, and we bagged many a prairie chicken as we drove that forty miles from Haden to Rexburg. We arrived at Rexburg that night, and next day sold all of the horses and surplus stock. Bob Cooke bought the four wagon horses and the wagons and tents, as he lived in Boise City, Idaho. I got $11 for Bruno, my riding horse, and he cost me $30. I had used him hard for over a month, so I think I did pretty well. Next day we reached Market Lake, the station on the railroad. This was the saddest day of all. Here we had to separate. We packed our elk horns and hides and saddles and such things as we wanted to take home, and shipped them. Bob Cooke, Sam Wester and Will Johnson continued their way across the plains to Boise City. Ed Trafton returned home with over $100 in his pocket and plenty of clothing and incidentals, so he was happy, and declared us all to be jolly good fellows. I venture to say there is not a man in that party who would not be glad to see old Ed again, and I know Ed would be glad to see any one of the party. So we separated, each one going his own way.

There never were eight more congenial men on a hunt together than our party. We hunted and enjoyed ourselves, had magnificent sport and shared all the hardships as well as the pleasures. The truth is, we were all genuine sportsmen and there was not a sorehead among us. The cost of the trip was about $200 each. We killed over twenty elk, two moose, one bear, twenty-five or thirty deer and no telling how many antelope, besides hundreds of prairie chickens and a good many ducks and geese. Every word of this recital or diary kept by myself is true, as can be attested by any member of the party. It is not overdrawn; in fact, there were numerous small side hunts for chickens and small game, and many fine catches of trout, not recorded at all. A. B. WINGFIELD.

Indian Territory Parched Covers.

LOCO, I. T., June 17.—*Editor Forest and Stream:* We are having a continual drought. We have had only one rain sufficient to swell the ravines since Jan. 29; that fell on May 12, bringing a terrific hail with it. Hailstones fell here 7in. in circumference. This destroyed all the young birds and many old ones. I say young, for I reckon the first broods were hatched out, as I heard the males calling Bob White as early as March 22; this is a sure sign of mating. Notwithstanding these and other calamities the birds have made it through and there seem to be more old and young than ever before. Crops will be a failure, and many will take up the gun to shoot for market who otherwise would be in more legitimate business. L. D. W.

AMERICAN GAME PARKS.

The "Forest and Stream's" Third Annual Report on Game in Preserves.

Part One.—Fenced Parks.

IN the issue of Feb. 17, 1894, FOREST AND STREAM published an article which we believe to have been the first general survey ever attempted of game in American parks. This was followed in May, 1895, by similar articles, and to-day we print the first instalment of our third annual report on game in preserves.

The object of these reports, primarily, is to furnish data regarding the breeding of wild animals in confinement and under strange conditions, and to demonstrate what species are best suited for stocking certain localities.

Experiment has shown that elk and the common deer, and to a certain extent buffalo, will thrive and multiply in confinement in almost any part of the United States. On the other hand, it seems equally certain that caribou cannot be kept in parks even where the locality approaches the latitude of their native range, and that antelope do not thrive east of the Mississippi.

The statistics are less convincing regarding the adaptability of a changed environment of moose, beaver, black-tail deer, mountain sheep, etc., but it seems likely that the two former animals furnish fit material for stocking where the locality is not too far South.

Charles F. Dietrich,

who has an estate of 1,600 acres at Millbrook, Dutchess county, N. Y., has a deer park that furnishes an interesting example of the possibilities of supporting a number of animals on a limited area, as he has over fifty deer, all in flourishing condition, in an inclosure of less than forty acres. These deer are grained all the year round and fed in much the same way as domestic animals. Most of the herd are white-tails, raised from animals procured from widely separated localities, such as Virginia, Wisconsin and Indiana, and Mr. Dietrich attributes their healthiness in measure to this fact of mixing different strains. He bought his first deer for the park four years ago, and this year he counts on an increase of about twenty.

Besides the American deer Mr. Dietrich has a number of German roe, which he imported a year or two since. The roe bred in confinement, but unfortunately the young all died. This year, however, he hopes to have better success. The original number imported was six, but one or more of the adult deer died also. Mr. Dietrich has also English pheasants, German partridges, and a number of coveys of native quail as well as ruffed grouse. Last year he tried for the first time the experiment of stocking with prairie chickens. In June he purchased twenty-four adult birds, which were released on his estate. He is unable yet to express an opinion as to their desirability for Eastern stocking, but knows that they have survived in their new environment, as he sees them from time to time about the place.

Mr. Dietrich's park is inclosed with woven wire fencing 8ft. high, made in two sections, the lower of which is heavier and stronger than the other. He has put out a number of German hares recently, and to keep the young of these within the park he has added an additional section of fine mesh netting around the lower edge of the original fencing.

John M. Forbes.

Mr. John M. Forbes, who owns Naushon Island, in Buzzard's Bay, is a sportsman who has always taken an interest in game preservation. Though little attention has been paid to stocking, there are a number of deer and a few quail on the island at present.

C. W. Chapin.

Mr. Chapin's game preserve at Lebanon Lake, near Pond Eddy, Sullivan county, N. Y., was first fenced previous to 1893. In November, 1895, an additional tract was inclosed. The two parks are surrounded by barbed wire fencing 8ft. high, about ten miles being used for each park.

At present Mr. Chapin is said to have in the two preserves 125 elk, 100 deer, and a considerable number of Belgian hares, native hares, jack rabbits and squirrels, as well as wild turkeys and wild geese with their wings clipped.

Cross Island Preserve.

Cross Island, at the entrance of Machias Bay, on the coast of Maine, is well stocked with deer, which have been protected from indiscriminate hunting by special legislation since 1857. It is estimated that there are at present 600 of these animals on the island.

The island is three and one-half miles long by two and one-half miles wide, and is heavily wooded.

Litchfield Park.

In August, 1893, Mr. Edward H. Litchfield purchased a tract of 9,000 acres of wild forest land near Tupper Lake in the Adirondacks, with the intention of creating, to quote his own words, "a private preserve similar to those in Scotland and the Tyrol."

The following September he had the park inclosed with a fence, of which the following description was furnished to FOREST AND STREAM.

"It was built under contract by the Page Woven Wire Fence Company, of Adrian, Mich., and is proving eminently satisfactory for a game preserve fence.

"It is of galvanized coiled elastic steel wire, with twenty horizontal strands tied together by vertical strands every 12in. The spaces between the horizontal wires are 3in. wide for the first foot, beginning at the bottom of the fence, and gradually widen toward the top.

"It has no barbs and is strung from tree to tree, being fastened by staples. Posts are used only in the absence of trees.

"All irregularities in the soil underneath are filled with green logs, stones or other suitable material.

"The fence is about 8ft. high and is over eighteen miles in length. It is absolutely dog and deer tight. No dog can get through unless he digs a passage underneath.

"The Page people put on two large gangs of men and drove the work with great rapidity, closing it out a month ahead of the contract time.

"The fence runs through the roughest Adirondack country, through swamps and over mountains. At one place it crosses the bay of a lake, a distance of 150yds.; at another it runs over the crest of a mountain nearly 1,000ft. above the level of the surrounding country.

"The wire is, as it were, corrugated before using, and its elasticity is so great that if a tree falls upon the fence, when the tree is cut away the fence springs back into place and only requires re-stapling.

"The area inclosed is about two and a quarter miles wide by six and one-half long, amounting to between 8,000 and 9,000 acres."

Early in 1894, Mr. Litchfield had had an inclosure half a mile square fenced, and to this was brought a small band of elk. The original purchase consisted of four bulls and seven cows, which were wintered at Rome, N. Y. Three of the bulls, however, died, owing no doubt to injuries received at the time of their capture or to rough handling in transport, reducing the herd to eight animals. Since then he has purchased nineteen more elk, so that at present the herd numbers twenty-seven. Of these seventeen have the freedom of the entire tract, while the others are kept in the small park.

As yet no elk have been born in captivity, but judging from the latest reports there are good prospects of calves this year. The elk thrive in their new environment, and all have wintered well and seem to be in good condition. Of those that died, one bull fell off a rock and broke his back, and two others died from tumors shortly after their arrival. Climatic conditions are not responsible for any deaths.

Besides the elk, Mr. Litchfield has recently turned loose in the park five black-tail deer, and there are also a great many native deer within the inclosure. Mr. Gustave Snyder, a civil engineer by profession, who has supervision of the park at present, estimates the number of these deer at fifty. The head gamekeeper, on the other hand, puts the number at 200. No doubt the true figures lie between these two extremes.

In the small park there are fifty jack rabbits from Kansas, and English pheasants are being raised with success. Mr. Litchfield has also put out a lot of fox squirrels, and is planning to stock with capercailzie and wild turkeys when he can procure the specimens. Though he has advertised for wild turkeys, he has failed as yet to get any satisfactory offers.

Though Mr. Litchfield does not care for them among the fauna of his park, some of the larger carnivorous animals occasionally stray his way. Last year a deer was killed on the west line of the park by an animal supposed to be a panther.

Mr. Litchfield has had the stream running from Heaven Lake to Lake Madeline cleaned of fallen treetops and brush that obstructed the passage of trout. This stream has a drop of 250ft. in its course of about a mile and is an ideal trout stream. The character of the fishing in the lakes may be judged from the fact that trout up to and including 1½lbs. in weight are returned to the water.

A very interesting exhibit in connection with the park is a beautifully colored topographical map, laid out on a scale of 500ft. to the inch, and with 20ft. contours. This map is nearly 7ft. in length, and not only shows the natural features of the land, but also the location of the various kinds of timber found on the tract. The necessary surveys occupied the time of a corps of engineers from July 1 to Nov. 1.

The elevations of the five lakes in the park were determined by actual levels run from Tupper Lake, and the elevations along outside boundaries and cross lines by vertical arc observations referred to the above base, while interior contours were fixed by aneroid observations reduced to the same base.

These "cross lines" are 4ft. wide blazed lines running at right angles through the park, and dividing the entire area into sections measuring about a mile square. By reference to these cross lines the exact location of any point of interest may be determined on the map, and vice versa. The 18½-mile fence runs 15 or 20ft. inside the boundary of the park, and is not a line fence according to the strict definition.

Mr. Litchfield proposes to cut a good road through to the head of Tupper Lake, to connect with the road running to Horseshoe Pond station on the Adirondack & St. Lawrence R. R. The existing road to Tupper Lake is very poor. The new road will be laid out by skilled engineers, and in grade and construction will be the best.

Mr. Litchfield is a sportsman of ripe experience. He has hunted all over the United States, and is familiar with all kinds of game in their native wilds.

He first hunted in the Adirondacks in 1866, at a time when moose still were to be found in the wilder portions. Some, in fact, were reported that year at the headwaters of Bog River. In 1869, in company with Asa Puffer, an old moose hunter, he saw old moose workings on the north shore of Big Moose Lake. These signs, however, according to the best estimate that could be found, were then about three years old.

Puffer had an interesting theory to explain the sudden disappearance of the moose from the Adirondacks. During the last year or two of their occurrence he said he had found a number of moose that looked as if they had died from disease. At any rate, he could find no wounds on them. After the moose had gone and only the memory of them remained, he recalled this fact and argued that an epidemic had carried them off.

In February, 1871, while hunting on Little Moose, north of the Fulton Chain, Mr. Litchfield was followed by a pack of four or six wolves, who ran in his snowshoe track till he met them, having taken his back track for camp.

Furlough Lodge.

At his summer place in the Catskills, Mr. George J. Gould has a game preserve of 600 acres. This is inclosed with wire fencing, and is well stocked with ring-neck and Mongolian pheasants and various kinds of hares, as well as large game. The greater part of the park is woodland. Mr. John E. Haynes, superintendent, writes:

"Mr. Gould has at the present time fifty elk from one to ten years old, and about twenty calves. He also has fifteen common red deer and five black-tail deer. He is also the owner of a fine trout lake covering about 20 acres of land, and one mile of trout stream where he can go and catch 15 or 20lbs. of trout in two or three hours any time he wishes."

Mr. Gould has had remarkably good luck with his elk, as a reference to the table will show, but for some reason his deer have not done well.

Ne-ha-sa-ne Park.

Dr. W. Seward Webb has 9,000 acres of his Adirondack lands inclosed as a game park. He has made a specialty of stocking with moose and elk, and has successfully demonstrated that both will thrive in confinement, and that elk are adapted to the Adirondacks.

According to the average estimate of five gamekeepers, there are at present in his preserve sixteen moose, thirty-five elk, and 275 deer. Under date of May 27 Dr. Webb writes:

"Replying to your letter of April 30, I would say that I have only added four moose to the game in my park during the past year, but I have orders out in Canada for additional moose, which I expect to receive from time to time. All of my game are in good condition, and I have not lost a single moose. I lost a few elk at first, but since they have become acclimated they have done finely, and both the elk and moose have bred. This year all the females seem to be in calf."

Theodore A. Havemeyer.

Mr. Havemeyer's preserve at Mountain Side Farm, Mahwah, N. J., is inclosed with a fence of barbed wire 8ft. high. His superintendent, Mr. John Mayer, furnishes the following particulars:

"There are about 250 acres inclosed in our deer park, part thickly wooded and part open grazing glades. Spring water in abundance. We think there are about seventy deer in it this year, and many rabbits, Belgian hares, quail, woodcock, partridges and English pheasants. Keeping this park as the sanctum, and allowing no shooting in it, brings birds to it from other sections of this county where no preserves exist."

Tranquility Park.

Mr. Rutherfurd Stuyvesant's game preserve at Allamuchy, N. J., includes an area of about 4 000 acres, fenced with a close board fence 9ft. high, and one barb wire 11in. above the boards. The park includes wooded hills and swamps and a number of old abandoned farms. Mr. C. W. Puffer, superintendent in charge, furnishes the following particulars:

"The deer have done well and are increasing fast. It would be impossible to give a correct estimate, but I should think there were nearly 200. Three years ago we started with twenty elk, fifteen cows and five bulls, and now we have forty. We killed one last fall and have lost two this winter, that would be an increase of twenty-three. I think it would be impossible to raise elk in the Adirondacks without providing hay for them in winter, as they are an animal that migrate. I hope that I will be found wrong in this remark, as I would like to see the Adirondacks stocked with that royal game.

"The beaver are doing well and increasing fast, but there is no way of telling how many there are. They can be seen at sundown or after. They have two houses and several dams built on the streams.

"The buffalo died last month, and we count the crossing almost a failure, although we have two fine half-breeds.

"We stocked the pond with 5,000 German brown trout, but as we have since found pickerel in the streams we are afraid the trout will prove a failure.

"The ruffed grouse are quite plentiful, and there are a few English pheasants, but they stay in the park only in summer and go to lower ground in winter. Mr. Stuyvesant's bird department is on Tranquility Farm, managed by an expert by the name of Duncan Dunn, who has always made the bird department a success."

C. C. Worthington.

Mr. C. C. Worthington has a preserve near the Delaware Water Gap, said to contain 3,500 acres. It is inclosed with a wire fence 8ft. in height. It is reported that there are upward of 600 deer in this park.

Anticosti Island.

It is reported that Henri Menier, the millionaire chocolate manufacturer and well-known French yachtsman, who now owns Anticosti Island, has fenced off one-third of the island, which he will use as a great game preserve. The princely scale of Mr. Menier's enterprise may be judged when one considers that Anticosti is considerably larger than Long Island and that the tract which will be turned into a hunting park measures forty miles in length, with a maximum breadth of about thirty-five miles.

Mr. Menier's agent is at present advertising in FOREST AND STREAM for elk, and it is stated that he contemplates the purchase of buffalo and moose. He has already sent to the island five caribou and nineteen deer. The result of this stocking with exotic game will be watched with interest, for aside from bears no large wild animals have hitherto been found on the island.

In Volume I., No. 2, of FOREST AND STREAM "A Naval Officer" gives the following account of the animal life of Anticosti:

"It is worthy of remark," he writes, "that in many parts of the country there appears to be something in the pasturage which has an injurious effect upon certain forms of animal life. Rabbits and hares, without which scarcely an island of any size in the Gulf (of St. Lawrence) is found, are never seen, and though often introduced have quickly disappeared. Rats which have escaped from wrecks speedily become extinct, and it is strange that, though the interior of the island abounds in lakes and ponds, the sources of numerous streams, the beaver, mink and muskrat (the latter animal being so common elsewhere) are wholly unknown. The pleasant chirping of the graceful little chipmunk here never greets the ear, and there are but four fur-bearing animals known to the trappers—the black or brown bear, the otter, marten and fox, of which latter there are several varieties."

These four fur-bearing animals, however, are found in great numbers. The streams are full of salmon and sea trout, and multitudes of ducks and geese resort to the island in season.

Mr. N. Le Vasseur gives the following additional information:

"The intention of the new proprietor of Anticosti Island is to make a park in a corner of the island. The island is 147 miles long by thirty-five and thirty-nine wide. Wild animals that already exist on the island are bears, black and silver foxes, martens, otters, and I think hares are also to be found there. I have already sent over there thirty red deer, and will send moose, caribou and beaver. I have also here a fine specimen of female elk, and I want a bull elk now. If prices for elk delivered at

Quebec are not too high and quite acceptable, we might probably make a special elk park. For the moment anyway I want only one bull elk.

"As to the domestic animals, none will be admitted there but those of choice and pure breed, and genealogical registers will be opened for each species.

"Mr. Menier will devote much attention to the sea and inland fisheries; codfish, herring and lobsters are plentiful; rivers and lakes are swarming with salmon and trout; salmon are of a fair size; trout, fine. He will also indulge in agricultural pursuits. The island is well timbered, though the general size of the trees is not over the average. Lobsters are abundant all around the island, and canneries will be built in many places. I think there are already two lobster canneries in operation.

"Farm buildings, stores and private residences are in course of construction, from twenty to thirty in all, for a primary installation. Electricity will be used for light and power.

"A saw mill is being built. At Mawzeralle River on the north side of the island there is a fall of 200ft. high which will furnish a first-class water power.

"A wharf 400ft. long has been built at English Bay, and a little tramway 1,500ft. long has been laid upon the wharf for the carrying of merchandise of every description to the stores. Tramways (Decauville system) will be constructed wherever needed on the island."

[TO BE CONTINUED.]

MINNESOTA INDIANS AND GAME.

[From the Report of the Chief Fire Warden of Minnesota.]

THERE are upward of 7,000 Chippewa Indians living on as many as ten different reservations, widely scattered in the forest regions of northern Minnesota, a large portion of whom are almost constantly engaged in hunting and fishing, and who are just as much in the habit of building camp-fires as white hunters. There is reason to believe, however, that they are more careful in regard to fire than may generally be supposed. The Rev. J. A. Gilfillan, a missionary to the Chippewa Indians, and for many years acquainted with them, in reply to a letter addressed to him by this office, communicates the interesting fact that the Indians are more careful than white men to put out their camp-fires. He also states that the Indians respect the law, and when they come to know what is law generally obey it. In his letter he furnishes some interesting facts as to what occurs in the forest wilds, and which tend to show how productive of game our Minnesota game forests may become under a regulated system. Mr. Gilfillan says:

The region I will speak of is that in which our missions are situated, some 250 or 300 miles in circuit, beginning from White Earth; thence east to Leech Lake, 100 miles; thence north 30 miles to Raven's Point, Winnibigoshish Lake; thence west 20 miles to the head of Cass Lake; thence northwest 45 miles to Red Lake agency; thence southwest 100 miles to White Earth.

Of large animals inhabiting this region the most plentiful are: First, deer; second, bears; third, moose; fourth, reindeer or caribou. Of the smaller fur-bearing animals I do not speak. Within this circumference of 300 miles, lying altogether in the pine country, the above animals are slaughtered at all seasons of the year wherever and whenever found, and not only within that circle, but everywhere north of it as far as the British line.

First, as to the number of moose killed annually in the above region by the Indians, that is hard to estimate, but a few years ago there were killed, swimming in the water, pursued in canoes, in one bay on the north shore of the south lobe of Red Lake, opposite the Red Lake agency, at a place called by the white people the Narrows, and by the Indians Wabashing, the large number of eighty-seven moose. The animals had taken to the water to get away from the flies, and so were at the mercy of the Indians.

Moose are also constantly killed around Cass Lake, Lake Itasca, Winnibigoshish and Leech lakes, and a great many in the Big Fork River country. To give a rough guess at the number of moose annually killed by the Indians in the above region, excluding the Big Fork country, I would say:

By Red Lake Indians	200
By Cass Lake Indians	25
By Leech Lake Indians	20
By Winnibigoshish and Bowstring Indians	70
By White Earth Reservation Indians	20
By Sandy Lake and White Oak Point Indians	20
Total killed annually	355

Turning now to deer. There were marketed at Park Rapids about two winters ago, during the hunting season (November), 600 deer, the greater part by far of which were killed by Indians. They kill, of course, at all seasons and at all times. I would say, therefore, that the amount of deer killed by Indians in the above described range of our missions is as follows:

Deer killed around Leech Lake and wherever the Leech Lake Indians hunt	1,200
Deer killed by Cass Lake Indians and wherever they hunt	300
Deer killed by Winnibigoshish Indians	300
Deer killed by Red Lake Indians	1,000
Deer killed by White Earth Indians	1,700
Deer killed by Sandy Lake and White Oak Point Indians (est.)	200
Total annually killed by Indians	4,700

Nearly always when I go to Cass Lake—which is usually monthly—I find some of the Indians absent hunting deer by torchlight in summer. The Indians everywhere do that constantly. They put a lamp in the bow of the canoe, one man to paddle and one to shoot, and steal up upon them.

At Cass Lake they hunt so on white men's land continually; going up the Mississippi River from Cass Lake, outside of their reservation, hunting with torches nearly every night in summer and killing large quantities of deer, which come down to the water to drink or to get rid of flies. They do so also on every lake.

About eighteen years ago the Red Lake Indians killed very few deer, but the English working up north on the Canadian Pacific Railroad seem to have scared them down that way, or else it was by the white settlers in Minnesota to the south. At any rate the fact is certain that the number of deer killed has been far more numerous there of late years.

As to the number of bears killed, I would be almost afraid to hazard a conjecture, but would put it at 300 annually in the whole Indian country.

As to the reindeer or caribou, a few are killed around Cass Lake. I do not know of any other locality in our missions where reindeer are killed.

In estimating the number of deer killed by White Earth Indians, we know pretty nearly the number of men hunting, we can estimate the average that each man kills, and so arrive at the result. Many of the White Earth Indian hunters kill thirty deer each in a season. I think there will neither be deer, moose nor reindeer in all this region in a few years.

The Indians go out hunting deer with the first snow, usually early in November, and they stay out till about Jan. 1, when the severe weather drives them home. They also hunt at all times in summer with lamps or torches, as above mentioned.

White men also bring hounds and hunt in the uninhabited country, outside of the reservations.

The Indians use metallic cartridges; they hunt sometimes alone, sometimes with another; they always make fires to cook, etc.; they understand better than white men the necessity of care, and are more careful to put out fires, knowing, from having been brought up in the woods, how fires will run.

While the general good conduct of the Indians ought to be cheerfully recognized, it is undeniable that there are some thoughtless and bad men among them, who in times past have caused very destructive forest fires, in revenge for wrongs they had suffered, or thought they had suffered, from white men or from the Government. Also, whether well founded or not, it is the belief of many white citizens in the neighborhood of Indian reservations that the practice of allowing the Indians to sell such of their standing timber as has been injured by fire has proved a temptation for them to set fires. The forest preservation act of Minnesota has no binding effect upon Indians in the limits of Indian reservations, but off of their reservations the Indians are subject to it the same as other people. It is believed that when they come to understand its purpose, it will have a beneficial influence upon them as well off as on their reservations.

Another Armless Shooter.

HUNTINGTON, W. Va., June 4.—*Editor Forest and Stream:* The writer, a regular reader of the FOREST AND STREAM, is acquainted with Rev. Mr. Vann, a resident of Edenton, N. C., and a native of the United States, who lost both his arms in a cotton mill when but a child.

Mr. Vann is not only an able minister of the Baptist church, and holds—or has held—a position as professor in the Lake Forest University of North Carolina, but is a keen and ardent sportsman. Whether he can fish or not we are not advised, but he does use with good success a double-barrel shotgun, having wires running from the trigger, ending with a leather pull, to be worked by his mouth.

He can load and unload and fire his gun with rapidity and skill, and while we never had the pleasure of hunting with him we have been assured by good sportsmen who have spent days in the field with him that it will keep a man with two good arms hustling to bag more partridges than Mr. Vann.

We do not believe that Mr. Vann could put bait on his hook with his teeth. As to whether he fishes we are not advised. He has a good excuse for not sawing wood, and if we were in his place we would make use of that excuse; but when it comes to shooting he is one of the boys and right in it. We write this letter not specially for publication, but in order that you may look up this man Vann, as a statement of what he has accomplished under adverse circumstances would prove an excellent example for patience and perseverance, without which there can be no real sportsmanship. T. R. SHEPHERD.

[Mr. Vann's shooting has already been described in the FOREST AND STREAM.]

Sea and River Fishing.

KENNEBAGO AND THAT SORT OF THING.

Editor Forest and Stream:

I have just returned from a few days' trouting excursion to Kennebago Lake. Although my trip was delightful in every way, it would have been much more so had I been better posted in regard to the manners and customs prevailing in that vicinity, and it seems to me, therefore, that I owe it as a duty to give to the thousands of appreciative readers of FOREST AND STREAM a few points which may be of benefit to them.

One can leave New York at midnight and reach the village of Rangeley, Me., the following afternoon at about 6 o'clock, where, in the interest of comfort, one must stay all night. The hotel at Rangeley is new, fresh, sweet, clean and delightful in every way, the outlook over the lake being exceptionally fine. It will be necessary to engage guides at Rangeley to go to Kennebago Lake, as they do not stay at any of the camps. The ride on a springless buckboard to Kennebago baffles all description. The road could not possibly be worse if efforts had been made to make it so. It is filled with stones, rocks, boulders, holes, and the better way, and the one practiced by a large proportion of the people, is to walk. But after one arrives at the hotel at Kennebago the discomfort of the ten-mile ride is soon forgotten. The hotel stands at the head of the lake, which is one of the most beautiful I have ever seen. It is in the heart of the primeval forest; the woods have never been lumbered and have never been burned. The laws of Maine are exceedingly strict in regard to the setting of fires and placards are posted about in different places giving extracts from the State laws. A man cannot set a fire on his own premises without becoming liable to damages up to $1,000 for any injury resulting to his neighbor, and no person is allowed to set a fire except on his own land.

The fishing in Kennebago and in the ponds and streams in that vicinity is excellent, and one can take with flies all the trout he desires for his own use from the time the ice leaves in the spring until it forms in the fall. The fish run from ¼lb. to ⅓ and ½lb. in weight; occasionally, however, much larger ones are taken, often 1lb. to 3lbs. This is particularly the case at the upper end of the lake, about six miles from the hotel and in Little Kennebago Lake. The water of the lakes is cold spring water and there are a large number of mountain brooks emptying into them. A steam yacht runs two or three times a day from the hotel on Kennebago Lake to the different camps, and if one tires of fishing it is a very pleasant way of spending a few hours to take the trip. At the upper end of the lake it is a daily occurrence to see from one to half a dozen deer; and beaver and other animals are very plenty. The game laws of Maine seem to be, at least in that vicinity, greatly honored, and the talk of guides and visitors is very different from that met with in the Adirondacks, where poaching is more or less in order. No hounding or jacking is allowed.

The scenery all through this portion of Maine is very beautiful. There are many magnificent mountains, some of them 4,000 or 5,000ft. high, and being entirely covered with timber the play of the clouds upon them is very pleasing. There are a number of camps at the foot of the lake and on Little Kennebago, and Seven Ponds, ten miles still further into the wilderness. These are supplied by freshly cooked provisions from the hotel, or one can utilize the services of his guide as cook. Loon Lake is about four and a half miles from Rangeley on the road to Kennebago Lake and there is here excellent fishing. There is a fine camp, well kept, well furnished, and in the immediate vicinity are two or three large ponds which, with the lake itself, afford most excellent sport. The fishing at the Rangeley chain of lakes is now over for the season, but I was told—as I have many times seen in your columns—that it has been unusually good during the past spring. I saw records at the hotel of a considerable number of salmon having been taken ranging from 6 to 10½lbs. H. S. CHANDLER.

NEW YORK, June 25.

A HYBRID TROUT.

IT is generally believed that fish of the salmon family do not hybridize in a state of nature, because there are no evidences of crossing between distinct species. Fishcultural operations, however, have produced numerous crosses among trout and salmon, and some of them have been described and illustrated in these columns. Among them are hybrids between lake trout and brook trout, golden trout of New England and brook trout, European saibling and brown trout.

A very handsome hybrid has just come into my hands from Mr. Jas. Annin, Jr., superintendent of New York hatcheries. It was captured in Caledonia Creek, and Mr. Annin has seen two more from the same stream. He suggested that it may be a cross between the brook trout and the brown trout, and this opinion is shared by the writer. In form and coloration it has many points of resemblance to the brook trout, but its rather large scales and singular network of colors, differing from those of both parents, establish unmistakably its hybrid character.

The fish is about 9in. long, with the shape and proportions of the brook trout. The colors themselves should be seen in order to appreciate the striking beauty of the subject. The upper part of the body is brown mingled with purple; the lower part pink. The sides have a network of rather wide lemon yellow lines. The ventral, anal and caudal fins are pink, the ventral and anal having a milk-white anterior margin. In the anal fin this white stripe is bounded behind by a dark line, as in the brook trout. The breast fin is pale vermilion.

The dorsal fin has numerous small, dark blotches, and the membrane connecting its rays is pale lemon. The adipose fin is rather long and slender, amber colored, with two obscure dusky blotches, one of which is very indistinct. The eye is silvery white and shows yellowish reflections. Mr. Annin has properly called it "a very beautiful fish;" it would be difficult to find a handsomer trout or one more shapely.

In describing a hybrid between the golden trout and brook trout in FOREST AND STREAM, Nov. 20, 1890, the writer stated as one result of his observations that all essential characters are derived from the female when crosses are made between two species of the same genus; also, that when a large-scaled species is crossed with a small-scaled form, the result will be a large-scaled fish, whichever way the cross be made. The form of the body, shape of the tail, size of the scales and structure of the teeth are among the essential characters.

A single glance at this fish will reveal its relationship to the brook trout, which is a small-scaled species. The large scales demonstrate that a large-scaled trout entered into the parentage of the hybrid. Furthermore, the peculiar network on the sides is perfectly characteristic of the crossing of two genera—the brook trout form and the brown trout, or one of that genus. The brown trout and the brook trout have the same spawning season and it is on record that these trout have been artificially crossed at the Caledonia station.

While the proof of the origin of this hybrid is wanting, there is little reason to doubt that it came about through the artificial fertilization of the eggs of one species by milt obtained from a fish of a different genus. Brook trout eggs and brown trout milt may have been used or *vice versa;* the result in either case will be a large-scaled trout with so-called zebra markings. But if we may be governed by the shape of the body and fins and the structure of the teeth, the female parent was a brook trout.

Numerous experiments in hybridizing fish were formerly made at the Caledonia station, and some singular crosses were produced. More extended experiments have been carried on in Norway and other European countries. As a result of many observations it is claimed that hybrids between trout belonging to different genera are always sterile. The hybrid here described should be sterile.

It would be desirable to produce such crosses artificially because the result is a beautiful fish of rapid growth and excellent qualities; having no occasion to reproduce, its whole time and energy can be devoted to putting on flesh. Such a picture of symmetry and vigor would not be brought to the landing net without a pitched battle.

TARLETON H. BEAN.

NEW YORK, June 13.

Colored Party—What yo fishin' fo', boss?
Fisherman (carelessly)—Oh, just for recreation.
Colored Party—Well, yo' won't kotch none. Dere's nuffin in dat creek 'ceptin' mud eels an' suckers.—*Puck.*

The New York Fish, Game and Forest Commission has appointed James Green, of Caldwell, special custodian of the islands of Lake George for the season, the new appointee succeeding F. W. Allen, of Bolton.

ANGLING NOTES.

Nature's Flies and Man's Fancy.

WATERS may yet be found where the trout will rise to a piece of red flannel tied to a hook as readily as to a well-made artificial fly, but they are remote and it takes time and money to fish them, and a dozen trout caught under such circumstances do not afford the pleasure that is given to the angler when he has outgeneraled a wary old trout in a well-fished stream that has refused fly after fly because it does not look like the real thing, or has not been presented so artistically as to deceive his royal spangles. Anyone who labors under the impression that trout cannot distinguish between a good and a bad imitation of a natural fly fools his face. There are times when trout will seemingly take any fly offered, and again they are so dainty and capricious that just the right fly, and that properly dressed, must be offered if it is accepted. Some years ago I told in this journal of a day's fishing when the trout would not deign to notice any fly I offered them but the green drake, refusing even the gray drake on the same cast, and a variety of other flies I presented to them to test their vision.

Mr. Edward Marston, father of Mr. R. B. Marston, editor of the London *Fishing Gazette*, who writes so charmingly under the press name of the Amateur Angler, has something to say on this subject which is of interest to all who use the artificial fly:

"With reference to the May fly, it has been maintained by a distinguished connoisseur in all matters pertaining to angling, that neither trout nor grayling care a fico for the mere color of your 'imitation'—and he suggested for a change that a May fly dyed pink or deep red might prove a brilliant attraction for the gay old stagers in our deep pools.

"Accordingly I put this theory to a practical test. I put on my collar (in Yankeeland this would be leader) a May fly of a brilliant red color. I tried it for an hour or more—placing it as seductively as possible over many a rising fish—and I am bound to say that my experience does justify me in recommending for general use this singular departure from the more modest color with which nature usually paints her May flies.

"You who are accustomed to watch the action of fish in a stream have of course noticed that dart-like and diagonal disturbance of the water which a big trout makes when you startle him from the bank on which you may be walking.

"Well! no sooner had my red fly come over this rising fish than similar dart-like streaks could be seen in every direction. This fiery demon of a fly was a conspicuous object on the water for many yards around. Not only would my particular trout bolt like a shot, but every other fish in his immediate neighborhood would make similar tracks.

"This, you will please to understand, was a scientific experiment, and from it I am led to believe that both the trout and grayling, and possibly many another kind of fish, can not only distinguish flies by their natural colors, but that of all the seven prismatic colors red is that which scares them like the very deuce.

"Green drake and yellow drake and gray drake they take most kindly to; but I am well assured, from practical experience, that pink or red drake they cannot and will not stand."

It must be explained that Mr. Marston was conducting his experiment with his red drake on an English river during a rise of the May fly, and while the natural flies in their modest dress were rising on the river none of them were red except the one on Mr. Marston's cast, and as they had never seen the like they would have none of it.

If Mr. Marston will send me his red drake I'll warrant that I will kill good trout with it next September in the wilds of Canada, but not in a stream where the fish have been to school.

Up or Down Stream?

Split Shot asks, "Which method will insure the most and best trout—to fish up a trout brook or to fish it down?"

This is a question on which there is a difference of opinion among the best of anglers, and the result would depend much upon the individual and the conditions existing in the stream to be fished. In this country probably 75 per cent. or more of the fishermen fish down stream in wet fly-fishing. In England, in the slow moving rivers, the dry fly angler has to fish up stream, or at least cast his fly that it may fall above a rising fish, and is then carried over the fish by the current; and perhaps the majority of all anglers, wet fly or dry fly, fish up stream. In this country the character of our swift running streams makes it necessary to fish down stream, as in casting up stream the current would drive the fly back on the angler, and cause slack line perhaps at the moment of a strike. A rapid running stream can be fished up, but it is more difficult than to fish down, and so the latter is practiced.

In a stream the trout lie with their heads toward the current, and the up-stream fisher contends that they can more easily see the angler as he comes down, and this is where the skill of the individual comes in. The up-stream fisher also contends that in wading a stream the down-stream fisher dislodges debris to alarm fish below him, which the up-stream fisher does not do.

The down-stream fisher can as a rule better survey the water ahead of him than the one who fishes up; but there can be no hard and fast rule which will apply rigidly to either method at all times, to decide the question of Split Shot positively one way or the other.

Here is the opinion of so good an English authority as the late Mr. J. T. Burgess, who writes of wet fly-fishing, for dry fly-fishing was not practiced at the time he wrote:

"A learned discussion commenced as to whether a stream ought to be fished 'up' or 'down.' Since that time a great deal of ink and paper have been wasted on the subject, but it is not yet decided authoritatively either way. Excellent authorities can be brought forward to prove that each plan is the correct thing. My experience goes to show that, while it is more difficult to fish up stream and harder work, it is more scientific, and is likely to bring a greater weight of fish to the creel. Fish which generally lie wi h their heads up stream are less likely to see the angler when he is going up than when he is going down, and they can be struck easier, and in their subsequent struggles they are less likely to disturb the unfished water than when fishing down stream, as a trout generally rushes downward when he feels the hook. To fish down stream is easier, is more common, and fair sport may be obtained. Perhaps, after all, it is best to avoid dogmatically adhering to either of these ideas. Fish upward whenever you can, even at a little inconvenience; but come down on the opposite bank when the fish are likely to be hungry."

I have quoted Mr. Burgess because he was an up-stream fisher and tried to present both sides without prejudice; but his language shows that both methods were applicable to wide English rivers—by wide I mean wider than our mountain streams. Personally I prefer to fish down stream, and do so as a rule, because the most of our streams are built for that style of fishing, and I prefer to fish for the head of a trout instead of its tail. If a stream is open, with no logs, no overhanging banks and "holes," with the entrance up stream, then it can be fished up stream by casting above the fish; but it is no use fishing the tail end of a "hole" expecting a trout to "strike with its tail," as it has been claimed that they do on occasions, and if the trout is obliged to turn around and head down stream to take the fly the angler may be just as much in sight as though he were fishing down stream.

Salmon.

Mr. Archibald Mitchell writes me from the Restigouche: "Have had good fishing, and killed thirty-six salmon weighing 802½lbs. Average 22lbs. Only four under 20lbs., and the largest weighed 30lbs. I got twenty-eight last week, killing eight on Friday and seven on Saturday. This is as good fishing as any man ought to have. The conditions have been very favorable on most of the waters I have fished this year."

A salmon of 15lbs. was killed at the mouth of Saranac River in Lake Champlain, so I was told by a friend who a year or two ago informed me of the killing of several salmon at about the same place. This is the result of planting the streams in that vicinity with a few salmon fry by the State. It would probably be many years before any of the rivers in this State could be converted into salmon streams to afford such a score as Mr. Mitchell made in Canada with one rod in one week, but we have rivers that could be made into salmon streams if the State would provide means for the salmon to reach the headwaters after the fry or young fish planted had gone to sea and wished to return for the purpose of reproduction. The apathy of our anglers and lawmakers on the subject is surprising to me, and I should not be surprised to see the Delaware converted into a salmon stream before the people of this State awake to the importance of the work, simply because the people of Pennsylvania seem to know a good thing when they see it at short range.

Long-Distance Fly-Casting.

For many years the record long-distance cast with a salmon rod was held in this country by Mr. H. W. Hawes, who made a cast of 138ft. in 1888, using a rod 18ft. long.

Last year at a tournament in England Mr. John J. Hardy acquired the championship of the world with a cast of 140ft. 3in., using a rod of 18ft. His competitor, Mr. John Enright, the Irish champion, was a good second; and a few days after the tournament he made an exhibition cast of 143ft. with a rod 19ft. long. I have published in this column Mr. Enright's letter to me explaining his defeat at the tournament of 1895. At the recent ninth international fly-casting tournament, held at Wimbledon Lake, Wimbledon Park, London, in May, it was expected that the two great rivals for championship honors would meet on water, as at the previous tournament the casting had been on grass. Mr. Hardy was absent from the contest through illness and because of his physician's advice, and Mr. Enright was practically alone in the championship class. With a rod 20ft. long he made a cast of 147ft. and won the gold medal. Two of his competitors made casts of 117 and 99ft. respectively.

Mr. Enright is the maker of the Castle Connell rods bearing his name, and in another class at the same tournament, open to tackle makers, salmon casting with rods of 20ft., he made three casts of 124, 127 and 125½ft.

In the championship class, salmon casting, rods of 16ft., Mr. Enright's winning cast was 125ft. and his competitors made casts of 103, 92 and 87ft.

In the championship class, single-handed rods, 11ft. long, Mr. Enright won with a cast of 86ft. 6in., and his six competitors made casts of 78, 76, 72, 60, 56 and 55ft. respectively.

Except in the salmon class with 20ft. rods the English casting was much below our record casts, and, except one year, I do not find a salmon rod of 20ft. used in any of our tournaments. With a trout rod weighing 5oz. Reuben Leonard made a cast of 95ft., and with a rod 11ft. 3in. long he made a cast of 102½ft.

Criticisms on the Casting.

After the tournament at Wimbledon there was criticism offered because the casting was done from a platform elevated about 12in. above the water, and Mr. Enright made an exhibition cast on the Thames from a punt, so he was standing 2in. below the water level, casting 151ft. 3in. I suppose his rod was the same as used at the tournament—20ft. long.

Now, if Mr. Hawes or Mr. Leonard will show us what they can do in the way of exhibition casting with a rod of 20ft. they will have plenty of witnesses, and judging from their record work with shorter rods the odds would be a standard gold dollar to a ginger cooky that Mr. Enright would have to send his sign, "Champion of the World," across the ocean to be put up over a door in Central Valley, N. Y.

Mr. John J. Hardy is very frank upon the subject of long-distance casting, as I have had occasion to show on previous occasions. Mr. Hardy is also a rod maker—one of the best in England—and a practical man withal. He sends me, since the tournament I have been writing about, a copy of a letter which he wrote for the London angling papers.

Explaining by implication why the ordinary angler is such a poor second to the rod maker in casting contests, he says: "The angler who thinks he will have a 'shy in' at a tournament is not going to pay for an expensive rod to be used perhaps only once in a tournament, and then put away for good or used only as a specialty rod. As a matter of fact, few rods are built for tournament purposes except by rod makers, and hence the reason ordinary anglers are so far behind in making records, their usual rods being quite unfitted to lift record length lines.

"What these tournaments have to do with fishing is quite another matter, and there are other points from which to view such a successful gathering as that at Wimbledon on the 9th, besides the mere question, Is that a barge pole or a fishing rod a certain man may be using, or is this angling or athletics?" I think it was about a year ago that I quoted Mr. Hardy in regard to the construction of rods for tournament casting, that they were specially made for the purpose and were comparatively useless for ordinary fishing.

In the letter just received he refers to lines for long-distance casting in these words: "I may mention that lines generally used for casting are either short, heavy, parallel or double taper ones of dressed silk, spliced to a fine backing line. When this heavy silk is shot forward, it draws with it some yards of the fine undressed line, and this is called 'shooting.' In comparing casting records it is important to bear in mind whether the cast was made by shooting or not." Last year when Mr. Hardy won the championship he was photographed, and one photograph shows the line coiled in the hand, or hanging from it, ready for the shooting process. Mr. Samuels, author of "With Fly, Rod, and Camera," photographed the casters at Central Park at one of the national rod and reel tournaments, and in the book the picture of Mr. Lawrence shows the line held ready to be shot forward. Several of the original photographs, which I have, show very plainly the line ready to be shot. Mr. Hardy concludes his letter thus: "I regret if my plain speaking should offend any one, but I think it best to call 'a spade a spade' and let those interested know the facts as they exist."

Single-Handed Casting.

In the amateur class at Wimbledon, single-handed rods 10ft. long, Mr. Edgar S. Shrubsole won with a cast of 90ft., beating Mr. Enright's cast of 86ft. 6in. with an 11ft. rod. Consequently in English records an amateur is placed above the winner in the "all-comers" class.

To go back to the tools employed by some long-distance casters, my friend Mr. Marston, commenting in his paper on the recent tournament, says: "In American tournaments no restrictions as regards rods is imposed, except as regards the length, and I hold if we in this country want to beat the American records we must adopt their method and use rods which have been specially made for casting. As was very clearly pointed out both in our columns and in the *Field*, the ordinary fly-fisher who does not go to tournaments and only reads that 90ft. have been cast with a 10ft., and 147ft. with a rod of 20ft., is quite mistaken if he supposes that these are performances with ordinary fishing rods."

I wish to say to Brother Marston that it will not be necessary for any English fly-caster to come across the sea to get wrinkles in long-distance casting, judging from what Mr. Hardy tells us, for I can assure him that I never heard of using a heavy dressed line backed by a fine undressed line to increase the distance cast by shooting, nor did I ever hear of putting lead in the butt of a reel until I was informed by Mr. Hardy and Mr. Marston of these two aids to success in long-distance casting, and I have served as a judge at our national rod and reel tournaments. It is true that our casters use a heavy line and shoot it for all there is in it, but the light line behind the heavy one is new to me.

Weights of American Rods.

The English records do not give the weight of rods used, but the American records do. When Mr. Leonard made his cast of 102ft. 6in. his rod weighed 10¾oz. and was 11ft. 3in. long, not 11ft. 7in., as the *Gazette* has it taken from an American annual. Mr. Leonard's cast of 95ft., light rod contest, was made with a rod weighing 5¼oz. and 10ft. long. Mr. Hawes made a switch cast of 102ft. with a rod 11ft. long weighing 10oz., and he won the switch casting contest another year with a cast of 94ft. with a rod 11ft. 4in. long, weighing 8½oz.

In 1889 there were five entries for the "light rod contest." Mr. Leonard won with 90ft. Mr. T. B. Mills, Mr. James L. Breese, Mr. Cooper Hewitt and Mr. R. B. Lawrence cast 86, 86, 85½ and 85ft. respectively. Each used a rod of 5oz. in weight and 10ft. long, except Mr. Leonard's rod was 9ft. 9in. The same year, in a contest limited to rods of 11ft. 6in., Mr. Leonard won with a cast of 97ft. 6in., and his rod was 10ft. 11in. long and weighed 9¾oz. Mr. James L. Breese and Mr. T. B. Mills tied for third place with 90ft. (Mr. Hewitt being second with 96ft.), and in casting off the tie Mr. Mills cast 100ft. and Mr. Breese 96ft. Mr. Mills's rod was 11ft. long and 10¾oz. in weight. Mr. Breese's rod was 10ft. 11in. and 10½oz. in weight.

I ordered a rod from England last year, and as I wished it made especially light Mr. Hardy said it would have to be specially made. When the rod came (it was a split-bamboo) it weighed about 10oz., so I imagine the ordinary fishing rods in England are quite a bit heavier than ours.

The salmon rod with which Mr. Hawes made his record cast (for this country) of 138ft. was 18ft. long and 37oz. in weight. I have a Scotch salmon rod 18ft. long (greenheart, made by P. D. Maelach, of Perth) that weighs 48oz.

Some of the rods used in casting on this side may have been made specially for tournament purposes, but I know personally that a number of these were the ordinary fishing rods of their owners. If the *Gazette* will give the weights of winning rods on the other side and compare them with those I have given we can find which side uses the most timber, and then perhaps we can find out how much of the long-distance casting is due to the action and "hang" of the respective rods in this country and England, and how much due to weight of timber in the rods.

Error in Printing Records.

The *Gazette* has a table of "Best Recorded Performances," and in the heavy bait-casting, as we call it (heavy spinning bait in England), the world's record is awarded to Mr. J. T. Emery, with a cast of 71yds. 1ft. (214ft.) from the reel. Mr. W. H. Wood, of New York, is in the same list with a cast of 86yds. 2ft. 1in. (260ft. 1in.), "Thames style." Mr. Wood cast from the reel, not Thames style, and his cast was 250ft., and to be correct the asterisk indicating "world's record" should be placed before Mr. Wood's name instead of Mr. Emery's.

Other Critics.

While I have been writing the *Fishing Gazette* for June 13 came in, and I am more and more convinced

that my friend Marston is mistaken in his desire to send away from home to acquire new methods that may win in long-distance fly-casting, for they seem to have some over there to dispose of.

One correspondent in his paper says: "I am much delighted to find * * * that there is a decidedly growing feeling that we have had enough showman casting with 'faked' rods at angling tournaments. Even the patient * * * has at last exhibited symptoms of tuning, and deep and widespread indeed would be his gratification if he could but hope that in further contests he should see real fishing rods only used by all competitors."

Another correspondent commends Mr. Hardy's able letter, from which I have already quoted, which "lets in a flood of light" on the manner of record casting, and adds: "I think, sir, the whole thing as it stands is a burlesque, and the sooner the casting conditions are altered the better. If extra heavy lines must be used, and thrown out with great force to drag so much of their line after them, might one not as well try which man could do best at throwing a line with a chopstick, as used on the Yarmouth sands, and call it fly-fishing?"

After all is said, I think in a contest between Messrs. Enright and Hardy and Hawes and Leonard under similar conditions, no matter what they are, the spectators would get a race for their money. A. N. CHENEY.

FLY-FISHING

On the North Shore of Lake Superior.

[*Continued from page 497.*]

These indications were favorable for a glorious outing, and as a south wind was filling the air with fragrance and the lake with lovely ripples, we felt confident that our lures would not sail and drop and dance without attracting some golden fins.

After breakfast Ned busied himself in making an addition to his stretcher fly, a red-ibis, by completely surrounding it with some intensely red worsted yarn. He said, in explanation of his crafty work (?), that his red-ibis had tempted all the trout he had yet caught, and that a little more ruby attached to it would, he thought, doubly increase its attractiveness. "Shape with me," he continued, "is nothing, and though this looks like a miniature dusting brush, I'll risk my reputation that it will prove a first-class deceit."

"The trout will assuredly come tumbling after it," I remarked as I examined it, with a lurking smile stealing forth.

"Save your satire till the trial is made."

"Beg pardon, my language savors not of it."

"No, but that old cynical smile of yours did."

"Better a smile than a frown."

"Even so, but smile honestly, not significantly."

Ned really had the analysis of that smile down to a fine point, and thinking discretion the better part of valor, I withdrew from the contest, expecting to even up on the failure of his "dusting brush," if it so resulted, and I was almost positive it would. The boys now announced that the boat was all ready, and so gathering up our tackle we tramped down an inclined road that was painfully rocky and soon reached the stanch old Mackinac, and then on boarding her crossed over to the main shore opposite, a distance of about 200yds.

The work of enticing commenced at once, and so full of hope were we that morning, and so trouty looked the rocky bottom, that we expected at every cast to see some tigerish trout break water around one or the other of our lures, mine being a Montreal and a Parmachenee-belle, while Ned's consisted of his grand creation, the "dusting brush," and a silver-doctor. After reaching a point which turns at a right angle and runs to the Aguawa, Ned had a tumultuous response at his red idol of red yarn which so completely encompassed it.

"Ah, ah," says he, when he heard the tinkling melody of his silver reel, "what do you think of my red duster now?"

"What I always did, a frightful fraud."

"Indeed, but it tempts the trout."

"That was simply accidental, and I'll bet the trout is a slovenly piece of painted patchwork."

"Oh, he is a fright, is he; wait a bit and I'll show you a *facsimile* of the handsomest trout that swims or lurks in rocky crest or cranny."

Wait I did, and when Ned after a gallant fight had his trophy boated he showed up with the sun gleaming on his ruby side, as matchless a piece of work in red and gold as ever swam with spangled bride in crescent pool or stemmed a rippling current o'er golden beds of sand.

"What do you think of my beauty now?"

"I think he is a zany to be taken in by your abortion of a fly."

"Oh, you are dodging the question. His points of beauty, what of them?"

"I don't think he would ever receive the golden apple in a prize show."

"Hello, there," said Ned, as another infuriated trout lashed the water around his gob of red, and then started off with it in his gory jaws as if he had a deep attachment for it, "don't the sunset scarlet take 'em in? This is accident No. 2, I presume."

I was deaf to his piquant chattering and could see nothing but my sailing flies and their down dropping in the water.

"I say," he continued, by way of further aggravation, "ain't he a lovely cherub? See that leap and now the desperate dash!"

"Say, Ned, pull in that fish and don't gabble so much. You'll frighten away everything that swims."

And thus the good-natured chaffing went on until finally I struck a goodly trout and had a most exciting battle with him.

He was over 2lbs. and had an affinity for the Parmachenee-belle, the most attractive fly on the lake.

We fished awhile longer and then proceeded along the ragged shore, where the slopes, the serpentine ledges and the bosses of projecting rock interlarded with scanty soil display all the colors of the rainbow, and in the distance may be likened to a painter's palette. The bolder tints show up in maroon, purple and chocolate, with broad bands of white and gray that give toneful variety to the bold beauty of these rocky and incongruous formations.

Finally reaching a big range of moss-covered rocks that ran in small parapets and which admitted of fishing therefrom, we here went ashore and sought convenient positions for casting. Ned selected a projecting point near where we landed, while I tramped to the very lowest extremity of the declivitous mass.

Ned was fortunate enough to hang a 4lb. beauty to his streaming and bloody-red yarns, and was therefore much delighted at their success. More than ever was he in love with his carmined creation, and I finally began to believe that he had at last succeeded in making a first-class killer. My flies were not doing much in the way of coaxing, and I therefore concluded to take a look at them. My Parmachenee-belle was in poor condition, being frayed to rags, but Montreal had nobly stood the thrashing it had received. My belle I discarded, and on looking over my book selected a scarlet-ibis. This was approximating Ned's famous pet, for it was scarlet red, and that was the color that he so dearly caressed and of which he had so generously ladened his red-ibis, believing that if a little is the thing more would be better, hence his woolen attachment in the shape of stringy streamers of blood-red dye.

Having made the change, I stepped forward in position and soon had the carmined fly making lurid streaks through the balmy air as it sought the waters. The cast gave me a fierce rise and a 2-pounder, and then I began to think somewhat as Ned did, "Any color so it is red."

We caught no more here, but on taking the boat we moved further down the shore. Reaching some jagged rocks that were piled in the water in the most eccentric confusion, where the shadows on the hillsides made the green of the forest seem like large masses of *chenille*, we awoke a couple of trout that came racing after our flies like famished tigers. Ned caught one on his red flambeau and the other came to my scarlet-ibis. Both fought like Trojan warriors, and both paid the forfeit of their insatiable greed to the patient anglers of the upper element. It was whiz and whip, deliver and recover, for at least a half an hour around these disintegrated and gritty crumblings of the adamantine shore, but no prince of the frescoed tribe arose to the glowing lures. We advance till we see the fluttering tents at the mouth of the Aguawa, and then we strike another débris of fallen walls which had made numberless homes for the rose-colored and peach-flushed Adonis of the mountain stream. Here we gave ourselves completely up to the pleasures of the gentle art till time no longer ran like the few sands in a delicate hour glass held by a fragile human hand. Enthusiasm, heightened by the fascinating pictures around, carried us completely away. We thrashed the waters right and left, and rise after rise broke the surface where our flies fell with snowflake gentleness. I lost two magnificent trout after having them ready for the net, and Ned not only lost the same number, but missed many a response through undue haste.

"Oh my, a little slower," advised the tanny Kenosh, and then when one of my heavy weights escaped he cried out in deep distress, "Why don't you save the fish?"

Patience, patience, my sun-browned boatman, here comes one, and a gallant fighter too; now he leaps, again he dashes and then he seeks some watery lair. Defeated in this, he starts out with but one purpose, and that to escape the wiles his unseen adversary has woven about him. The little slender wand bends like a weeping willow when he strives to tear out the cruel hook, and then again it so constantly pulls and guides him that he is expending his vigor to no purpose. Ah! he will sever the tireless thread upon a saber-edged rock, but he is again baffled, and now he hears the call of the executioner and is slowly and surely being drawn to his sad fate. His last forlorn hope is in the lovely Naiads and Nereids who he thought were yester morn sporting here in the silver ripples; but now, alas, they are doubtless out among the snowy breakers combing their silken tresses and singing their entrancing songs to their proud sovereign Oceanus. With a last look at the golden fretted sky, he is imprisoned in a network of threads and consigned to another element, where he sleeps his life away, with the waters chanting his dirge and the wild shore flowers yielding incense to the blazing sun.

"That all right, now catch other one that made big splash."

"Is that him?" says Ned, who had just hung another to his fiery fly.

"Must be. Is he big?"

"Nothing less than a 3-pounder."

"Good, good, they now come."

This was the last trout taken here.

ALEX. STARBUCK.

[TO BE CONTINUED.]

THE NEW JERSEY COAST.

ASBURY PARK, N. J., June 26.—The past week has brought joy supreme to the heart of the surf fishermen all along our coast. Striped bass are very much in evidence and are being taken at all the favorite points; particularly is this true of the inlets. Our piers are not favorite places of resort to the angler of experience this year, owing to the formation of sand flats in their immediate vicinity, caused by the erection of the jetties on the ocean front. Still there are numerous sloughs all along from which good fish are being taken every day. It is extremely doubtful if there were ever more bass taken thus early in the season. As if more particularly to emphasize the never-ending vagaries of fish life, the exact reverse of favorable tidal conditions are in order. Heretofore the flood tide has been considered as the proper time for bass fishing, whereas now from half ebb to dead low water give the best results, fully 80 per cent. of the fish being taken at that time.

The best versed among us are all at sea regarding the matter.

"Happy the man who, studying nature's laws,
Thro' known effects can trace the secret cause."

Kingfish are with us in abundance and good catches are being made. They are now in their best possible condition, heavy with spawn, and their colorings are beautiful in the extreme. With all anglers they are a prime favorite, being glorious game, and one of the finest of table fish when properly prepared. They are now entering the rivers and bays, and the angler would better prepare himself for their advent. They are always to be met with in the deepest water, and confine themselves apparently to the channels when feeding. They bite equally well day or night, and usually are best taken on a rising tide. The novice will find there is much to learn to successfully cope with the kingfish, as his quick nervous strike requires continual alertness on the part of the angler.

Weakfish are running pretty freely in inland tidal waters; some good catches are being made in the Shrewsbury River, while at Barnegat fishing is good and the outlook for the future is most promising.

Bluefish are being taken along the southern portion of the coast at all points where pound-nets are not used, as that system entirely precludes the possibility of taking them in their immediate vicinity. There is perhaps no fish shier of nets than the bluefish, besides the nets continually gather in all the bait fish, leaving the adjacent water entirely stripped of fish life. Notwithstanding the many obstacles in the way the angler has good promise that the season will be one of delight as regards surf and river fishing. LEONARD HULIT.

SALMON AND THE SINGLE TAX.

RESTIGOUCHE SALMON CLUB, Matapedia, Quebec.—*Editor Forest and Stream:* A big canoe with an athletic half-breed Indian at each end and a money-bags with a rod sitting in the middle. Out into the quick water above a great pool, in a river much like the Delaware. The pole grates softly on the stony bottom; the Indian mutters some gutturals; down goes a heavy anchoring weight and the fisherman, standing up with his 14ft. of greenhear or split-bamboo, begins to cast. The little fly trails below the wake of the boat; a long brown back comes suddenly and quietly to the top of the ripple. One moment—do no strike him like a trout—the reel whirs, down sits the fisher with the butt of his rod on his stomach, already the anchor is up and the guide paddles toward shore, watching intently to follow the great harmless fish in hi useless struggle. He dashes off, taking out the line so that the reel shrieks—he jumps; lower the rod tip, else he will get a purchase and smash everything. Now he tiring, reel up slowly, quicker, now quick! quick! he i coming this way. Hold up the rod and make him work against the strain and the current. At last the line is short—the salmon's belly rolls like a birch log in the dead water. Draw him in gently, gently, till the Indian get a long, sharp gaff hook under him; he strikes—he 25½lbs. of fish meat which cost you $250.

Such is salmon fishing right at a railroad station, and where even a tyro may kill salmon at not less than $5 per pound, and get exercise, health and amusement into the bargain.

I am only a guest here—not a member, because that modest luxury costs $6,500 down and an annual club due of about $500; then there are other reasons besides.

Most members stop three weeks each season, at a total cost of about $1,000 per year apiece.

An illustration of single-tax principles is to be found here. The fishing lease of one river (the Cascapedia) was sold a few years ago for $100 per annum. A few of the Restigouche Club members have just taken a new lease of it from the Government for $6,000 a year. Our enlightened republic would have sold the land for a song and would not have the sense even to tax it afterward.

Private possession with public ownership works well under this aristocratic Government, as it secures the preservation of salmon from destruction on the spawning beds.

On the other hand, a large river is "owned" by the proprietor of the land about it. He is a Boston gentleman, and has shrewdly bought up the netting privileges at the mouth of his river—and discontinued the fisheries.

The result is that his fly-fishing has improved, and the food supply and the demand for labor correspondingly diminished.

That is the way to make "lower classes."

BOLTON HALL.

Cayuga Lake Fishing.

ITHACA, N. Y.—No very alluring stories have reached me of bass fishing in Cayuga Lake. A few weeks at most should disclose some first-class sport at various bass grounds along the lake. The popular points for the sport may be checked off as Ludlowville, twelve miles north of this city, on the east side; Union Springs, Sheldrake, and for some distance both north and south of this latter place.

Cayuga Lake, embraced by a lovely country, offers very many delightful attractions to the devoted angler who respects the stories which the winds and the waters and a varying landscape have to unfold. Leaving Ithaca by boat or railway train, as he may elect, the traveler is confronted on either shore of the lake by fascinating bits of landscape. On the east rise rugged walls of rock packed by a dense growth of low-growing timber. The west shore, fringed by woodland, reaches out into a land of charming country houses.

A dozen miles northward and the wooded slopes disappear from the west shore, and splendid farms abut the water's edge. Steep, precipitous walls continue to crowd the east shore for a distance of fifteen or more miles. At the very edge of the water twists and writhes and fairly doubles upon itself the tracks of the Auburn Branch of the Lehigh Valley R. R. Gradually the stern and rocky aspect of the east shore disappears, and the gently sloping shores roll back into a rich and beautiful farming country.

Alternating stretches of scenery surprise and enthrall the observer from Ithaca at the head to Cayuga village at the foot of the lake. A trip up the lake in the early evening, including an unobscured sunset, will reveal to the angler a picture that will glow in his mind for many moons to come.

In addition to the bass fishing, perch, pickerel and muscallonge are to be taken in plenty.

At the Ithaca end of the lake, along the east shore, some excellent bass fishing was enjoyed last season. There seems to be no reason why the present season should not prove equally entertaining. M. CHILL.

The Moosilauke League.

PIKE STATION, N. H., June 20.—I send you under separate cover a copy of the constitution and by-laws of the Moosilauke Union Fish and Game League, concerning the organization of which I wrote you nearly two years ago. This league, I am glad to say, is prospering beyond the expectation of its founders. We have a membership of nearly 150, and have placed over 200,000 young trout in our local streams and ponds this season. We have closed for three years over fifty small trout brooks which serve as feeders for the larger streams of northern New Hampshire, and by the appointment of special detectives in different sections are keeping the law very thoroughly enforced, thereby insuring fine trout fishing throughout Grafton county in the near future. E. B. P.

NOTES OF BOSTON FISHERMEN.

BOSTON, June 29.—Mr. George Linder and Mr. Charles H. Maynard have returned from a successful fly-fishing trip to Moosehead. That lake has behaved rather badly for them, so far as wind and weather are concerned. For days they were wind-bound and could not fly-fish at all, but when fair weather did come, as it condescended to do once in a while, the fishing was all that could be asked. One of the party took a 4lb. and a 3½lb. trout on the same cast, and this was considered victory enough for one trip. They also actually rose lakers to the fly and secured them. Mr. Linder has his best flies tied in Europe.

Mr. Frank Raybold started for the Adirondacks Friday evening. He will go first to Chazy, where he will fish the trout brooks. Then he will go to Plattsburg and the Upper Saranac.

E. Frank Lewis is as fond of the rod and rifle, and more particularly the woods, as any man in the world. Only three or four years ago he made his first trip to Maine. He is just back from his spring fishing trip. The party was made up of Mr. Lewis, Mr. Russell Bowditch Beals, Miss Fanny B. Lewis and Miss Rice. They went to Lincoln on the Bangor & Aroostook Railway; thence to Lee and by buckboard to townships Three and Four. They lived in tents during all of their three weeks' trip, and yet without danger to the health of the young ladies, neither over strong. They caught trout in abundance, fishing Dobsis Lake the most of the time.

Mr. D. H. Blanchard has gone to his salmon river, the Northeast Branch of the Sainte Marguerite. Col. C. T. Keeler goes with him, and will remain for ten or twelve days, after which Mr. Richard O. Harding, of Appleton & Basset, has a standing invitation, and hopes that he shall be able to accept it. But so far the tackle trade has been so active that he could not get away.

L. O. Crane inherits a strong love for rod and rifle from his father. "He will go fishing and stay all day without a bite." Heretofore his outings have generally been at the Adirondacks and Lake George, where he has secured big trophies, but he is now planning a trip to Maine and will start for Bemis this week, and may also visit Kennebago and other points. There is danger that he will never go to the Adirondacks again; such is usually the fate of sportsmen of that region who visit Maine under favorable circumstances.

Mr. Oliver Ames is just back from the Restigouche. He reports excellent salmon fishing. Letters from the same preserve also mention the best fishing for years. Ex-Gov. Russell, with B. F. Dutton, has just returned from the Little Pabos. He reports lots of salmon and the biggest for years. He always has a good story of his fishing trips. This time he hooked a big one when casting for the shore. The big fellow took down stream for all he was worth. There was nothing for the Governor but to follow as fast as possible, down over stones and rapids, through pools and swift water. At last the fish was conquered, and the Governor was wet to the skin. The guide came up to gaff the salmon. The Governor cautioned him to be careful which he gaffed; he was as wet as the fish and had been in the water about as much. He also indulged in casting one day with an 8oz. trout rod and a small fly. A salmon that must have weighed 20lbs. struck and was hooked. Now came the trouble. The fish could not be held with so light a rig. The Governer called to three or four guides that were near. Two were stationed below the pool and two above. The fish would attempt to make a run out of the pool when the men would beat the water with oars and sticks and drive him back. At last he came to the gaff, but just as the guide was about to strike he rolled over and the small hook was out of his mouth. Those who think that Gov. Russell has been aspiring for the presidential nomination will here find that he has been doing something of an entirely different order. But presidents almost all fish.

C. H. Olmstead, who is fishing the St. John at Gaspé, P. Q., in company with C. G. Sias and Geo. Talbot, writes most glowing accounts of the sport there. They have been taking salmon of 24lbs., 17lbs. and great numbers of 14 and 15lbs.

Mr. W. J. Clemson, with three other rods, has been trout-fishing in the Trihon Tract, between Lake St. John and Quebec. A letter to Richard O. Harding mentions most remarkable fishing in that country, which is but little known to sportsmen. They have taken one 8¾lbs. square-tail trout, one 7lbs., two 6lbs., two 4½lbs., one 4lbs., eight 3lbs., a great many of 2lbs., and more than 200 of ½ and ¾lbs. The party is greatly pleased with the country. They were fishing for the above from June 5th to the 18th. Fly-fishing is the rule with them, and the trout rise with remarkable activity and force. It is suggested that this region is yet to become great for the trout and salmon fishermen. SPECIAL.

Mr. and Mrs. F. H. Talcott have just returned from a two weeks' trip to Belgrade Mills. They have had a charming time and enjoyed the fishing very much, getting a great number of bass, all with the fly. While casting at the mouth of a small stream Mr. Talcott hooked and landed a brook trout weighing 2 1-16lbs. He has always felt satisfied that there are larger trout in these ponds, and has had his belief proven both by his own experience and that of Messrs. Rickett and Curtis, the first of whom landed two at one cast, one of 4¼ and another of 2lbs., while the latter captured a beauty of 4⅛lbs. Some ill-advised persons put pickerel in the ponds some years ago, and these piratical fellows have nearly cleaned the trout out. Now the bass are having their time at the pickerel, and the trout will get another opportunity to thrive. A great number of trout streams empty into the ponds, and as they are all protected by a law closing them for quite a long time the trout ought to do well.

The Haverhill anglers have been having a good time with the bass up at Lake Wentworth in New Hampshire. Charles J. Halpen and City Treasurer John A. Glines landed over 100 in one day, all taken with the fly. Mr. Halpen mentions his cast, which was gaudy enough, being a scarlet-ibis, Parmachenee-belle and Col. Fuller. Other Haverhill men who were at the lake at the same time were Horace G. West, Seth C. Bassett, Enoch H. Howes and ex-Alderman Frank E. Watson. They all did well and think Lake Wentworth about the right place to go bass fishing.

The average man who goes fishing in Maine returns to his home satisfied with his luck and the locality he has visited, but I had the pleasure of listening to a Boston man (a day or two since) who thinks he has found and visited one of the best places that lies out of doors. A. F. Clark, having occasion to go to Caribou, Me., on business, was induced to make a trip to Square Lake to try the fishing. This beautiful sheet of water is nearly fifteen miles long and four or five miles wide, and as for the fishing, well, according to Mr. Clark, it is just right. His first catch of trout included six, which tipped the scale at 21¼lbs., and they were beauties too. Another feature which should always go with good fishing is picturesque scenery, and this abounds in plenty around Square Lake. There are several other lakes connected with this body of water, namely: Eagle, Cross and Mud lakes, all of which are deep in the green woods, and said to be well filled with trout.

I think the region must be all that Mr. Clark claims, since I have the evidence of another Boston man who has been up in that country—in fact, only just returned. T. H. Rollinson, of the Oliver Ditson Co., accompanied by Mrs. Rollinson, spent two weeks in the neighborhood of Big Fish Lake, and judging from his vivid description of the trip he surely reached there and captured some of the big fish for which the lake is named. He went first to Ashland, and then by team to Portage Lake, ten miles north of there. From this point the journey continued in canvas canoes—which he states are both strong and broad of beam—and was paddled by the guides five miles up the lake to Fish River, which is practically dead water for a distance of four miles. Above this the canoes were poled for two and one-half miles, and about three hours more of paddling brought him to the lake. The camps are managed by Peterson, McNally & McKay, all noted guides of the region. Good fishing can be had on the trip up the river, and in the Thoroughfare, just before reaching the lake. The trout run from 2 to 2½lbs., and are very game. In the lake they reach 4 and 5lbs. Mr. Rollinson remarks that a 5lb. trout in these waters is as long as a Rangeley 8-pounder, and fights according to his length. The lake is five miles long, with an average of one mile in width. It is surrounded by high ridges covered with green timber, and the scenery is magnificent on all sides. The camps—while not up to those of the Rangeley and Dead River regions—are rapidly improving, and he thinks the whole locality will soon be acknowledged as a sportsman's paradise.

U. S. Senator Redfield Proctor, of Vermont, passed through Boston on Wednesday en route to the salmon rivers of the provinces. He goes first to the northwest Miramichi, then to the Nepissiquet, and winds his trip up on the Tobique waters, being a member of the Tobique Salmon Club.

F. A. Larkin, of New York city, has just completed his annual fishing trip to Lake Winnebago in Wisconsin. It is nearly all bass fishing up there, and the party of Milwaukee men with whom he has gone for many successive years had the best luck of their experience on this trip. A large steam launch was their traveling conveyance, and tents were taken for camping out. Three hundred and sixty-four bass, all over 2lbs., were captured before they stopped counting. They are all expert bait casters, and it is a lucky bass who escapes capture if his presence is suspected anywhere neat the boats of this party.

HACKLE.

On a Stocked Stream.

I HAD just got my rod together, and was hooking on a worm, when the owner of the brook, a sturdy and somewhat ill-looking farmer, appeared on the bank beside me. I offered a short salutation, and received one in return considerably shorter than my own.

"Any trout in this brook?" I asked.

"Chock full on 'um."

"You allow fishing here, of course?"

"Yaas, ef the pay is all right."

"How much?"

"Five dollars a trip, now she's stocked."

"Oh, she's stocked, is she? Well, I'll give you $5: in advance, too."

He pocketed the money, and I swashed down the brook, a basketful of half-pounders swimming before my dazzled vision. In the first three miles the only bite I had was from my coat pocket. I spent an hour casting in "The Pool," another one through "The Cut" and finished out the afternoon skirmishing around the shores of "The Pond." Then night came on, and I was glad. If ever I have an evil deed to perform, anything like murdering an able-bodied farmer, I prefer to do it after dark. On my way to the station I stopped at the house of the farmer and inquired for him.

"Pa's gone tur the village," said the boy; "he got some money turday, so he's gone over tur git some groceries."

"Your father told me the brook was stocked," I said fiercely.

"So 'tis."

"I don't believe there's a trout in it over one inch long."

"I don't nuther," said the boy; "pa didn't stock it tell las' summer."—*Philadelphia Ledger.*

Men I have Fished with.

THE announcement under this title in the last FOREST AND STREAM brought two valuable contributions to the biographies of Reuben Wood and George Dawson. As these are among the first they are very acceptable. If friends will respond to the appeal for items in the lives of men mentioned last week as promptly as they have done in the two instances named it will be a great help. Who knows about the old bachelor, semi-hermit, hunter and trapper, Port Tyler, of Greenbush, N. Y., his early history and the date of his death? I have a store of anecdotes of him, but lack the points named. He comes into the series early, and so the items are needed soon. Next week the series will begin with the late Reuben Wood, of Syracuse, N. Y., who passed his youth in Greenbush. Items in manuscript or newspaper clippings may be sent to me at No. 63 Linden street, Brooklyn, N. Y.

FRED MATHER.

The Kingfishers in 1896.

THE Kingfisher party, which will number a full dozen this season, contemplate going to Burt Lake for their piscatorial outing. The lake is about twenty miles beyond Petosky, and was formerly noted fishing waters. Old Hickory said that was the location he had mapped out, as it promised a greater variety in fishing than other localities they have had under contemplation. Brook trout and grayling are in many of the streams that pour into it, and then again they are not far away from telegraph and mail facilities. Some one or two of the party are quite eager for the capture of muscallonge, and desire to influence the party for the waters where the gameful fish so proudly rove and grow to such magnificent proportions. Go where they will, they will have an avalanche of sport, even if they occasionally have to start a searching party for a "lost man" or two. ALEX. STARBUCK.

American Fisheries Society.

GLENS FALLS, N. Y.—*Editor Forest and Stream:* At the last annual meeting of the American Fisheries Society it was resolved to restore to the published transactions of the Society the list of deceased members which it was formerly the custom to publish therein, and which, perhaps by an oversight, has been omitted for a few years last past.

I will thank the members of the Society if they will consult the printed transactions and inform me of the decease of any active, honorary or corresponding member enrolled in any year since the creation of the Society, as I find that the last printed list of deceased members is imperfect to my own knowledge and must be so to the knowledge of other members.

A. N. CHENEY, Recording Sec'y.

"Uncle Lisha's Shop."

FOUNTAIN POINT, Mich.—*Editor Forest and Stream:* Would it be fair to ask Mr. Rowland E. Robinson to tell us what the women of Danvis were doing while Uncle Lisha and associates were in camp?

Tell him there is a heart-broken widow here getting more real comfort out of "Uncle Lisha's Shop" now than from all other human agencies.

Nature is God's great restorer, with time and duty. These books are vivid gleams of nature bound by a master hand into beams of everlasting light. They belong with the gems of the English tongue. J. B. DAVIS.

The Kennel.

FIXTURES

BENCH SHOWS.

Sept. 7 to 11.—Rhode Island State Fair Association's fourth annual show, Providence, R. I.

Sept. 7 to 11.—Toronto Exhibition Association's eighth annual show, Toronto, Can. C. A. Stone, Sec'y of bench show.

Sept. 14 to 17.—Montreal Kennel Association's bench show, Montreal. G. Lanigan, Sec'y.

Sept. 22 to 24.—Milwaukee Kennel and Pet Stock Association's second annual dog show, Milwaukee Louis Steffen, Sec'y.

Oct. 6 to 8.—Danbury Agricultural Society's show, Danbury, Conn. G. M. Rundle, Sec'y.

Dec. 15 to 18.—Central Michigan Poultry and Pet Stock Association's show, Lansing, Mich. C. H. Crane, Sec'y.

FIELD TRIALS.

Sept. 2.—Morris, Man.—Manitoba Field Trials Club. John Wootton, Sec'y.

Sept. 7.—Kennedy, Minn.—Continental Field Trial Club's chicken trials. P. T. Madison, Sec'y, Indianapolis, Ind.

Oct. 9.—Brunswick Fur Club's annual meet. Bradford S. Turpin, Sec'y.

DOG AND PICTURE.

PHILADELPHIA.—*Editor Forest and Stream:* I read with much interest in FOREST AND STREAM of June 27 the reply with which Rev. Charles Josiah Adams honored my communication, published in your issue of June 13. I feel some constraint in joining issue on the subject of mental science with an authority so acknowledged and so eminent as is Mr. Adams. I feel it the more so as I am not certain that I know very much about the matter any way, though I have read a great deal about it and have given it much thought. Many of the authorities which I have consulted manifested unintentionally the like uncertainty. Nevertheless, as my imperfect knowledge and my doubts may be shared by others, my attempts at a reply may confer a general benefit by inducing Rev. Mr. Adams to dispel them and all others of like nature entertained by any one else.

At the very outset it is obvious that the discussion is necessarily restricted and hampered for sundry reasons, so that we are required to assent to much that is assumed as if it were a matter of fact. It would be useless to discuss the objective and subjective world as it applies to the mentality of man, and then assume it as data in proving the mentality of the dog; first, because analogy, however true and convincing it may be, is never a demonstration, though it may be of use in establishing an inference. Again when the analogies are isolated and new to our experience they may be simple matters of coincidence and not truly analogous in a manner necessary to establish the soundness of argument.

To begin fairly, Rev. Mr. Adams and myself agree on the dog having the powers of cognition. I believe that the dog has the ability to reason, though in simple forms as compared to the ability of man to reason. Our divergence of views is at a point where the views of all psychologists diverge—that is, when they attempt to define the inner workings of the mind, the subjective phases of it, the pure mentality; that is to say, in considering the workings of the mind within a man's own head and the minds of other men working inside of their heads. If we observe a man in deep thought, with no exterior action, we cannot tell with any accuracy what his thoughts are or indeed whether he is thinking at all. But in all that exteriorly designates the workings of the mind mankind is fairly well agreed. In such mental phenomena as are readily observable there is a uniformity in their action and

purpose. We observe that certain expressions and actions have certain meanings. But when the psychologist turns inwardly to the study of his own mind (introspection)—for it is the only mind he can study after he has passed a certain stage in the phases of mind—his conclusions are according to his own powers of reasoning, be they good or bad.

Thus, from the ancient philosophers down through the Scotch and English schools of metaphysicians, there were indeed very few who agreed one with another on anything pertaining to the science of mind. If the world's psychologists could not formulate a science of mind applicable to man, how can any science of mind be formulated for an entirely different animal, whose subjectivity, or the inner workings of whose mind, cannot be known even by analogy, as looking into our own mind we do not know that the mind of the dog is in any way related to it. If we ask our fellow man if his mind works so and so, he will tell us that it does or that it does not, and thus we can verify our proposition. But we can ask no question of the dog. We judge his mentality by the visible phenomena (the emotions which he displays, and as being analogous to our own.

I will review more minutely Rev. Mr. Adams's arguments, first repeating that I agree with him perfectly in holding that the dog has powers of cognition, but qualifying it by not necessarily admitting that that term includes the higher complex mental processes of reflection such as are conceded to man. So much has not yet been proven. To illustrate this point, let us take the simple matter of eating. The dog is hungry. He eats to satiety to appease his appetite, yet he does not know why he eats and he never seems to care why he does so. His bodily cravings are the impelling cause. He can cognize what is food and what is not, but he never reflects on why he eats or what are the effects of eating, or what are the consequences of not eating. He seems to have a limited knowledge that certain causes will produce limited results, but his reasoning is always simple and direct. It never takes any mediate forms. He never makes any abstract reasonings. A thing actually exists or it does not. If the dog cannot understand certain things he drops the whole matter. He goes on in his own little world of simple cognitions. He has not even an axiom to guide his intellect. And here let me say that I believe that the rules of logic have done more to set in the background the dog's just claim to possessing powers of reason than all other causes combined. The artificial formula of reason, the syllogism, that absurdity of logic, is not essential to good reasoning and absolutely falls short of meeting the simplest requirements of it. Yet because a dog's reasoning may not have been according to the rules, it does not follow that his reasoning is not good reasoning any more than that the reasoning of the savage is not good reasoning.

In his first letter on May 30 the Rev. Mr. Adams says:

> It has always been a mooted question in comparative psychology whether a lower animal has the power to perceive a portrait. Mark the word which I use—portrait. That a lower animal can perceive a reflection there is no doubt. Upon this recognized fact the advertiser played in the picture which, a good many years ago, appeared on the box-lid of a certain shoe-blacking, which picture represented an interesting terrier barking at his reflection in a highly polished, great pair of top boots, which polish could not have been attained by the most accomplished boots had not the blacking within been discovered and compounded.
>
> To a dog lover there is nothing much more amusing than a frouzy cur's violently barking at his own reflection in a mirror. He evidently thinks the reflection a dog. He tries to get at it. He fails. He tries again with somewhat of uncertainty. A question has arisen in his mind. He draws back. He fears. There is something uncanny in the situation. What has every appearance of being a dog is not a dog. With his tail between his legs and maybe a yelp, he slinks away, glancing furtively back over his shoulder. Now take the frouzy cur, wash him, pet him, allow him to see his reflection time and again, and he will come to know it to be a reflection as well as you do.

Concerning the closing sentence, will Rev. Mr. Adams kindly cite an instance as a precedent to sustain that statement.

That a dog can perceive a reflection there is no doubt, but he does not recognize it as a reflection. He cognizes it as a reality. All his acts indicate that he considers it a real entity. This Mr. Adams appreciates when he says in the above quotation: "He evidently thinks the reflection a dog."

The data do not justify the conclusion that a dog can recognize a portrait. Mr. Adams here arrives at a definite conclusion by inference. It is really a verbal conclusion. The matter still stands as a proposition, capable of maintaining a dozen other inferences quite as truly as it does the inference given it by Mr. Adams. After a dog finds that his efforts are vain, no matter what he may be engaged in, he soon desists. In the matter of his own reflection, which to him appears to be a different dog, he finds that it is something which he cannot solve, so he drops the whole matter. Man will gaze with interest on a reflection, knowing it to be such, and admire its fidelity to the original. The dog refers it to nothing. To him it is in itself the original. The dog will refuse to gaze on his own reflection so soon as he is convinced that the reflection is not a real dog. He doesn't recognize it as a reflection. He doesn't understand it, so he gives up the matter entirely.

The other example, that of a fox terrier, as the dog in Æsop, jumping into a stream after the reflection of a bone, shows that the dog did not consider for a moment that the reflection was other than a genuine bone. To him it was a bone in reality. If he were to see another bone reflected he might not plunge after it, not because he recognized that it was the reflection of a bone, but because that he had been deceived and his prior attempt resulted in failure. It was not necessary for him to know in what way he was deceived or the manner in which it was done. The fact alone that he was deceived would be sufficient to impel him to desist from further effort.

Picking up pieces of tin on which were the figures 1, 2, 3, 4, etc., according to the number called out, was not necessarily a cognition of the figures as figures, but from the unlikeness of one tin from the others made distinguishable by the different shapes of the figures. It was precisely in the same manner that the dog would recognize a shoe from a hat by the difference in shape. The figures as a means of notation never entered the dog's mind. In such cases as trick dogs pick a block out of a row of blocks, each bearing a certain number, to the observer the dog seems to pick out the block with the designated number by intelligent perception, when in reality he picks out the correct block by secret signal from his master. I once watched a trainer in a public exhibition make his dog do this trick, and although I was satisfied that the dog was working to signal, I could not detect the signal. Later, from a friend who knew the owner of the dog, I learned that the signal was given with the trainer's big toe. Moving it upward raised the upper of the shoe, thus making a perceptible motion, and this raised at the right moment gave the dog the signal to take up the one at which his nose was nearest. But granting, in the case cited, that the dog did pick up the correct tin simply from a recognition of its difference from the others, the act required no mediate course of reasoning, such as would be required in the recognition of a portrait. Such an act was an act of direct mental cognition, and required no power of mental representation. It was precisely the same power to recognize differences that a dog trotting on a level displays when he comes to a doorstep, changes his gait in ascending it and nimbly jumps up two or three steps at a time.

Again, in recognizing colors as Mr. Adams mentions, the colors served to show differences plainly perceivable to the eye. They had no reference to anything else as colors. It again was a direct cognition. The dog did not think of green being the same color as the grass or as the leaves of the trees. It is doubtful that he thought of them as colors at all. The difference served to make an unlikeness only. There is nothing to show aside from mere verbal conclusion that he recognized the different colors or that it was at all necessary to the successful accomplishment of the feat which he performed. It was a matter entirely of unlikeness and not of color. It was the same as the dog would recognize differences of smell by their unlikeness, or differences of sound by their differences impressed on the sense of hearing. Again, a dog might recognize an object by its color, since the color made an unlikeness, though as a matter of fact the dog trusts almost entirely to his sense of smell in determining what an object is. Let his own master return after a short or long absence and the dog rarely concedes his identity at once. If he does not dare to approach direct he will take a circle till he gets the wind, then when the sense of smell vouches for the person's identity he immediately abandons all suspicion and comes to his master with full confidence.

A dog might be deceived by a painting of a beefsteak as he was by his own reflection in the glass, but in either instance it was to the dog a mental reality. Failing to find it a reality, he abandoned it entirely as something which he did not understand. Being absolutely without knowledge of such a thing as painting, or that there was such a thing as a likeness, he could only in his simple way give up the matter, as he had no knowledge of causes or that they even existed.

Now, when the matter of recognizing a likeness is introduced, the instances cited as preparatory to the introduction of the dog's recognition of a portrait have no relevancy to it. All that have gone before are simple cognitions. The dog looking at his own reflection might discern that it was a reflection of himself, although the proof that he does so is regrettably insufficient. If he recognize the portrait of his master, it, instead of a matter of simple cognition, as in recognizing his own portrait, becomes a matter of complex reasoning. In other words, Mr. Adams cites matters of simple reasoning to prove powers of complex reasoning. The data advanced hardly warrant his conclusion. And in this connection let us examine his data a little more fully.

His friend's letter, on which he bases his conclusion, contains the following:

> My wife does crayon work. Last week she had on her board two portraits, each a striking likeness of its subject—the one of myself, the other of a friend unknown to Tiger. When Mrs. Creveling had about finished her work, and after my portrait had been placed in a frame and stood on an easel—the other being very near it—Tiger was admitted to the room. (You will please remember that some precaution must be taken before admitting him to a studio, as his tail is not conducive to the good order of such a place.) Immediately upon seeing his master in crayon he walked over to the easel and endeavored to kiss the face. It was covered by glass. A second attempt was made to show his recognition of and love for his master. He could only touch the glass. This trial was enough to convince him that any further attempts to kiss the object of his love would be in vain; so he lay down in front of the easel, his eyes riveted on the covered face thereon, and over his face passed an expression of combined disappointment and love that was truly pathetic. He would fain have kissed my cheek to tell me of his love. After a few moments of mental anxiety he rose, came over to where I was sitting, got on my lap (he weighs 105lbs.), kissed the living face, expressed his love, and fully showed his great delight that his master still existed in tangible form. The subject of the pencil, it is quite useless to tell you, was as much pleased as Tiger.

Let us now consider the actions of a man examining the portrait of a friend, or as the mental scientist would say, observe the mental phenomena which he exhibits. His face may take on a pensive look. He does not reach out to shake hands with it, or slap it on its shoulder, or talk to it. He knows it is only a representation. It is only a semblance—not a reality.

Now observe the actions of Tiger. They did not indicate that he knew the portrait was a representation of his master. He manifested all the emotion of gazing on a reality. "He walked up to the easel and attempted to kiss the face," says the writer of the letter. He made another attempt to kiss the face, but was again balked by the glass which was in front of the picture. Then "he lay down in front of the easel, his eyes riveted on the covered face thereon, and over his face passed an expression of combined disappointment and love that was truly pathetic." All these signs indicated that he considered the picture a reality. He attempted to kiss it. He was repulsed. He lay down before it and gazed on it as if it were his master really before him. He showed all the emotions coming from a genuine belief in the actual presence of his master. When he turned to his living master his expression of emotion was identical with that exhibited to the portrait. Nothing indicated that he knew or suspected that he was looking at a reflection—a portrait. The dog's actions were real, they were such as he displayed to his master's person, and the valid conclusion is that he thought that it was really his master which he beheld.

At the risk of appearing captious, I desire to say that the analogy between Tiger and Shakespeare seems a bit forced, since the Rev. Mr. Adams explains that Shakespeare was only more highly endowed with faculties which were not uncommon to his fellows. But Tiger, so far as the evidence goes, stood alone in his powers of intellect. If a man possesses powers which were never known to be possessed before by man, it is considered out of the domain of the genius and in that of the miraculous. But Tiger not being essentially different from other dogs, and the data being imperfect, and the inferences not being so convincing, and it not being shown that there are not many opportunities for many other inferences from the same data, ones contradictory to his perception of a portrait, is it not possible that all things which he can cognize are realities to him, and that Mr. Adams's inference is merely verbal? Take the similar traits exhibited by all dogs, note their relations to each other, and the legitimate conclusion is that they have no complex powers of reasoning in a purely subjective manner; that is abstract reasoning.

I believe with Mr. Adams that the dog has powers of reason; our divergence of belief is on the degree of it; and while my argument has been in a positive manner against Mr. Adams's data, I simply have endeavored to show that his proposition is not proven, and not that it is impossible. The data up to the present time do not sustain his proposition, nor warrant his conclusion. The matter to gain a belief with the world should be free from any *petitio principii*.

A. Posteriori.

E. F. T. Club's Derby Entries.

Herewith is the list of entries for the club's Derby, 49 in all: 29 setters and 20 pointers. Last year the entries for Derby numbered 40. Two years ago 35. The pointer men are waking up. Twenty pointer entries is the largest entry since 1888.

POINTERS.

John S. Wise's Robin, l. and w. dog (Strideaway—Beulah III.), March 8.

John S. Wise's Damon, l. and w. dog (Strideaway—Beulah III.), March 8.

H. S. Smith's Ripple, l. and w. bitch (Rip Rap—Pearl's Dot), May 24.

T. W. O'Byrne's Moerlin, b. and w. dog (Rip Rap—Belle of Ossian), March 4.

Furlough Lodge Kennels' Ridgeview Tammany, l. and w. dog (Lad of Kent—Ridgeview Tricks), May 24.

Furlough Lodge Kennels' Furlough Tricks, l. and w. bitch (Jarre—Furlough Cling), Jan. 25.

Furlough Lodge Kennels' Pat, l. and w. dog (Ightfield Upton—Ightfield Blythe), May 8.

Jas. S. Crane's Firefly, l. and w. bitch (Rip Rap—Clipaway II.), May 5.

Del Monte Kennels' Tick's Kid, b. and w. dog (Tick Boy—Lula K.), April.

Del Monte Kennels' Toney Works, l. and w. dog (Tick Boy—Lula K.), April.

Dr. C. I. Shoop's Aloysia, l. and w. bitch (Rip Rap—Dolly D.), May 12.

W. I. Love's La Dolle, l. and w. bitch (Love's Kent—Fritz Fay), May 12.

T. W. O'Byrne's Red Skin, l. and w. dog (Love's Kent—Fritz Fay), May 12.

Charlottesville Field Trial Kennels' Sahib, l. and w. dog (Delhi—Selah), April 13.

Charlottesville Field Trial Kennels' Rupee, l. and w. bitch (Delhi—Selah), April 13.

Charlottesville Field Trial Kennels' Deccau, b., w. and t. dog (Rip Rap—Dolly D.), May 12.

Hempstead Farm Kennels' Hempstead Druid, dog.

W. B. Townsend's La Rosa Elgin, b., w. and t. bitch (Kent Elgin—Julia Paine), Feb. 3.

F. R. Hitchcock's Tory Maxim, l. and w. dog (King of Kent—Queen's Grace), April.

F. R. Hitchcock's Tory Maid, l. and w. bitch (King of Kent—Queen's Grace), April.

SETTERS.

Robert Dudley's Ney, b., w. and t. dog (Roi d'Or—Tory Lit), April 15.

Robert Dudley's Lawnes, b., w. and t. dog (Roi d'Or—Tory Lit), April 15.

H. B. Ledbetter's Walter Gladstone, b., w. and t. dog (Gladstone Boy—Nat's Queen), March 6.

P. Lorillard, Jr.'s, Merry Maiden, b., w. and t. bitch (Eugene T.—Maiden Mine), March 26.

P. Lorillard, Jr.'s, Lulu L., b., w. and t. bitch (Eugene T.—Beryl), Feb. 20.

P. Lorrillard, Jr.'s, Olivette, b., w. and t. bitch (Eugene T.—Beryl), Feb. 20.

P. Lorillard, Jr.'s, Count Gloster, b., w. and t. dog (Eugene T.—Gloster's Girl), March 3.

P. Lorillard, Jr.'s, Maid's Lad, b., w. and t. dog (Eugene T.—Maiden Mine), March 26.

F. R. Hitchcock's Tory Rustic, b., w. and t. dog (Count Gladstone—Rhoda Rod), February.

John White's (agt.) Alma, bitch (Roi d'Or—Tory Lit), April 15.

Dr. Geo. Eubank's Rodstone, b., w. and t. dog (Cinch—Rod's Florence), Jan. 7.

A. C. Peterson's Minnie P., o. and w. bitch (Antonio—Nellie Bly), Jan. 25.

Avent & Thayer's Orester, b., w. and t. dog (Orlando—Dollie Wilson), April 29.

Avent & Thayer's Orinda, b., w. and t. bitch (Orlando—Dollie Wilson), April 29.

Avent & Thayer's Paladin, b., w. and t. dog (Count Gladstone—Hester Peyne), April 26.

Avent & Thayer's Peconic, b., w. and t. dog (Count Gladstone—Hester Peyne), April 26.

S. O. Cundy's Rod's Queen, b., w. and t. bitch (Rodfield—Opal), Feb. 1.

Geo. E. Gray's (agt.) Rod's Pell, b., w. and t. bitch (Rodfield—Opal), Feb. 1.

W. R. Holliday's Billy T., b. and w. dog (Revenue—Daisy B.), July 20.

H. K. Devereux's Grannon, b., w. and t. dog (Antonio—Nellie Hope), June 14.

H. K. Devereux's May Hope, l. and w. bitch (Anton—Nellie Hope), June 14.

Hobart Ames's Guenn, b., w. and t. bitch (Blue Rid Mark—Lou R.), April.

Hobart Ames's Christena, b., w. and t. bitch (Blue Ridge Mark—Lou R.), April.

J. J. Odom's Count Odom, o. and w. dog (Count Gladstone—Nellie Avent), January.

S. P. Jones's Hurstbourne Zip, b., w. and t. dog (Tony Boy—Dimple II.), May 20.

Charlottesville Field Trial Kennels' Pin Money, b., w. and t. bitch (Count Gladstone—Daisy Croft), May 18.

Charlottesville Field Trial Kennels' Shadow, l. and w. bitch (Count Gladstone—Daisy Croft), May 18.

Ernest Johnson's Queen of Morocco, b., w. and t. bitch (Spot B.—Miss Monk), Jan. 5.

Furlough Lodge Kennels' Miss Busy, b. and w. bitch (Bold Rock—Furlough Belle), Feb. 26.

Simon C. Bradley, Sec'y.

U. S. F. T. CLUB'S DERBY ENTRIES.

ENGLISH SETTERS.

GEORGE EUBANK'S b., w. and t. dog Rodstone (Cinch—Rod's Flounce).

F. R. Hitchcock's b., w. and t. dog Tory Rustic (Count Gladstone IV.—Rhoda Rod).

George Gould's b., w. and t. bitch Miss Busy (Bold Rock—Furlough Belle).

Charlottesville F. T. Kennels' b. b. bitch Pin Money (Count Gladstone IV.—Daisy Croft) and lem. and w. bitch Shadow, same breeding.

H. B. Ledbetter's b., w. and t. dog Walter Gladstone (Gladstone's Boy—Nat's Queen).

H. Ames's b., w. and t. bitch Queen (Blue Ridge Mark—Lou R) and b., w. and t. bitch Christina, same breeding.

Fox & Blyth's b., w. and t. dog Potomac (Antonio—Countess Rush) and b., w. and t. dog Carolina, same breeding.

J. J. Odom's o. and w. dog Count Odom (Count Gladstone IV.—Topsy Avent).

A. C. Peterson's o. and w. bitch Minnie P. (Antonio—Nellie Bly).

J. White's (agt.) b., w. and t. bitch Alma (Roi d'Or—Tory Let).

S. L. James's b., w. and t. dog Tartar (Count Gladstone IV.—Rod's Sylph).

P. M. Essig's b., w. and t. bitch Saragossa Belle (Gleam's Pink—Maud E.).

J. P. Greene's b., w. and t. dog Robert Emmet (Sam Gross—Bess R) and b., w. and t. dog Sarsfield (Rodfield—Opal).

E. C. Johnson's b., w. and t. bitch Queen of Morocco (Spot B.—Miss Monk).

S. P. Jones's b., w. and t. dog Hurstbourne Zip (Tony Boy—Dimple).

R. D. Winthrop's b., w. and t. dog Ney (Roi d'Or—Tory Let) and b., w. and t. dog Lamas, same breeding.

S. O. Cundy's b., w. and t. bitch Rod's Queen (Rodfield—Opal).

W. R. Holliday's b., w. and t. dog Billy T. (Revenue—Daisy Bondhu).

H. K. Devereux's b., w. and t. dog Grannan (Antonio—Nellie Hope) and lem. and w. bitch May Hope, same breeding.

Avent & Thayer's b., w. and t. dog Arc (Count Gladstone IV.—Hester Phryne) and b., w. and t. dog Angle, same breeding, and b., w. and t. dog Abacus (Orlando—Dolly Wilson) and b., w. and t. bitch Node, same breeding.

George E. Gray's (agent) b., w. and t. bitch Rod's Pell (Rodfield—Opal).

Theodore Goodman's b., w. and t. dog Albert Lang (Count Gladstone IV.—Dan's Lady) and b., w. and t. dog Dave Earl, same breeding.

P. Lorillard, Jr.'s, b., w. and t. bitch Merry Maiden (Eugene T.—Maiden Mine) and b., w. and t. bitch Luta L. (Eugene T.—Beryl), and b., w. and t. bitch Olivette, same breeding, and b., w. and t. dog Count Gloster (Eugene T.—Gloster's Girl), and b., w. and t. dog Maid's Lad (Eugene T.—Maiden Mine).

POINTERS.

Charlottesville F. T. Kennels' l. and w. dog Sahib (Delhi—Selah) and l. and w. bitch Rupee, same breeding, and b. and w. dog Deccan (Rip Rap—Dolly D.).

F. R. Hitchcock's l. and w. bitch Tory Maid (King of Kent—Queen Grace).

G. Eubank's b. and w. dog Ripstone (Rip Rap—Pearl's Dot).

George Gould's l. and w. dog Ridgeview Tammany (Lad of Kent—Ridgeview Tricks), and l. and w. bitch Furlough Tricks (Jone—Furlough Cliney), and l. and w. dog Furlough Pat (Ightfield Upton—Ightfield Blithe), and lem. and w. bitch Furlough Peach (Verdon Prince—Peach).

F. W. O'Byrne's b. and w. dog Moerlein (Rip Rap—Belle of Ossian) and lem. and w. dog Redskin (Love's Kent—Fritz's Fan).

W. I. Love's lem. and w. bitch La Dolle (Love's Kent—Fritz's Fan).

George E. Gray's (agent) b. and w. dog Rip Rap, Jr. (Rip Rap—Pearl's Dot).

J. S. Crane's l. and w. bitch Firefly (Rip Rap—Clipaway II.

W. B. Townsend's b. and w. bitch La Rosa Elgin, (Kent Elgin—Julia Paine).

Del Monte Kennels' b. and w. dog Tick's Kid (Tick Boy—Lulu K.) and l. and w. dog Tony Works, same breeding.

C. I. Shoop's lem. and w. bitch Aloysia (Rip Rap—Dolly D.) and b. and w. bitch Dympna (Rip Rap—Pearl's Dot).

G. A. Castleman's l. and w. bitch Maida (Rex—Nell).

Hempstead Farm's l. and w. dog Hempstead Druid (Sandford Druid—Hempstead Jilt).

H. S. Smith's l. and w. bitch Ripple (Rip Rap—Pearl's Dot).

H. K. Milner's l. and w. bitch Almeda (Rip Rap, Jr.—Prairie Belle).

H. H. Maybury's l. and w. bitch Alabama Girl (Von Arrow—Lady Mull).

T. T. Ashford's l. and w. bitch Elgene (Kent Elgin—Julia Paine).

The Pacific Fox Terrier Club.

WE are much obliged to the secretary of the Pacific Fox Terrier Club, Mr. H. H. Carlton, for his kindness in sending us the proceedings of his meeting, held June 12, and we trust that his friendly attentions will thus continue into the far future. We will ever rejoice at the club's prosperity, and have only good wishes for it. The present report, however, has some special features upon which we desire to make some remarks, and trust that the club will receive them in the same calm spirit in which they are offered.

We note that the main parts of the club's proceedings are really a disputation with a contemporary, and are directed to that end; and it seems to us that the matter would be a more homogeneous whole if kept together. We believe in the just liberality of permitting our contemporaries to harvest their own territory in their own way.

In this particular instance there is much to approve in the criticism upon the Pacific Fox Terrier Club, not perhaps as an organized club, but as it refers to many of its members. They should not wince so promptly at a single criticism when they so liberally pour out their criticism on others. Their action is in distinct contrast to the dignified silence with which Mr. Mortimer has treated the abusive utterances which have been bestowed on him since he judged at San Francisco at the invitation of the club. East of the Rocky Mountains Mr. Mortimer has suffered no diminution in the confidence and esteem of the dog fanciers, and we feel sure that when sober second thought holds sway, or time shall have better matured the knowledge and judgment of the disgruntled fanciers of the Pacific coast, their esteem and confidence in him will return. His fame and ability as a judge did not begin yesterday, and the confidence and esteem of those who know him many years are not to be dissipated by those whose judgments are based on their disappointments.

Wrangling, bickerings, jealousies, reciprocal attempts to wreck reputations among fanciers do not appeal favorably to the outside world, nor can such be very pleasant goodfellowship for the sportsmen and fanciers who are directly engaged in the puerile warfare. The world is large enough for everyone, and if everyone could but learn that it is so it would save many needless alarms and much groundless warfare. The reputation of a dog is of some value, as is also the reputation of a man, and if the fanciers can do no better they should give the man at least the same consideration they give the dog.

The Little Wunk.

THE little stranger arrived in this city yesterday and already his arrival has created considerable excitement, as he is probably the first of his kind ever seen by any one in Janesville. He is one of the famous wunk dogs and is very valuable, as there are only a very few in this country. He was imported from the interior of China, where they are grown for food, being known as the Chinese edible dogs. They are fed on rice, and this one with two others was brought over on the steamship Victoria by Capt. James Panton, who has made a specialty of obtaining these dogs. One of them was for Collector of Customs Henry Drum; another for Jay Sedgwick, who was the owner of the first wunk ever brought to this country, which created such a sensation in New York city; and the third was for Mrs. McCabe. This one was the only one out of the three that survived the effects of the trip.

He is a striking little fellow in appearance, being very small and very short, and covered with long brown hair which sticks out straight like thick wool all over his body and makes him look very plump. His mouth and tongue are jet black and his ears stick straight up. In fact, his head bears no resemblance whatever to a dog's, but looks almost exactly like a bear's. His tail is short and lies flat on his back. When he first came he was decidedly stupid acting, but after his dainty supper of rice and jelly he began to brighten up and soon began to show that he is very bold spirited and as full of mischief as any ordinary dog. Mr. MacLean's older and larger dogs were at first inclined to look at the new arrival with suspicion, and the great English mastiff looked as though he were about to make one mouthful of the little mite, but their master soon talked them into a spirit of toleration and ere long the wunk will doubtless be heartily received into the canine clan.—*Janesville (Wis.) Recorder.*

Pacific Fox Terrier Club.

SAN FRANCISCO, June, 1896.—The regular meeting of the Pacific Fox Terrier Club was held at 405 Powell street, President D'Evelyn in the chair. The secretary was instructed to have a circular letter printed setting forth the many advantages of the club, and to mail same to the fox terrier breeders of the coast.

Carried that the meeting nights be changed from Tuesday to the second Friday in each month.

The chair notified the members that he would appoint a demonstrator for each evening, who would be expected to conduct point judging and discussion of the standard.

Mr. Debenham was appointed demonstrator for the next meeting.

The following paragraph in regard to this club, taken from the *American Field*, was considered:

"The fox terrier men on the Pacific coast are all a-boil again. They always are when a San Francisco show has just passed into history. Unquestionably the gentlemen know a lot more than some of the best judges of a fox terrier in this country, but for all that we are foolhardy enough to venture the opinion that the outcry against the decisions of Messrs. Raper, Mortimer and Davidson is very fair proof that those decisions were in the main correct. Having satisfied themselves that the three judges named do not know the first thing about the points of a fox terrier, why do not the members of the Pacific Fox Terrier Club have a judge made to order? But before doing so perhaps they might as well put Mr. Geo. Bell and Mr. T. S. Bellin through the mill, if they can catch them."

The secretary was instructed to write the following letter to the kennel editor of the *Field* and spread same in full upon the minutes:

"Sir: At the regular meeting of the P. F. T. Club the paragraph in your issue of 30th ult. was brought before the members.

"I am instructed to inform you that the chages you make against this club are untrue, and we are surrprised that a journal of your pretensions would make such statements simply to oblige a reporter who we judge hesitates to make them over his own name."

After some further talk on terrier matters the club adjourned. H. H. CARLTON, Sec'y.

New Jersey Kennel League.

THE annual meeting of this club was held at Newark recently. The secretary said that the failure of the club to secure a suitable building in which to give another show left him without anything to report on, and as he had been subject to an attack, he wished to sever all connections that may bring him in contact with those concerned, and would decline all nominations. In spite of this and further protest, he was unanimously elected as secretary, but only agreed to serve until his successor was appointed.

The president reported that a further attempt made by him to secure a place for a show at Orange had been fruitless.

The treasurer reported that he had secured terms for the Industrial Hall, where the former event was given, the hall being in a satisfactory condition.

Miles A. Hanchett, of Orange, was elected president; Walter Browe, first vice-president; Dr. E. Guenther, second vice-president; August Hahn, third vice-president; Frank Linck, treasurer; Edwin H. Morris, secretary; Christian Feigenspan, chairman of the executive; with W. J. Whelan, John Brett, Carl Brandt, Dr. W. F. Thum, Otto H. Heintz, Chris. Kirschler Alfred Broote and Alfred Thomas as his colleagues.

New members were elected and a special meeting was ordered to make arrangements for a show.

EDWIN H. MORRIS, Sec'y.

M. K. and P. S. Association.

MILWAUKEE, Wis., June 27.—The Milwaukee Kennel and Pet Stock Association will hold a show under A. K. C. rules Sept. 22–25, at State fair grounds, Milwaukee. The premium list is in the printer's hands and I shall mail you a copy shortly.

Mr. W. W. Welch has resigned as secretary and the undersigned chosen in his place.

LOUIS STEFFEN, Sec'y.

POINTS AND FLUSHES.

"Reminds me of a story of a brother of mine out in Ioway," said the man on the step. "Had a fine setter dog—best hunter in the State. My brother couldn't shoot, so he wanted to sell him. But he couldn't, 'cause the dog had a twist in his tail like a pig. Cyclone caught that dog out in the buckwheat patch one day and just nacherally ironed out that tail like a broomstick. He sold the dog for $80 the next week."—*Chicago Tribune.*

The Monongahela Valley Game and Fish Protective Association is now arranging for its second annual field trials, to be run on its preserve grounds, Greene county, Pa., beginning Oct. 28. The Derby entry is $5 to nominate and $5 additional to start. Entries close Aug. 1. Ten per cent. is deducted from entrance money, the remainder divided into 50, 30 and 20 per cent.—first, second and third respectively. Judges, W. S. Bell and S. C. Bradley. Address S. B. Cummings, Secretary, 113 Wood street, Pittsburg, Pa.

One day last week policeman John H. Dwyer was arraigned before Justice Wentworth, charged by the Society for the Prevention of Cruelty to Animals with killing a Skye terrier owned by Miss Mary J. McDowell, 837 Sixth avenue, New York. Miss McDowell was taking a walk on Fifth avenue, and being weary sat down to rest on a stone in front of St. Patrick's Cathedral. Beauty, the Skye, which was killed, was a year old, and Topsy, the Irish setter, was three. They played on the turf in front of the Cathedral. Policeman Dwyer coming along gruffly ordered Miss McDowell to remove her dogs off the turf. Beauty, the puppy, a midget of a dog about a foot long and a few inches high, ran toward the policeman barking. The latter killed him with one blow of his club. In passing on the matter in the Yorkville Court, Magistrate Wentworth is alleged to have said that "I do not believe the policeman intended to kill the dog. It is a case for a civil action. However, I will withhold my decision for a few days. I do not think that the machinery of this court should be blocked by the consideration of a terrier dog case. If it had been my case I would have tolerated the dog's action for a few minutes and would then have hoisted him on the toe of my boot clean over the Cathedral spire." Truly an undignified utterance for a judge, one who is to impartially enforce the laws and be an example of obedience to them.

We are indebted to Mr. W. E. Warner for a photograph of the famous pointer bitch Lady Gay Spanker, owned by the Furlough Kennels, of which Mr. Warner is the efficient manager. The portrait hardly does full credit to Lady Gay Spanker, but for that matter such a circumstance is not uncommon.

If Mr. W. W. Titus will kindly inform us of his address, we will forward him some letters sent to him in care of this office.

Premium lists of the R. I. S. F. Ass'n are now ready for distribution. Address Mr. E. M. Oldham, Supt., care of Spratts Patent, 245 East 56th street, New York.

In our advertising columns C. T. Brownell, New Bedford, Mass., offers Gordon setters. John J. Barber, Toledo, O., offers St. Bernards. Supt. Cronin, New York, offers setter and spaniels. Arthur L. Bailey, Plymouth, Mass., offers pointers. R. I. Holbrook, Townshend, Vt., offers setter dog. Horace Smith, Monroe, N. C., will train setters.

KENNEL NOTES.

BRED.

Seaforth Kennels' (East Orange, N. J.)

Jersey Belle (37,770), St. Bernard bitch, Feb. 6, to Sir Hugh (34,716).

Lady Anna (20,331), St. Bernard bitch, April 19, to champion Melrose King (21,885)

Mr. H. H. Snedeker's Queen Lilian, St. Bernard bitch, April 26, to Seaforth Kennels' (East Orange, N. J.) Sir Hugh (34,716).

Mr. W. H. Wylie's Lady Violet II (40,885), St. Bearnard bitch, May 17, to Seaforth Kennels' (East Orange, N. J.) champion Melrose King (21,885).

Mr. C. W. Snow's Snow's Bess (34,457), St. Bernard bitch, May 22, to Seaforth Kennels' (East Orange, N. J.) champion Melrose King (21,885).

WHELPS.

Mr. C. G. Hopton's La Belle Charlotte (39,162), St. Bernard bitch, whelped, March 15, five dogs, by Seaforth Kennels' (East Orange, N. J.) champion Melrose King (21,885).

Mr. C. Farquhar's Rose F. (33,848), St. Bernard bitch, whelped, March 28, nine (two dogs), by Seaforth Kennels' (East Orange, N. J.) champion Melrose King (21,885).

Seaforth Kennels' (East Orange, N. J.)

Jersey Belle (37,770), St. Bernard bitch, whelped, April 9, ten (six dogs), by Sir Hugh (34,716).

Lady Anna (20,331), St. Bernard bitch, whelped, June 21, nine (six dogs), by champion Melrose King (21,885).

Mr. H. F. Foote's

Champion Meersbrook Maiden, black and tan terrier bitch, whelped, June 8, six (one dog), by champion Bromfield Sultan.

Whittle, smooth fox terrier bitch, whelped, June 22, three (one dog), by Marden.

Brittle Buzz, wire fox terrier bitch, whelped, June 21, six (three dogs), by Mister Great Snap.

SALES.

Seaforth Kennels (East Orange, N. J.) have sold

——, rough-coated St. Bernard puppy, to Mr. E. H. Dodd.

Seaforth Lady Bess (40,928), St. Bernard bitch, to Mr. John Irving Romer.

Seaforth Rex (41,030), St. Bernard dog, to Mr. W. H. Addoms.

Seaforth King (41,029), St. Bernard dog, to Mr. Thos. D. Smith.

Wheeling.

ONE WAY OF LEARNING TO RIDE.

MUCH has been said and written of the difficulties of learning to ride a bicycle, and from some standpoints the difficulties have been greatly exaggerated. For a man of athletic tendencies, who has a clear head and plenty of nerve, it is only a matter of an hour or two to learn the rudiments of riding, provided he sets about it in the right way.

The difficult thing, of course, to acquire is the art of balancing—pedaling and steering come naturally once this is learned. The reason that balancing is hard to acquire is because one must be in motion while learning. If, as the Irishman said, you could learn to ride standing still, all the difficulty would disappear. Realizing this fact, all the learner's efforts should be concentrated on the one point of balancing.

If he intends to learn without assistance, let him select some smooth piece of road or street, where he will not be interfered with, which has just sufficient slant in one direction to make his wheel run ahead of its own accord. Preferably he has borrowed an old wheel to learn on, for the spokes are sure to suffer even if the machine meets with no worse accident.

When the beginner has his bicycle at the top of the incline, let him straddle the rear wheel and leaning forward grasp the handle bars, and then, putting one foot on the step, push off down the incline with a series of hops. Of course the hill is not supposed to be steep enough to give the wheel any dangerous momentum. The grade should be just sufficient to keep the wheel moving, no more.

As soon as the rider feels the bicycle well under way, he should draw himself up on the step and stand there, crouching forward, but not for an instant thinking of getting into the seat. That will come in good season, but for the present it is safer to keep as near the ground as possible.

At the first attempt the learner may go 10 or 15yds. before the wheel "yaws," as yachtsmen say, so violently as to throw him off. He does not loose his feet, however, and if he keeps tight hold of the bicycle no evil consequences follow and he is ready to repeat the attempt.

The longer the learner tries the more his confidence increases, and he soon finds that the bicycle is perfectly willing to stand up while carrying him provided he humors it judiciously. He finds that instead of trying to bring it into the proper course by jerking the handle bar with all his strength in one direction, it is wiser to let the front wheel do about as it wants to, and to steer by swaying his body a trifle to one side or the other.

In the course of half an hour or so, if he is quick to catch on to its eccentricities, he will be able to let the bicycle coast a block or two without upsetting or leaving the road, and then his victory is assured. Nevertheless he should have his confidence well keyed up when he attempts mounting to the seat and catching the pedals. His victory is finally complete when he can ride to the foot of the hill upon which he has previously been coasting, turn around, and ride back up the grade to the starting point. Then he is in the position of the swimmer who has just acquired the art of keeping himself afloat. He has much still to learn in the way of endurance and skill, but he has mastered the rudiments of the thing, and accomplished the step at which so many halt.

There is nothing inherently difficult in learning to ride a bicycle. Children, who have no preconceived ideas as to how it should be done and no exaggerated ideas as to its difficulties, frequently learn to ride almost as soon as they get on a bicycle. But to learn easily confidence and fearlessness are absolutely necessary.

SPORTSMEN CYCLISTS.

LAST winter *Judge* printed a cartoon showing a number of sportsmen in pursuit of big game riding over the snow on bicycles equipped with tires a foot or more in width. An old hunter stands by watching the twentieth century crusters with frigid disgust, for the picture explains why he has lost his job of teaching them the use of snowshoes.

While we are not in a position to affirm that bicycles will ever become popular as a substitute for snowshoes in the pursuit of game, we have abundant evidence to show that they are fast becoming an important part of the sportsman's equipment.

Anglers find it profitable to ride to and from fishing waters on their wheels, which are more easily cared for than the old horse, and less susceptible to black flies when left out in the woods. Bird shooters reach the best covers quickly by the new method, and when they want to save the dog they train him to occupy a baby carrier and ride too. In New England where they shoot foxes the champion hunters head off their game not on the backs of thundering iron-shod horses, but on the silent steed that is shod with rubber.

We could multiply such instances by the score, but what is the use of arguing in support of a patent fact? Every sportsman can supply similar instances from his own experience.

Last summer, while going through a good deer country, some one cried out, "Look at the deer!" For an instant the illusion was perfect, but a moment later the vision resolved itself into a white shirted cyclist flying along a road that was none the best past the runway where not so long ago seven deer were killed in a single day

Mountains and sandy roads do not keep the sportsmen cyclists back. We find them on old tote roads far back in the big woods of the North declaring that the riding is better than on many of the rutty and travel-worn highways of civilization. And we find them skirting the cotton fields of the South raising more coveys than they ever dreamed of before.

The fact of the matter seems to be that the wheel is a pretty good thing after all, and that its possibilities have not by any means as yet been exhausted. A wheelman is a firm believer in the merits of his mount, and if he happens to be a sportsman too he will manage to go about anywhere that anybody else can go, and cover the ground several times as fast. And where he does strike a good piece of wheeling it is a pleasure to see him "let it out," so swiftly he flies and with so little effort.

TOWPATHS AS CYCLE PATHS.

SUPERINTENDENT of Public Works George W. Aldrich has issued orders to the superintendents of repairs of all the canals in New York State to do what they can to place the banks in condition for wheeling purposes without interfering with their regular duties. This order is designed not only for the benefit of the wheelmen, but also for the regular patrons of the canals, who will likewise profit by a smoother roadway for their hauling teams.

In making the extensive improvements authorized by the $9,000,000 bill recently passed by the Legislature, Mr. Aldrich believes that the wheelmen should be taken into consideration. The towpaths in many parts of the State offer the only level riding to be had, and in some cases the only feasible route for bicycle riders through the most picturesque sections.

By a little additional care in construction the towpaths can be made extremely good cycle paths, and they have an advantage over all other roads in their perfect grade.

Heretofore wheelmen using the towpaths have been looked upon as trespassers. The superintendent's order to his subordinates puts things in a different light, for it gives them rights along with the mules and the boatmen.

The mules and the boatmen, however, will not give up their monopoly without a struggle, and the immediate effect of Mr. Aldrich's order seems likely to be an increased hostility to the wheelmen.

There are 622 miles of towpaths in New York State.

New Worlds to Conquer.

EVERYTHING is coming the way of the bicycle. Within the last few months the railroads pretty generally have come to regard it as baggage. The city car lines and elevated roads are beginning to make provision for its carriage. And now the circus people acknowledge its influence. News comes that the Barnum & Bailey show has introduced a perfect system for checking bicycles on the show grounds. It looks very much as if transportation not only by horseflesh, but also by trolley and rail, in all but the largest cities will suffer as a result of the introduction of the improved method of human locomotion afforded by the bicycle.

Yachting.

FIXTURES.

S indicates races sailed by the Yacht Racing Union of L. I. Sound;
M indicates races sailed by the Yacht Racing Ass'n of Massachusetts.

JULY.

Atlantic Y. C. cruise—
- 3. Rendezvous, Larchmont.
- 5. Sail to Black Rock.
- 6. 1st run, to Morris Cove.
- 7. 2d run, to New London.
- 8. 3d run, race to Shelter Island.
- 9. Shelter Island, rowing races, etc.
- 10. 4th run, to Morris Cove.
- 11. 5th run, to Oyster Bay.
- 12. Disband at 10 A. M.

4. Larchmont, An., Larchmont, L. I. Sound.
4. Cor. San Francisco, San Francisco Bay.
4. Roy. St. Lawrence, 25 and 20ft., Montreal, St. Lawrence River.
4. Plymouth, outside race, Plymouth Harbor.
4 Pavonia, special, Atlantic Highlands, New York Bay.
M 4. Boston City, open, Boston, Boston Harbor.
4. Fox Lake, club, Fox Lake, Ill.
4. Beverly, 2d open sweeps, Buzzard's Bay.
4. Toledo, open, Toledo, Lake Erie.
4. Milwaukee, club, Milwaukee, Lake Michigan.
M 4. Plymouth, Duxbury and Kingston, union race, Plymouth Harbor.
4. Rochester, review and sail, Lake Ontario.
6. Winthrop, evening race, Great Head, Boston Harbor.
6. Cor. Atlantic City, ocean race, Atlantic City.
S 6. American, An., Milton Point, L. I. Sound.
9. Rochester, ladies' day, Lake Ontario.
11. Beverly, 2d cham., Buzzard's Bay.
S 11. Riverside, An., Riverside, L. I. Sound.
11. Hempstead, ladies' day.
11. Hull, club, Hull, Boston Harbor.
11. Winthrop, club, Great Head, Boston Harbor.
12. Winthrop, sail, Great Head, Boston Harbor.
13-17. Seawanhaka-Cor. international races, Oyster Bay, L. I. Sound.
18, 20, 22-25. Larchmont race week, Larchmont, L. I. Sound.
M 18. Quincy, open Quincy, Boston Harbor.

M 29-31 Quincy, summer cruise, Quincy, Hull Bay.
30. Rochester, club, Lake Ontario.

Tacoma and Satanic.

NEXT week promises some interesting racing in the Satanic-Tacoma matches of July 6, July 8 and if necessary July 10. The boats are matched for best two in three races for $150 a side, and the money has been put up and the courses, judges, etc., agreed upon.

The first race will be sailed over the South Boston Y. C.'s second class course, from judges' boat off Marine Park Buoy to Cow Pasture Buoy, to Buoy 7 off Fort Independence, to S. B. Y. C. barrel off Long Island Wharf, to S. B. Y. C. barrel off Moon Head, to Buoy 7, to finish; 9 miles. The second race will be sailed over the Massachusetts Y. C.'s triangular course from Winthrop Bar Buoy, around a mark at Nahant and the Graves Whistling Buoy; 10 miles. The course for the third race will be decided by lot. Y. R. A. rules will govern.

Both boats have a fine record as prize winners, and both are types of the racer, pure and simple, in which light construction plays an important part. Tacoma is the beamier boat of the two and carries the larger sail plan. Her chances are believed to be best in a breeze, though Satanic is not to be counted out in that sort of work and is certainly a flyer in light weather. The chances seem to be about even between the boats and betting on the result is likely to go on favoritism more than definite data. It is hard to pick the winner.

The race is a friendly one, and the main object is to settle the question of the better boat. Both sides have entered into the match with the best of feeling, but just the same there will be no throwing away of points. Tacoma is backed by J. T. Bache, of Harbinger, and will be sailed by Capt. Joe Turner. Capt. Daly backs his own boat, and will probably sail her himself, with Mel Wood for one of his crew.

Satanic was built in the spring of 1895 by Sheldon from a design by Mel Wood, of the Fore River Works, designer of Gleaner, and was presumably an improvement on the latter's model. She is 31ft. over all, 20ft. 6in. waterline, 8ft. beam and 10in. draft. She is very lightly built and carries a 500lbs. weighted centerboard. Her sail area is a little over 600sq. ft. Her red hull has made her unmistakable among the boats of the racing fleet.

Tacoma was built last year at Calais, Me., by Henry A. Davidson, and is of light construction, though not of quite so fine finish as her Boston-built competitor. She is 29ft. over all, 19ft. 6in. waterline, 10ft. beam and 9in. draft. She has a metal centerboard 6ft. long and weighing 625lbs. Her main boom is 23ft. long and her bowsprit 10ft. outboard. She carries about 900sq. ft. of sail.

The racers will be started at 2 o'clock in the afternoon, and the time limit will be four hours. Additional interest is given them by the offer of a cup or piece of plate to the winner by Frank P. Norton.
—*Boston Globe.*

Morrisania Y. C. First Annual Regatta.

THE new Morrisania Y. C. sailed its first race on June 21, the courses being from off the club house, around the Gangway Buoy and Stepping Stones. The wind was strong from S.W. and several yachts came to grief. H. C. Miner lost her mast and others met with minor mishaps. The times were:

SLOOPS—SPECIAL CLASS AA, 30FT. AND OVER.

	Start.	Finish.	Elapsed.	Corrected.
Reliance	10 48 00	Did not finish.		
Leontine	10 48 30	. . . .	5 26 00	5 19 00

CLASS A—SLOOPS, 20 TO 25FT.

Nettie B	11 00 00	3 24 00	4 24 00	4 24 00
Dawn	11 02 00	Did not finish.		
Lelia	10 59 00	Did not finish.		
Olive L	10 58 00	3 43 00	4 45 00	4 37 00

CLASS B—CABIN, JIB AND MAINSAIL, 20 TO 25FT.

Iola	11 00 20	Did not finish.		
Fakir	10 58 00	Did not finish.		
Emma	11 01 00	Did not finish.		

CLASS C—JIB AND MAINSAIL, OPEN, 20 TO 25FT.

Zetes	11 07 00	3 16 00	3 16 00	3 16 00
Maybe	. . . .	Did not finish.		

CLASS D—CABIN CATS, 20 TO 25FT.

Pride	11 10 30	2 36 30	3 26 00	3 24 00
Alice S	11 10 00	2 39 00	3 29 00	3 26 00
Frank	11 12 00	2 28 00	3 16 00	3 16 00

CLASS E—OPEN CATS, 20 TO 25FT.

Bum	. . . .	Did not finish.		
Ethel C	. . . .	Did not finish.		
W. H. Gill	11 18 00	2 06 00	2 54 00	2 54 00

CLASS F—OPEN CATS, 17 TO 20FT.

Bismarck	11 30 00	Did not finish.		
Arrow	11 21 30	Did not finish.		
H. C. Miner	11 23 00	Did not finish, dismasted.		
Willie B	11 23 30	2 41 00	3 18 00	3 17 30
Twinkle	11 25 00	3 39 00	4 17 00	4 13 30

CLASS G—OPEN CATS, 14 TO 17FT.

Cricket	11 29 00	Did not finish.		
Success	11 29 00	Did not finish.		
Tramp	. . . .	Did not start.		
Little Dean	11 30 00	3 08 00	3 38 00	3 37 00
Aurora	11 28 30	Did not finish.		
Dolphin	11 29 00	Did not finish		
Bye-Bye	11 29 30	3 29 00	3 59 00	. . . .
Anna L	11 30 00	Did not finish.		
Josie	11 29 30	3 20 30	3 50 00	. . . .

The winners are: Leontine, Nettie B., Zetes, Pride, W. H. Gill, Willie B. and Little Dean. Nettie B won the Commodore's prize for best elapsed time. Frank fouled Pride and was disqualified.

Columbia Y. C.

MICHIGAN CITY RACE—LAKE MICHIGAN.

Saturday, June 20.

THE annual regatta of the Columbia Y. C., of Chicago, from that port to Michigan City, established as a club event in 1893, was this year thrown open to all clubs of the Lake Michigan Y. A.—a wise and liberal policy on the part of the club. The race was sailed on June 20, starting from the Van Buren street gap, the wind being then light from the west. During the race of thirty-six miles it shifted to all points of the compass, at one time falling to a flat calm and again bringing a heavy squall. The chief interest in the case centered in the two new fin-keels, Siren and Vanenna, the latter just completed in time for the race. The prizes were in all classes for elapsed time, the Peck cup to be won in two consecutive races; in the schooner class the Steffens cup, won last year by Mistral, with club prizes of barometers, yacht guns, etc., in each class. The squally weather took the topmasts out of Siren, Druid and Vanenna, and the jib boom out of Toxteth, while Genevieve parted her throat halyards. In trying to squeeze by the mark at the line to save tacking in a very close finish with Hawthorne, Mistral fouled the mark and was disqualified. The times were:

SCHOONERS.

	Start.	Finish.	Elapsed.	Corrected.
Hawthorne	1 03 08	6 16 44	5 13 36	5 13 36
Mistral	1 04 55	6 19 35	5 14 40	5 13 34
Toxteth	1 04 40	6 33 15	5 20 35	5 22 45
Merlin	1 05 00	7 37 56	6 27 50	6 07 20

FIRST CLASS SLOOPS.

Druid	1 14 36	6 39 30	5 24 34	5 24 34

SECOND CLASS SLOOPS.

Vanenna	1 12 00	6 07 40	4 55 40	. . . .
Siren	1 14 30	6 33 10	5 18 40	. . . .
Charlotte R	1 13 52	7 09 41	5 55 49	. . . .
Sadie	1 14 41	7 15 55	6 01 14	. . . .
Jeanettie	1 17 40	. . . .	. . . .	. . . .

THIRD CLASS SLOOPS.

Valiant	1 13 00	7 08 43	5 55 43	. . . .
Hattie B	1 14 14	7 30 20	6 16 06	6 09 58
Peri	1 15 00	7 45 31	6 30 31	6 18 01
Allie T	1 12 52	. . . .	. . . .	. . . .
Pinta	1 12 09	7 58 00	6 45 51	6 31 06
Genevieve	1 15 21	7 47 18	6 31 57	6 16 42
Trix	1 13 07	7 44 30	6 31 23	6 14 48
America	1 14 14	. . . .	. . . .	. . . .

FOURTH CLASS SLOOPS.

Wizard	1 13 27	. . . .	. . . .	. . . .
Vixen	1 12 25	7 40 00	6 27 35	6 23 48

Hawthorne wins, Mistral being disqualified; Vanenna wins the principal prize. The other winners were: Druid, Valiant and Wizard.

Niagara's Water Tanks.

THE gallant Admiral Montague writes as follows to the *Field:*

"There must be others besides myself who have read with amazement the report that the Y. R. A. thought it necessary to send representatives post haste to board the Niagara to learn something as to her water tanks. They even did not wait to see the owner of Niagara, but surveyed the vessel in his absence. This reads very serious. We now hear these tanks were only intended to support the crew, but that the officials deputed to go on board thought it necessary to order the said tanks to have a certain pipe disconnected, that could be used to run water from one tank to another. I do not think this a satisfactory ending to arrive at. Either the tanks should not be where they are placed, as tending to cast suspicion as to their being used for peculiar purposes, or else the pipe should be left for the purpose it is supposed to meet, namely, to run a stream of fresh water from one tank to the other as they are filled. Severing some metal connection is of no use; any piping other than metal would have the desired effect. It seems to be "straining at a gnat in order to swallow a camel," and I think it would have been far better to have left the connection as it was, and accepted the word of honor, than to order the severing of a metal connection which could be reinstated by any other mode to answer the purpose equally well. The Americans seem to build fast boats; the Defender was a fast boat, the Niagara is another. Why don't our designers take the hint and place our water tanks in the bilges; and as regards Defender, whether she carried water tanks in excess of what the requirements of the crew demanded or not, she had the peculiar gift (which none of our boats have) of being able to practice optical delusion on thirty-two pairs of eyes with a vengeance. Perhaps American crews suffer more from thirst than English crews, and tanks have to be carried in extra proportions. Empty tanks must be a deal of useless weight. I do not think, if I built a 20-rater to race in English waters, I should care to carry empty copper tanks, especially when I find my crew landing feather pillows, nail and tooth brushes, etc., the morning of a race. The proverbial jar of beer and a couple of breakers would have to do for my 20-rater when racing, and if I were owner of Niagara to-morrow out would come my copper tanks, and in would go two or three cloths to my topsail."

Half-Raters to the Rescue.

THE fact must not be overlooked that there is to be an international yacht race this summer, and still more important is a due appreciation of the energy and patriotism of the thirty gentlemen who have built boats to maintain the ½-rater championship of the world.

True, these odd little ships are as gnats to the eagle when compared with Defender and Valkyrie III., but an immense amount of sport and good seamanship can be shown with these midgets, and the spirit which animates their owners is as truly American as that of the famous V. I. M. trio which built Defender.

As the New York Y. C. has undertaken to defend the America's Cup—and the way it has done so is the world's admiration—so the Seawanhaka Corinthian Y. C. is pledged to guard the tiny craft trophy won from the Canadians last year.

Judging from the trial races now in progress off Oyster Bay and the marvelous speed and skill shown by competitors, this new international prize is apt to stick at home as hard and fast as the America's Cup.—*New York Herald.*

Seawanhaka Corinthian Y. C.

INTERNATIONAL CUP—TRIAL RACES.

June 22-23-24-26.

SUMMER racing on the Sound is by no means the most thrilling and exciting form of sport; on the contrary, it is likely to try the patience of all concerned in it: sailors, committee and spectators. The past week has been about as bad as was in any way possible in June, calm and more or less cold and rainy. Not once in the week have the yachts been seen in a hard breeze and sea, and only once in a fresh breeze, the test of the series of four trial races being purely a light-weather one. The task of the committee has been by no means an easy one, to pick the best defender from a fleet of nearly thirty competitors, but they have made a wise choice and one that gives general satisfaction to all who are familiar with the boats and those concerned with them. In judging the merits of the yachts it must be borne in mind that few if any save those which have been racing since May 30 were in racing form or at all known to their owners. Most of them were hurried at the last moment, and the fleet as a whole may be summed up as in many ways a crude and experimental one. No doubt the class racing will continue through the season, to the material improvement of some of the boats. While allowance must be made for her as well as the others, El Heirie is in as good shape now as any, and her crew is in a position to work her up much further within the next three weeks.

At a comparatively early period in the racing, which began last Monday, it became easy to run through the list of starters and pick those which had no chance whatever of being selected, those which promised more or less, but were evidently capable of improvement, and those practically available for the defense of the cup. As the racing progressed this latter division narrowed down to three boats, Riverside first, El Heirie a close second, and Ideal third, but decidedly inferior to the other two. This inferiority was most apparent in the one point where Ethelwynn was at her best compared with last year's fleet, to windward, and the reasons for it were easily discernible. It is not likely that with her moderate form Ideal, or in fact Ethelwynn or Two Step, all nearly alike, can be made as fast in a broad reach as the majority of the class in which features verging closely on the "freak" order are employed to give a very long list line in reaching; but all of these boats are fast down wind, and the experience of Ethelwynn shows that they may be made to go to windward with anything in the class.

The general features and form of these boats, with the peculiar "Scarecrow" rig, has been fully described by us in the past. The two leading boats were of distinctly opposite types; Riverside is a fin-keel of 5ft. 6in. beam, moderate proportions and good form, entirely free from all freak features. She is of the general type of Wee Winn, Trust Me and Scarecrow; in reality an improved Trilby. She was designed by Chas. Olmstead, designer of Govilan, Eidolon and Vorant II., as well as Trilby, and was built for a syndicate of Riverside Y. C. members by some of Mumm's old workmen at Bay Ridge, under Mr. Olmstead's personal supervision. The hull is very light, the planking a "shiplap" single skin of cedar, with a deck of thin pine covered with varnished muslin. There are no bulkheads, and the oblong cockpit is just large enough for two men, Mr. Olmstead steering her, with a professional for "crew." In very bad weather a flat hatch may be screwed down on gaskets inside the coaming, making a complete flush deck. The fin is narrow and deep, of $^{7}/_{32}$in. Tobin bronze, with about 250lbs. of lead, or 325lbs. in all. The rig is a boom and a gaff mainsail of Union silk with a criss-cross jib. The hull is painted white with a dark bottom, and a broad gold band above the bootleg. The spars are hollow.

El Heirie was designed by her owner, C. H. Crane, of New York, a graduate of Harvard, and now employed at Cramp's shipyard, in Philadelphia. With him is associated his brother, D. M. Crane, a graduate of the Massachusetts Institute of Technology. The two have raced a good deal in small craft about Boston when at college, and now have the 15-footer Elsa, designed by C. H. Crane, in the length class at Boston. The design of El Heirie was begun last fall and completed by degrees, the boat being launched about two weeks since. The *motif* of the design was taken from Question, being suggested by the reports of the speed of that craft, but this crude idea has been refined and elaborated. The yacht has a flat floor about 24in. wide, turning up athwartships to a round, hard bilge, while fore and aft it carries a fair sweep from the stern to the transom. The bow is a regular shovel nose, the flat floor running well forward. The fore overhang is longer than the after, much like the Dyer boats, Grilse and Owana. There is practically no sheer and quite a crown to the deck, the name El Heirie (camel) being hardly justified, however. The comparison to Ethelwynn, as made by us last week, was based only on the first view of the yacht as under sail at Larchmont; when out of water a very different form appears. The cockpit is long and narrow, and the floor is high enough to drain into the well, but there is no forward bulkhead, only an after one. The centerboard is of the knife pattern, ¼in. thick, of Tobin bronze, similar to that of Ethelwynn; but it is so pivoted that when raised it projects 6in. below the keel. The rudder is nearly square, of the Herreshoff spade type, and hung abaft the waterline. The planking is double skin, the outer mahogany, with crude turpentine between the two. The deck is of white pine. The mast is solid, with a hollow gaff and boom. The rig is a boom and gaff mainsail, with a low-cut jib with boom laced to the foot. The mainsail is of light cotton.

Ideal is practically the same as Ethelwynn, with 2in. more beam and sparred for a larger rig of 250sq. ft. Owing to the lack of stretch in her new sails they measured, as it proved, but 208sq. ft. They are of cotton, and with those of the other two were made by Wilson & Griffin.

It is more than likely that some of the more heavily rigged of the boats were favored in the light airs by more sail than their length would allow, but as they did not win they were not measured.

The story of the first race was given last week, but the table was not complete. The following gives the work in detail and makes complete the whole record of the series.

FIRST TRIAL RACE.

Monday, June 22.

	1st Mark.	2d Mark.	End.	1st Mark.	2d Mark.	Finish.	Elaps'd
Ideal	1 04 38	1 31 03	2 12 02	2 50 42	3 30 36	4 05 00	3 35 00
Riverside	1 04 58	1 29 55	2 11 05	2 49 14	3 31 22	4 07 06	3 37 06
El Heirie	1 05 18	1 29 35	2 12 48	2 51 52	3 37 10	4 11 21	3 41 21

Manontasquot withdrew.

SECOND DAY.

Tuesday, June 23.

Tuesday morning broke with a strong N.E. breeze on the Sound and a sea as well; from the roof of the club house the whitecaps were visible, and the hearts of many were gladdened at the sight. Not only the various "one-design" boats, but many others as well, after Monday, claimed to be "hard-weather" boats, and prayed for wind in proportion to their assumed degree of hardness. During the morning, however, the wind fell and went to the westward, the Sound smoothed out all its wrinkles, and the prospect of a rattling race disappeared. It is greatly to the credit of the owners of these small craft that after the discouragement met by many on Monday all but five were at the line a little after noon. Some were doubtless enticed into another trial by the prospect of a breeze, but 22 boats started after it was evident that the race would be almost a drifting match.

The tide was running strong ebb, and in order to keep their places until the signal was given the racing boats tied up in a long string to Center Island Buoy, some remaining in tow of their launches. Astern of the club steamer Dunderberg, the committee boat, was another long string of naphtha launches.

At 1 o'clock there was a light S.W. wind blowing, and at 1:20 the committee gave the preliminary signal and set the course flags N.N.E., 3 miles to leeward and return, to be sailed twice. There was no wind for maneuvering, and the ebb tide was rushing over the line, so most of the yachts took a safe course by getting as far to windward as possible, risking a late start rather than to be carried over the line with little chance of working back. Ideal, again sailed by Duryea and Zerega, took the lee end of the line near the bow of the Dunderberg and with but 30 seconds to go was in a good position to shoot across with way on and drop her spinaker. Just before the gun, at 1:40, the wind dropped and left her; she drifted down on the wrong side of the steamer and was soon helpless in the tideway, unable to stem it. Terrapin had followed her closely and was similarly caught. Maudeen brought up squarely across the bows of the steamer, but escaped without injury; another boat drifted down on the steamer, and Trilby was all tangled up with the Center Island Buoy at the other end of the line. The best start, just after the gun, was made by Two Step near the steamer, Riverside going over promptly near the other end of the line. Hope and Columbia also made good starts, with several others indistinguishable in the pack. More than half the fleet was scattered at a distance above the line, making late starts, Vesper being one of this division. Ideal and Terrapin could not have sailed up to the line, with no wind and the foul tide, but took a tow from the press launch and crossed the line at 1:46:15, their time being taken by the committee. Die Hexe, to leeward of the buoy, was also ordered to start where she was, short of the line, but in reply held up a tiller broken at the rudderhead, and started to reach home across the tide. A naphtha launch hailed her, passed her a monkey wrench and left her with a friendly intimation that she might sail to a warmer climate. She started after the distant fleet and very pluckily sailed the race out, using the wrench as a tiller.

The fleet was not so closely bunched as on the first day, and there was less crowding and blanketing, though all had spinakers out. From the start Two Step ran away from the pack, and with no wind save what had passed them was soon clear ahead. The starters were: Two Step, Riverside, Hope, Columbia, Paprika, Question, Kittie, Trilby, El Heirie, Yola, Ideal, Terrapin, Die Hexe, Maudeen, Isabelle, In It, Vesper, Cyclone, Tornado, Gnome, Saghaya and Willada.

They were doing little better than the speed of the tide, less than three miles per hour. At the end of a mile Two Step was over a quarter of a mile ahead of the fleet, the next boats being In It and Riverside. Vesper came through the fleet, and with Kittie, Yola and Gnome ran up even with this pair. Ideal, after her bad start, was picking up the stragglers, passing Maudeen, Question, Willada, Isabelle, Hope and Paprika. Two Step jibed her boom to port about ten minutes before reaching the mark, which she turned at 2:51:10. Just as she did so a nice little breeze came in and she hardened sheets for a beat home. Kittie gained on the fleet toward the end of the run, and with her nose down in the water and a big sail plan all in the mainsail she was sliding down hill very fast. The times were:

		Elapsed.
Two Step	2 51 10	1 11 10
Kittie	2 54 06	1 14 06
Gnome	2 54 25	1 14 25
Riverside	2 54 50	1 14 50
Saghaya	2 55 10	1 15 10
El Heirie	2 55 55	1 15 55
Vesper	2 55 24	1 15 24
Columbia	2 55 41	1 15 41
Yola	2 55 41	1 15 41
In It	2 55 44	1 15 54
Ideal	2 56 07	1 16 07 / 1 09 52
Tornado	2 56 25	1 16 25
Hope	2 56 28	1 16 28
Cyclone	2 56 58	1 16 58
Trilby	2 57 00	1 17 00
Paprika	2 57 04	1 17 04
Isabelle	2 57 34	1 17 34
Willada	2 58 56	1 18 56
Question	2 59 23	1 19 23
Maudeen	3 00 15	1 20 15
Terrapin	3 02 12	1 22 12 / 1 15 57
Die Hexe	3 04 27	1 24 27

Ideal had worked up to the middle of the fleet in spite of her heavy handicap, and her actual time is even better than that of Two Step by over a minute. There was some very even running, as the elapsed times show.

The wind was still very light and the ebb tide running strong in places, with the flood forcing itself between. Nearly all the yachts stood inshore at once after luffing around the mark on starboard tack. Two, Vesper and Trilby, went fluke hunting for a breeze that was just visible under the Greenwich shore, but with a broad stretch of ebb tide to cross.

Two Step did neither one thing nor the other. She stood on starboard tack for a time after rounding, then went about and stood offshore, but never as far as the middle of the Sound; she thus kept in the strength of the ebb tide and out of the shore breezes. Riverside very soon took the lead, Kittie following off to leeward, while Gnome slid off like a crab until she was to leeward of half the fleet. She carried to-day the original Herreshoff canoe mainsail, but did no better than with the boom and gaff sail used on Monday. The work over this leg was fluky in the extreme, what little wind there was came in spots and patches from different quarters, and the ebb and flood tides split the water into contending currents and eddies. One boat after another was favored by luck from time to time. Riverside steered a good course and sailed very fast, and both Kittie and El Heirie following her did very well. Two Step, by her poor course, threw away all of her long lead and made the poorest time but one on this leg. Ideal was still at a distance from the leaders and under different conditions, but she was not doing good work on the wind. Vesper was well sailed to windward by Mr. Butler, and she found the breeze she was looking for under the north shore, Trilby also sharing her luck. Saghaya did quite good work on the wind.

Riverside stood on up the harbor nearly to the lighthouse and then came for the mark on port tack. El Heirie and Kittie were astern of her, Yola, Ideal, Paprika and Hope, with others astern, were under the shore of Lloyd's Neck, and Two Step was just off shore and now well astern. Vesper came across the Sound on a long starboard reach and fell in second to Riverside as they neared the Center Island Buoy at the end of the round. Trilby followed her and fell into fourth place. The first round was timed:

		Elapsed.
Riverside	4 50 36	1 55 46
Vesper	4 57 51	2 02 27
El Heirie	4 58 26	2 02 31
Trilby	4 59 38	2 02 33
Kittie	5 01 48	2 07 42
Saghaya	5 03 07	2 07 57
Hope	5 04 06	2 07 38
Paprika	5 04 46	2 07 42
Ideal	5 05 07	2 09 00
Yola	5 09 24	2 13 43
Two Step	5 09 28	2 18 18
Columbia	5 12 25	2 16 44
In It	5 14 20	2 18 26
Terrapin	5 14 55	2 12 43
Die Hexe	5 15 20	2 10 53

Riverside had done excellent work to windward in a light air, and the other fin-keel, her older sister Trilby, was one of the three boats that shared the second place together.

Riverside set her spinaker to port on rounding, but soon took it in, ran out her spinaker boom as a bowsprit and set her balloon jib on it, a trick worked last year in the trial races and tacitly recognized then by the committee as permissible.

Vesper did not set a spinaker, but all the others did. The end of the leg was timed:

		Elapsed.
Riverside	5 44 16	0 53 40
El Heirie	5 50 16	0 51 50
Vesper	5 53 55	0 55 04
Kittie	5 54 15	0 52 27
Trilby	5 56 12	0 56 34
Ideal	6 05 17	1 00 10
Saghaya	6 06 29	1 03 22
Yola	6 06 55	0 57 31
Paprika	6 07 00	1 02 14
Hope	6 08 14	1 04 08
Two Step	6 08 45	1 00 43
Columbia	6 15 40	1 03 15
Die Hexe	6 17 00	1 01 40

The only incident of the run was the excellent showing of El Heirie off the wind. She outran everything, even Riverside. Riverside, however, had a lead of an even 6 minutes when she started for the beat home, the breeze being moderate and with a promise of freshening as the day declined. Far from this, it dropped again when the leaders had turned the lee mark. The tide was now on the flood and most of the boats worked the middle course, well out in the Sound. The wind was in patches and from all points. Riverside was hung up for a time in a calm spot, and when two-thirds of the leg had been covered El Heirie was well out in the Sound on starboard tack heading for the finish, with both Riverside and Kittie to the leeward and broken off by a different wind, until it seemed that El Heirie must finish first. Another shift soon upset all these calculations, and left Riverside in first place.

Riverside finished first after a tedious beat of an hour and a half for three miles with the tide. Vesper came for the line on starboard tack and El Heirie on port, the latter thus being enabled to cross first through having right of way. Kittie and Trilby made a close finish well to the front. Two Step, Yola and one or two more had stood into the harbor and picked up a good start, which brought them up on the leaders and made Two Step's time for the leg considerably better than any others. The final times were:

		Elapsed.
Riverside	7 08 08	1 23 52
Vesper	7 09 57	1 17 02
El Heirie	7 10 06	1 19 50
Kittie	7 12 05	1 17 50
Trilby	7 12 41	1 16 29
Two Step	7 18 28	1 09 43
Yola	7 19 19	1 12 24
Saghaya	7 20 50	1 14 21
Hope	7 23 08	1 14 54
Paprika	7 24 48	1 17 48

Die Hexe, steered with a 6in. monkey wrench, finished, but was not timed. Gnome, Ideal, Question, Willada and a number of others withdrew, and the committee did not wait to time any after Paprika.

As a test the race was but a waste of time; all that it showed was that the bulb-fin Riverside is very fast in light weather, both on and off the wind, and that El Heirie and Vesper are both fast. Kittie had conditions nearly to her liking, smooth water and light winds for her big cat rig, and she made a very good showing both to windward and free. In It went into the harbor and her crew tied a knot in a bit of line and tacked it ahead of her name on the upper transom.

The race was a trying one, both in the uncertainties and flukes of the weather and the severe exertion of some eight hours in a small boat, or worse yet, on the flat deck of such craft as Trilby, Question and Willada. Many went out with little or no store of food and water, and suffered thereby, and all complained of the tedious and anxious work so greatly prolonged.

THIRD RACE.

Wednesday, June 24.

Wednesday morning brought a change of weather, "a southerly wind and a cloudy sky" at sunrise, with a sprinkle of rain about 11 A. M. that had increased to a fine steady downpour by noon, wetting the crews before the start. The course was the triangular, sailed the usual way, to the eastward first, making the third leg dead to windward if the wind held. The day was much more like what the scow boats had been wishing for, a fresh breeze and slightly troubled water, though with nothing that could be called a sea. The wind proved variable, both in force and direction, piping up at times and sometimes falling very light in spots, while it swung around toward the South and back, its direction at the start being S.S.W. With all its variations, it was true enough to give a perfectly fair test of the boats, and there was no fluking on the part of any of the leaders. Before the race the competitors were requested by the committee to keep as close together as practicable on the windward work, in order that the inequalities of tide and wind might be eliminated as far as possible.

In spite of the discouraging results of the preceding days, no less than 16 yachts out of the original 27 started. Kittie left for home on Tuesday evening, having had her chance in light weather; Maudeen went out in tow of her tender, a sloop yacht, on Wednesday morning; Norota started across for Stamford under staysail set as a trysail and a large jibtopsail, with Gnome in tow; the two Nyack boats had already left in tow of a launch; Memory started for the long run to Newport with Nit in tow; Two Step did not appear at all.

The committee and all but two of the starters were at the line by noon. A long wait was made for the two laggards up the harbor, and it was 12:35 before the starting whistle was blown. It was a start to leeward, with a strong ebb tide over the line, as on the previous day. While working about the line some of the yachts had decks well awash under the strong puffs, but, as it chanced, just before the gun the wind fell much lighter. Ideal worked close along the line from the buoy toward the committee boat during the last two minutes, but shaved two close and drifted on the line before gunfire, being over too soon. Riverside made a fine start, and Hope, Trilby, El Heirie and Paprika were among the leaders. They started with spinakers to starboard, but soon shifted to balloon jibs. Ideal and Riverside led the fleet for a time, but the boats closest inshore caught a stronger breeze, and Yola, Paprika, Hope and some others came to the front about on a line with Riverside further out in the Sound. As the wind shifted at intervals some of the boats set spinakers again and made them draw, while others did better with balloon jibs; in some cases the spinaker boom was run out as a bowsprit and the balloon jib set on it, a practice that calls for some action, though not specifically prohibited by the present rules. They jibed at the mark as follows:

		Elapsed.
Riverside	1 01 02	0 26 02
El Heirie	1 01 52	0 26 52
Trilby	1 02 03	0 27 03
Die Hexe	1 02 04	0 27 04
Vesper	1 02 15	0 27 15
Paprika	1 02 30	0 27 30
Cyclone	1 02 48	0 27 48
Yola	1 02 48	0 27 48
Ideal	1 02 58	0 27 58
In It	1 02 58	0 27 58
Willada	1 03 00	0 28 00
Saghaya	1 04 28	0 29 28
Question	1 04 35	0 29 35
Tornado	1 04 40	0 29 40
Terrapin	1 05 16	0 30 16
Hope	1 02 35	0 27 35

Once trimmed for a broad reach El Heirie made short work of Riverside, passing her at once and setting a fine pace for the second mark. There was some very pretty luffing and fighting among the various groups, and positions changed materially. Trilby and Die Hexe, the latter steered with a ramshackle jury tiller hastily made in the morning, were fighting for third place, Ideal caught Trilby, and fought hard to get by, but failed; Willada, well out to windward, picked up very much and Vesper dropped astern. The times at the mark were:

		Elapsed.
El Heirie	1 22 39	0 20 47
Riverside	1 23 27	0 22 25
Die Hexe	1 25 03	0 22 59
Trilby	1 25 58	0 23 55
Ideal	1 26 14	0 23 16
Paprika	1 26 21	0 23 51
Willada	1 26 27	0 23 27
Yola	1 26 39	0 23 51
Hope	1 26 50	0 24 46
Vesper	1 27 09	0 24 54
Cyclone	1 27 37	0 24 49
It It	1 29 39	0 26 41
Saghaya	1 29 44	0 25 16
Tornado	1 32 00	0 27 20
Terrapin	1 32 48	0 27 32
Question	1 33 19	0 28 44

El Heirie made a poor turn, going wide of the mark with sheets off and failing to lay her course for a long time after rounding. Riverside made a very neat turn and hardened sheets at once, her criss-cross Wilson jib, the same as that carried by Ethelwynn last year, doing good work. Trilby dropped her balloon jib over the side and towed it for a while, to her manifest detriment. For some time, both holding the port tack, Riverside gained on El Heirie and was decidedly ahead. Trilby was doing excellent work in third place, but Die Hexe was falling to leeward. Ideal had passed the mark barely ahead of Paprika, the latter made a short board inshore and stood on again on starboard tack, the pair were apart for a time, but when they came together Paprika easily crossed Ideal's bows. Hope worked out until she had a clear wind and forged ahead very fast, she and Ideal falling in together. They had it hammer and tongs for a short time, Ideal to leeward running ahead and then dropping astern, leaving Hope to chase her yellow sister, Paprika. When half over the leg Paprika was in third place, El Heirie a good distance ahead of Riverside, with Paprika dangerously close on the latter's weather quarter and Hope to windward of Trilby. At 1:55 Paprika tacked for the Lloyd's Neck shore, and Riverside and El Heirie immediately came about to windward of her, each having stood on the one long port tack from the last mark. El Heirie had a long lead now, and the interest was transferred to the fight between Riverside and Paprika, with the odds, in the strong breeze then blowing, in favor of the latter. They all stood on for some 15 minutes until well inshore, Paprika finally passing her rival. The end of the first round was timed:

		Elapsed.
El Heirie	2 21 43	0 59 04
Paprika	2 23 21	0 57 00
Riverside	2 23 52	1 00 25
Hope	2 25 23	0 58 33
Trilby	2 28 22	1 02 24
Ideal	2 33 00	1 06 46
Vesper	2 35 00	1 07 51

With the beginning of the second round the wind dropped perceptibly and hauled more to the south, making a reach across to the first mark, in fact a reach all around the triangle, to the great advantage of El Heirie. While she increased her lead, Riverside repassed Paprika and took second place. Ideal had done very poorly on the windward work, for some reason not apparent, and withdrew at the end of the round. Vesper was still further astern, but Mr. Butler has long been noted in canoeing for always finishing a race, whatever the conditions, and though he had little to gain by a hopeless stern chase in the rain, he very pluckily held on. All of the later boats withdrew either at or before the end of the round. The first mark was timed:

		Elapsed.
El Heirie	2 43 50	0 22 07
Riverside	2 48 17	0 24 25
Paprika	2 49 40	0 26 19
Hope	2 50 50	0 25 27
Trilby	2 54 22	0 26 00
Vesper	.. ..	.. ..

As Paprika rounded and her boom jibed Mr. Hoyt went forward to take in the balloon jib, but slipped and went into the drink; he was hardly in before he was out again, helped by a timely pull from the helmsman, and at work forward without waiting to shake himself. El Heirie trimmed sheets for a reach across, but the others astern set spinakers and carried them well over this leg, the wind being light. The times at the second mark were:

		Elapsed.
El Heirie	3 14 10	0 30 20
Riverside	3 16 55	0 28 38
Paprika	3 20 07	0 30 27
Hope	3 21 02	0 30 12
Trilby	3 25 53	0 31 31
Vesper	.. ..	.. ..

The last leg turned out but a close reach and El Heirie pulled out a long lead, the finish being timed:

	Start.	Finish.	Elapsed, Last Leg.	Elapsed, Whole Course.
El Heirie	12 35 00	3 49 23	0 35 13	3 14 23
Riverside	12 35 00	3 53 13	0 36 18	3 18 13
Paprika	12 35 00	3 56 56	0 36 49	3 21 56
Hope	12 35 00	3 57 30	0 36 28	3 22 30
Trilby	12 35 00	4 03 00	0 37 37	3 28 00
Vesper	12 35 00	4 12 57	.. .. ..	3 37 57
Die Hexe	12 35 00	Withdrew.		
Ideal	12 35 00	Withdrew.		
Willada	12 35 00	Withdrew.		
Yola	12 35 00	Withdrew.		
Cyclone	12 35 00	Withdrew.		
In It	12 35 00	Withdrew.		
Saghaya	12 35 00	Withdrew.		
Tornado	12 35 00	Withdrew.		
Terrapin	12 35 00	Withdrew.		
Question	12 35 00	Withdrew.		

Though the selection was narrowed down to but three or four boats, the committee was still at sea as to a final decision. Ideal had won fairly on the first day and had shown up very fast under spinaker, but she had made a most disappointing performance under conditions that her sister ship Ethelwynn had found most favorable, to windward in a strong breeze; Riverside had done remarkably good work in the three races in lighter weather, especially showing excellent all-round performance, while El Heirie, evidently a fast boat in light weather and on all courses, was remarkable in stronger winds and especially in reaching. Under the circumstances the committee, after a meeting, decided to call a special trial race on Friday to which the three winners, Ideal, Riverside and El Heirie, should be eligible, together with Vesper and Paprika; added to which was the open race of the class in the annual regatta of Saturday.

FOURTH RACE.

Friday, June 26.

Thursday turned out cold and rainy, and Friday morning was but little better, with a S.W. wind and threatening clouds. However, they broke as the day advanced, and welcome signs of the sun were visible about noon. The five yachts selected for the final trial were all ready at the line just after noon, the course was given, 2 miles to leeward, N.E., and the club launch ran out with the float and ball. The preparatory signal was given at 12:30 and the start at 12:35, Paprika, Riverside and El Heirie going over abreast almost together, with Vesper and Ideal just astern. The wind was dead aft, and while three of the boats set spinakers to port, two, Vesper and Riverside, tried them to starboard, both jibing very soon after passing the line. The wind was very light and they merely traveled with the ebb tide, soon falling to a dead drift. Twenty minutes after the start they were strung out in line, perhaps 75yds. apart, the order being: Paprika first, El Heirie, Ideal, Riverside and Vesper. It was ding dong to the lee mark, with catspaws and drifting; spinakers were taken in and reset. Vesper steered a more southerly course of her own; the others were very closely bunched, with Paprika now astern. The order at the mark was:

		Elapsed.
Riverside	1 21 46	0 46 46
El Heirie	1 22 11	0 47 11
Vesper	1 22 27	0 47 27
Ideal	1 22 35	0 47 35
Paprika	1 23 24	0 48 24

They jibed and started in on the starboard tack. Vesper had fallen into third place just ahead of Ideal as they rounded, and the latter made a short leg on port tack to clear her wind and then stood after the three leaders. She soon passed Vesper and began to overhaul the other two, doing excellent work on the wind, but after about 10 minutes the block of her jib gave out, the wooden shell splitting and the sheave flying off, letting up the luff of the jib. There was no chance to make repairs while on the wind, and she sailed the leg out with jib all slack. The fight for first place was a sight to see, the two leaders, Riverside and El Heirie, being very closely matched under the existing conditions of a moderate breeze and smooth water to windward. El Heirie tried to reach off through Riverside's lee, but stuck under her beam and failed to get by. When Riverside tacked at 1:58, followed by El Heirie, she was about 300yds. ahead, while Ideal was about the same distance from El Heirie when the latter crossed her bows. Vesper and Paprika were far astern. All worked well under Lloyd's Neck and then started across the tide for the line. Riverside fetched the mark on her last long tack and went off gaily with spinaker to port. When El Heirie came up she had to make a short leg to round. The times were:

		Elapsed.
Riverside	2 18 51	0 57 05
El Heirie	2 22 03	0 59 52
Ideal	2 32 25	1 09 50
Paprika	2 43 35	1 20 10
Vesper	2 44 25	1 21 00

In the beat of two miles in a light and variable wind Riverside had gained 2m. 47s. on El Heirie, and 12m. 45s. on Ideal. El Heirie was slow with her light sails, setting balloon jib first and then the spinaker. The run down wind was made with a steadier breeze than before, but still with no weight to it. The times were:

		Elapsed.
Riverside	2 49 11	0 30 20
El Heirie	2 53 26	0 31 23
Ideal	3 00 31	0 28 06
Vesper	3 13 25	0 29 00
Paprika	3 13 50	0 30 15

Ideal beat the leaders by two to three minutes, while Vesper showed up almost as well down wind. El Heirie now luffed well out beyond Riverside's wake as they stood inshore, the wind heading both. There was a nice little sailing breeze blowing, enough to give a lively motion to the boats and to carry them to windward against the tide, but it was by no means enough for any of them. On the run Ideal's crew had lashed a new tack block and the jib was tacked down, with a marked improvement, though she was hopelessly astern. They all stood well inshore and then across the mouth of the harbor, being timed at the end of the second round:

		Elapsed.
Riverside	3 45 20	0 56 09
El Heirie	3 48 55	0 55 29
Ideal	4 00 45	1 00 14
Paprika	Not timed.	
Vesper	Not timed.	

This time El Heirie had beaten Riverside by 40s., while Ideal, though still third, had lost but 4m. to Riverside instead of nearly 13 on the previous beat. They ran down with spinakers to starboard, the wind being more to the south, and were timed at the lee mark:

		Elapsed.
Riverside	4 12 55	0 27 35
El Heirie	4 15 16	0 26 31
Ideal	4 26 19	0 25 34
Paprika	4 41 39	.. .. ..
Vesper	4 48 22	.. .. ..

Ideal had beaten Riverside by 2m and El Heirie by 1m. on the run. The elapsed times of Paprika and Vesper could not be calculated.

The leaders headed in for Lloyd's Neck again on starboard tack with a little more breeze from west of south and settled down for a hard battle. The dozen or so of yachtsmen on the Dunderberg, including the committee, soon lost all sense of size and cost and were watching the fight with as deep an interest as though the two were of 90ft. waterline and cost $1,000 per foot. So close were they to the steamer that every detail, almost the handling of the helm, was visible to the eye without a glass. El Heirie slowly but steadily overhauled Riverside, holding well a-weather of her, and after a time planted herself on the other's quarter. Finding that there was nothing to be gained there she soon dropped to the lee quarter and started to ramp off through the other's lee. Both were well in to the beach by this time, but could have stood on further without touching. El Heirie drew clear ahead of Riverside's lee bow and the latter tacked at 4:34, El Heirie immediately coming about on her weather and thus winning the race. They stood for the mark with a freshening breeze and were timed:

		Elapsed.	Elapsed, whole course.
El Heirie	5 04 18	0 49 02	4 29 18
Riverside	5 10 19	0 57 24	4 35 19
Ideal	5 17 06	0 50 47	4 42 06
Paprika	Not timed.		
Vesper	Not timed.		

Paprika and Vesper were obstinately fighting for fourth place, but they were far astern, and as the newspaper men were anxious to get to the train the committee did not wait to time them, so they withdrew. On the last windward leg Ideal showed up much better, her elapsed time being within 2m. of El Heirie and much better than Riverside. The race was by no means a satisfactory test; the best that can be said of it is that the conditions were normal—such wind and water as is too often found in the Sound in summer. The only drifting was on the first run; after that the boats at all times had enough breeze to keep good way on against the tide, and at times were even rail-to. The difference between El Heirie and Riverside on the last leg is hard to understand, as the conditions were not materially changed from those on the preceding rounds.

The decision of the committee was reserved until Saturday night, when it announced El Heirie as the defender and Mr. Olmstead, helmsman of Riverside, as the winner of the helmsman's prize, a spirit compass presented by Mr. T. C. Zerega, for the best work in the starts.

The races were sailed entirely in light to moderate weather and smooth water, at no time was a yacht reefed, and even the tenderest of the fleet were able to carry full sail without difficulty. While the same weather is likely to prevail in the cup races two weeks from now, there may be quite different conditions, as in the final Ethelwynn-Spruce races of last year. There is no doubt, however, that in heavy weather El Heirie will acquit herself well. She has shown every evidence of good hard-weather performance, such as her relationship to the Question type would lead one to expect; at the same time she is far and away ahead of the other boats of the scow family in light weather. Apart from the performance of Paprika in a flat drift, and that is coupled with a very large sail plan, none of these boats—Question, Hope, Paprika or Willada—have done well in the light weather that most Sound races are sailed in. In the fresh breeze of Wednesday both Paprika and Hope did well, especially the former; but even then there was not enough wind for her.

The class has sailed six races within the week, practically, as the Larchmont race of June 20 served as a preliminary to the actual trial races, the whole series ending with the Seawanhaka annual race on June 27. Out of the fleet of twenty-seven competitors the possible winners have narrowed down to three, El Heirie, Riverside and Ideal. All of these are new and untried and capable of much further improvement before their true places can be determined with sufficient accuracy to furnish a basis of argument as to the merits of the three distinct types, the refined scow, the moderate bulb-fin and the moderate centerboard type. While we are hardly in a position to discuss the question without some prejudice, we believe that the representative of the latter type, Ideal, has been at a more serious disadvantage in the present races than either of the others, and that the boat herself is capable of a much better showing, especially to windward. Owing to late completion, she was compelled to go into the races with a rough bottom and poor paint, and with much less sail than she was intended to carry. Riverside has not been measured, but we understand that she has rather more length than the other two and a small sail plan. El Heirie and Ideal went under the measurer's tape together after the last race in very poor trim for measuring, having been in the rain for some hours, and with hulls and sails thoroughly soaked after a week's immersion in exceptionally damp weather for June. The result was:

	L.W.L.	Sail.	Racing Length.	Additional sail allowed.
El Heirie	14.29ft.	240.00sq. ft.	14.93ft.	7sq. ft.
Ideal	14.68ft.	208.60sq. ft.	14.46ft.	20sq. ft.

By good luck, as it is largely a matter of the stretch of sails, El Heirie was safely inside the limit of the class and no more; while Ideal, with sails of the same material and from the same loft, sewed on the same machines, was under-canvased to the extent of 20ft., a serious matter in a drifting match or a mere drain of air, as in most of the races. Further than this, the waterline can readily be brought down by several inches, allowing 30 to 40 more feet if the boat will carry it. The only moral of this is the vital importance of early preparation and thorough tooling up of such small craft so as to bring them fully up to the measurement under a well balanced sail plan. It may be said of the entire fleet, with very few exceptions, that the yachts were hastily finished and far from their best racing form.

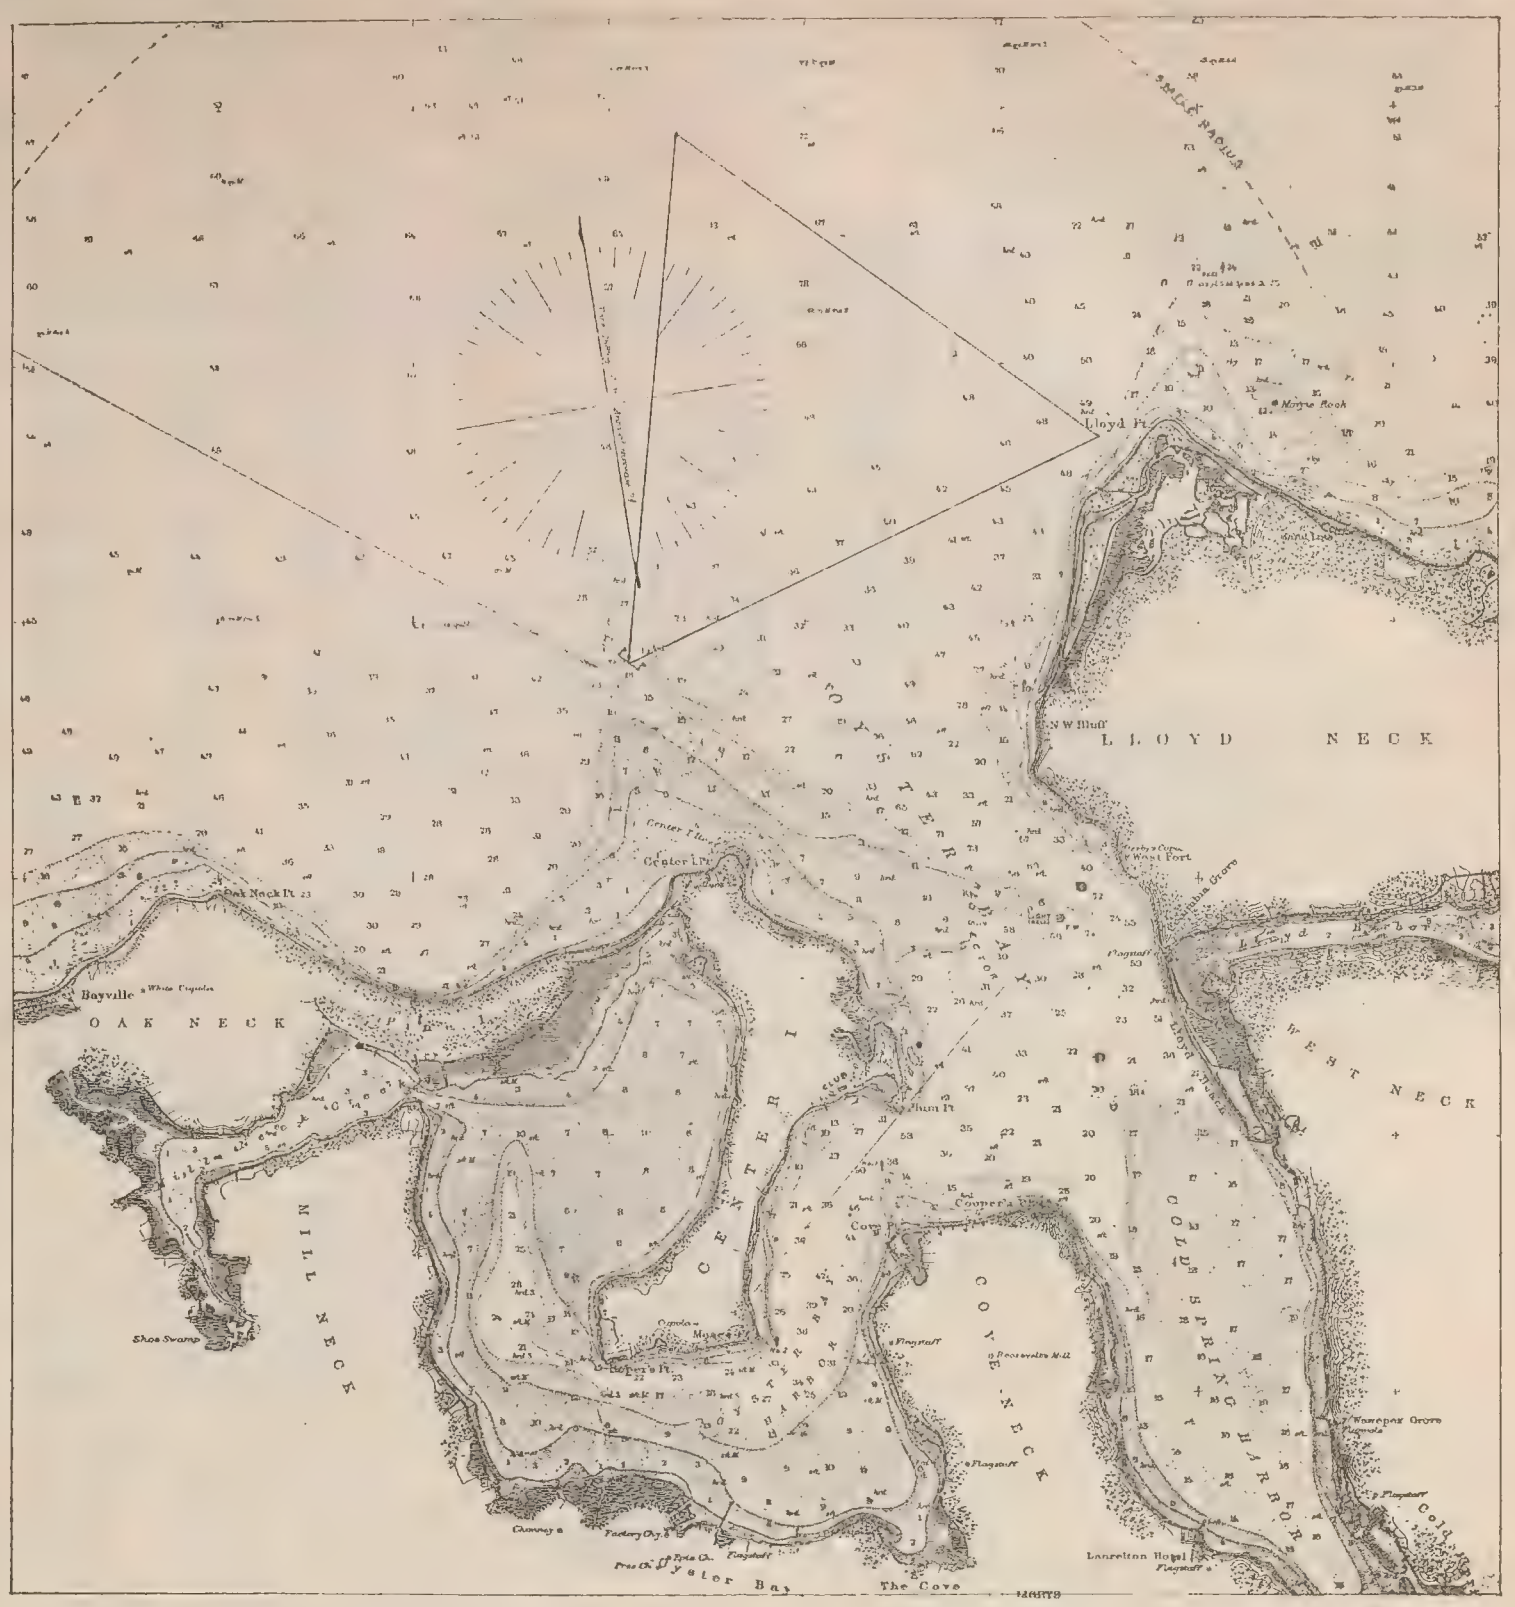

CHART OF COURSE FOR SEAWANHAKA TRIAL AND CUP RACES, OFF OYSTER BAY, LONG ISLAND.

Seawanhaka Corinthian Y. C.

OYSTER BAY—LONG ISLAND SOUND.

Saturday, June 27.

THE twenty-sixth annual regatta of the Seawanhaka Corinthian Y. C. was sailed on June 27 over the club courses on Long Island Sound. The regatta was open to yachts of all the regular and special classes, and was sailed under the rules of the Y. R. U. The following prizes were offered:

Class prizes: A prize in silver for the winning yacht in each class, excepting to the winner of the vice-commodore's cup. In any class in which there are more than three starters a second prize will be awarded.

The cup presented by Vice-Commodore Cruger (value $250) for the schooner making the best corrected time over the course.

The "Leland Corinthian Challenge Cup," open for competition to members of the Seawanhaka Corinthian Y. C. only, for the winner in the 30ft. special class of sloops. The winner of this cup in the annual Corinthian race and in each subsequent contest to receive a prize recording the names of the competitors.

Individual prizes to the Corinthian members of crews on winning yachts, whenever all or all except one of the crew are amateurs.

Single entries which do not elect to go into the next larger class may all be included in a mixed class race, prizes for which will be awarded as for the regular classes.

The courses were: (1) For schooners and class 1, 80, 70, 60, 50 and 43ft. classes of cutters and sloops: The Sound triangular course—From the starting line N.W. by N. 5 miles to and around a mark about 1 mile S. by W. from Greenwich Point, keeping it on the starboard hand; thence E. ½ N. 5 miles to and around a mark about 1¾ miles off Long Neck Point, keeping it on the starboard hand; thence S.S.W. 5 miles to and around the stakeboat, keeping it on the starboard hand; course to be sailed over twice, 30 nautical miles.

(2) For 36 and 30ft. classes and 34 and 30ft. special classes: The Shippan triangular course—From the starting line due north 5 miles to and around Cow's Buoy, keeping it on the starboard hand; thence E. ½ S. 2 miles to and around a mark about 1¾ miles off Long Neck Point, keeping it on the starboard hand; thence S.S.W. 5 miles to and around the stakeboat, keeping it on the starboard hand; course to be sailed over twice, 24 nautical miles.

(3) For 25ft. class and 21ft. special class, once over Sound triangular course.

(4) For 20 and 15ft. classes, once over Shippan triangular course.

On Friday afternoon and during the night a large number of yachts, both sail and steam, made their way into the harbor and anchored off the club house. Saturday morning was calm enough, with a light S.W. wind. The fleet made its way easily to the starting line off the mouth of the harbor, the racing craft being:

Alice, G. G. Frey	19.85	12 45 00	

Wasp and Uvira, having no competitors, were placed in a special class with the 43-footers for an extra prize, the regular prizes being also given in the 43ft. class. Iroquois and Elsemarie went in without allowance, on even time. Bogie, having no competitor, was obliged to go up into the 25ft. class. Nearly all the yachts have raced before and are well known. Secret is a new craft designed by her owners, Messrs. Townsend, and sailing her first race with a suit of sails borrowed from the old sloop Blonde, her own not being ready. Bogie is the new bulb-fin 30-footer, designed by W. P. Stephens, with the same rig as Ideal and Ethelwynn. Vaquero II. is the Herreshoff 21½-rater so successfully raced in the Solent last year by H. B. Duryea.

The start was made in three divisions: a time start at 12:35 for all schooners and cutters of 36ft. and over; a one-gun start at 12:40 for the 34, 30 and 21ft. special and 25ft. classes, and a one-gun start at 12:45 for all other classes.

There was but a light S.W. wind to work in, but the fleet of 53 yachts went away promptly without fouling, the big ones being timed:

Wasp	12 35 33	Mirth II.	12 38 55
Elsemarie	12 36 31	Drusilla	12 39 06
Uvira	12 37 13	Amorita	12 39 06
Eidolon	12 37 27	Colonia	12 39 14
Iroquois	12 38 00	Emerald (handicapped)	12 40 00
Norota	12 38 34	Indolent	12 40 00

The yachts sailing the Sound course had a close reach to the Greenwich Point mark, Wasp and Elsemarie, both with a good start, leading the way and gaining on the fleet. The mark was timed:

Wasp	1 20 25	Colonia	1 33 30
Elsemarie	1 25 00	Iroquois	1 34 29
Eidolon	1 25 53	Amorita	1 36 44
Uvira	1 27 50	Emerald	1 39 47
Norota	1 28 35	Drusilla	1 43 09

The yachts which sailed the Shippan course turned the mark at the Cow's Buoy as follows after reaching across the Sound under balloon jibs:

Hera		Ideal	2 02 53
Acushla		Paprika	2 06 33
Dragoon		Microbe	2 09 46
El Heirie	1 58 36	Vesper	2 10 36
Riverside	2 01 04		

The fleet set spinakers to one side or the other and drifted with most exasperating slowness in a calm. Microbe gave up and took a tow from a launch for Larchmont. The entire fleet rounded the last mark, the times as far as taken being:

Elsemarie		Musme	2 40 10
Hera	2 29 15	Acushla	2 32 31
Vaquero III.	2 36 20	Dragoon	2 35 20
Asahi	2 36 44	Vorant II.	2 37 25
Wawa	2 37 54	Feydeh	2 40 45
Mai	2 38 30	Twilight	2 47 25
Carolina	2 38 45	Wasp	3 05 50
Esperanza	2 39 31	Uvira	3 25 20

Bogie led her classmates and also the 21-footers over two legs of the course. Riverside and El Heirie were close together at the mark. Elsemarie had spun out a very long lead not only on her classmate, but on Colonia, Amorita and Emerald.

The last leg was to windward in a flat calm, with a flood tide in the Sound. Elsemarie worked out far to the northwest and did well by it. Colonia managed to outsail Emerald in the very light air and got well to windward of her.

The 30-footers separated in all directions. Riverside led El Heirie and they had a hot fight well out in the Sound for several hours. Vesper picked up Ideal on the wind, but soon dropped astern. Ideal profited by the experience of the week, and made one long starboard tack for the Long Island shore, fetching under the east end of Lloyd's Neck about 5 P. M. By this time Riverside and El Heirie had lost all the wind out in the Sound and were drifting. Vesper had cast off-shore for luck, but failed to find it, and Paprika and Hope were astern of the fleet.

At 5:24:17 Elsemarie managed to reach the line, where the signal to finish was set, followed by Colonia and Wasp, with Dragoon and Vaquero III. later. About this time El Heirie and Riverside, close together, lowered jibs and took a line from El Heirie's launch; kindly going a long way out of their course to pick up Ideal. By the time they reached her and proffered a line she had caught the first puffs of the long-looked-for shore breeze, and setting a balloon jib was almost able to keep up with the launch Astern of her were Bogie, Vaquero II., Celia and a lot more, all catching the breeze off the mouth of Huntington Bay. It was a long way to the line, but now the flood was making fast and helped them in. Paprika very pluckily hung out for second prize.

The times of those which finished were:

	Start.	Finish.	Elapsed.	Corrected.

Elsemarie wins the Cruger cup, and Vaquero III. the Leland challenge cup. The class prizes go to Colonia 1st; Wasp 1st; Norota 1st, and also 2d in the special class; Drusilla 2d; Dragon 1st; Vaquero III. 1st, Hera 2d; Twilight 1st; Bogie 1st; Houri 1st; Ideal 1st, Paprika 2d; Volsung 1st, Onaway 2d; Mary II. 1st, Weasel 2d; Alice 1st.

The race committee—Messrs. Cromwell, Sherman, Wetmore, Kerr and Dresser—were on the club steamer Dunderberg. The only notable feature of the race was the fast work of Elsemarie under such adverse conditions.

Winthrop Y. C. Open Race.

GREAT HEAD—BOSTON HARBOR.

Saturday, June 27.

THE open race of the Winthrop Y. C. on June 27 fared badly on account of the light S.E. breeze, only 40 yachts starting out of 100 entries, but a race was made in all classes. The times were:

	Length.	Elapsed.	Corrected.
FIRST CLASS.			
Harbinger, W. F. Bache	28.04	2 10 15	1 44 24

The Evasion of Waterline Measurement.

THE following letter calls attention to a matter that has been more or less under discussion for several seasons, and has this year demanded more notice than ever before through the increasing number and the monstrous proportions of what yachtsmen term "freaks."

NEW YORK, June 19.—*Editor Forest and Stream:* I wish to call your attention to a rule of measurement which you will find in the book of rules of the Long Island Yacht Racing Union, on page 5, Rule II., as follows:

"A form, resulting from the cutting away of the fair line of the stem, sternpost or the ridge of the counter, for the apparent purpose of shortening the load waterline, shall be measured between fair lines."

This rule can be applied to a number of "freak" boats to the advantage of racing yachtsmen who do not care to build "freaks," and who are now compelled to give time allowance to larger boats, which by reason of their peculiar build and the non-enforcement of the above rule are enabled to cheat the rule of measurement.

In the FOREST AND STREAM of June 13 is given a description of two ½-raters, which no doubt will exceed the 15ft. sailing length of this class if measured according to the above rule. WM. E. ELSWORTH.

We are heartily in sympathy with the spirit of the rule as quoted, and would like to see it enforced fairly but firmly by every yacht club in the country; at the same time we can see certain difficulties in applying it. There is one case, the one originally contemplated, as nearly as we can ascertain, in the framing of the rule years ago, in which its application is an easy matter, that such as came up some three years ago in Detroit, in which the City of the Straits (the yacht of that numerous name, and not the City of Detroit) sought to secure a fictitious measurement by sawing notches out of the stem and counter just about the waterline. The evasion and intent were so palpable that the decision should have been a matter of course; but the question was referred to the New York Y. C., and the opinion of its measurer, to whom it was finally submitted, was that the measurement must be taken between points on the fair line of the stem and counter, such as would be made by placing a batten against them.

The evil, as it is coming into existence to-day, is of a somewhat different nature, the old keel contour, made up of nearly straight lines and long, bold curves, either concave or convex, has given place to all sorts of freak jogs and angles, some for one purpose and some for another. In some cases it might be possible to apply the rule without question, as in the case mentioned, but in the majority the curves, though short and abrupt, still keep within the technical definition of a "fair line." In the first case, of the square jog cut in the stem, it would be manifestly impossible to bend a batten, however thin, into the opening; but in such craft as the Knot In It, to which our correspondent alludes, a batten might be bent from the heel of the sternpost to the stemhead. True, it would need to be very thin at one point, but still we may at least assume for the sake of argument, even if such is not the actual fact, that the keel contour is a "fair line," in that it can be thus described by a batten. The intent is obvious, but in the majority of cases it would be difficult to disqualify a yacht as the rule is now worded.

While we are strongly against such evasions, and approve decidedly of legislation against them should it prove necessary, we are by no means convinced that such tricks are of any benefit. With a measurement properly taken, that is, with crew and all proper weights aboard, there is a very small margin for any cheating of the waterline measurement; the main trouble comes in under the present system of measuring without all weights aboard. Anyone who watched Knot In It bobbing around the course in the races of last week, apparently making a painful effort to get herself down into the water where she should be, but would not go, must have recognized that if her proportions of about 10ft. waterline and 380ft. of sail were possible in the class, a far better boat could be designed by abandoning the futile attempt to get the upper part of the hull into the water when sailing The boat was seriously handicapped by the weight and the great windage of deck and topsides that she could never immerse unless when laid flat by a squall, and so far on her side that speed would be impossible As the facts were, she really sailed on a short, round and hard lee line, instead of the long easy one which she was supposed to have.

Kittie IIIII is another example. It is not yet known that either boat will measure into the class. To appearances the latter will not; but even if they do, their record in two days of light weather shows them to be hopelessly out of it with boats of moderate form and honest length measurement. Dragoon is another example. Without questioning her speed, any one who watches her under all ordinary conditions and sees her split the water from time to time with the sharp under ridge of her stem will realize that this disturbance can in no way contribute to her speed. Amorita is perhaps the fastest of the whole of this branch of the freak family, and there are many who agree with us that she might have been quite as fast with a stem that was not painful to look at.

It is true that this feature is being carried to an extreme in some of the new catboats, and apparently to advantage, to judge from their performances; but we have little fear that with the waterline fairly measured, as in England, with crew and racing weights aboard, there can be any material gain over the yacht of honest design.

Looking Backward.

IN its characteristic fashion the Boston *Herald* of June 20 has a fling at the 15ft. class, to which it misapplies the English name, as follows:

The ½-raters are not a go hereabouts (Boston), which is an indication of the sense and intelligence of our yachting men. At best they are a half-worked-out type, neither safe nor comfortable, nor do they in any way represent any ideas upon which the least beneficial information can be gained. The ½-rater is a dangerous craft, though with air-tight cans they are made to float. The pity is that even yachtsmen have been found to put money into them, when at a little more expense an out-and-out racing class might have been built from which data could be had. The ½-rater class will not be a permanent fixture on this side, for American yachtsmen do not believe in standing still.

It is sad to think how many misguided yachtsmen, or perhaps they are not real yachtsmen after all, have taken pleasure in designing, sailing and watching these boats during the spring without knowing how thoroughly bad the class is—in the opinion of the Boston *Herald*. As far as the remark about the class in Boston is concerned, it is simply arrant nonsense, as there are just about as many 15-footers in Boston as there are snakes in Ireland. The so-called "Boston boat" of the Seawanhaka trials was built by Lawley & Son, and they made a good job of her too, but she was designed by her owner, a resident of New York. Besides her, and she was afloat in Boston waters for only a few days, there is one other racing 15 footer, designed by S. N. Small, of whose merits we are not informed. There are about Boston, at Cohasset and Winthrop, a couple of dozen "one-design" 15 footers, designed and built with a low cost as the first consideration, and in no sense to be classed with such craft as those built for the real class racing, such as Ethelwnn, Trilby, Riverside, Ideal, Two Step, El Heirie, etc. Some of these boats, we know, are not of the proper design for their intended use, and none of them can be expected to make a good showing in open water beside the old class of racing yachts of 15ft. l.w.l. and unlimited sail.

The comments on the danger of the 15-footer read very funnily when we recall that this severe critic is at the same time pleading for the restoration of one of the worst types of small craft yet devised in this country, the unlimited 21-footer of 1891, boats of shoal draft, great beam, match-box construction and big rig. A man who will go outside of Half-Way Rock in such a craft in a fog, with nothing aboard but a jug of lemonade and a ton of pig lead piled on the floor, should hardly worry over the danger of racing a boat like Ethelwynn or El Heirie about the harbors of the Sound.

If the "Boston *Herald* man" had thought it worth while to attend the recent races, he might not only have learned just what a modern 15-footer is, but he could have seen clever handling that would have won his admiration, some sharp racing of a big fleet that throws into the shade the haphazard meeting of boats by couples in the large classes, and he could have filled several large note books with interesting and valuable "data" on models, sails, rig, construction and other vital points. Perhaps, too, he might have been able to explain the unlooked-for success of the bulb-fin in this class, the failure of the brute boats, the scows and the freaks and many other points not yet entirely clear. American yachtsmen do not believe in standing still, the American 15ft. class and its great advance in a single season over the English ½-rating class show that, as well as the immense amount of skill and energy displayed by the younger yachtsmen in producing and racing a fleet of 27 yachts of the same measurement.

Eastern Y. C.

MARBLEHEAD—MASSACHUSETTS BAY.

Saturday, June 27.

THE first of the races of the Eastern Y. C., for the knockabout class, was sailed on June 27 off Marblehead in a light S.E. wind, the new Herreshoff boat, Cock Robin, being an easy winner. The times were:

	Length.	Elapsed.
Cock Robin, C. S. Eaton	21.00	2 54 06
La Chica, C. V. Souther	21.00	2 59 35
Tautog, W. O. Gay	21.00	3 07 45
Mala, Everett Paine	21.00	3 25 55
Mayona, C. O. Stearns	21.00	3 30 45
Jacktar, T. E. Jacobs	.. ..	Withdrew.
Aruna, J. H. and F. D. Lambert	.. ..	Withdrew.
Dorothy, Frank Brewster	.. ..	Withdrew.
Water Lily, H. M. Sears	.. ..	Withdrew.
Bonito, J. O. Stacey	.. ..	Withdrew.
Sally, D. C. Percival, Jr.	.. ..	Withdrew.

The steamer Nantucket followed the race with the members of the club aboard. The regatta committee included Messrs. P. T. Jackson, H. H. Buck and A. N. Rantoul. The club house and grounds were illuminated in the evening, and many guests were present to enjoy the dancing.

The Week's Races.

THE present week is a busy one about New York. On Monday the Stamford Y. C. gives a race for 30-footers, 21-footers and 15-footers, with the annual regatta of the Pavonia Y. C.; on Tuesday are the special races of the Indian Harbor Y. C. at Greenwich; on Wednesday the Corinthian fleet of New Rochelle will hold its special races for 30-footers and 15-footers; on Thursday are the special races of the Horseshoe Harbor Y. C., of Larchmont; on Friday the annual regatta of the New Rochelle Y. C., and on Saturday the annual regatta of the Larchmont Y. C.

YACHTING NEWS NOTES.

Jessica, cutter, is under charter to W. K. Vanderbilt, Jr.

Kathleen, cutter, has been sold by Tams & Lemoine to H. C. Hopkins.

Constellation, schr., has been chartered by Bayard Thayer to G. W. Weld.

Bedouin, cutter, has been sold through Tams & Lemoine by Samuel Mather to J. Murray Mitchell.

WASHINGTON, June 21.—When President Cleveland arrives at Gray Gables for his summer vacation he will find his vapor launch newly painted and renamed Three Sisters. Last year, when the President and Mrs. Cleveland bought this launch, they christened it Two Sisters, and this name was inscribed on the stern, but another daughter claims attention now, and this led to the change in the name of the boat, this suggestion having been made by Mrs. Cleveland before starting for Buzzard's Bay.—*Chicago Daily Tribune.*

The new steam yacht Kanawha, designed and built by Charles L. Seabury & Co., Nyack, for John P. Duncan, N. Y. Y. C., made her official trial trip on June 23. The guaranteed speed in contract was 16 miles per hour for three consecutive hours over a measured course, and without the least trouble she attained a speed of 17 miles per hour for the time mentioned, everything working to perfection. The engine is a Seabury design, triple expansion, and the boiler of Seabury's latest improved type. The principal dimensions of Kanawha are: 140ft. over all, 115ft. waterline, 17ft. beam, 7ft. draft. Capt. William A. Miller is in charge.

FIXTURES.

JULY.

1-8. Atlantic Division Meet, Lake Hopatcong, N. J.

Red Dragon C. C.

ON Saturday, June 13, an invitation race for mosquito boats and half-raters was scheduled by the Red Dragon C. C. for boats of the Riverton and Philadelphia yacht clubs and the Canoe Club. The half-rater race was called off because of lack of entries, only two of the Red Dragon half-raters being ready, and none of those of the other clubs. The mosquito boat race was more successful, four boats starting: Elsie, C. M. Biddle; Onawa, Norman Ellison; Ivie, C. C. Reinhard, and Michella, H. W. Mitchell.

The course was from a buoy off the Red Dragon station, at Wissinoming, to and around the Plum Point Spar Buoy, sailed over twice, making 12 miles. The course was nearly a dead beat from the club house buoy to the Plum Point Buoy, and Elsie finished first in 2h. 31m. 5s.; Ivie second, 2h. 32m. 25s. Regatta committee: W. J. Scott, John M. Hamilton, H. E. Bachmann, Omar Shallcross and E. W. Crittenden.

The thirteenth annual spring regatta belied its unlucky number, being very successful, with plenty of good racing. The events resulted as follows:

1. Maneuvering and upset sailing, won by A. S. Fenimore, canoe Smuggler.

2. Single paddling, double blades, decked sailing canoes: First, E. W. Crittenden; second, F. L. Wise; third, H. E. Bachman; fourth, F. M. Crittenden. This was won by a length, half a length between first and second.

3. Tandem paddling, double blades, decked sailing canoes: This race had but two entries. F. L. Wise and H. M. Rogers finished first, E. W. and F. M. Crittenden second. Won by about half a length.

4. Tandem paddling, single blades, open canoes: This race was the best of the day, being in doubt to the very finish. R. G. Fleischmann and H. E. Bachmann finished first by a good spurt, but were disqualified for passing outside the buoy marking the end of the finish line instead of inside. E. W. and F. M. Crittenden got square with Wise and Rogers for the previous beating by winning out for second, but were awarded first because of the disqualification of the other crew.

5. Hand paddling failed of entries, and was called off.

6. Upset paddling: Frank Crittenden won after upsetting twice, once at the signal and once afterward when he didn't intend it. F. L. Wise second.

7. Tub race: This race, because of the scarcity of tubs and the number of entries, was run, or paddled in heats. First heat: H. M. Rogers finished. E. W. Crittenden and Wise stopped on the way to inspect the bottoms of their tubs after they had capsized. Second heat: Bachmann finished and Fenimore and Lloyd Titus capsized. Final heat: Rogers won, Bachmann second. This race illustrates the beauty of having an accommodating regatta committee. The course was about 40yds. out from the float and return. Hamilton, owner of the mighty half-rater Imp, acted as the buoy and referee seated in a small canoe, Wasp XXXIII, about the size of a pumpkin seed, and incidentally did the life-saving act when Titus concluded to take a dive head first into the mud to see what had become of his tub. The tide was running out at this time and there was only about 3ft. of water at the float. Titus didn't find his tub, but when he came up he was a sight.

The last event was the time-honored tournament, and Titus, with Fenimore as paddler, helped somebody else get dirty by punching Crittenden out of his canoe twice in succession, upsetting the canoe each time.

Refreshments were served after the races, and later as many as cared to brave the heat danced waltzes and two-steps *ad lib.* till the time for the last train.

The prominent guests were Horatio Page, of New York; Vice-Com. Hand, of the A. C. A.; Jimmie, he of the curly locks like a slice of burnished gold, the genial smile and the coochee-coochee dance, and W. C. Lawrence, of the Park Island C. A., Algonquin C. C., etc., etc.

The first of a series of three Club Record races was held on Saturday, June 27, for two classes: canoe yawls and half-raters. The course was from off the club house, at Wissinoming, to and around a buoy three miles up the river. The starters were as follows:

Half-raters: Feather, F. W. Noyes; Dragon, W. J. Scott; E-Cho, A. S. Fenimore and J. E. Murray; Imp, Jno. M. Hamilton.

Canoe yawls: Nixie, H. E. Bachmann; Tadpole, R. G. Fleischmann; Olie, E. W. Crittenden.

The start was at 3:46:22 P. M., with a very light wind from the west, making the start a broad reach. Tadpole was first over the line, with Feather and Imp close behind. The wind shortly hauled to the southwest, enabling spinakers to be set to port. Dragon rounded the mark first, followed by E-Cho and Tadpole. On the beat back Dragon still did the best work and crossed the line first at 5:34:00 P. M., Imp second at 5:41:28; Feather third, at 5:42:08. Nixie finished first of the yawls at 5:43:17; Olie second, at 5:47:55. Tadpole withdrew.

SUMMARY—HALF-RATERS.

	Elapsed.
Dragon, first, 5 points	1 47 38
Imp, second, 3 points	1 55 06
Feather, third, 1 point	1 55 26

CANOE YAWLS.

Nixie, first, 5 points	1 56 55
Olie, second, 3 points	2 01 33

Of the above boats Dragon is a Stephens "scarecrow" with Linton Hope board, and Imp was designed and built by Clapham. Nixie was designed and built by her owner. M. D. WILT.

Atlantic Division Meet.

To the Members of the Atlantic Division:

The meager responses to the previous circular sent out by your committee will not warrant the engagement of a canal boat for the transportation of canoes and duffle from New York and vicinity, nor the scheme of a general mess for the use of members at the camp at Lake Hopatcong, July 1 to 8.

It is hoped that a sufficient number will signify their intention of being present at the camp with canoes and duffle to warrant the use of a lighter to make the rounds of the clubs near New York, and transfer the canoes and duffle to a baggage car at Hoboken; from there the car will go to Hopatcong, stopping at Newark for the equipage of members along the Passaic River. The cost of the lighter for one day—June 30—will be in the neighborhood of $30, and it will depend upon the responses received whether your committee will engage the boat or not. The charge for the car will be nominal if eighteen full-fare tickets at $1.30 each are taken from Hoboken to Hopatcong. The cost of transportation from the railroad at Hopatcong to the camp will be slight. The cost for return transportation will be about the same.

Camp will open on the afternoon of July 1. Members are urgently requested to be present, if not for the whole time, at least for Saturday and Sunday, July 4 and 5. It is proposed to hold the annual meeting of the Atlantic Division at the camp on the evening of July 4.

The following programme has been prepared by the regatta committee, subject to change in order of events:

1. Sailing race, 3 miles, limited to 80ft. rig and to canoes having 40in. cockpit; canvas, etc., cockpits barred.
2. Paddling race, ½ mile, open canoes, single blade.
3. Elliott Sailing Trophy race, 9 miles, 130ft. rig or under.
4. Paddling race, ½ mile, for lap-streak decked canoes.
5. Combined race, 3 miles; alternately ½ mile sailing and ½ mile paddling.
6. Hurry-scurry race.
7. Sailing race, 6 miles, 100ft. rig, handicap sealed.
8. Paddling-tandem race, open canoes, ½ mile, double blade.
9. Paddling race, ½ mile, decked canoes, double blades.
10. Sailing race, 6 miles, 130ft. limit to rig.

As previously advised, arrangements will be made for storage and sleeping tents for members arriving without duffle, but it is hoped that enough members will be present with canoes and their own equipage to make the regatta a success and to give a good appearance to the camp.

If twenty favorable responses are received by the undersigned prior to Monday, June 29, the lighter and car will be engaged, and notice of time when lighter will call for canoes and duffle and when the car will leave Hoboken (stopping *en route* at Newark) will be sent to each member so advising. JAMES K. HAND, Vice-Com.

NEW YORK, June 22.

A. C. A. Membership.

APPLICATIONS for membership may be made to the purser of the division in which the applicant resides on blanks furnished by purser, the applicant becoming a member provided no objection be made within fourteen days after his name has been officially published in the FOREST AND STREAM.

Noyes	7	2	4	4	8	6	6	7	2	4—50
	3	7	6	1	6	2	2	3	4	2—36

A cup has been donated to the club to be known as the Keystone Championship cup, to be shot for on the Fourth of July. The club will hold an all-day shoot on that day at their range at Berkencamp's farm.

June 27.—Below are the scores of to-day's regular practice shoot. The weather was hardly favorable for good scores, the wind being very changeable:

Germann	6	8	8	4	10	9	7	10	8	4—74
	5	8	5	6	8	10	9	6	8	7—72
	5	9	6	7	8	10	8	5	8	5—71

Columbia Pistol and Rifle Club.

SAN FRANCISCO, June 15.—*Editor Forest and Stream:* The weather conditions at Shell Mound were not the best at yesterday's shoot.

The Columbia Pistol and Rifle Club's members turned out in goodly numbers, several attending from Mount Eden. On the rifle range a number of fine scores were made, particularly in the 3-shot Unfred diamond medal match. Burfeind's best score (Columbia target) was 2, 4, 2—8. He was tied by McLaughlin with 5, 1, 3—8. On the military medal match (Columbia target, Creedmoor count) F. O. Young carried off the honors with 45 out of 50. Young was also high on the 10-shot record medal match on 51. The rifle scores were as follows:

Target rifle, Unfred medal, 3 shots: D. W. McLaughlin 8, H. H. Burfeind 8, F. O. Young 13, Dr. L. O. Rodgers 14.

Military rifle, Glindermann medal, 10 shots: F. O. Young 45, J. P. Bean 40, J. Meyer 38.

Rifle record, 10 shots: F. E. Mason 84, F. O. Young 51.

Champion class, for members only: D. W. McLaughlin 56, F. O. Young 69, Dr. L. O. Rodgers 70, A. H. Burfeind 82, P. Bohr 117.

First class: O. A. Bremer 77, A. B. Dorrell 85, H. R. Crane 86, F. E. Mason 91, F. Baumgartner 99.

Second class: J. E. Gorman 96, F. Dennis 119, A. H. Hesse 144, W. F. Unfred 185.

One of the most enthusiastic .22cal. rifle shots is E. Jacobson, and he became so proficient with the little rifle at 50yds. that he was anxious for a match. Smith Carr preferred. He wanted to meet the latter because Carr is in the front ranks in this style of shooting. The two met on the range yesterday, and in a short time they arranged a small purse on a 50-shot contest. There was great interest manifested in the event. For a time it looked as though Carr was going to win, but Jacobson on his last string succeeded in hitting the inch center five out of ten times and pulled out 12 points ahead, as seen by the annexed score:

E Jacobson	6223222323—27	S Carr	2221321143—21
	3162242222—26		3542242534—34
	4333121235—27		2552322121—25
	1333432123—26		1261542212—26
	1141141223—20—126		3635121542—32—138

The markers on the 50yd. pistol range were kept busy all day, for besides the regular record contests there were a number of new members at practice. Even in their brief experience the new additions to the club give promise of becoming fine shots who will worry the older men. The pistol records were as follows:

Champion class, 10 shots: E. Gorman 42, C. M. Daiss 60, F. O. Young 64.

First class, 10 shots: Dr. L. O. Rodgers 54, F. Baumgartner 62, M. J. White 67, F. Dennis 79, A. B. Dorrell 81, D. W. McLaughlin 105.

Second Class, 10 shots: E. Jacobson 55, F. E. Mason 65, Dr. Robertson 106, O. A. Bremer 113, A. H. Hess 141, W. Unfred 169.

Pistol, Blanding medal, open to all competitors, 3 shots: C. M. Daiss 8, 12, J. E. Gorman 10, 11, F. O. Young 16, 18, Dr. L. O. Rodgers 14, 16.

The Columbia target gives the most perfect satisfaction for all-round target work. This club has experts in all styles of shooting—target rifle, military rifle, .22cal. rifle, pistol and revolver, and the ½in. rings answer every requirement. ROEEL.

Rifle Club Constitutions.

WE would be obliged if secretaries of rifle clubs would favor us with copies of constitutions and shooting rules, that we may send them to other clubs seeking such information.

Baltimore Claims no Dates.

ELLICOTT CITY, Md., June 28.—*Editor Forest and Stream:* I was authorized in May last to claim the second week in October, 1896, for a tournament in Baltimore. Since then certain contingencies have arisen that make it impossible to carry out the programme as at that time made and provided, and I hereby withdraw any claim to the second week in October, and from any personal connection with a tournament in Baltimore at that time. SAMUEL J. FORT, M.D.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

July 4.—SPRINGFIELD, N. J.—Annual tournament of the Union Gun Club; live birds and targets. E. D. Miller, Sec'y.

July 4.—PLEASANT HILL, Mo.—All-day shoot of the Pleasant Hill Gun Club.

July 4.—GREGORY'S POINT, Conn.—All-day shoot of the Naromake Gun Club. Targets. W. E. L. Capron, Sec'y.

July 4.—CHARLESTON, S. C.—Third annual tournament of the Palmetto Gun Club. Targets.

July 4.—NEW HAVEN, Conn.—All-day shoot of the New Haven Gun Club. Targets. W. H. Hazel, Sec'y.

July 16.—ELIZABETH, N. J.—All day shoot of the Elizabeth Gun Club, commencing 9:30 A. M. Sixth tournament of the New Jersey Trap-Shooters' League at 2 P. M.

July 21-22.—HOT SPRINGS, Ark.—Sixth annual meeting and tournament of the Arkansas State Sportsmen's Association; $165 added money. All purses divided on equitable system. John J. Sumpter, Jr., Sec'y, Box 111, Hot Springs, Ark.

July 22-23.—PORTLAND, Me.—Interstate Association's tournament, under the auspices of the Portland Gun Club.

July 29-30.—WORCESTER, Mass.—Tournament of the Worcester Sportsmen's Club. Targets. For programmes address A. W. Walls, Worcester, Mass.

July 30, 31.—GOSHEN, Ind.—Midsummer tournament of the Goshen Gun Club.

Aug. 4-6.—CHICAGO, Ill.—Tournament of the Du Pont Smokeless Powder Company. E. S. Rice, Mgr.

Aug. 11-14.—DETROIT, Mich.—Jack Parker's sixth annual international tournament. Fuller details later.

Aug. 26-27.—BURLINGTON, Vt.—Tournament of the Interstate Association, under the auspices of the Lake Side Rod and Gun Club.

Sept.—BUFFALO, N. Y.—B. F. Smith's tournament at Audubon Park. Live birds and targets.

Sept. 2-4.—BUFFALO, N. Y.—Tournament at Audubon Park. Targets and live birds. B. F. Smith, Manager.

Sept. 7.—MARION, N. J.—Sixth annual tournament of the Endeavor Gun Club. Targets. J. A. Creveling, Sec'y.

Sept. 8-11.—HARRISBURG, Pa.—Annual tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Harrisburg Shooting Association.

Sept. 15-16.—KANSAS CITY, Mo.—Third annual tournament of the Schmelzer Arms Company; $750 added money.

Oct. 6-8.—INDIANAPOLIS, Ind.—Autumn tournament of the Limited Gun Club. Open to amateurs only. Two days, targets; one day, pigeons and sparrows. Royal Robinson, Sec'y.

Oct. 7-9.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association; targets and live birds; added money announced later.

1897.

March 23-25.—NEW YORK CITY.—The Interstate Association's fifth annual Grand American Handicap at live birds.

June (third week).—CLEVELAND, O.—Fourth annual tournament of the Chamberlin Cartridge and Target Company.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

Paul North, under date of June 23, writes as follows: "One of the shooters attending our tournament last week left the fore end of his gun on the grounds. If you will kindly mention it in your paper we will be pleased to forward it to the owner."

A gun club has been organized in Danvers, Mass., with a good membership. The officers are: President, John W. Babbitt; Vice-President, Dr. E. H. Niles; Captain, E. H. Langdon; Secretary and Treasurer, E. A. Bedell; Executive committee, the president, vice-president, captain, Frank Brown and D. S. Brown.

On Saturday, June 20, the day after the close of the Chamberlin tournament, a little match for a valuable consideration was shot on the grounds where the tournament had been held. The principals were R. E. Sheldon and Jack Winston. The conditions, 100 targets, expert rule, one-man up. Both men scored 83 out of 100, Winston losing his last target. The tie was shot off at 25 targets, Winston winning by 22 to 19.

Mr. C. O. Gardner, secretary of the newly-organized Bergen County Gun Club, of Hackensack, N. J., writes as follows: "The Bergen County Gun Club has been organized and incorporated with the following list of charter officers and members: Thos. Bell, President; H. D. Warner, Vice-President, C. O. Gardner, Secretary; E. A. Jackson, Treasurer; Geo. Griffiths, Captain. The club has begun under very favorable auspices and has already leased grounds and commenced to erect shooting houses, platforms, traps, etc., and will hold its initial shoot on July 4, 1896. There will be a large merchandise shoot besides other interesting events, and the fraternity are cordially invited to be present, with the assurance that the Bergen County Gun Club will give them a cordial greeting."

The season at the Hollywood (N. J.) traps was opened on Saturday last, June 27. The main event was the "Overture prize," 15 live birds, $15 entrance, handicap rise. The winner was A. L. Ivins, who killed 14 out of 15 from the 30yds. mark. Bland Ballard (30) and Phil Daly, Jr. (28) tied for second money with 13 kills. The other entries were: Fred Hoey (30) 9 out of 12, Charles Hebbard (29) 11 out of 14, F. S. Roebling (29) 11 out of 13, W. S. Edey (30) 9 out of 12, H. B. Moore (27) 7 out of 12, J. J. O'Donohue, Jr. (25) 5 out of 12.

Preparations for the big Du Pont tournament in Chicago next month are progressing rapidly. Mr. E. S. Rice, the Du Pont Co.'s Western agent, will soon have his programmes ready for distribution.

The New Haven (Conn.) Gun Club will hold an all-day shoot on July 4 at its new grounds, Cedar Hill, near the Schuetzen Park. The programme of events is a popular one, with a little added money to give it a spice.

The letter from our Baltimore correspondent, Bell Muzzle, is calculated to break ground in a question that must sooner or later be faced by the trap-shooters of this country. While we do not by any means indorse all the opinions expressed by our correspondent, there is yet a good deal to be said in behalf of some of his propositions.

EDWARD BANKS.

Pawtuxet's Club Shoot.

PAWTUXET, R. I., June 20.—The Pawtuxet Gun Club has accepted the challenge of the Rhode Island Shooting Association, and a series of shoots will take place, commencing July 9, on the grounds of the last named club. The conditions are 5-men teams, 25 birds per man, four contests, two on grounds of each club, the team scoring the most breaks out of the four shoots (500 birds) to win.

We should like to hear from any philanthropic firms or individuals who desire to contribute anything from a fine hammerless to a can of powder, as either individual or team prizes, and we can assure them that they will be thankfully accepted.

To-day's was the sixth medal shoot of the season:

Class A.

The Pittsburg Tournament.

THE circuit of 1896 may be said to have closed on June 25, the last day of the tournament held at Pittsburg, Pa., under the auspices of the Pittsburg Gun Club. Following so closely upon the heels of the successful tournament at Cleveland, O., it was only to be expected that several of the shooters taking part in that tournament would make the 130-mile trip to Pittsburg and take in the Smoky City's shoot with $500 added money. And as a matter of fact the delegation that came on from Cleveland was a large one: Rolla Heikes, C. W. Raymond, H. E. Norton, Chas. Tippy, Ralph Trimble, Jack Winston, Redwing, Edwards, Charlie Grimm, Neaf Apgar, Frank Parmelee, G. W. Sergeant, Charlie Budd, Chauncey Powers, E. D. Fulford, Will K. Park, Seth Clover, A. P. Pope, A. W. du Bray, Dick Swiveller and Jack Fanning. J. A. Flick was present on the second day, being able to spare but one day from his business.

THE GROUNDS.

The grounds were very conveniently located, being actually only six minutes' ride by trolley car from the door of the Anderson Hotel, the headquarters for shooters. In point of accessibility these grounds were superior to any on the circuit, that is, speaking from our own personal knowledge. There are many shooting grounds, however, that are more picturesquely situated.

On the wet day of this shoot the aspect of affairs was not inviting. The atmosphere was charged with moisture and smoke, the sun failing to make any impression on it. The rain too came down in quantities sufficient to stop the shooting several times. That was on the second day of the tournament. On the other two days, and also during the practice work of Monday, the sun shone down with a fervor that was more than noticeable; at the same time the brilliant sunshine caused the targets to show up very clearly against the background of smoky haze. Taking it altogether (when it was not raining) the light for target shooting was very good.

The arrangements were excellent, there being plenty of tents to shelter shooters from either the sun's rays or the rain. One tent was the property of the Herron Hill Gun Club, of Pittsburg, and all visitors were welcome. Another was the commissary tent, presided over by the genial Snowball, who dealt out meals and teetotal liquids at extremely moderate rates. A third tent was occupied by the entertainment committee of the Pittsburg Gun Club, and in it the club kept open house. As some of the boys put it, the tent was "open to all, nobody barred." A streamer on the side of this tent bore the following legend: "Pittsburg Gun Club: Sandy McPherson, Chairman; Committee: C. M. Hostetter, J. S. McIntosh and J. H. Shaffer."

A fourth tent was devoted exclusively to the housing of the visitors' guns, shells, etc. This tent was placed in charge of a trustworthy watchman during the day, his services being needed owing to the rabble of small boys, etc., who enjoyed the free show of trap-shooting. We must not be understood to include under the head of "rabble" the large crowd of spectators who daily watched the work of the visiting cracks and the locals with the most extraordinary show of interest. The way this crowd followed the "Heikes squad" and the "Indian squad" from one set of traps to another was decidedly refreshing, and showed a degree of interest in trap-shooting we have seldom, if ever, seen equaled. Elmer E. Shaner, who of course ran this shoot, had made all necessary preparations for the handling of this crowd, a strong railing that ran the whole length of the three sets of traps, together with the services of two of Pittsburg's "finest," being all that was needed to keep the crowd in its place.

A favorite lounging place for the shooters was under the large fly of a fifth tent, the cool breeze that swept under it being exceedingly grateful after one had fired 35 shots with hardly a chance to rest.

The cashier's office was made rather too small for convenience, but that was due to a mistake on the part of the carpenters who had the job on hand. Still, Fred Davison, the cashier, although short-handed, got through his work very satisfactorily. Shortly after the close of the last event on the third day everybody's money was forthcoming; all the shooters had to do was to step up and draw down what was coming to them. It is only proper to state here that the assistance rendered the cashier's department by the "lightning calculator" from Charlotte, N. C., John W. Todd, were fully and gratefully appreciated by the management. The work, too, of Will K. Park, who volunteered to act as press agent, putting the scores in a shape readily understood by the daily newspaper men, deserved and received the hearty thanks of the Pittsburg Gun Club.

THREE SETS OF TRAPS WERE USED.

Three sets of bluerock traps, with Paul North's latest electric pull attachment, were used, bluerock targets, of course, being thrown. The regular programme events were decided on Nos. 1 and 2 sets, No. 3 set being devoted to the running off of the extra events. These extra events were: On the first day the 100-target handicap race, $5 entrance, targets extra at 3 cents, a silver cup, donated by the E. C. Powder Company, going to the winner; on the second and third days, four events of 15 targets each, expert rule, one man up, were scheduled to be decided on this set; Rolla Heikes, as told below, coming out on top in these events on both days. The 100-target race was won by John H. Shaffer, who thus won the E. C. silver cup.

THE MANAGEMENT.

Everything connected with running this tournament was under the direct supervision of Elmer E. Shaner. In connection with Mr. Shaner's management it should be stated that this tournament was in no sense of the word an "Interstate tournament," it was the annual tournament of the Pittsburg Gun Club. The error made by several papers in announcing this shoot as given under the auspices of the Interstate Association was doubtless due to Mr. Shaner's connection with that association as its manager.

The entertainment committee has been mentioned above. Its duties were well performed, the various members of that body doing their level best to make all the visitors feel at home. Old Hoss (C. M. Hostetter), of course, was in his element, making many new friendships and renewing old ones. The referees were an unusually capable trio: Bill McCrickart looking after No. 2 set of traps, while Second Vice-President Harry B. Mohler, of the Herron Hill Gun Club, and Secretary Lautenslager, of the same organization, rendered the decisions at Nos. 3 and 1 sets of traps respectively.

In regard to the work of the referees, Elmer Shaner had something to say prior to the firing of the first shot on the morning of June 23. Asking the attention of the shooters for a few minutes, Mr. Shaner addressed them in words to the following effect: "Gentlemen, we have secured the services of three competent referees, who will decide all questions of 'dead' and 'lost.' Although they are not infallible, we know they are honest and we believe they are capable. At this tournament we want it well understood that 'the referee's decision is final.'" At the close of this brief address there were "cheers for Elmer."

The cashier's office has been referred to above, so nothing more need be said on that point. The scorers, both blackboard and manifold men, were as good as we have ever had the pleasure of watching, mistakes being very few and far between. It may seem an easy thing to score correctly, but to any one who thinks so we would say, "Try it for a single squad." John Wright, better known perhaps as Blinks, looked after the blackboards and put up the names of the shooters in each squad in a most artistic manner. Brother Bill McCrickart, besides acting as referee at No. 2 set of traps, was major domo and controlled the trapper boys.

Coming, as it did, at the close of a succession of large tournaments which commenced early in April, it was not to be expected that the Pittsburg Gun Club's tournament would be a record breaker. It was, however, a most successful and enjoyable gathering of shooters, and was the best shoot ever given under the auspices of one of the most progressive clubs in western Pennsylvania.

GENERAL AVERAGES.

The programme of regular events called for 175 targets, unknown angles, each day. This made a total of 525 for those who shot through the entire list of events. Owing chiefly to this large number and to the extra events on No. 3 set of traps, only 17 men shot through the programme. Fanning had the misfortune to have his gun break down on the first day, shutting him out of two events and spoiling his otherwise good work; his totals on the last two days of the shoot show what he is capable of. Bridgers, who shot up well during the tournament, missed the 10th event on the first day. No average money was offered by the club, but the top-notchers shot out for place. Heikes landed in first place by the narrow margin of 2 targets over Parmelee, Fulford coming third, with Apgar and Grimm tied for fourth place. Below are the general averages:

	Broke.	Av.		Broke.	Av.
Heikes	493	93.9	Anthony	449	85.5
Parmelee	491	93.5	Sergeant	444	84.5
Fulford	487	92.7	Trimble	435	83
Apgar	481	91.6	Todd	426	81.1
Grimm	481	91.6	W S King	421	80.1
Powers	477	90.8	McVey	415	79
Redwing	469	89.5	U M C	415	79
Budd	464	88.3	Tippy	396	75.4
Hood	455	86.6			

PRELIMINARY WORK.

As usual there was some preliminary practice work on the day prior to the commencement of the shoot. At 2 P. M. on Monday, June 22, according to promise, Elmer Shaner had everything ready for the boys to try their hands at bluerocks. There is a double purpose in this practice work: it gives shooters a chance to get accustomed to the light and background, and also enables the management to break in their trappers, scorers, referees, etc. Seven events, 15 targets each, unknown angles, $1.50 entrance, were shot during the afternoon. The scores made are given in the following table:

Events:	1	2	3	4	5	6	7	Events:	1	2	3	4	5	6	7

FIRST DAY, JUNE 23.

The weather was extremely warm to-day, and it seemed as if the grounds at Exposition Park were about as hot a place as one could find anywhere. The programme was a long one; it called for five events of 15 targets and five events of 20 targets each, in addition to the annual 100-target handicap race, a total of 275 targets. The length of the programme, and the comparatively late hour at which the shoot commenced, naturally made it well past sundown before the last target was thrown.

The main feature of the day was the 100-target handicap race, which resulted in a popular win for a local man, John H. Shaffer, who had an allowance of only 6 extra targets to shoot at. Out of his 106 shot at he scored 98, running his last series of 25 targets straight. Winston gave Shaffer quite a race, scoring 91 out of his 100, and then breaking his 6 extra targets. In third place were Apgar (106) and A. H. King (110), both of whom broke 95. In fourth place came Grimm and Parmelee, each breaking 94 out of 102 shot at. Rolla Heikes, who was one of the two scratch men, landed fifth, with 93 breaks; Bridgers (110) and Born (110) tieing with him for fifth money. Fulford, the other scratch man, only broke 88 out of his 100. The scores made were as below:

THE HANDICAP EVENT.

	1st 25.	2d 25.	3d 25.	4th 25.	Handicap.	Total.
J H Shaffer (106)	21	23	23	25	6	98
J Winston (106)	24	22	21	24	6	97
Neaf Apgar (106)	24	21	22	23	6	95
A H King (110)	20	22	22	22	9	95
C M Grimm (102)	21	24	23	24	2	94

Colteryahn	18	15	16	w		
Harbison	13	12	21	w		
Allen	14	17	10	w		

* Did not shoot out their handicaps.

By his victory in the above event Shaffer became the owner of the really handsome silver cup presented by the American E. C. Powder Co. At one time it was thought that Winston had tied Shaffer, but an inspection of the scores showed that Shaffer won the cup and first money by the narrow margin given above.

REGULAR EVENTS.

In the regular events some good shooting was done. Heikes led with 94.8, Apgar being close behind him with 94.3. Grimm and Parmelee followed with 93.7 and 92.5 respectively. Below is a table of the

SCORES OF JUNE 23.

Events:	1		2		3		4		5		6		7		8		9	10		
Targets:	*15*	*20*	*15*	*20*	*15*	*20*	*15*	*20*	*15*	*20*									Shot at.	Broke.	Av.

The following shot in only one event: No. 1: S. P. Life 11; No. 2: Colteryahn 15; No. 5: Scott 10, J. Mack 9, Matthews 10, Cundall 7; No. 6: Gray 14; No. 7: Ewing 10, Breckville 2; No. 9: Wall 9.

SECOND DAY, JUNE 24.

A heavy rain that came down at intervals made shooting anything but a pleasure. The grounds were soaked, while the tan bark which was spread at the score became saturated with moisture, every step taken by a shooter making it worse for those who followed. The sky was of course overcast, while one or other of the surrounding machine shops belched forth volumes of dense black smoke and added to the general obscurity of the surroundings. Scores were good, however, and the boys kept on shooting in spite of the wet. Below, in order of merit, are the

SCORES OF JUNE 24.

Events:	1		2		3		4		5		6		7		8		9	10		
Targets:	*15*	*20*	*15*	*20*	*15*	*20*	*15*	*20*	*15*	*20*									Shot at.	Broke.	Av.

Collins	7	15	8	10	5	..	..	..	..	..									85	45	52.9

Johnson scored 10 in No. 3; Du Bray 8 in No. 5. Pope shot only in two of the expert events.

SHOOTING UNDER EXPERT RULES.

The programme provided for four events to be shot on the extra (No. 3) set of traps; each event was at 15 targets, expert rule, one man up, five traps down, $1.50 entrance. The Pittsburg Gun Club gave a solid silver berry spoon to the man making the highest average in these events. Heikes won the spoon, beating Grimm by one target. Scores:

THIRD DAY, JUNE 25.

The morning broke with but poor prospects for a fine day, and everybody was prepared for another wet one. About 10:30, however, the sun broke through the clouds (both rain and smoke) that hung over the city of Pittsburg and before long the heat became very oppressive. With a better light, scores of course ruled higher. Fulford and Parmelee tied for first place, Rolla Heikes being a close second. Of the twenty-three shooters who shot through the programme eight made averages better than 90 per cent. Below are the

SCORES OF JUNE 25.

Events:	1		2		3		4		5		6		7		8		9	10		
Targets:	*15*	*20*	*15*	*20*	*15*	*20*	*15*	*20*	*15*	*20*									Shot at.	Broke.	Av.
Fulford	13	19	15	19	14	19	15	19	14	19									175	166	94.8
Parmelee	14	18	15	19	14	18	15	20	14	19									175	166	94.8
Heikes	13	20	13

After the programme on this day had been shot out the crowd waited to see the match reported to have been made between E. D Fulford and Jack Winston. The conditions of this match were stated to be: 100 targets per man, expert rule, one man up, $100 a side. This match, however, did not come off. Instead of it Winston shot a race at 100 targets with A. P. Pope, of Olean, N. Y., for $10 a side. Winston won, but only after a close race, scoring 76 to 73. Score follows:

Winston .....1111010001111011111011110001111111111111110110111110—38
0111011111111010001111110110111011111011111101111011—38—76
Pope.....0111111011010001111011011100011111000010111111011—33
1111110111100111010111101111011111101111011111011—40—73

A couple of three-cornered matches for a small consideration were also shot at the No. 3 set of traps. The conditions were: 15 singles, expert rule, one man up, and 5 pairs. The results of these matches are given below:

First match:

F S Edwards	111111111110100	10 10 11 01 11—19
Capt Money	111011100111010	10 11 10 10 10—16
Col Anthony	110110001101101	00 10 10 11 10—14

Second match, same conditions:

F S Edwards	111110111111101	10 11 10 11 01—20
Capt Money	011101110111000	11 11 11 11 11—19
Col Anthony	110110111111011	11 00 11 10 00—17

In a match at 5 pairs Capt. Money and Colonel Anthony tied on 7, Edwards scoring 6.

NOTES.

The Indian Squad made a great record at this shoot. Each of the six men composing the squad shot at 525 targets in the thirty programme events, making a total of 3,150 targets shot at; of this number they broke 2,838, making a squad average of 90.09 for the three days. The individual scores were: "Roundmouth Chief" (Parmelee), 491; "Southpaw, the Papoose" (Apgar), and "Moonface, the Squawman" (Grimm), 481 each; "Blackfoot Charlie" (Powers), 477; "Dago Chief" (Budd), 464, and "Man-Afraid-o'-Water" (Sergeant), 444.

Tom Divine, of Memphis; H. L. Foote, of Rolling Fork, Miss.; Col. Anthony and John W. Todd, of Charlotte, N. C.; and H. C. Bridgers, of Tarboro, N. C., formed the major part of a Southern squad that was often heard from.

In Brother Bill McCrickart and Blinks, Elmer Shaner had two men who never shirked when it required a little effort to keep things moving.

The Pittsburg daily papers gave plenty of space to reports of the shoot and, without exception, handled the matter in a style that few lay papers possess.

J. A. H. Dressel, of Hartley & Graham, and U. M. C. Thomas looked after the interests of the Union Metallic Cartridge Company. Thomas shot through the programme, but Mr. Dressel did not reach Pittsburg until the morning of the last day.

Capt. A. W. Money, of the American E. C. Powder Company, put in an appearance on the last day. The captain had plenty to say about shooting in England, having only just returned from a business trip to London.

The squad record for one event was carried off by the Indians. In No. 3 on the second day the squad broke 89 out of 90, Apgar being the only one to lose a target. All but one of the squad used E. C. powder.

J. J. Hallowell, of Tucson, Ariz., attended the shoot on the first two days. We believe that Arizona Jack, as the boys called him, has returned to Tucson. During his six or seven weeks' absence from that city he has made many friends who will gladly welcome him again next year.

Dick Swiveller and Fanning were the Gold Dust representatives at this shoot, while H. P. Collins and Ralph Trimble looked after the interests of Du Pont's Smokeless and Hazard's Blue Ribbon respectively.

H. E. Norton, of Ironton, O., was not shooting in his true form; he can give a much better account of himself than that which he rendered last week.

Seth Clover of course was in his element all the time and never lacked for an appreciative audience. When Divine was asked what brought him so far from home he replied: "I came up here because I wanted to meet an Eastern gentleman." Seth Clover, who was standing by, overheard the remark, expanded his chest and struck himself with his fist, remarking: "He must mean me."

The King brothers, W. S. and A. H., and Jim Denny stuck to it right through from start to finish. Live birds are their forte, but they pluckily kept pegging away at the bluerocks.

McVey, of Indianapolis, Ind., was not shooting as well as usual. The peculiar light, particularly when the weather was gloomy, seemed to bother him a good deal.

Bill Clark, late of Altoona, Pa., but now of Pittsburg, showed up on the last day of the shoot, but without a gun. Bill has given up targets and sticks to live birds.

To Sandy McPherson, chairman of the entertainment committee, belongs much of the credit for the success of the shoot. Sandy's hospitality was unbounded, and the boys appreciated his efforts at assuming the rôle of host.

Rolla Heikes is apparently back in his old form. He shot as well as ever, and had a snap and a go about him that was markedly absent at the earlier tournaments this year.

"Two Old Cronies" is the title that might have been applied to Lieut. A. W. du Bray and Old Hoss. If there's anything Old Hoss loves, it's a gun; and if there's any gun he loves more than another, it's a Parker gun. Hence the bond of union.

John Shaffer's win of the E. C. cup in the 100-target handicap race was a popular and a meritorious one. His handicap of 6 extra targets was by no means large; he won the cup by good and consistent work with the gun in each 25.

Jack Winston, of Cleveland, O., who was shooting and talking Austin powder, did his best to get some matches on while in Pittsburg. He did shoot a small one with A. P. Pope (reported elsewhere), and we understand that he was to shoot Bill Clark a match at 100 sparrows per man, $100 a side, on Saturday last, June 27. As we have heard nothing about it, we suppose it fell through, like the Winston-Fulford match.

EDWARD BANKS.

Shooting at Chicago.

CHICAGO, Ill., June 27.—Mr. Eugene du Pont, of E. I. du Pont de Nemours & Co., Wilmington, Del., is in Chicago to-day, *en route* to California on business of the company, and of course visits with Mr. E. S. Rice, general agent of the company here.

The Du Pont shoot, Aug. 4-6, promises to be a great affair. The experiment of a mixed shoot will not be tried, so I am advised, and the shooting will be at live birds exclusively. This should make the tournament one of the foremost at live birds of the entire season. The terms will be liberal enough to suit the most fastidious, and the amounts added should be enticing to all the good ones of the country.

There will be a large number of State teams of five men each, each team to enter at $10 per man, and for each team thus entering the management will add an amount equal to the entry to the purse. It is expected there will be over a dozen teams from Illinois alone. No better place for such a shoot could be chosen than Chicago, and even in August the birds will fly a little. We should see a fine gathering of the cracks.

Audubon Gun Club, of Chicago, has held its annual meeting and finds itself in a state of robust health in every way. This is one of the oldest and most conservative of the shooting clubs of Chicago. The membership is full and Col. C. E. Felton is president.

Mr. E. Bingham, of the Du Pont Company, went to Aurora this week to a shoot and found a large bar in front of the experts. Nevertheless he went in under the unknown traps and angles rules and broke all but 7 out of 185 targets shot at, in consequence whereof he is feeling well to-day.

THE COOK COUNTY LEAGUE TROPHY.

CHICAGO, Ill., June 27.—The capital prize of the Cook County Trap-Shooters' League, the W. P. Mussey trophy, has just been received from the silversmiths, and is now on exhibition at Mr. Mussey's hall, 106 Madison street, the home of the historic safe in which the wealth of Chicago shootingdom is deposited. The trophy is a magnificent silver cup more than 2ft. in height, handsomely adorned with relief work in designs suitable to a shooting trophy, such as crossed guns, etc. One face of the cup has an inlaid gold plate upon which is engraved a field shooting scene in very well executed fashion. All the engraving and chasing on the trophy is artistically done, and the piece is probably the handsomest offered in this city for a competition. The winning team will be fortunate, and will have occasion to thank Mr. Mussey for his generosity.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Marietta Gun Club.

MARIETTA, Ga., June 25.—Below are the scores made at the weekly club shoot of the Marietta Gun Club, which took place this afternoon. Conditions: 25 targets, unknown angles.

W. J. BLACK, Sec'y.

Missouri State Amateur Tournament.

JEFFERSON CITY, Mo., June 25.—The sixth annual tournament of the Missouri State Amateur Association was not quite as successful as the previous ones given by this organization. The attendance was very slim, and very few shot through the entire programme. The local club added $290 to the purses, but very unwisely added it in lumps, in place of distributing it along in the different events; it added a large amount in some of them, and nothing to the majority. This makes a very unsatisfactory programme, and one that rarely ever holds the crowd.

The tournament was held in the ball park. One set of target traps and one set of live-bird traps were in position, but the grounds were not large enough for the purpose, and Nos. 3 and 4 traps of the target set were in the live-bird boundary, and birds going in this direction worried the shooter not a little. This could have been overcome had the target traps been placed further back. Everything was left until the last minute, as the club intended to hold the tournament on the bank of the Missouri River, but the river rose to such an extent as to inundate the grounds; the club therefore had no choice. This, to a certain extent, accounts for the very poor accommodations to be had at this shoot. No hotter place could have been selected, yet there was nothing to protect the shooter from the sun while at the score, and scarcely a place to retire to when not shooting. The grounds are inclosed by a very high fence that shut off any breeze that might be stirring.

Bluerock targets and traps were used. The background was one of the most trying. Just beyond the fence in front of the traps was a high hill covered with vegetation, while along the fence were a number of trees. For this reason the targets were thrown rather high; yet throw them as high as they might, it would be impossible to get a sky background. Another thing that was sadly lacking was an efficient corps of assistants to run the shoot. The whole thing seemed to depend on one man, Mr. F. P. Dallmeyer, the secretary of the club, who acted in the capacity of manager, cashier, squad hustler, and at the same time shot along with the boys. None of the other members seemed to understand anything about conducting a shoot. Naturally things dragged considerably and caused no little dissatisfaction. There was an abundant supply of pigeons on hand, but these events had few entries. Mr. Fred Tresher, of St. Louis, furnished the birds and looked after the handling of them. They were of the quality usually seen at this season of the year—rather an uneven lot.

THOSE WHO WERE PRESENT.

Kansas City had the largest delegation; from there came Lee Porter (Ross), George Schrader (Germany), Chris S. Gottlieb, J. J. Cornett (L. C. Smith), Lill Scott, Ed Savenney and Dr. J. P. Jackson. From St. Louis came W. E. Field (Sam Hill), Dr. E. N. Kessler, J. Heil and Herbert Taylor, representing the Du Pont Powder Co. Moberly had Dr. C. B. Clapp and A. S. Head present. J. C. McClure, J. W. Letts and C. and J. Linsbery were on hand from Sedalia. Then there were G. W. Hayden and Thos. Hurd, Paris; J. L. Wilmot, Lexington; L. Staiger, New Franklin; W. W. Reavis, Pisgah; W. N. Bates (Haweater), Palmyra. M. F. McDonald and H. M. Davis, of Richmond, shooting under the names of Green and Menefee; J. L. Head, Peru, Ind.; R. G. Dunn, Roodhouse, Ill.

All target events were known traps and angles. In these events G. W. Haydon, the oldest shooter taking part, made the best average. He shot at 405, broke 370, averaging 91.1 per cent.

FIRST DAY, JUNE 23.

A murky atmosphere and a glaring sun that beat down with tropical fierceness was what the weather man dealt out to the shooters to-day. The programme consisted of six target events and two live-bird events. The sum of $10 was added to the purse in event 3 and $15 in event 6. A gold jewel case was the prize for the best average in both live-bird events. Wilmot and Gottlieb tied on 20 straight. Gottlieb, however, proved the best man in the shoot-off and captured the case. L. C. Smith (J. J. Cornett) easily outshot everybody in the target events, making an average of 93.5. In addition to the names given in the table below, Roberts, R. Dallmeyer, C. Miller and J. Linsbery also shot in the target events.

Events:	1	2	3	4	5	6	7	8	9	10

LIVE-BIRD EVENTS.

No. 1, 10 birds, $6.50: Wilmot 10, Gottlieb 10, Ross 10, Germany 9, Hill 8, Dallmeyer 8, Doehla 8, Wagner 7.

No. 2, 10 birds, $7.50: Wilmot 10, Gottlieb 10, Dallmeyer 10, Scott 10, Ross 9, Heil 9, Germany 8, Staiger 8, Doehla 8, Hill 7, Miller 5.

SECOND DAY, JUNE 24.

Although the sun shone just as brightly and as fiercely as yesterday, there was a good breeze blowing that managed to get in over the high board fence surrounding the park every now and then, and succeeded in tempering the heat. At a meeting of the Association, held last night, it was decided to cut off the last day of the shoot and finish the programme to-day and to-morrow. There were 10 target events and 2 live-bird events shot to-day. There was $35 added in 3 target events and $25 in the live bird sweep. One of the target events was a 2-men team race, 25 targets per man, for the L. C. Smith cup. This was won by Wilmot and Haweater (W. N. Bates) with a score of 46. The other event of the day was the contest for the amateur live-bird championship medal, which was held by Wilmot. He succeeded in retaining it, although he had to kill 30 straight before he disposed of Germany (Geo. Schrader) and Gottlieb, who had tied with him. Wilmot also made the best average in the target events. Altogether he was very much in evidence during the day. Heil, Roberts, J. Linsbery, Hill, Wagner, R. Dallmeyer, C. Miller and Hurd also took part in one target event.

Events:	1	2	3	4	5	6	7	8	9			
Targets:	*10*	*15*	*20*	*15*	*25*	*10*	*15*	*20*	*15*	Shot at.	Broke.	Av.

Ross	2122101120— 8	Henderson	001012010•— 4

Shoot-off: Wilmot 20, Germany 17, Gottlieb 14.

THIRD DAY, JUNE 25.

The last day of the shoot was a scorcher. Old Sol evidently knew that this would be his last chance at the boys, and seemed determined to send them home well tanned. This may be termed added money day, as there was no less than $205 added to the purses, but regardless of this inducement the attendance had dwindled down to a mere handful. Few indeed shot through the entire programme to-day. The principal event of the day, a live-bird sweep at 15 birds, with $75 added, had only 11 entries. Haydon led all the target shooters with an average of 91.1.

Events:	1	2	3	4	5	6	7

THE ANNUAL MEETING.

The annual meeting of the Association was held Tuesday night, June 23. Paris, Mo., was selected as the place where the next annual tournament should be held. Dr. C. B. Clapp, of Moberly, was elected President; A. P. Drescher, Palmyra, Vice-President; Judge Thomas H. Hurd, Paris, Secretary and Treasurer. The following clubs were admitted to membership: Pastime, of Kansas City; Palmyra, New Franklin, and Sedalia clubs.

PAUL R. LITZKE.

Handicaps and Highest Possibles.

BUFFALO, N. Y., June 25.—*Editor Forest and Stream:* In reference to your comments on handicap of experts in the New York State shoot, I would refer you to your report of the shoot for positive proof that the handicap was not too severe. Every expert at the shoot made money, with the possible exception of Fulford, and had he shot in all the events he would surely have been ahead. He shot in 5 out of the 6 State events and drew out about $60. He had only to shoot in the other event to be certain of fourth average, which was $20 cash (the entire amount of entrance to the 6 State events). He would also have come out all right on daily and general averages had he shot in all open events. As for the statement that McMurchy shot a 92 per cent. gait on the second day and never got a place, I would also refer you to your report as evidence of your mistake. He got a place in State event No. 5 and also a place in daily average, which two must have nearly made him even on the day. Glover was placed in 4, McMurchy in 2 out of the six 25-bird State events. Fulford secured a place in 2 out of 5 of them. As shown above, this was enough to give handsome profits to all of them. The handicap in the 50-bird events was rather severe, but Glover managed to get a place, and McMurchy carelessly lost his in the *Times* event, after he seemed to be almost certain of first place.

You must also take into consideration the fact that the weather conditions made "the shooting as hard as any you ever saw." Had it been easier, experts would have had no trouble in getting placed almost every time. A reference to the scores at Memphis and Cincinnati will show this to be a fact. You will find days in these tournaments when some of the experts would not have been shut out a single time by the rule of "experts eligible to first and second places only."

Experts cannot expect to go to tournaments in the future as they have in the past and have everything their own way. A handicap, such as that at Buffalo, gives them a chance to make a little money, and they will have to be satisfied with that, or they will find themselves shooting alone in the near future.

BUFFALO.

Our correspondent, Buffalo, seems to have misunderstood the position we took in regard to the handicap on experts at the New York State shoot. We said that "the Audubon Gun Club * * * imposed a stiff handicap upon 'known experts.'" We went on to say that we thought "the result was satisfactory to the majority," and nowhere did we suggest that it was too severe in the 20-target events. Our correspondent, however, agrees with us that "the handicap in the 50-bird events was rather severe."

In quoting McMurchy's shooting through the day and never getting placed, we referred to the open events on the third day, in which he broke 154 targets out of 170 without getting a place. He made one score of 47 out of 50, five scores of 18 and one of 17. In the 50-target event Graham broke 49 and Glover 48. His score of 24 out of 25 in State event No. 5 netted him one-fifth of 20 per cent. of the net purse; as we figure it this would be somewhere between $9 and $10, our scores showing 69 entries at $3, price of targets included, $75 added. It cost $18 to enter in the open events and $9 in the State events on that day. Against that $37 McMurchy drew out the above $9 or $10 and the fourth daily average. He broke altogether 226 targets out of 250, including the Lefever medal contest.

Summing up the situation briefly, we thank our correspondent for his criticisms, which after all are directly in line with our own arguments. If experts want their less skillful brethren to attend tournaments and shoot along they will have to submit to some sort of a handicap that will place them as nearly as possible on the same footing. The most successful tournament held this season was the Hazard shoot at Cincinnati, where experts shot at unknown angles, amateurs at known traps and angles.

Lynchburg Gun Club.

LYNCHBURG, Va., June 23.—The regular weekly shoot of the Lynchburg Gun Club was held to-day. Events Nos. 1 to 5 were at known traps, unknown angles. No. 6 was at unknown traps and angles:

F. M. D.

Amateur and Professional.

BALTIMORE, Md., June 24.—*Editor Forest and Stream:* The gentlemen who are interested in trap-shooting frequently have brought to their attention the rights of the amateur and the rights of the professional, the rights intrinsically in themselves and as they relate to each other.

Notwithstanding the general interest in the matter, its importance in competition at the traps, the frequent occasion for reference to what is the equity of the competition as it refers to the amateur and the professional, and therefore the constant need of having the two terms accurately defined, it is doubtful if any trap-shooter to-day can acceptably define what constitutes a professional.

So loose has been the ruling on this matter that all attempts at definition partake more of the nature of a defense of professionalism and a justification of it rather than a fair attempt to differentiate the two interests by fair definition. As a matter of fact, the conditions as they exist in the trap world at the present time afford very imperfect and very fragmentary data on which to found any argument and any conclusion. Amateur shooters, professional shooters, expert shooters and all other kinds of shooters have shot so long on nearly even terms that the distinction, so far as it has any practical bearing on the competition, has been lost. There have been experimental attempts to establish equity, varying greatly one from the other and giving satisfaction or dissatisfaction accordingly as they were a gain or a loss to one party or the other, and withal leaving the real question of professionalism untouched. To bring out a needed discussion on this subject, with a view to determinate results, I will herewith lay down some propositions on what matters I consider constitute an amateur and what a professional, and which I believe that I can maintain.

Of course, when what constitutes a professional is decided, all the shooters other than professionals necessarily must be amateurs, hence it is only necessary to define the professional.

I maintain that:

First, any man who shoots where gate money is charged is a professional.

Second, any man who shoots in an open public stake which requires an entry fee over and above the expense of the stake and which will yield to the winners a material profit in the way of monetary return, is a professional.

Third, any man who shoots as a regular business, whether in the employ of a gun, powder, or shell or ammunition manufacturer, or as a personal business venture of his own, is a professional.

Fourth, any man who shoots a match for money in public is a professional.

Each proposition contains its own specification, so that anyone who holds a different opinion has the specifications to argue upon, and these I stand ready to maintain against all comers. BELL MUZZLE.

Hill City Gun Club.

FOREST CITY, Ia., June 23.—The initial shoot of the Hill City Gun Club came off to-day and was a complete success. The club has a membership of about 30 and only two or three of the members have ever taken part in a tournament; therefore they deserve great credit for the manner in which the different events of the programme were run off. There was not a jar or dispute of any kind to mar the enjoyment of the most fastidious lover of harmony. A finer lot of men never got together for a shoot; as a consequence everybody thoroughly enjoyed himself, and went away well pleased with the day's sport. The Hill City Gun Club, although young, has a good, strong, active membership, a fine club house and shooting grounds, with a bright future ahead. The following is a list of the winners in the regular events and their scores:

Events:	1	2	3	4	5	6	7	8	Events:	1	2	3	4	5	6	7	8

No. 9 was at 20 targets, known angles. The winners were: Gilson 19, Mortenson, Howard and Schnautz 18, Hartman and Cole 17, Thompson 16. DR. W. H. STEELE, Manager.

In New Jersey.

COULSTON DEFEATS KNOWLTON.

THE third match between G. W. Coulston, of the New Utrecht Gun Club, and Dr. J. G Knowlton took place at Elkwood Park, N. J., on Friday, June 26. Knowlton had won the first match, the second being taken by Coulston, so honors were easy when the third match started. Both previous races had been at 100 live birds per man, but the third was at 150 live birds per man and for a stake of $250 a side. The day was cloudy and none too favorable for the birds, which were an average good lot for the time of year. Knowlton started badly, losing 4 out of his first 8, Coulston losing only his 1st bird out of the same number. Notwithstanding this unfortunate start, Knowlton caught his man in the 67th round. They entered upon the last 25 birds with Coulston 1 in the lead, the score standing 111 to 110. Losses in the 133d and 134th rounds put Knowlton 3 behind. Then Coulston lost his 139th and 140th, both dead out of bounds, thus making his lead only 1 bird, with 10 more to shoot at. When Coulston lost his 148th and Knowlton killed, the score was a tie. Coulston scored his 149th, but Knowlton let a driver from No. 4 trap get away, losing the match by 1 bird, as both killed their birds in the last (150th) round. The high runs were: Coulston, 24, 19, 17, 16, 14 and 13; Knowlton, 32, 20, 19, 14, 10 and 10. The score in detail was as follows:

Trap score type—Copyright 1896 by Forest and Stream Publishing Co.

AMATEUR TRAP-SHOOTERS' LEAGUE OF NEW JERSEY.

June 27.—Very quietly, so far as newspaper notoriety is concerned, has the Amateur Trap-Shooters' League of New Jersey come into being. It was organized as recently as June 6, and is the outcome of some dissatisfaction with the affairs of the New Jersey Trap-Shooters' League The clubs composing the new League are the Boiling Springs Gun Club, of Rutherford; the Endeavor Gun Club, of Jersey City; the Passaic City Gun Club, of Passaic; the Oritani Field Club, of Hackensack, and the Bergen County Gun Club, also of Hackensack. The officers of the League are: President, C. F. Lenone; Vice-President, G. H. Piercy; Secretary-Treasurer, Thos. Bell; Captain, W. H. Huok. The board of directors is at present composed of the above gentlemen, but its number will be added to shortly by the election of one member from every club not represented on the board.

The League intends to hold shoots once a month, a team race and sweepstakes for nominal entrance fees to be the features of these monthly gatherings. Teams are to consist of six men a side, all members of the same club, 30 targets per man, 15 known angles and 15 unknown angles. These races are handicap affairs, an allowance of extra targets per man being allowed to the members of teams representing the weaker clubs. These handicap allowances are to be considered afresh every three months. At present the handicaps stand thus: Boiling Springs, scratch; Passaic City and Endeavor, 2 extra targets per man; Bergen County, 3 extra targets per man; Oritani Field Club, 4 extra targets per man. The allowances are shot off at unknown angles.

The first shoot of the new organization took place to-day on the grounds of the Endeavor Gun Club, at Marion, N. J.; the home team winning rather easily, leading its nearest competitor, the Bergen County Gun Club, by 6 targets. The percentages of the teams were: Endeavor 82 8, Bergen county 77.2, Passaic City 74 4, Boiling Springs 76 6, and Oritani 52 9. The attendance of shooters was very satisfactory to the promoters of the new League.

We understand that the captain of the Bergen County Rod and Gun Club lodged a protest against certain shooters taking part in the team race on the ground that they came under the head of professionals. The constitution of the League provides that no professionals shall be permitted to shoot on any of the teams; hence the Bergen County captain very wisely lodged the protest in order that the board of directors may define exactly what constitutes a professional, as it understands the term. (We refer them to a letter from a Baltimore correspondent touching upon this very point, which appears in our trap columns this week and which affords much food for thought, as well as a capital chance for a good argument.)

The scores in to-day's League race were as below:

Endeavor Gun Club.

F S Edwards (2)	111110111011111111111111111011	—29

The Worcester (Mass.) Sportsmen's Club will hold a two-days' shoot July 29-30. The management has gotten out a capital programme. Mr. A. W. Walls, of Worcester, will be pleased to send a programme to any one who desires same and who will send him his address.

Boston Gun Club.

BOSTON, Mass., June 24.—The third last shoot in the Boston Gun Club prize series took place this afternoon at Wellington in pleasant and mild weather. The grounds on the previous Wednesday, June 17, a local holiday, were used by the West Bedford Shooting Club, the B. G. C. skipping one week. As the series nears its close the interest increases, and after a fortnight's cessation the old crowd appeared to do their best. Gordon was high gun on the prize match, breaking 21 out of the 25. Spencer shot well in later events, scoring 54 out of 60.

Some ladies graced the occasion, adding to the enjoyment; one, who had driven out with her father, confiding to Miskay that she had for some time desired to handle the shotgun, but her mother hardly coincided. Now she was going to the country for vacation and her father promised on the grounds to aid her in learning. Scores below:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14
Targets:	10	10	10	10	10	15	10	10	10	10	10	10	10	10

Johnson	01011001010001 — 6
Mack	00100100101001110 — 7

* Visitors. MAJ. BRIERE, Sec'y.

Missoula Rod and Gun Club.

MISSOULA, Mont., June 23.—It is hardly worth the while it requires to chronicle the doings of the Missoula shooters these days, there being so few that are shooting. Four only appeared again to-day to contest for the medals. J. P. Menard was the lucky A Class man, making 19 for the fourth consecutive week. Graham being all alone in the B Class, it has not yet been decided whether his score of 9 entitles him to the silver medal or to the booby prize.

A Class.

W P Brayton	1100010101011011010—11
J M Evans	1111111010111111110—17
J P Menard	1111111111111111110—19

B Class.

W Graham	0111010100100100101 0— 9

WILL CAVE, Sec'y.

Answers to Correspondents.

No notice taken of anonymous communications

H. L. L., Concord, N. H.—I have been told that the .38-55 Winchester really contains 49grs. of powder. Will you please inform me if this is so, and also how many grains of smokeless and its equivalent in black powder are contained in the above-named cartridge? Ans. The .38-55 cartridge as loaded by the Winchester Company contains 48grs. of black powder; the smokeless powder charge weighs 19grs.

M. C. P., Omaha, Neb.—My dog, some four years old, seems to lose power of locomotion occasionally. He will lie down, and in trying to walk toward any object runs sideways and finally falls down. Froths at the mouth and eventually lies on his back, with eyes becoming glassy and body rigid. I have dosed him during the attacks with milk and charcoal mixed, and it seems to bring him through Would like to be advised of the cause of the attack as well as a preventive. Ans. Treat for worms. Give 10grs. of bromide of potash three times a day. With the meals give a salt spoonful of powdered wood charcoal. Keep very quiet for the present.

J. T. N., Far Rockaway, L. I.—This morning I caught a tree frog, and I hope that the following description will enable you to identify him: From 1½ to 2in. long, marked with two or three varying shades of gray, which are separated from each other by narrow black lines; the inner side of the hindlegs is bright orange-yellow. When handled he emits a large quantity of fluid. Ans. Your description is too vague to enable us to do more than guess at the species. Very likely it may be the common tree frog (*Hyla versicolor*). Were the ends of the toes dilated so as to form distinct round disks? Were the fingers webbed?

PUBLISHERS' DEPARTMENT.

THE Fall River Line will operate double service for the summer, commencing June 29, when the great steamboats Priscilla, Puritan, Plymouth and Pilgrim will be in commission together The leaving time from New York will be 5:30 and 6:30 P. M. Boats leaving at the former hour will run direct to Fall River, the latter touching at Newport en route. On Sundays there will be but one steamer at 5:30 P.M. from New York.

The advertising matter issued by the Fall River Line is always interesting. A folder containing full time table and list of summer literature will be mailed for 2-cent stamp inclosed to P. O. Box 452, New York city.—*Adv.*

THE finest chicken shooting in the world is found in the States of Iowa and Minnesota, and the crop for 1896 promises to be the largest for years. Along the line of the Chicago Great Western Railway (Maple Leaf route) birds are particularly plentiful. Write to F. H. Lord, General Passenger and Ticket Agent, Chicago, for points on some of the choice spots and how to reach them.—*Adv.*

Readers accustomed to buying the FOREST AND STREAM *at news stands, and who are going out of town, may have the paper mailed from this office for any length of time at the rate of forty cents per month.*

SMALL YACHT RACING.

Now that the racing season is well under way, it is evident that the absence of the ninety-footers is by no means equivalent to a total cessation of yacht racing, but that on the other hand the sport as a whole is very well off without the sensational and disappointing experiences of 1893 and '95. That there is no lack of keen racing is shown by the many reports published by us each week; and even these by no means represent the extent of yacht racing throughout the country. The great number of yachts, each representing from two to ten yachtsmen on the average, which take part in the numerous races, give most satisfactory evidence of a widespread and wholesome interest in yachting. The many races sailed about New York this spring have brought out large fleets, from thirty to sixty yachts at a time, and the same is true about Boston. The present is not a "cup race" or a syndicate year, but it is none the less a prosperous year for yachting in all its branches. The result of the season's racing will be to strengthen the classes of smaller yachts best suited to the amateur yachtsman of moderate means, to the amateur designer and builder, and to the younger class of Corinthian sailors in general.

The attention of all yachtsmen last season was centered on the few and very disappointing races between Vigilant, Defender and Valkyrie III.—duels of the most unsatisfactory nature save in a very few instances. This year the yachtsmen about New York are treated to real racing in the every-day work of the special thirty-foot class, with its large fleet of evenly matched yachts, and the close racing among the still more numerous fifteen-footers. About Boston there is a keen and lively interest in the many small classes, and the new yachts of the past year or so show a marked advance on the older ones. On the Lakes, from Ontario to Michigan, yachtsmen are unusually active, spurred on by the promised international races between the Chicago and Canadian champions. On the St. Lawrence River, from the Thousand Islands down to Montreal, the fifteen-foot class is coming into high favor. Throughout the West, on the many small fresh-water lakes, racing is flourishing, with many new yachts, the work of the more noted professional designers, coming into competition with that of local men.

The influence of last year's racing was to narrow the sport to two designers and a small number of millionaires in rival syndicates. The tendency this year is to bring yacht racing of the highest quality within the reach of all who have suitable water at hand, and to encourage a healthful and beneficial competition among owners, designers and builders.

BILL BOARD BLOODHOUNDS.

ON July 1 there died in Hartford, Conn., one of America's most noted writers, Mrs. Harriet Beecher Stowe. Her great fame rests chiefly on one work, "Uncle Tom's Cabin," the theme of which, the evils of slavery, was so interwoven with the sectional strife of the day of abolition and anti-abolition, and the consequent evolution of political reforms which profoundly affected the destinies of the whole country, that it gained an extraordinary circulation by reason of association with those events. Intrinsically a work of fiction, it was nevertheless largely accepted as being a realistic portrayal of slave life. The passing away of nearly half a century has done but little to correct its exaggerations, and of these none are greater than the parts where dogs form the interesting action of the story. These creatures were described as being most ferocious and unrelenting in their pursuit of the runaway slave when once upon his track, and were credited with perpetrating horrors of deaths and mutilations well calculated to inspire hatred of all who practiced or incited such barbarities.

The book was dramatized, and old Uncle Tom's Cabin shows wandering through the land gave extravagant and sensational exhibitions of the ferocity of the bloodhound. The plot rested on blood spattered about; poor negroes torn apart in their gentle, defenseless strife for freedom; large, savage-looking dogs, with pricked ears and ferocious aspect. The so-called bloodhounds were mongrel Great Danes or other large dogs having the requisite aspect of ferocity, and the flaring sensational posters with which the towns of the United States were placarded, showing the demon dogs tearing the down-trodden negro to pieces, conveyed a false idea of the treatment of the slave and cast a stigma on the bloodhound which still exists at this day. The general ignorance which prevailed in respect both to the breeds of dogs and to the state of slavery aided greatly in establishing the exaggerations as facts. Slavery as an institution had no just defense, but the canine monsters of the Uncle Tom's Cabin shows were no part of it.

As a matter of fact, the bloodhound is an entirely different dog from the ferocious curs of Uncle Tom's Cabin drama, and the bloodhound of the story of Uncle Tom's Cabin did not exist at all outside of imagination. The dogs used for slave chasers were the common foxhounds. They served the purpose of following and finding the runaway slave, which was all that the pursuer desired, as he was thus enabled to capture the fugitive. As a negro was worth from $1,200 to $2,000, it is clearly absurd to assume that an owner would desire to have dogs which would mutilate or kill his property. The dogs would follow and bay the slave, when the owner coming up would recapture him. It is doubtful if there was a genuine bloodhound in the whole South in slavery days, yet for many years to come the big, fierce-eyed and ferocious-looking brutes of fiction will be accepted as the kind of dog which harassed the slave and tore him to pieces, or checked his efforts for freedom.

HORNLESS BUCKS.

THE recent record in FOREST AND STREAM of the killing of two hornless male Virginia deer suggests the inquiry whether in other species of American deer the males are sometimes without horns. We do not know that anything has been written on this point, yet the question is one worth looking into.

In a note appended to the record of the hornless male deer, which we printed some weeks ago, it was remarked that the male of the European red deer was sometimes found without horns. This condition no doubt occurs more frequently than is realized, and these hornless stags are perhaps not so uncommon in the Scottish forests as is generally believed. The shooter who is looking over a herd of deer usually strives to select the finest head of horns, and pays little attention to the females and the younger males. It is not strange, therefore, that these hornless males are not noticed. Their presence in the forests is well known to close observers. It is said that these hornless males are good fighters, and that—fighting altogether by striking with the forefeet—they are often able to drive off their rivals which seem to be much better armed.

On the frontal bones of these "hummels" there are usually found two slight excrescences of bone covered with skin and hair, which occupy the position of the stumps which support the horns in the normal stag, but present no appearance of ever having borne horns. In some parts of Germany these hornless males occur, and there they bear the names *büffel, plattköpfe,* hermits and perhaps others. In these forests they are usually killed wherever met with and so are now seldom seen.

Although in the Highlands of Scotland such animals are reported to be as large, strong and well nourished as others of their kind, yet in Germany the lack of horns is attributed to insufficient food and to close inbreeding. It may be questioned whether this is the true cause. The German records of such deer go back as far as the early part of the present century. In these forests there are also single-horned stags, known to the foresters as "murderers." The European roe, which is normally horned, is also sometimes found hornless.

The two recently recorded specimens of hornless male deer seem to have been Virginia deer, but it would be extremely interesting to learn whether hornless males of other species have been met with by any of our readers. It may be assumed that, if they occur, hornless stags are very rare, and the chances of their being seen and recognized would be very slight.

It is well known to geologists that the deer of the lower Miocene were all without horns, and that in the upper Miocene deer are found with simple spike horns or at most with a single prong. In the Pliocene, however, the antlers of deer become more complex. Hornless skulls of the Irish elk have several times been found. It may be that the occurrence of these hornless stags is an example of reversion to an ancestral type.

Has any one of our readers ever seen a hornless male moose, elk, caribou or deer killed during the season when these animals usually bear horns? If so, we should be glad to learn of it with all possible detail of time, place and circumstance. The subject is a new one and observations are needed.

SNAP SHOTS.

The *Asian*, published in Calcutta, declares that there is such a close connection between wild ducks and photography that "every silver print made has a tendency to diminish the supply of wildfowl." Albumen, it explains, is an indispensable adjunct to photography, and as the eggs of poultry possess special value in all countries, "the eggs of wildfowl are laid under contribution in countless numbers, and the diminishing supply of these birds on some parts of our coast, especially in the Scottish Hebrides, must, in some measure, be due to the considerable demand for albumen." This is interesting because it shows the wide distribution of the wild duck albumen myth. From Alaska to the Scottish Hebrides and from Canada to India the duck egg story has been given currency and credence. It would be instructive to get at the actual origin of the fiction. Men have devoted their lives to the study of comparative folklore, and nothing in their investigations is more surprising than the wide dissemination of some of the most simple and familiar tales. Very many of these folk fables have been traced originally to India. If photography was among the lost arts, it may be conjectured that in their day and generation the sportsmen of 1896 B. C. viewed with becoming alarm the conversion of duck eggs into albumen.

One of the most interesting of the game park enterprises we have described is that conducted by M. Henri Menier, the millionaire chocolate manufacturer of France, who is engaged in an endeavor to convert Anticosti Island into a great game preserve. He proposes to stock the island with red deer, moose, caribou, elk and beaver. Our correspondent Mark West suggests that while the scheme is a very beautiful one it may prove impracticable because of the terrible pests of flies which make Anticosti uninhabitable for these larger animals. The Canadian Government and private individuals have tried to stock the country with game, but they have failed because all excepting fur-bearing animals are killed by the flies. "One tough resident told me," says Dr. Morris, "that he had kept a cow on Anticosti through one year, but the cruelty of it made him sick." The flies will also prove a serious pest to the settlers in their endeavor to cultivate the barren soil of Anticosti. What with the hosts of black flies, gnats and mosquitoes we apprehend that the devoted French colonists and the imported game are destined to have a hard time of it on this island in the north.

James H. Dudley, who died at his home in Poughkeepsie, N. Y., on Tuesday of last week, at the age of seventy-nine, was one of the great FOREST AND STREAM family, as he himself was wont to say. His contributions to the entertainment of others through our columns extended over almost the entire term of publication from 1873 to the present. Mr. Dudley's was a singularly sweet and winning disposition. In all our acquaintance with him only once did we ever hear him speak harshly of another, and even then it was under great provocation, for the man had stolen from him a ducking point by bringing a steam yacht to anchor in front of the blind where he knew Mr. Dudley was ensconced. Mr. Dudley was among the first visitors to the Adirondacks, away back in the days when the Northern Wilderness was a wilderness indeed. He was accustomed to ascribe to these outings the vigor and good health of old age, and he never wearied of preaching the doctrine of outdoor recreation.

The Sportsman Tourist.

IT MIGHT HAVE BEEN.

OLD JOE, the guide, with steady stroke,
Rows out beyond the fringe of reeds,
Across the channel green and deep,
Between the reef and pick'rel weeds.

The dimpled waters gleam and flash
With brightest gold and darkest green,
Catching the light of evening clouds
In tender rose and silver sheen.

The birds are singing in the pines,
Far off I hear the calling loon;
With easy hand the rod I hold,
And feel the throbbing of the spoon.

A sudden strike, a savage tug,
And out there leaps with mighty lunge,
All green and white, with fins of gold,
The king of fish—a muskallonge.

Then comes the test of rod and line,
And all the angler's craft and skill,
As back and forth, with sweep and swirl,
The desperate captive has his will.

Now rushing off with sudden speed,
He makes the good reel scream with glee,
Or fiercely shakes his mighty jaws
In vain to get the tackle free.

At last he wearies of the fight,
And slowly turns his flashing sides,
While, guided by the short'ning line,
Beside the boat he meekly glides.

The gaff is near his milk-white throat,
A moment more and he is ours;
When down he goes beneath the boat—
"The line has parted, by the powers!"

* * * *

The sun has set, the sky is gray,
The evening wind blows sad and raw;
I only know that I have lost
The biggest fish I ever saw.

HENRY J. SAWE.

LABRADOR SKETCHES.

IV.—Dead Man's Bay.

[Translated by Crawford Lindsay for the FOREST AND STREAM from the manuscript of Count H. de Puyjalon.]

IF ever you come to Labrador and sail along its coast, do not on any account go into Dead Man's Bay on a Friday night. It is a very long, very narrow and very somber bay, surrounded on all sides by high, dark, beetling cliffs of surprising aspect.

The sun's rays barely penetrate into it and the shades of night are darker and more impenetrable there than anywhere else.

The most extraordinary feature of this rather small bay is the great depth of water. Bottom cannot be found with sixty fathoms of line at the foot of the rocks. These liquid masses of limited area and prodigious depth, nearly always of the very darkest hue, always give me a feeling of undefinable fear and curiosity. They inspire me with uncanny ideas when necessity compels me to pass over them; I cannot help looking behind to see whether there is not some gigantic saurian—some last living remnant of days gone by—swimming in my wake, and I experience quite a relief when I get again into the sea and observe once more its bright and ever-changing waves.

It is in this bay that the ghost of a poor devil of a fisherman, drowned there many years ago, roams about on Friday nights. He was returning from his station with a companion, both considerably intoxicated. When they reached the bay the fisherman stumbled and fell overboard.

"Throw me a rope!" he cried to his mate, but as the latter was about to do so the unfortunate man suddenly disappeared, although he had shown no sign of exhaustion, and had not uttered a single cry of distress. Nothing was ever seen of him. Completely sobered by fright, the companion made his way home and told the sad news to the disconsolate widow and sorrowing friends.

From the time of this tragic ending, all who venture to cross the bay on a Friday night hear the drowning man's cry: "Throw me a rope!" and some even affirm that they have seen his shadow floating erect under water.

It was in 18— I was obliged to return because my man Thomas found that we had got much too far away from the Rivière aux Canards, where I had taken him, and one night we came to the entrance of Dead Man's Bay. Not knowing that it was haunted, we pulled in and shortly before dark had put up our tent on a rock near the shore on which we had hauled up our boat.

After a hearty supper of cold salmon we lay down to sleep without the slightest anxiety. The boat, tent and provisions were all safe above the reach of the highest tides, and there seemed to be nothing likely to disturb our slumber, well earned by a long pull against the wind. I was sleeping soundly, as I always do, when I was suddenly awakened by a terrible yell and my man threw himself on me, saying: "*Mon Dieu!* What is it, sir? Save me! save me!"

I pushed him away angrily and called out: "What have you seen, you infernal idiot?"

"I don't know, sir."

"Neither do I, stupid."

I was angry, but the poor fellow looked so pale and flurried that I could not help laughing at him.

"Don't insult me, sir," he said, "I don't know what I saw, but what I did see——"

"Well, what was it?"

"It was a man. A man all in white walking under water——"

"You saw him? Through the sail cloth of the tent?"

"I suppose so, sir."

"Nonsense, you ate too much cold salmon and have had the nightmare, that is all."

"Perhaps so, sir, but it is strange all the same," and he shook his head.

I glared my contempt at him, and settling in my blankets I fell asleep and was not disturbed again.

The sun was already high above the horizon when I woke up the next morning. Thomas, reassured no doubt by the sunlight, was out of the tent. I went out also and saw him some distance away contemplating an object which I could not distinguish. He beckoned to me to join him, and I climbed over to where he was with the aid of plants growing in the crevices of the rocks.

On a rather wide ledge and resting against the mossy side of the cliff was an abandoned fishing boat. Such a boat weighs at least half a ton. Who could have conceived the idea of carrying a craft of that weight and build to that spot, 25ft. above the highest tides, and what could have been the object?

After reflecting some time I gave up trying to solve the problem, and we prepared to start. An hour afterward we had quitted the bay where poor Thomas had been so frightened.

At noon we landed on an islet covered with gulls. The richly tinted rocks had attracted my curiosity, and while we were eating our lunch Thomas said: "I saw it, sir! I saw it! I thought it was a white porpoise, but I soon made out its eyes. Oh, what eyes!"

"But you were asleep?"

"Perhaps so; but I saw it all the same."

"You dream't that you did?"

Thomas respectfully shrugged his shoulders and did not say another word. At sunset we landed near a fishing station where we were to pass the night, and as usual the fishermen came to visit us in our tent and asked the usual questions as to whence we had come and where we were going:

"You have come from Dead Man's Bay. Did you pass the night there?"

"Certainly," I replied.

"And you heard nothing; you saw nothing?"

"No."

"And yet yesterday was Friday?"

"Yes. But what boat is that on a ledge so high above the water mark on the shore of the bay?"

"That is Johnny's boat."

"Johnny's boat," I exclaimed. Seeing that I was quite mystified and could make nothing of it, the fisherman explained the matter to me. In the first place he told me the story I have related above as to the origin of the name of the bay and then he related the following story:

About three years before, Johnny, who used to indulge in an occasional spree, was sailing home in his boat from some place down the coast. He was very drunk, but the weather was fine, the sea was calm, and he sang at the top of his voice, for he was always jovial in his cups.

When he reached Dead Man's Bay he suddenly heard a voice call out, "Throw me a rope, Johnny." He paid no heed. The voice repeated the request, but he sang on. At the third supplication Johnny got impatient, sprang up with a curse, and seizing the slack of the halyards he threw it out, saying, "Catch hold, you drunken lubber, since you have been singing out so long for it."

At the same moment his boat was caught up and carried to the rocky ledge where we had seen the wreck, and Johnny, although sobered by the fright, had all the trouble in the world to recover his senses and make his way to his home, which he reached two days after.

I listened very quietly to this yarn, and when it was finished I raised my eyes, which met those of my man Thomas. They so eloquently expressed terror, triumph and contempt all mingled together that I could not help laughing, to the great disgust of the man who had spun the yarn.

"You don't believe it, sir?" he said.

"Oh, yes," I hastened to answer. "I am laughing at Thomas. He took your dead man for a white porpoise. Isn't he stupid?"

Thomas was indignant.

"Well, sir," he said, "I am not very clever, but I am not a gentleman. What I see, I see."

After that, what could I say? I held my tongue.

H. DE PUYJALON.

BEES.

SHASTA MOUNTAINS, Cal.—*Editor Forest and Stream:* I feel considerably stuck up. That phrase is not to be taken as slang, and I am sure I have seen too much of the world to feel as though I was anybody in particular. I have merely been "cuttin' a bee tree" and getting some wild honey and some of the things that go with it.

I have noted from time to time what you and your contributors have been giving us about bee hunting—the last article I remember being in your number of Feb. 1, and signed by Hermit. I would like to have his full name, also his photograph, so when I meet him I will be sure that I have got him. I am a hermit myself, but I never monkeyed with a bee tree until to-day, and I followed some of Hermit's directions.

Hermit writes a very graphic and pleasing epistle. No doubt he told all he knew about bees, and something more—but there is a quantity of wisdom and knowledge that is evasive. I am quite positive just at present that Hermit let some of it get away. He may know something about some bees, but if he will call around in this vicinity and chop down a bees' nest he will get some points.

You see it was this way. I've been hankerin' after honey. I wanted to get some myself, and besides I wanted a few bees to help fix up my ranch with. FOREST AND STREAM talked about bees and honey, and when they commenced coming to my garden this spring I commenced to pike around after 'em. I fixed up some bait and got 'em to coming to it all right and then I watched them.

I got several courses. In fact, as near as I could tell, every one of them had a course of his own. Once in a while one of them would go up the creek, so I went up the creek. After chasing them for two or three days I had coursed them about 300yds. Then they began to go wild. Most of them would fill up on my bait, make two or three false motions, then zigzag around a few times, shoot up toward the sky, and neither I nor my dog could tell where in thunder they made for. Finally I left my bait out and there came a big rain and destroyed it, then I quit for awhile. I was not completely discouraged, but I thought I was losing my interest in bees.

One day a man came by my shack. I don't see a man very often in this vicinity, so I had a talk with him. After a chat he said:

"Wal, how is it ye never cut that bee tree up thar?"

"Well," I replied diplomatically, "it's most too far, and in a kind of a bad place to get at."

"Fur," said he; "why, it ain't more'n a quarter, and right alongside of the creek and the road. Couldn't be in a better place.

"Oh, you mean that dead white oak near the crossing?"

"Naw, I mean the big black oak, with the top broke, near where some feller has been makin' cedar posts."

"Oh," said I, in a sneaking kind of a tone, "I've calculated to cut that tree, but I thought I had better wait and give the bees a chance to get some honey." I added conscientiously, to myself, "besides, I'll be blasted if I knew that tree had bees in it."

"Wal," said the man, "I'd cut it now and save the bees; they'd have time to fix up for winter. They're workin' strong now."

Then my visitor commenced telling bee yarns. As soon as he left I went up to see the tree. Sure enough, they were there, "b'ilin' out of it by handfuls," about 30ft. from the ground. The tree was just out of my road up the creek, and I had passed it about 1,100 times. Then this man, passing it for the first time, had seen the bees at once. Such is life.

It was a large tree, about 2ft. in diameter, and I thought it was sound at the base. It looked like a big contract for me to cut it down alone and I waited two or three weeks for some one to come along who would like to take a hand. Finally a party of surveyors came along. I asked them if they would like some honey. Oh, yes, they would. Then I told them about how by cutting the tree we could get some. Well, they rather guessed they didn't have time—besides, they didn't understand cutting bee trees nohow.

I then worked three days and made two first-class bee gums, with two compartments and numbers of frames, air-holes, etc. I still look with pride on what I consider a neat job.

When I had finished the gums I couldn't wait any longer. I wanted honey bad—having been entirely out of it for several years—and besides I wanted to see those bees in my new hives, working for me on the ranch.

I got all the things together that I expected to need, took my axe and a bee gum and went up to see the bees. I reached their front yard about 4 o'clock in the afternoon. I could see from the ground that they were open to business. It was one of the warmest days we have had this year, and I think bees are lively on warm days.

I figured on the tree and thought I could chop it down in an hour and a half, and I wanted to monkey with the bees about sundown. I thought it would be pleasanter in the cool of the evening. The tree was in the shade of some tall pines, and I went to work. I chopped out a good sized chip and listened. I didn't hear anything buzz or whiz, so I kept on. The bees acted very civilly—they were so high up in the world they simply ignored people on the ground. But they didn't know I was going to take 'em down a little. The tree was hollow to the ground, and when I had blocked out one side I saw I had time enough.

I rested awhile. I sort of like to rest while chopping, which is a good deal like labor. I never labor without resting whenever I have a good, square chance. But the mosquitoes were so bad I thought I might as well chop, and before I expected it I cut through into the hollow so far that the tree began to crack, then it squeaked, tottered and fell with a crash—an hour ahead of time. There was a granite boulder 30ft. from the tree. The bees seemed to be doing business in the honey line about 30ft. up. I calculated to drop them on the boulder, which would open up their works in all probability without further use of the axe. The tree fell on the boulder and burst like a pumpkin. The entire domicile of the bees was opened up to the public, which was, at this place, two dogs and myself. I sneaked up a few feet to see how things looked before I put on my prepared armor, which I had near by.

I didn't get a very good view. I came away too soon. The air all at once seemed to be one solid whiz, and was so full of bees that my dogs gathered a lot of them without trying, and went off as though they wanted to get away from there. One of the dogs was a small, short-haired dog, and very black. When he left I could see he was full of little yellow spots that looked like spangles. They were bees, and they clung to him as though they had never had a dog before. The dog acted as though he had never had bees behind before.

I secured my armor and prepared for action. I had only a small piece of mosquito bar which I fastened to my straw hat, letting it festoon my face. I drew on a hickory overshirt (wearing it like a bushwhacker, outside of my pants), then I tied a string around my ankles, one around my waist and a handkerchief around my neck; finally I drew over my hands two pairs of cotton socks for gauntlets, and I was ready.

I approached the bees gradually. I got in among them and they couldn't do a thing to me. But didn't they try it though! I never was the center of so much attention in my life, and I had no notion till then how much racket a few million bees can make. I peered into their works in the tree, now spread wide open. I never saw such a combination of honeycomb and mad bees.

I then got my hive, buckets and pans, and went to work. Just about this time the sun came out from behind a tree and shone as though it had concentrated all its rays to focus on my operations. The bees got madder and crazier. One of the dogs had come back as near as he dared, and as luck would have it he flushed a skunk so close by that the animal pervaded all the atmosphere that was not full of bees. I got entangled in grapevines and thought I could hear a rattlesnake, but the bees made such a whiz I could only guess at it. I grabbed all the honeycomb I could see through my veil, put it in the buckets and had everything full and more left. My gauntlets became loose and a few bees got into them, my veil leaked and let in a few, then a small contingent got into my hair!

Now did those bees behave like those Hermit tells about? Had the "little warriors of a moment ago" found they were to be robbed, and quit in despair to fill up on honey? Not a bit of it.

My hat felt as if full of red-hot barbed wire, and my hands as though they were full of red hot fish hooks. If anyone had come along then he could have seen it was my busy day, and he would have gone right away about his business somewhere else.

As soon as I could get out of the grapevines, rocks and the brush, I made for the creek and away from where I seemed to be as fast as I imagined a man with only two legs to work with could progress.

Talk about things with strings on! All the things I had tied on to keep the bees out were now keeping them in! Some of the bees I took with me wanted to get out, but they couldn't, so they stayed with me—stuck right to me. When I did get out of my extra duds, every bee was simply stupefied with victory and sated with revenge. I sat down to recover my senses and incidentally to pick the stingers out of myself that the bees seemed to have had no further use for. My dog seemed to have thought I was insane, and he even risked the bees to get around somewhere where I could fall over him in my mad career. Now he condoled with me, and I asked him if he had ever made one of such a pair of fools before in his life. He looked skeptical and was non-committal; but between his experience with the bees and his traffic with the skunk he seemed to feel humiliation too.

I left for home with half a barrel of honeycomb, 2 or 3lbs. of honey, a swelled head, a smarting anatomy, lots of experience and a fond hope to get a chance at Hermit and the bee editor of FOREST AND STREAM some day.

The foregoing account is merely the record of the first day's operations with bee tree No. 1. I never quit an enterprise that I undertake so long as I think the rest is easy, and that I have had the worst of it. I went back to those bees. I spent the next two days with them, and dreamed of them the intervening nights. There are about eight gallons of them, and at this writing I have them on my premises. I brought them down in two loads, corked up in a keg and a box. Whether I have one, two or three swarms I don't yet know. I poured them out and drove them into my new gums with a switch. I divided them as near as I could.

To-day they all seemed to be having a time of it themselves to get straightened out and reorganized. They get out on the piazza to their new homes and march from one hive to the other They stand on their heads, kick at the sky and buzz and countermarch. I don't know what their plans are, but I do know they haven't quit fighting back. They have not yet missed a reasonable chance to sting me. It is said that when they sting they die; if this is true and they keep at me, they will all commit suicide. There are only a few million of 'em left. Before I cut my next bee tree I will wait until I can wear an ordinary shaped hat Meantime I will think up some on the subject. RANSACKER.

P. S.—I suppose there are apiarians who think they know all about bees, and have written books. To the novice I offer my advice free, viz: don't try to read up on bees. You would never get it all. Either cut a bee tree and hive a swarm or two, or be content with patent honey made out of sorghum and nitro-glycerine. R.

Natural History.

THE SOUTH AMERICAN OSTRICH.

BY ADOLPH ERICH BOECKING, PH. D.

[A number of questions recently asked by readers of FOREST AND STREAM lead us to publish an abstract of a paper read by Dr. Adolph Erich Boecking before the Scientific Society, of San Antonio, Texas, which contains a great deal of very interesting material about this species. Dr. Boecking states in this paper that it is rewritten and translated into English from his original field notes, which formed the basis of his monograph on these birds published some years ago in *Wiegmann's Archiv*, a German publication devoted to zoölogy.]

The American ostrich is the largest bird of the New World, and is the sole survivor here of a group of birds which were very abundant in post tertiary times. Some of these still survive, as the ostrich, the emu, the apteryx and others; but others, like the giant moas of Australasia, have become extinct.

The South American ostrich, of which there are two species, is found distributed over the vast plains that extend from the southern tributaries of the Amazon southward as far as Patagonia. Of these two forms the smaller is the more southern, while the entire pampa proper of the Argentina, the larger southeastern half of Brazil, the eastern portion of Paraguay and the whole of the Banda Oriental of Uruguay is the range of the larger and more northern bird. This species is peculiarly a bird of the plains, and avoids alike the forest and abrupt hills or high mountains. He prefers the thickets of the high prairie and the little islands of underbrush which are found here and there over these great prairies.

This ostrich is a bird of the warm temperate zone, and diminishes in numbers as the equator is approached. Throughout all his range the species is found in moderate numbers, being the most abundant where food is plenty. During the breeding season the male lives with from three to seven hens, occupying a range of his own and defending it against any intruder. During the remainder of the year old and young keep together in loose herds of fifty or more individuals, which may be broken up and scattered by any accident such as a night surprise, a storm or even an intervening rise of ground, while they are feeding, and the stragglers join with the first feeding herd that they may encounter. Notwithstanding this fact, they appear to be attached to a particular range, and a crippled specimen, known by his wing, which had healed imperfectly, was found always within a few miles of a certain point by my men, and I often saw it myself.

The most striking characteristic of the ostrich, and one which has passed into a proverb, is his never-failing appetite. They seem to be eating all the time. In spring the food consists largely of fresh green clover and the insects of the prairie, but his mainstay and daily bread consists of grasses and unripe flower buds, together with such berries and insects as it can pick up. They do not appear to feed upon the dry and ripe seed of many grasses, nor do they touch grain at any time. They very rarely drink.

It is in spring, which of course in the southern hemisphere begins in the mouth of October, that the ostrich is seen at his best. It is then that his plumage is brightest, his deportment stateliest, and it is then that he utters at short intervals the sonorous gutteral cry which gives him his popular name Ñandú. This is a call to his mate, but it is also a challenge, an invitation, a warning, and an encouragement all in one. "This call never missed its effect upon myself when camped out, with nothing to keep me company for perhaps a hundred miles except my horses and dogs, I heard its long-drawn ring vibrate through the starry night. It was the reassuring manifestation of life and peace at the same time amid the overwhelming solitude and stillness. As long as this sound reverberates you are safe from every surprise. You will hear it even in your sleep, and only when it ceases then you wake up with a start. The horses interrupt their cropping and listen, and the dogs take in the wind to ascertain what it can be. Of all watchful pampa creatures the ostrich is the most vigilant."

Like all the other higher animals of the country they inhabit, wild or tame, the ostrich enjoys a siesta at noon during the summer; but to make up for this lost time it feeds for three or four hours during the night. In winter the birds rise and go to sleep with the sun.

The first eggs laid by a family of ostriches are dropped here and there on the prairie early in December, but after a while the male bird scratches out a shallow hollow on some dry place, often choosing a wallow dug out by the rolling cattle, and here the eggs are laid, the number being from seven to twenty-three. Other eggs are laid outside the nest, for what purpose is not known. It has been stated that these were for the newly hatched birds to feed on, but this is not the fact, for these young birds from their second day on feed upon grass blades and insects. Incubation is performed by the male, who turns the eggs over every day. He sits on them all through the night and in the morning until the dew has left the grass, when he leaves them for a time to feed. This absence is sometimes more or less prolonged, and on one occasion I observed a male feeding for four hours before returning to the nest, and all of the eggs hatched. When the work of incubation begins the bird is timid and likely to steal away at the merest suspicion of danger, but later on he sits much more close and often springs up only when nearly approached. For a little while he will make as if he were about to attack his disturber, but thinking better of it, makes off, feigning to be injured and trying to induce pursuit. The nests are sometimes attacked by foxes, opossums, lizards and snakes, but the old bird is said to defend the nest against these creatures if they approach when he is near.

The young are usually hatched about the beginning of January after six weeks' incubation. At two weeks old they stand about 1½ft. high and are very pretty in their striped livery of yellow and brown. When a few days out of the shell they cannot be overtaken by a man on foot, but earlier they are often caught; yet there is always danger of killing instead of catching them, since when nearly overtaken they are likely suddenly to crouch flat on the ground and may easily be stepped on. When in this position they are recognized only with difficulty, so closely do they resemble the ground on which they lie. For the first few weeks these young birds follow their father about alone, but gradually they are joined by the females, which have hitherto apparently taken no interest in the young family. In fall, that is in April and May, the downy coat of the young has been changed for one of feathers, which, however, are not of the same gray color as the plumage of the adult female. At this season the families leave the thickets and move out into the open prairie to avoid the attacks of the larger cats, like the jaguar and the puma, which prey upon them. On the whole, however, the ostrich has few enemies except man. Sometimes they may be run down by wolves or captured by one of the big cats, or now and then young ones may serve as a meal for eagle, fox or boa. The pampa fires no doubt destroy more ostriches than all other causes put together.

The damage done by the ostrich is confined to the little clover that it eats, or the rare occasions when it interferes with some cultivated crop. On the other hand the bird destroys great numbers of noxious insects, and vast quantities of injurious plants while they are green. It is a useful rather than a noxious bird.

The Sea Serpent.

STATE OF WASHINGTON, June 20.—The sea serpent has at last been caught. The West is ahead as usual. Maybe it is not the sea serpent, only a sea serpent. If not a sea serpent, then a what-do-you-call-it? The East sees sea serpents time and again, and there are the sensational stereotyped accounts in the papers which no one believes, but the great West sees sea serpents and goes one better, catches them.

Some fishermen while plying their trade on Hood's Canal a few days since caught one of these elusive and long-sought monstrosities, which is now on exhibition in Seattle with all the full steam flourish of a sure enough side show, and a painting on the canvas fearfully and wonderfully made of a sinuous monster from whose low-browed, broken-nosed Bowery tough head there issues a forked tongue that spits lightning to the four corners of the earth.

I did not see the thing, but my informant who did describes it as being between 6 and 7ft. long, about as large as your arm near the shoulder, sleeve and all, of a brownish color, mottled, with smooth skin, dorsal fin whole length of back, but no other, tail rather blunt, and with a head which was a "cross between that of a snake and a bulldog," if such a thing can be imagined, with teeth, tusks and all, like a cat's. It had no whiskers, or if it had ever been possessed of those appendages they had been shaved off. Gills it had. Now if this isn't a sea serpent we'll try again. I think we can fetch it if necessary.

It was reported that it was to be sent to Prof. Alexander, of the Fish Commission steamer Albatross, which is at Seattle, for inspection and identification if possible, but I know not whether it was done.

As I have somewhere remarked in my works, there are other things beside rain in Washington. O. O. S.

The Copperhead.

I SHOULD like to say for the benefit of Forked Deer that I had a pretty intimate acquaintance with this "myth" some twenty years ago on my father's farm. The editorial note states that the snake in question is found from the Atlantic to the Mississippi. He was the commonest dangerous reptile known in the section above referred to, the Ozark region of Southwest Missouri, some twenty miles north of Springfield. He was usually to be found about old fences, piles of logs, stumps, etc., and was in a state of chronic belligerancy. This circumstance and the added one that he strikes without warning made him more dreaded than the rattlesnake. I have killed a great many of these handsome, villainous fellows, and only once remember seeing one try to retreat.

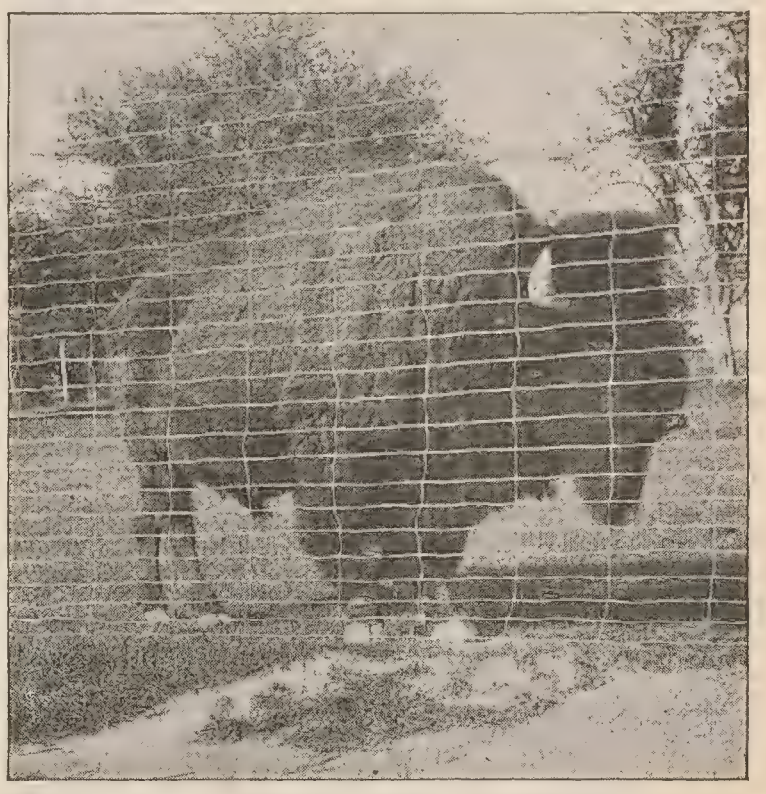
They are marked a good deal like the rattlesnake, but of brighter colors. It is a common notion that they are the female rattlesnake. AZTEC.

Game Bag and Gun.

AMERICAN GAME PARKS.

The "Forest and Stream's" Third Annual Report on Game in Preserves.

Part One.—Fenced Parks.—Continued.



The Page Fence Company.

The Page Woven Wire Fence Company has a game park at Adrian, Mich., in which are included at present eight buffalo, seventeen elk and nineteen deer. There is also a black bear and a number of foxes, coons, badgers and coyotes. The coyotes do well in confinement and are prolific breeders.

Among the deer are a number of black-tails. The common deer are from stock captured in the Adirondacks, Michigan and other widely separated sections. On a recent Saturday, Sunday and Monday three sets of twin deer were born.

The elk were purchased three years ago, and have bred regularly since the first year. They are handled as easily as domestic cattle. A large bull met his death recently by a stroke of lightning.

The buffalo at present are kept in what is known as the "breeding inclosure," which contains an area of about five acres. There are four cows and two bulls; one of the latter is nine years old, and an unusually fine

THE "BUFFALO RANGE" TO DAY.

specimen. As he stands naturally he is said to hold his head 4½ft. above the ground.

The Page Company recently lost a large bull purchased from the herd of Mr. J. H. Bass, of Fort Wayne, Ind., from injuries received at the time of the transfer. The bull was very wild and resisted capture desperately, breaking repeatedly through temporary inclosures into which he had been driven. After three days' maneuvering he was finally subdued, bound head and feet and dragged into a cage that had been prepared for his reception, but the struggle had been too much, and he died a few days after his arrival at Adrian.

The price paid for this buffalo is stated as $600.

Under date of June 23 W. A. Hoisington writes:

"Our people recently purchased two more buffalo—a bull and a cow—near Keokuk, Ia. They arrived in good condition one week ago and have already made friends with the Ft. Wayne and Chicago buffalo purchased earlier in the season. The bull is four years old and the cow three years, and they are equal to the best specimens that we have. Our people have just accepted a proposition of a Wisconsin man to sell a herd of sixteen deer and our gamekeeper will start for them to-morrow."

The Bear Swamp Game Preserve.

The Bear Swamp Game Park, located in Sussex county, N. J., contains about 1,000 acres, principally woodland. About 100 acres near the center of the park is known as the Bear Swamp (from which the park derives its name), is an admirable protection for game, being thickly wooded with hemlock, pine, laurel, etc. This track was purchased by Dr. E. S. Dalrymple in 1894, with a view to forming a private game preserve.

The park has recently been fenced with the Page woven wire deer park fence, 7½ft. high. The park will soon be leased for a term of years to an association of sportsmen, the membership of which will be limited to twenty-five.

The preserve has been but partly stocked; a few deer, Canada and Belgian hares were released this spring. The native game consists of partridges, quail and rabbits; the former are quite numerous.

As soon as the association is fully organized and in working order it is proposed to stock the preserve with deer, English pheasants and such other game as is thought suitable. The park is watered by a stream and tributaries which empty in Lake Owassa, a lake lying along the western side of the park.

Maple Point, a grove adjoining the park and fronting on the lake, has been improved during the past two or three years, cottages built, roads laid out, etc. A site has been selected here for a club house, which will no doubt be erected in the near future. There are several lakes in this vicinity. Culvers and Owassa have been stocked with black bass several years, and more recently with landlocked salmon and wall-eyed pike. The bass fishing has been excellent during the past three or four years.

The St. Louis Park and Agricultural Company.

The St. Louis Park and Agricultural Company, of St. Louis, Mo., have a game preserve near Springfield, Mo. The elk purchased from the Caton estate were recently sent there, and eleven arrived in good condition.

The St. Louis Park and Agricultural Company is a regularly organized and incorporated company under the laws of Missouri. Our property is located in Taney county, one of the southern counties of this State. It is on White River, twelve miles from Forsyth, the county seat, about five miles from the Arkansas line, sixty miles southeast of Springfield, Mo., and forty miles from Chadwick, the nearest railroad station. We have about 5,000 acres of fine, rolling, well timbered, watered and fertile land, most of which is inclosed with a close barbed-wire fence 13ft. high. We have also a club house, boat house and other necessary buildings for the care and protection of stock and game. At present we have the property divided into two parts, and both well stocked with elk, native deer, red deer, fallow deer and Angora goats. Will add in the fall some black-tail deer. We have about seventy-five pure breed Mongolian pheasants which we probably will turn loose in the park in the near future. We also have other game in abundance, such as quail and wild turkeys. The park is well adapted to the raising of game, the climate being mild and temperate, and grass and foliage abundant the year round, so that stock usually winter well without other feed than that secured in the park. Ours is a park or game preserve for private use only. The parties interested (six in number) are mostly officers of the Liggett & Myers Tobacco Co., and the main office of the company is at St. Louis. We expect to continue adding game and improving the property, and at some future day to have a preserve or property that will be a credit to the State and a pleasant resort for those interested in it. White River also furnishes good sport for the angler; so taking it altogether, we are well located, and the prospects good for sport for years to come.

ST. LOUIS PARK AND AGRICULTURAL CO.
J. P. LITTON, Sec'y and Treas.

Judge Caton's Game Park.

The late Judge John Dean Caton was probably the first man in this country to bring together in one park the different species of American game. While deer parks were common before his time, especially in Virginia and the South, his was the first park of which we have knowledge where general stocking was attempted. Writing in 1881 he says:

"For many years I have kept in domestication the American antelope and all of the American deer of which I treat (in 'Antelope and Deer of America'), except the moose and the two species of caribou or American reindeer."

His park at Ottawa, Ill., was inclosed by a picket fence 8ft. high. It was of small area as compared with some of the modern game parks, and probably never contained more than 100 animals at any one time. Previous to his death Judge Caton sold a number of his elk, which were shipped to Europe. In April of the present year the remaining elk, numbering eighteen, were sold to the owner of a park near Springfield, Missouri. They were very wild, and in the effort to capture them four were killed and four made their escape from the park. The latter were recaptured at various times. The last to be taken was run down with hounds and gave its captors, Messrs. Prettyman and McDermott, of Ottawa, a very exciting chase, in which one hound was killed and another maimed for life.

Under date of June 22 Mr. Prettyman informs us that he understands that eleven of the elk are alive in the preserve of the St. Louis Park and Agricultural Company, at Springfield, Mo.

At Judge Caton's park there are still left thirteen common deer.

Stave Island in Lake Champlain.

I HAVE an island (Stave) of eighty-six acres, eleven miles down the lake from Burlington. It is fenced with Page woven wire fence, 88in. high. I have pheasants, quail and rabbits, but no deer as yet. I expect to put a few deer on the island this summer, provided I can get them near by. Your Mr. Banks touched up Stave Island in writing on Vermont Fish and Game League banquet held here the latter part of November, '95. You may find something of interest in FOREST AND STREAM of that date.

F. H. WELLS.

Biltmore Estate.

Mr. Vanderbilt has not yet given the matter of fish and game upon his estate at Biltmore much consideration. He will doubtless do so, however, in the near future. * * *

CHARLES MCNAMEE.

John E. Searles.

Mr. John E. Searles has the nucleus of a game preserve on his estate at Great Hill, Mass., on Buzzard's Bay. He has just purchased six elk, and will no doubt add other animals in the near future.

Petit Manan Preserve.

The Petit Manan peninsula on the coast of Maine is now owned by a land company, which has a game park of 720 acres surrounded by five miles of wire fencing. In this park are a number of deer as well as hares and other small game.

J. H. Bass.

Mr. John H. Bass, who lives near Fort Wayne, Ind., has five buffalo in an inclosure surrounded by a fence of mortised boards 8ft. high.

Dr. Edward L. Partridge.

Dr. Edward L. Partridge, of New York, has a paddock containing half a dozen deer at his place on the Storm King, in the highlands of the Hudson River.

D. F. Carlin.

At Leslie, S. Dak., D. F. Carlin has a herd of twenty buffalo. He began in 1889 with nine buffalo.

Other Preserves.

Among the fenced parks may be mentioned Tuxedo Park and Sterling Park, both in Orange county, N. Y. The former has an area of about 4,000 acres and is stocked with deer. The latter has never, we believe, been stocked with large game. Pierre Lorillard's park at Jobstown, N. J., is at present in a run down condition.

NATIONAL PARK POACHERS.

As intimated in last week's FOREST AND STREAM, two poachers, Tom Newcomb and June Buzzel, recently arrested for killing elk in the Yellowstone National Park, were tried before Commissioner Meldrum at the Mammoth Hot Springs during the week ending June 27. These men were employed as scouts last autumn by Capt. Anderson, the Superintendent of the National Park. In the pursuit of their duties they naturally learned much about the haunts of the game in the Park, and after their discharge made use of this knowledge to slaughter. Happily, they were captured, and the result of their trial was the imposition of a fine of $50, which each defendant paid. In the opinion of many persons it is time now to begin the imprisonment of rascals who poach on the Government preserves. It is very well to begin with a fine, but this does not put an end to the business of poaching as imprisonment would.

W. F. Wittich, the Butte (Mont.) taxidermist, who, it is alleged, has long been responsible for a great deal of the poaching done in the National Park, was subpœnaed last fall to give testimony at the trial held at the Mammoth Hot Springs of J. S. Courtney, on the charge of having killed buffalo in the National Park.

On the advice of an attorney Wittich disregarded the subpœna, and recently his alleged contempt of court in failing to respond was brought to the attention of the Wyoming Federal Grand Jury, and an indictment was returned against Wittich. A bench warrant was accordingly issued direct to Marshal McDermott, who went to Butte recently and caused the arrest of Wittich. The prisoner was taken before United States Commissioner McMurphy, of Butte, and remanded without bail to appear before Judge Knowles, of Helena. The prisoner was taken to Helena, and on June 26 Judge Knowles granted the required order and turned Wittich over to the custody of the Marshal, to be taken by him to Cheyenne, to appear before Judge Riner for contempt of court. The prisoner was taken to Billings, and thence by the Burlington R. R. to Cheyenne. On the way the prisoner was treated more like a guest than like a prisoner, and had every facility offered him for escape if he wished to.

If Wittich should be found guilty he may be fined from $100 to $500, or be imprisoned for not more than five years, or both, in the discretion of the court.

HOOTERS.

PORTLAND, Ore., June 25.—*Editor Forest and Stream:* One of the most interesting and pleasing sounds which greets the ear of the angler in early spring, as he threads his way along the streams in quest of trout, is the soft, sonorous and far-reaching whoo, whoo, whoo of the male grouse. No woodland note is more inspiring, and he is no true son of Nimrod who can refrain from a glance into the thick branches of the giant fir from which this sylvan music comes. And as perchance the author of this hollow, deep-toned love song may lie at length along some overhanging branch, not far away, it is very often our privilege to stand and watch his ardent wooing. At this season and under these conditions the big blue hooter of this region is oblivious to all else except the lady of his choice, who sits upon her nest at no great distance from the tree, and will continue to hoot until shot at repeatedly.

In this manner thousands of these noble game birds are destroyed, the functions of breeding are interfered with, and the species is thus rapidly exterminated. No single factor has wrought more havoc among the grouse of our covers than the almost universal practice of shooting hooters. Few in this region can escape the just imputation of guilt in this direction, though it is the farmer's boy who is the arch offender. With his infernal .22 he is out in the early spring listening for the mating song of our best game bird, and following up its sound, with the knowledge that no amount of sound will disturb the author of that note, he examines the treetops until the bird is located and shoots him without compunction. A true sportsman, having the interests of game preservation in view, would as soon think of killing a mother grouse over her covey of young.

An unfeeling brute in human form, who has haunted our forests for five years, hunting all the time, in season and out, slaughtering deer with little helpless fawns, trapping quail, hounding deer out of season, and doing more to decimate our country of its native game than all the decent hunters in the country would in ten years, was last week captured in the very act of shooting a hen grouse upon her nest. His arrest immediately followed, and it is to the credit of the good sense and courage of the court that he received the extreme penalty of the law. Our Mr. McNaughton contributed very much to the success of this righteous prosecution, and swore out a second complaint against the offender for illegal deer killing. Judge McMurray gave him $100 fine and sixty days in the county jail upon each count. Every true sportsman in this county applauds the judgment. I have dwelt at some length upon this case, as it forms the initial conviction of any consequence in Pierce county.

Hitherto our excellent game laws have been openly violated, and owing to the impossibility of obtaining a conviction in this county our most efficient and energetic game warden, Mr. Ed. Flannigan, resigned his office in disgust. We congratulate Justice McMurray upon his sensible decision, and sincerely trust that this may mark the dawn of a new era in game protection.

I was out in the park region of the Cascades several days of last week, and as I traveled through a region which only ten years ago was the best deer country in the Northwest, and noted the almost total absence of this beautiful animal, I fell to asking the old ranchers questions. There was only one story from all of them—variously told, regretfully by nearly all, boastfully by some, but the same by all: "'Twas the hounds that did it; they drove them out."

Summer and winter, spring and fall, always and forever were the tireless and hungry hounds baying through the glens and along the corridors of these temples of the sylvan gods; giving no respite to the timid quarry, sparing neither innocent youth nor feeble age, nor respecting the sacred state of motherhood. Need we wonder that a spot which for centuries had furnished deer meat as the sole food supply of thousands of Siwashes, without visible diminution, has become a silent and uninhabited tract under these murderous conditions?

Let us be men together, and, standing manfully together, let us fight this worst foe to the native game, the hound, now, before it is too late, and our deer is a thing of the past. Still-hunting will not visibly affect the deer supply in this country in the next fifty years; the hounds will utterly exterminate it in the next ten.

J. A. BEEBE, M.D.

GROUSE NEAR BOSTON.

BOSTON, June 28.—We are encouraged, Gypsey Belle and I, for we have seen good signs. This forenoon we took a short run out into the country, I on my bike and Zip at wheel. She is as fat as butter this summer, so we took it easy and at the end of a half hour's run left the wheel in a barn and struck into the sprouts. Here we met, by appointment, friends and relatives: two of the boys from the office with a pair of Zip's puppies. We hunted up a stream some distance and finally got up an old partridge. The pups were astonished, as neither had ever seen the woods before, much less a bird. After exhausting all the wet cover on that side of the ridge we cut across country to a pond to give the dogs a swim, and when they had been washed and rinsed we crossed the ridge to lower ground and turned homeward. We had scarcely entered the birches when Zip struck a scent and before she got it figured out up jumped a young partridge from some blueberry bushes right at our feet and went screaming over the knoll. I suppose he was screaming, that's about as close as I can describe the noise he made. He was evidently a badly scared bird. Soon after this Zip came to a point in an opening just in front of me, and while I was calling up the pups the birds began to get up on all sides of me. The woods seemed literally to be alive with them and Zip never moved a step until I had counted nine little fellows and the old bird. We started a few of them a second time just to interest the puppies and then left them, not wishing to frighten them too badly. Now that is a good big bunch, not only in numbers, but in size. They were a little larger than full-grown quail and made a good strong flight when they got up.

I suppose if those pups had been in the sales list of some prominent kennel I should have to tell how they hunted on their own hook, stood their birds like veterans, etc., etc.; but as neither of them could be bought for love or money, I may tell the simple truth, which is that they showed more interest in chasing each other through the sprouts and in trying to induce their mother to leave her hunting and join them than they did in hunting. But they had a good time, the biggest kind of a good time, and took hold just enough to show that it was in them.

A brood of ten large, strong birds before July 1 would seem to indicate a good breeding season, and if they have done equally well in other places there should be some sport next fall. Another Sunday, if there ever comes another when it does not rain, I shall take the camera along and pay this interesting family another visit and try for a snap shot at a "point." Boston has a few charms other than baked beans and east wind, for this brood of birds is scarcely beyond the paved streets.

C. HARRY MORSE.

Calibers.

NOTHING delights me more than to have an old question like this thrashed over in FOREST AND STREAM. I have myself settled down upon the .45-70 as the most satisfactory cartridge for deer shooting. It is quite possible that the penetration of this cartridge is insufficient for quartering shots at moose or grizzly bears. I have no means of trying that. I had a .45-90 rifle for a while, but it proved to be inaccurate. I found its recoil rather unpleasant also; twenty grains less of powder make quite a difference. A rifle of 7½lbs. weight, if properly stocked (and I wouldn't have anything but a shotgun butt), can be fired with 70grs. of powder without serious discomfort. The Marlin people now offer to make a light weight rifle in their '95 model for a very slight advance in price. The Winchester Company charges entirely too much extra for their light '86 model, but it is a most satisfactory weapon.

I give it as my opinion that the common idea that the recoil of these light weight guns throws up the muzzle enough to make them inaccurate has no foundation in fact. One accustomed to the 40 or 48grs. of powder of the .44 and .38 cals. may find the shock unpleasant and flinch; but if he doesn't he can put the big bullet about where he "p'ints."

I may remark in conclusion that last season I shot three deer in about the same spot, just behind the shoulder, through the big arteries and lungs, and every one of them ran some distance—one over a 100yds.—in spite of the .45cal. bullets. These were Gould bullets, which I prefer; but tempered 1 to 16 they do not mushroom much in a deer. I am going to try the Weed bullet. By the way, Gould's "Modern American Rifles" is an interesting treatise.

AZTEC.

Maryland Beach Birds.

STOCKTON, Worcester County, Md.—Our next shooting here will be the summer flight of beach birds down the coast. The first generally make their appearance about the last week in July. From that time on until September the flights are usually constant and sure. The dry weather and heavy northeast gales (without rain) ruined our spring yellow-shank shooting. We generally average from 50 to 100 a day while the flight lasts, from a week to ten days. This year we did not average five.

O. D. F.

Exercises of ye Fierlock.

A CURIOUS relic of the manual of arms in bygone days came under the eyes of the writer a short time ago. It was the manuscript "Exercises of ye Fierlock," of Col. Stafford, the grandfather of Mr. Christopher R. Stafford three removed of this city. Col. Stafford has commissions among his papers which are still preserved. "Exercises of ye Fierlock" is written on a long strip of paper in a neat and at present quite legible hand. There are fifty-two movements recorded upon the list, with the numbers opposite. The movements may be illustrated from the following quotations:

"Joyne your right hand to your fierlock, poise your fierlock, cock your fierlock; present; fier; half-cock your fierlock; handle your carteridg; open your carteridg; prime; shut your prime; cast about to charge; charge with carteridg; draw forth your ramrods; put them in ye barrils; recover your ramrods; return your ramrods; then shoulder, rest, order, ground, take up, rest, club, rest, secure and shoulder your fierlocks; rest on your arms; draw your bayonets; fix your bayonets; rest your bayonets; charge; push your bayonets; rest your bayonets on ye left arm; shoulder your fierlocks; present your arms, to ye right four times; right about; to ye left as you ware; left four times; left about; right as you ware; quit your arms, face to ye right about, march, then halt."—*Providence Journal.*

Sea and River Fishing.

MEN I HAVE FISHED WITH.

I.—Reuben Wood.

THIS noted sportsman, who for nearly half a century made his home in Syracuse, N. Y., was well known throughout the State, and it was my good fortune to have him as an instructor in the art of angling in earliest boyhood. We were born in the then small village of Greenbush (opposite Albany), he in December, 1822, and I eleven years later.

Almost every man who has passed the half-century milestone on life's journey loves to imitate Lot's wife and look over his shoulder, and usually the retrospect is pleasant because we do not remember clearly; we conjure up the roses in the pathway and the small thorns are indistinct in the distance; a faint humming of the bees whose honey we stole brings no remembrance of the penalty paid for it; the wound of the sting is cured by the honey—in memory, at least. Poor indeed is the man of fifty who has no wealth of retrospect and who thinks the punishment of Lot's wife was fitted to the crime! It was cruelly unjust, and in compensation at this late day she should be sainted perhaps with the name and title of Saint Salina. Here I pause to ask if there is really any such thing as an occult cerebration which caused my pen to turn to thoughts of Lot's wife while writing an apology for looking back at the boyhood of a citizen of Syracuse, N. Y., the great salt-producing city of the State?

There are men who never could have been boys—engaged in boyish sports and had a boy's thoughts. Everyone has known such men. Men who must have been at least fifty years old when they were born—if that event ever happened to them—and have no sort of sympathy for a boy nor his ways; crusty old curmudgeons who never burned their fingers with a firecracker or played hookey from school to go a-fishing. They may be very endurable in a business way, but are of no possible use as fishing companions. I speak by the card, for I've been in the woods with them.

Reuben Wood was a boy, and was one to me as long as he lived. We were boys together, he being a big boy when I was but a little one; he was at our house a great deal, and is among the earliest of memories. He was "Reub" all through life to all his familiars, and they were many.

It was a summer day, and I was some some six or eight summers old when Reub came down the street with some fish that he had caught in a stream then the northern boundary of the village, but now in it and fishless. After much solicitation he agreed to let me in the party next day, Bruin and me. Now, Bruin was a big Newfoundland dog belonging to my father which Reub had taught to pick me up whenever he said, "Bruin, go fetch Fred," no matter what screams, kicks and protests his burden made, and this was one of Reub's jokes which I did not appreciate. We started, Bruin and I in high glee. Reub cut some poles, rigged the lines, floats and hooks and put on the worms, and he soon had a perch, a monster it seemed then, and does yet, while the sunfish that tried to run away with my float and which Reub helped to land probably weighed more than the grocer's scales could tell; it must have been as big as 100 modern ones, and Reub said "it was as big as a piece of chalk." Such was the first experience in angling, as clear in memory as if only a week ago.

A little pond turtle stuck his head up near the float, looked at it and at us, and paddled to the bottom in the funniest way. Reub called it a "skillypot," but he had funny names for everything. Then I caught a perch, actually bigger than the sunfish, and a new world seemed to open, but the spines of the fish cut my hand and the world was not so bright. Five fish came to my lot in all, but Reub had about twenty, some perch, sunfish, two bullheads and an eel. He said that I let the fish eat the worms off. I saw a turtle climb on a log while Reub was up the bank after worms and I went out on the log to get it, but the turtle slid into the water and so did I. A scream brought Reub, who whistled for Bruin and ordered him to "Fetch Fred," and he did. O, the dripping of clothes and the splashing of shoes as we went home, and the tearful tale of a turtle who wouldn't wait to be caught! This last seemed the greatest cause of grief and afforded Reub and other boys a text for teasing, which they worked to an annoying extent, and it was long before he would take me fishing again, saying, "No, you'll go diving for turtles." This occurred about 1840 and Reub referred to it the last time I saw him, in 1883.

At this time Greenbush was a very quaint little village on the upper Hudson, whose connection with the outside world was by the Albany stage to Boston and by ferry to Albany. No railroad entered it, and in fact the only one at that time in the whole State of New York ran from Albany to Schenectady, and hauled its cars to the top of the hill by a stationary engine before hooking on the light locomotive. The place was favorable for the development of character, unhampered by the conventionalities which come from contact with outside people, and Reuben grew to manhood there and retained a quaint simplicity all his life, a rugged, honest nature, whom it was refreshing to know and a lovable man to meet. If, as a boy, he ever indulged in forays on the fruit and melon patches of the farmers the fact is unknown to me. That I did is certain, but the disparity of years forbade comradeship in such nocturnal pleasures. He was large, strong and heavy of movement, with a deep chest voice, even when a boy, that was remarkable. His brother Ira, nearer my age, resembled him in this and other particulars, and in both there was an air of honesty and truthfulness, not so frequent in boys, which was fully borne out in their characters as men.

In later years I had a joke on Reub which was originally on me as a boy, but later knowledge reversed it. With some other boys one day I had been fishing away up the hill in the pond of the locally famous "red mill" and had seen a pair of wood ducks alight upon a tree. We somehow knew that they were wild ducks, but had no idea that the term included more than one kind, for at that day we only knew one sort of tame ducks. To see a duck light on a tree was strange, and I told Reub of it and he spread the incredible story, for he knew nothing of wood ducks, and the laugh was on me. "Seen any ducks lightin' on trees lately?" was a common and annoying salutation, and years later the question was turned on Reub. I fished with him many times as a boy, never after he left Greenbush for Syracuse, in 1852; but we met occasionally after 1876 when thrown together at fairs and fly-casting tournaments, and he seemed to be the same boy that somehow had gray hair.

The picture of him gives an excellent idea of his manly face, but the cigar I do not recognize. This is not remarkable, because he used from a dozen to twenty each day, and there are people who might not recognize his picture without a cigar of some kind. The badge upon his corduroy coat is a certificate that he is a member of the Onondaga Fishing Club, of Syracuse, which was always represented at the State Sportsmen's tournaments. Take a good look at him! That kind, honest face would be a passport anywhere. To me he was always the same lovable boy to whom I looked up as guide, philosopher and friend on my first fishing trip away back in the forties. I think I am a better man for knowing Reub Wood when he was a big boy and I a child. From him I learned that the world was round, "rounder than a marble," he said, and I saw that the sky was the upper half and that

REUBEN WOOD.

we were inside the world; if he knew better he never explained the matter.

Reuben's humor was manifested in the use of strange words which he probably manufactured, as I never heard them from any other person. A bad knot in a fish line was a "wrinkle-hawk," an excellent thing was "just exebogenus," a big fish was "an old codwalloper" and a long stemmed pipe was "a flugemocker." What a blank page is a boy's memory that such things written on it remain indelible for over half a century when more important ones have faded! The name of Reub Wood conjures up these trifling things, which if heard ten years ago would have been forgotten. But he had such a strong individuality that a person who only met him for ten minutes would be impressed by it and know him in after years; what wonder that he should carve his personality on the mind of a child? Impressions of other men and boys in that small village are also quite distinct and, as is usual in such places, there is more profanity and obscenity heard by a boy than in cities, for the tough boy in small places excels in such things, and it seems to me that he was worse then than now. But the worst that I ever heard Reub say was "gosh hang it," under the provocation of having to cut a fish hook out of his thumb. His mind was as pure as his life, and that is more than can be said of many who live straight enough, but have to resist temptation frequently. A man is not so much to be judged by his actions as by his thoughts, if you only knew them, and Reub's thoughts were his spoken words.

In Greenbush he was employed in the bakery of Jonas Whiting, where he learned the mysteries of bread and cakes, and when he went to Syracuse he blossomed out as a caterer for balls and parties, and then established a business in fishing tackle, now carried on under the name of "Reuben Wood's Sons." His old cash book is still extant, and was not only what its name implied, but was day book, journal and ledger all in one, with a margin for a weather record which contained such items as "Gone hunting," "Went after ducks," "Gone a-fishing," etc. This is indefinite, and one wonders what the result may have been until we strike the entry: "Wood returned from Piseco with 250lbs. of trout." At this date no man knows whether they were brook or lakers, *fontinalis* or *namaycush*. In that early day, in the fifties, Onondaga Lake abounded in pickerel and eels, and Reub and his companions often made a night of it, taking them with torch and spear, as was the custom of the time, and the catch went to their friends and the poor. When this mode of fishing became unpopular and unlawful, in later years, Reuben was one of the foremost in suppressing all kinds of fishing that the law forbade, but at the time of which we speak there was no law on the subject, nor public sentiment against spearing. He followed the custom of the day, merely drawing the line at fishing on Sunday.

A chum of Reub's was Mr. Charles Wells, of Wells, Fargo Co.'s Express, and they went shooting and fishing when the spirit moved. Mr. Wells had not only all the railroad transportation necessary, but could have trains stopped anywhere in the woods if necessary, night or day, by flag or fire signal. This brings a sigh not of envy, but merely a wish that such conditions existed today and I was "in it," as the saying goes. One day in the fall of 1857 a report came to Mr. Wells that there were "rafts of ducks" on Cayuga Lake, one of those numerous large lakes of western New York lying some thirty miles west of Syracuse, and a famous one for ducks; he told Reub just in time for him to gather his muzzleloader and ammunition and get the next train going to Cayuga, at the foot of the lake via the "old road" of the New York Central R. R., a road then so slow that it took the best part of a day to get there. Wells had his camping outfit and they camped for the night. As Reub told me the story years afterward, daylight found him in an old dugout, the only semblance of a boat at hand, while Wells had a good place on the shore. The ducks were flying down the lake and Wells had killed several, and was signaling him to come and pick them up, when a great flock of bluebills came up the stream and turned directly over Reub's head. As he let both barrels go the dugout somehow let him go into ice-cold water, but he hung on to his gun and got ashore chilled to the bone, and took the first train for Syracuse, where he traded his gun and equipments for a Knight's Templar badge and other things, and from that day foreswore the gun and devoted his energies to wielding the rod.

About this time Mr. Wells learned to fish with the fly and taught Reuben the art, to which he became devoted. It was long after this that I met Reuben, the occasion being the tournaments of the New York State Association for the Protection of Fish and Game, where he was a frequent competitor in the fly-casting tournaments, but never would allow himself or his brother Ira to win first prize because of a chivalric idea that another competitor—to whom he always deferred—should not be beaten. Either of them could outcast the other man, whose hoggish nature never allowed him to acknowledge the knightly courtesy—if he had the capacity to appreciate sacrifice. Not until the State Association held its tournament at Brighton Beach, Coney Island, in June, 1881, did Reuben Ward ever have a chance to cast unhampered by his sentiment. Here he had a new competitor with a great local reputation, who had never cast in a State tournament before. This was in the two-handed salmon rod contest, and Reuben won the first prize, valued at $50; with a cast of 110ft. His brother Ira came second, with 101ft. Harry Prichard cast 91ft., and F. P. Dennison 94ft. All but Prichard were members of the Onondaga Fishing Club, of Syracuse, and cast with the same rod—a split-bamboo, won by Reuben in the tournament at Buffalo in 1878; length, 17ft. 1in. As there was an allowance of 5ft. for every foot of rod in length, Mr. Prichard was allowed 9ft. 10in. because his greenheart rod (made by himself) was 1ft. 10in. shorter than the one used by the others; hence his amended record of 91ft. had an allowance of 9ft. 10in., making it 100ft. 10in., giving him third prize over Dennison.

In 1883 Prof. Spencer F. Baird appointed Reuben to take charge of the angling department of the American display at the International Fisheries Exposition in London, an appointment of which he was justly proud, as he wrote me in a farewell letter, and on June 11 he took part in the English fly-casting tournament at the Welch Harp, where he won first in salmon casting with an 18ft. split-bamboo rod, scoring 108ft.; Mr. Mallock casting 105ft. with an 18ft. greenheart rod. In the single-handed trout contest he won first with 82⅓ft. over four competitors. In a contest with two-handed trout rods, a thing unknown in America, Mr. Mallock won first with 105ft., and Mr. Wood took second prize with 102ft. 9in. His many trophies in the tournaments in Central Park, New York city, are familiar to readers of FOREST AND STREAM.

He died at his home in Syracuse on Feb. 16, 1884, in his sixty-second year. Mr. R. B. Marston, editor of the English *Fishing Gazette*, said of him: "I know many an angler in this country will feel sad at hearing genial, jolly, lovable 'Uncle Reub' has gone to his long rest. During his stay in this country he never failed to make friends of all who came in contact with him. I shall never forget the enthusiasm and almost boy-like glee with which he enjoyed a fishing trip with me to the Kennet, at Hungerford. He would stand for hours on the old bridge watching the trout and marveling at their cuteness. The system of dry-fly fishing pleased and astonished him greatly, and he told me he meant to try it on some wary old American trout he was acquainted with. Then he would show us some of his long casting with a split-cane rod. If we in this country, who only knew him so short a time, feel his loss so keenly, what must those home friends of his feel—his family and that wide circle of acquaintances who were proud to call him friend?"

His death was very sudden. He fell dead while entering his dining room, and his family doctor said that the heart had become diseased from excessive smoking. In addition to his love of the rod he was for many years an active member of the Syracuse Citizens' Corps, and later of the Sumner Corps, two well-known military organizations. He was also a member of the Baptist Church, and his name was a synonym for all that was honest and manly. The last time I met him he referred to our first fishing experience by saying, "Fred, are you catching many turtles now?" And the answer was, "No, Reub, it keeps me busy watching wood ducks light on the trees."

FRED MATHER.

New Jersey Weakfishing.

WARETOWN, N. J., June 26.—Mr. John Westcott and two friends, stopping at the Bay View House, caught fifty-seven weakfish to-day. Mr. B. Brooks and two friends took ninety-one. All were in good condition and of nice size.

July 6.—Nine different parties were out from the Bay View House for two days past and all made good catches of weakfish, from thirty to over one hundred to a boat.

J. H. BIRDSALL.

FLY-FISHING

On the North Shore of Lake Superior.

[*Continued from page 9.*]

AND again we skirt along the dismantled walls until we come to a defaced headland, where tons upon tons of flinty rock have been torn from its disfigured face and hurled into the waters below, where a sapphire gleam was then playing along the sinuous shore of dethroned deformity.

Here must be the home of some of the scarlet and spotted race that rove through these channeled fissures and under the shelving ledges.

The thrashing commences, and every crevice and slip and gap were showered with our dropping flies until patience was almost exhausted, and then a daintily dotted pet of less than a pound broke water and learned the lesson of disenchantment by paying the forfeit of his life. He was a victim of Ned's dusting brush, as he called his red-headed, red-sided and red-footed fly, the terror of the lake.

"Oh, yes," says Ned after the hook was disengaged, they all come for it; even the babies cry for it."

I smiled at the venerable angler's unbounded joy over his new-made novelty and its success, but prudently remained silent, wondering all the time what an artistic fly builder would think of such an outre combination he had brought forth, bringing the trout so readily to the surface. The fair authoress of "Favorite Flies," who had doubtless been years in preparing and formulating that admirable work, would doubtless think Ned's close acquaintance with an oriental bowstring consistently advisable. Ned when he built that gorgeous red gob had doubtless been wading knee deep in Shakespearean lore, and when unearthing that passage in Hamlet which relates that

> "There are more things in heaven and earth, Horatio,
> Than are dreamt of in our philosophy,"

set about at once under the mystic language and evolved from his inner and ingenious consciousness the great, gory killer, the dusting brush.

We think an apology due the fair authoress for making mention of her remarkable book in connection with Ned's red riddle, that should have disappeared with the lost arts of the ancients.

To return to the pleasant pastime, will remark that we thoroughly fished along this grand rocky scenery, where the crystal splinters fly from the sunbeam's chisel, and not another of the Claude-tinted family disturbed the surface of the silver sea. As Ned had outranked me in the angle with that red-headed devil, he was anxious to start for camp, and that without a halt. Making no demur, we hasten along in full sympathy with the great hills of endless rock that here mark and sing the song of eternity. They do not babble, or sob, or moan, or roar, like the discontented, melancholy sea. The powers of air bring all their batteries against them, lightnings blast and rive them, torrents plow them to the bone, sunshine scorches them, frosts gnaw away their substance and tumble it down into the valleys, and they utter no cry. "After thunder and hail and whirlwind, their peaks look out from above and take the sunshine with no bravado, as though it is their mission to suffer and be strong. Dumb patience in trouble, persistent fortitude against obstacles, the triumphant power of a character rooted in truth over the hardships of life and the wrath of the world—such a lesson, and the tone of spirit that can exhibit it, they try to infuse into the soul that lives in their society. By this effluence, even though the recipient is unconscious of the cause, they stimulate and soothe a flagging will or fainting heart, as the airs they purify search and reanimate an unstrung frame."

> "Ah, Nature, wrap thy dreamy shade
> About the life that thou hast made,
> And let me slumber long!
> Thine echoes softly, sweetly roll
> Through hidden chambers of the soul,
> And teach the poet song."

We arrived at camp about 1 o'clock, and then the boys hustled around and soon had dinner for us, with some beautifully browned trout as the dish *de resistance*. We did no fishing in the afternoon, whiling the hours away in reading and cards, and tramping around the little island, taking in fresh visions and new beauties at almost every step. We found the same general characteristics here as on the other islands in the lake. Huge masses of broken stone and rough boulders cover the lower levels, while trees and rushes run riot almost everywhere. The shore rim of the island is ragged and craggy, and tells the story of storm and ice that is fast eating up and disorganizing the flinty masses.

The softness of the air, the puff of coolness that steals in from the lake as the evening draws on, the lengthening of the mountain shadows, the reddening and flashing light, the seeming increase of all-absorbing silence, the feeling as if nature were making ready for the end of the day, give to the receptive mind and heart impressions of the unutterable things of life which lie on the soul as the clouds rest in the air, changing their appearance and never losing their continuity. What nameless things pass through the mind when nature thus unfolds her treasures to the sensitive soul! There are moments in our confidences with her when simply to live and allow the pulses of high feeling to flow through one is to be great, and they always come to us in such hours as these, when she interlaces us with the holiest and best.

Being possessed with great desire to cast a fly around the buttressed walls that inclosed us, I procured my rod and then commenced the arduous tramp and the steady cast. I used the same flies I had in the morning, being satisfied they would prove as effective as Ned's great red-headed masterpiece. Some parts of the shore afforded fine opportunity for luring, while others were so declivitous and tortuous that it was really dangerous to attempt their passage. I however got over the best part of it without a slip or tumble; but what a miserable *fiasco* the venture proved. Not a trout could I interest, though I changed my flies several times. They were evidently not here. Last year I caught but one here, and I presume he must have been "the last of the Mohicans."

When I returned to camp and reported my dismal failure to Ned, he said if I had taken his red-headed terror the trout would have come miles for it. It was, he said, like a fairy's magic wand. I coaxed hard to have him try its potent powers in the waters I had so earnestly whipped, but he concluded it best to not hazard it where he thought the scarcity of quarry might make a failure possible.

After supper, when the air was fragrant with pine and balsam, the stars just discernible, and the insects on wing humming a significant serenade, we again gathered around a comfortable camp-fire, with the mantle of night soon enveloping us. Ned, who was in grand humor, owing in part to the success of his red-headed terror during the day, gave us a repertoire of song that came like a copious river over the mazes of enchanted ground.

Kenosh's Ditty.

On his concluding with the soulful melody of "Allan O'Dare," he turned to Kenosh, who was whiffing away at a corncob pipe, and asked if he couldn't favor us with some old Canadian boat song, with which the half-breeds are so familiar. He stopped his puffing at this request, and then, after scratching his head and looking up to the glowing heavens, where the dipper was in diamond brilliancy, slowly opened his mouth, from which gleamed his white teeth, and then moved his silent tongue by giving a welcome affirmative.

"I sing 'em in French though," he added.

"Sanskrit, if you wish," says Ned.

"No good singer, like you."

"Thanks, Kenosh."

"You no understand the French."

"Not a word."

"Hope you like em anyhow."

"I am sure we all will."

Here he laid his pipe aside, and on clearing his throat commenced the *chanson*, and one which I am positive I had heard our boatmen sing on the famed Nipigon. He rendered it, as do all the half-breeds, in a low, mournful voice; but he seemed to put his whole soul in it, and I presume thought he was entrancing his auditors. So confident was I of having heard it that I got from him after he had finished the chorus line, which was, "*La violette dandine, la violette donde.*" On looking over a book styled "The Shoe and Canoe," while writing this letter, I accidentally stumbled over it. The author of the work said it was taken from the lips of the singer, and is evidently ancient Norman in the Canadian *patois*.

I may be intruding on space in giving the translation of the ballad, but I am sure all anglers who have employed the half-breeds of this shore in their outings will read it with some interest and may possibly recognize it. It thus pleasantly runs:

> "With heart as wild
> As joyous child
> Lived Rhoda of the mountain.
> Her only wish
> To seek the fish
> In the waters of the fountain.
> Oh, the violet, white and blue!
>
> "The stream is deep,
> The banks are steep.
> Down in the flood fell she,
> When there rode by
> Right gallantly
> Three barons of high degree.
> Oh, the violet, white and blue!
>
> "'Oh, tell us, fair maid,'
> They each one said,
> 'Your reward to the venturing knight
> Who shall save your life
> From the waters' strife
> By his arm's unflinching might?'
> Oh, the violet, white and blue!
>
> "'Oh! haste to my side,'
> The maiden replied,
> 'Nor ask of a recompense now.
> When safe on land
> Again I stand
> For such matters is time enow.'
> Oh, the violet, white and blue!
>
> "But when all free
> Upon the lea
> She found herself once more,
> She would not stay,
> But sped away
> Till she reached her cottage door.
> Oh, the violet, white and blue!
>
> "Her casemate by,
> The maiden shy
> Began so sweet to sing,
> Her lute and voice
> Did e'en rejoice
> The early flowers of spring.
>
> "But the barons proud
> Then spoke aloud:
> 'This is not the boon we desire.
> Your heart and love,
> My pretty dove,
> Is the free gift we require.'
> Oh, the violet, white and blue!
>
> "'My heart, so true,
> Is not for you,
> Nor for any of high degree.
> I have pledged my truth
> To an honest youth,
> With a beard so comely to see.'
> Oh, the violet, white and blue!"

We were about retiring after the musical festival, when Kenosh inquired of Ned if he intended to give his remarkable adventure of bagging three bears without a single shot. Ned said he had forgotten all about it, but as he had promised to relate this exciting occurrence, he would do so, and then the half-breed tossed a stick or two more of spruce upon the fire, and thereby sent up a golden shower of sparks that fell dangerously near our tents.

Ned's Bear Story.

"Well," said Ned, throwing himself back in his camp chair and tossing away his nearly consumed *El Principe*, "I was at one time in the sixties stopping at a farmhouse contiguous to a little town called Baldwin, on the line of the Père Marquette Railroad, with all the paraphernalia requisite for taking fin, fur or feather. When I was not catching grayling, with which the streams near by abounded, I was roaming the woods in search of birds, deer or bear. One morning I concluded I would endeavor to bring in bruin's scalp, and so I prepared accordingly. The weather was a little cool, and I thought a little nip of the extract of golden grain would not come amiss, and had therefore early in the morning sent the serving boy, who was a stripling of some fifteen years, down to the little hamlet near by to secure me a pint bottle of the elixir. The boy made good time and was back before I had finished breakfast; and when I was ready to start, which I did in great haste, he informed me the bottle was on the table in the front room. I snatched it up quickly as I passed through the room, and, as it was not much larger than an ordinary flask, I put it in the back pocket of my hunting coat, where it would doubless be out of all danger from breakage.

"It struck me after I had commenced the tramp in the dense and shadowless forest that it would have been much better if I had taken my flask, as the bottle showed a disposition of juggling in that capacious pocket, and again, if I got after a bear on the double-quick, or he got after me, the glassware stood a good chance of breakage, or at least of receiving some emphatic language not in vogue in polite society. I threaded the pathless forest for some three miles, when feeling slightly wearied I concluded I would sit me down on the trunk of a prostrate tree and ascertain whether the contents of that perplexing bottle, which was constantly vaulting from one side to the other of that wonderful pocket, which would hold many a brace of fowl, was good for the inner man. Finding a convenient log, I was about to luxuriate in ease, when to my surprise a big black bear rose up with a fierce growl from the opposite side of the timber. At once I sprang back, and taking a steady aim at the discontented bear pulled the trigger; but the gun was not responsive. By this time the bear, who appeared not only in a savage mood, but fighting mad, came jumping over that log with his eyes all aflame and his heart full of desperate valor. I was then satisfied he had a cub or two near by, and that the best I could do was to speedily retreat. On I swiftly went, with the ferocious bear at my heels, who I was confident was fast overhauling me. Spying a tree in front of me which I knew—you might say by intuition—that no bear could climb, I dropped my gun and clinching the tree shinned up it with the alacrity of an acrobat. After having secured a safe position I turned around and saw old *Ursa major* looking up at me in the most rageful and disappointed manner. He tried hard at times to scale the tree, but it was a problem he could not solve. There was too little tree and too much hug, and as a consequence the quotient could not be obtained. In his violent anger he tore up the ground, bit at the tree and growled with a roar that could be heard far away. He kept this up for quite a while and then, much to my amazement, a couple of more bears came trotting to the scene. They all, after a consultation, joined together in endeavoring to get a human steak or two out of my anatomy, but it was a total failure. The entire trinity were constantly around the tree, very industriously clawing and biting it, but to no purpose. If they had only formed a pyramid such as we see in a circus, they could have had a circus out of me, but they lacked in gymnastic knowledge and would therefore lack in the feast that was so near and yet so far away. I finally lost all fear of them for the nonce, and enjoyed their restless antics in a high degree. I concluded while in this mood to take a little of the corn extract from that tumbling bottle of mine, so I yanked it out from its playground after cornering it in the starboard side of its receptacle. Out came the cork, and with a smile and smacking lips I closed around the mouth of that bottle, and at the first gulp I found my mouth in a sea of nasty oil, which I spit out instantaneously. As the drops touched mother earth the bears sniffed around them and then commenced licking up the oily substance.

"The 'boys' in sampling a good quality of old bourbon in good fellowship joyfully exclaim, 'It's oil, you bet,' and then rub their diaphragms with a satisfied smile rippling o'er their beaming faces. I could in my present dilemma with a verity say, 'It's oil, you bet,' but the diaphragm movement would be omitted, most emphatically so. I evidently had the greasy substance, but who in the devil was fortunate enough to possess the abstracted whisky. I was satisfied it was old Tom Buford, one of the jolliest anglers that ever cast a fly or hung a trout. He had arrived at the farmhouse the day before with piscatorial intent, and when I bade him a cheery good morning at the breakfast table, as I started on the hunt, I surmised that he developed a significant smile. Ah! Tom, you old rogue, you are the prince of good fellows and king of practical jokers, and you no doubt found my whisky O. K. and assuredly cracked your sides laughing when you thought it about time for me to take an initial nip and emphatically exclaim, 'I'll be blanked if it ain't genuine oil and another of old Tom's tricks.'

"As I saw the bears so fondly lapping up the rejected oil, a happy idea came to me, and as it fully developed in all its lurid magnificence I laughed over it so heartily that I came near falling out of the tree and giving the bears an opportunity for a first-class meal. The plot, although ingenious, was very simple. I would adroitly coax the bears to the tree, saturate them with the oil, and then by dropping a few lighted matches among them, of which I had plenty, would make a bonfire of my shaggy sentinels and thus escape. Again I had to cachinnate and again I came near tumbling out of my perch. I got everything all ready for roasting those greedy bears, and uncorking my bottle, I dropped a little of the oil on the inclined trunk near the bottom of the tree, and then on their scenting it all of them went for it as if it were the most delicious wild honey. This was my golden opportunity, so holding my bottle directly in line for them, I poured the whole contents of it over those three bears, and then quickly lighting a dozen or more of the matches, threw them in a bunch among the bears, who were still at the oil, and instantaneously there were roaring flames of fire, and like lurid comets they started off at a desperate speed through the forest and brake, howling in the most agonized manner. Then I hugely enjoyed the spectacle of the racing and blazing bears. But what is that smoke and flame that spreads out like the opening of a vast fan just ahead of me? As it moves along it gathers in speed and magnitude, and then for the first time I saw what a terrible thing is a forest fire. It was the involuntary work of the burning bears. For months there had not been a drop of rain in this section of the country, and the woods in consequence were like a tinder box. How I did regret that ingenious joke of mine, which, while it saved my life,

would cause dire disaster to the surrounding regions. Oh! but it was an immense conflagration, and everything before those gigantic walls of fire was being consumed as if it were saturated with benzine. On, on they went swifter than the speed of a race horse, sending up their dense clouds of smoke and flames that had reached most appalling dimensions. Trees were wrapped in seething flare as if their branches were of tissue paper, while wide spaces were spanned by waves of fire that jumped hundreds of feet. What a roar and crackling there was, and what a terrible devastation ensued. I watched the towering flames for near an hour from my elevated position, and never did regret anything so much as this sad calamity. What horrors would reach my ears, what loss of life ensue, what distress prevail over that burnt and barren district. I dreaded to hear the report and slowly traced my way back home, with my head bowed in sorrow and a tempest of sadness in my heart, so keen and so painful that it almost snapped its vital chords."

"Why you no burn up?" inquired the amazed Kenosh.

"I was on the windward side of the fire."

"Oh, that it."

"When I reached home, which took me a long time, I was so prostrated with the great disaster I had wrought that I really dreaded to hear the report. Time and again would I sit down and rest myself quite a while until it was almost dark, when I at last reached the farmhouse. When the dreadful story was told me of the great loss it nearly paralyzed me. I heard that several hamlets and villages and a dozen sawmills went up in the flames, while farm after farm was completely blotted out. The loss in the aggregate was over $2,000,000, and if I had been an Astor I would have been only too glad to have paid every dollar of it, for I felt that I was the principal cause of it all, though in an accidental manner."

"What became of the bears?" again inquired the interested Kenosh.

"The bears were found by a small creek roasted to a turn and were fed to the 5,000 destitute sufferers by the fire."

Here Ned arose, as if the recital of that famous fire had renewed the agony he once suffered and started for the tent with bowed head, as if sleep would prove his only solace.

I soon followed him, and after we were in bed could hear the father and son talking over the "tale of the three burnt bears."

"You believe that?" says Kenosh to his son Jo.

"It's hard to swallow."

"How he feed 5,000 people with three bears?"

"I don't think they go around."

"Bear eat oil like honey?"

"Maybe."

"Two-million-dollar loss?"

"If woods burn up, yes."

"Pour your oil on 'em and then fire 'em?"

"Yes, if he had it to pour."

"You think he told true story?"

"Some part maybe, and then he stretch some."

"He stretch all the time. What Bible man that lie so?"

"It was Analias or Analyses."

"Well, he beat him."

And then both joined in hearty laughter, and there they sat by the dying embers talking and turning over Ned's bear story till the moon came up and silvered forest and lake, mountain and cliff.

ALEX. STARBUCK.

[TO BE CONTINUED.]

THE CANADIAN FISHING SEASON.

Editor Forest and Stream:

Gen. Hay, of England, has returned here from a lengthy fishing trip in the Canadian home of the ouananiche. He has enjoyed good sport in La Grande Décharge, where he has spent about a month. Part of his catch, after having been preserved, has been expressed by him to their royal highnesses the Princess of Wales and the Princess Louise. There has been a rather unusual amount of fishing in the Discharge this spring, both in the hotel preserves and also in the Griffith pools, but the general run of fish has not as yet been as large as in former years. The water is still, however, somewhat high, and the best of the fishing is yet to be had in the vicinity of Isle Maligne and thereabouts. I would strongly urge upon intending visitors to the Discharge after this date the advisability of running further down the stream than usual if they would desire large fish. Some very good specimens have been taken out by Mr. Creighton, of Ottawa, and Mr. Mathews, of Rochester, in their preserved waters near the foot of Alma Island. The ouananiche are now also to be had in the rivers flowing from the north into Lake St. John. A few parties have already had good sport at the Fifth Falls of the Mistassini, and the Messrs. McCormick, of Florida, have gone on an exploring trip far up the river. The month of July should be a most desirable time to make the trip up the Peribonca River to Lac Tschotagama. Among the most successful anglers for ouananiche this season have been Lieut.-Col. and Mrs. Wilson, of Quebec, many of whose friends have received trophies of their angling skill from Lake St. John. Dr. Louis Webb, of New York, has also proved a good killer. Several Springfield anglers report good sport with the ouananiche and heavy catches of trout upon their preserve on the Amabalish limits. I have seen some more 6 and 6½lbs. trout from Lake Edward lately, but none that will at all compare for weight with fish yielded by Lake Batiscan on the Triton tract. Messrs. Dean, of New York, and Clemson, of Taunton, Mass., had some phenomenal fishing there the week before last, two *fontinalis* of their catch weighing respectively 8¾ and 7½lbs., according to the solemn assurance of their guides. Winter fishing in this lake has frequently yielded 8lbs. fish.

Lieut.-Col. Andrew C. P. Haggard, D. S. O., who made the Peribonca trip as far as Tschotagama in 1892, and fished the Nipigon and Cowichan the same year, and who is well known to the readers of modern angling literature by his frequent contributions to the columns of the London *Field*, his article on ouananiche in *Blackwood's Magazine* and his exceedingly picturesque introduction to "The Ouananiche and its Canadian Environment," is on his way out from England for some more angling in Canadian waters. I hope to accompany him on further expeditions against trout and ouananiche. In terminating his introduction to the work already referred to, Col. Haggard says: "I have fished with many companions in Scotland, in Norway, in Ireland, in Spain, in England, in India, in Asia Minor, in Turkey, in Egypt, in Canada, in British Columbia, and various other, now forgotten, parts of the world; but for all fishing countries, all companions and all kinds of fishing, give me some real good days in the district of Lake St. John, above Quebec; give me —— for my companion and let the fish be the ouananiche."

From the salmon rivers come reports that the fishing this season is the best experienced for many years past. On the Restigouche fish have been large and free risers. Friends now on the Marguerite write that they are also having good sport, and that the salmon are more plentiful than usual.

Mr. Frank Ross and party on their first day's fishing on the Magdalen River on Monday killed fourteen salmon, one of which weighed 39lbs., and found fish very plentiful. Mr. George Gould and Mr. Julian D. Davis, of New York city, passed through here on Sunday in Mr. Gould's private car for the Metapedia, where the party will fish for some days.

E. T. D. CHAMBERS.

QUEBEC, July 3.

ANGLING NOTES.

Habits of Salmon.

"Do I sleep? Do I dream?
Do I wonder and doubt?
Are things what they seem?
Or is visions about?"

AFTER reading a syndicate letter upon the subject of salmon fishing I am somewhat in the condition of Truthful James, or the distinguished statesman who did not know "where he was at." Why? Because in the letter I have read it is stated that "the salmon has many peculiarities. It is, properly speaking, a salt-water fish, the sea being its home for about ten months of the year." My mental machinery said "that is not so," and when I found that the letter was written by some one I know I concluded it was a mistake that the types were responsible for and not the author. A little further on I read this: "The time for salmon to leave the sea is about June 1, but in spawning rivers far from the sea the time may be two or three weeks later. They ordinarily leave the rivers during August, thus limiting the fishing season to six or eight weeks." That begins to look as though the author were not a safe guide to the natural history of the Atlantic salmon, but it corroborates the ten months in salt water, and perhaps he is writing about a new breed of salmon that have no occasion, or time, to spawn. The deeper I get into the story the more I am confused. It is generally believed, and this belief has been universal for a few hundred years, that salmon remain in a river until they spawn, surely until October, and certainly some salmon have been known to enter a river from the sea as early as February; so that really some few salmon remain in fresh water eight or nine months. Why salmon in "rivers far from the sea" should be later in starting because of the location of these rivers is not entirely clear. I have heard of an early run of fish and a late run of fish in the same river, without regard to the rivers being far from the sea or adjacent to it. Although they are a salt-water fish, "salmon are never caught in the sea, and nothing is known of them from the time they leave fresh water after spawning [it seems that they do spawn after all, so they must spawn between June and August] until they return the following year."

It is a mistake to say salmon are never caught in the sea, for they have been caught in mackerel nets off Provincetown and also off the coast of Maine, to say nothing of their recorded capture in the sea off the European coast. In fact, there is quite a bit of evidence to show that they do not go far from the mouth of the river in which they are born. Dr. Edward Hamilton, who is considered a very good authority upon the subject of the natural history of the salmon, says: "It has been a matter of controversy as to how far the salmon go into the sea. The general opinion is that they remain always near the coast, and do not inhabit the deep sea. A doubt has arisen lately as to whether the great salmon found in the early spring in Loch Tay ever go to the sea proper at all; whether they do not merely go to the estuary of the river and there find sufficient food to renovate their strength and return in the early spring to the loch in the finest condition. That they can invigorate themselves quickly in brackish water is proved by the salmon in the Gulf of Bothnia, where, owing to the enormous quantity of fresh water which is poured into it and the narrow outlet into the sea, the water is very brackish, yet the salmon thrive wonderfully in it; still these fish can go if they wish into the North Sea."

I quote Dr. Hamilton because he is a modern writer upon the habits of the salmon.

Our friend of the syndicate letter continues thus: "It is a conceded fact that they (salmon) do not eat while in fresh water."

Is it? Brother Hallock is far from conceding it and has produced evidence to show that they eat quite a variety of food, one of which I will mention later. But let us see what Dr. Hamilton has to say on this subject: "The question has often been asked, 'Why is it that as no food is ever found in the stomach of a salmon in fresh water he rises at the fly?' The salmon takes the fly because he thinks it something to eat. Because nothing is found in his stomach is no argument that he does not feed as other fish; he may have a very quick digestion or he may eject the food when alarmed; this I have myself seen done by sea trout." I simply quote this to show that it is not a conceded fact that salmon "do not eat while in fresh water."

The letter goes on to say: "It is a strange fact that there are a few (salmon) that do not return to the sea, but remain in the rivers during the entire year. No explanation of this has ever been given. Such fish are called kelts." It is astonishing to read that no explanation has ever been given for a kelt's remaining in fresh water. They remain because they are so weak and spent they can do nothing else. But how is this for an explanation, from Pennell? "The adult fish are called 'spent' or unclean fish or 'kelts,' and at this time are quite unfit for food, and their capture is prohibited by law. * * * For some time after spawning, however, they are in a very weak and exhausted state, and have not energy for immediately descending the river. Accordingly they usually drop down from the spawning grounds to the first quiet deep, there remaining until their strength is recruited." Hallock says: "After the gravid fish have spawned they stay in the river all winter, and if there are lakes at their headquarters which are well stocked with food they soon recuperate and put on flesh; but if not, they play havoc with the salmon peel (young salmon) which they find in the main river, and are often picked up by the June angler while working their way down to salt water, still pitifully lean and emaciated, but ravenous to extremity. They are called 'kelts' then, and more disgusting objects can hardly be imagined."

It seems that the presence of kelts in a river has been explained, and that they do eat in fresh water, and eat their own young. One more extract from this rather remarkable letter, and I am through: "The fly is the only sportsmanlike way of catching." If the lamented Billy Florence were alive he would object most strenuously to that word, for while he *caught* trout, he insisted that all successful salmon fishermen *killed* their fish.

They are so taken in American and Canadian waters, except in the Fraser and Columbia rivers, where the spoon is the only successful lure. In the rivers of Great Britain and Norway it is different. In many of these the fly will not be taken, and success is attained only by the use of a small spinner, which is cast and drawn in the same manner as a fly.

Now that I have written the quotation, it strikes me that it would be better to leave comments to the English, Scotch and Irish fishermen, as in my mild way I may not do the subject justice according to their ideas.

I know that a friend in New York city, who fished a Norwegian river for several seasons, will be surprised as well as the anglers over the water. In what I have written I do not mean to be hypercritical, but I do feel that such misinformation should not be sent out broadcast in a syndicate letter unless it is printed in the humorous column.

What I have said has been said briefly, although columns might be written on the subject, as I believe that a protest of some sort should be filed whenever misleading information is given out, through carelessness or otherwise, concerning the habits of our fishes. There is yet much to be learned about them, and authorities differ in regard to some features of their habits, but there seems to be no necessity for attempting to controvert what is admittedly true, and upon which all have heretofore agreed. The habits of a species of fish in one body of water cannot be set down as true always of that species in all waters, and governing conditions must be taken into account should a difference exist, but when such a fundamental truth as the spawning season of salmon is questioned, even by implication, it should not be passed over unnoticed.

How a Pond was Stocked.

There is a pond in the southeastern part of the Adirondacks that was never known to contain trout of any kind within the memory of men living near it. There were bullheads and minnows in it, but nothing more. Ponds and lakes in the vicinity were natural trout waters, but this particular pond was known to be barren of trout until about two years ago, when a man living near the pond who was with a party of men hunting deer on its shores baited a hook which he carried in his pocket and cast it into the pond to catch some bullheads. The hook was taken, greatly to his surprise, by a large fish much more active than any bullhead he had ever caught, and it proved to be a trout. He returned to the pond a little later and an examination disclosed the fact that there were some big trout spawning in the inlet. Last year the discoverer of the trout invited two friends, acquaintances of mine, to visit the pond for trout fishing, and their success was remarkable, as they caught trout up to 4½lbs. in weight, and their entire catch averaged so large as to cause those who saw it to think it made up of selected trout from a private preserve. They visited the pond again this year and had success equal to that of last year, and in the meantime it had been found how the pond happened to contain the fish. It seems that some years ago a lot of fish fry from one of the State hatcheries were being conveyed on sleds to a lake beyond the pond in question. One of the cans of fish was not in the best condition and it was thought that they would not live to reach their destination, and when the pond was reached the fish were turned into it and the matter was forgotten, as it was supposed that the water was scarcely suitable for trout, and even if it was the trout fry would not thrive.

It has now been fished two seasons, and trout up to 5¾lbs. have been taken from it. This year the original discoverer of the trout had another surprise when he hooked in the pond a lake trout (*namaycush*). The pond is not large and the water in it is not over 25 ft. deep, and as this is the only lake trout known to have been in the pond, I imagine it may have gotten in with the brook trout fry at the hatching by accident. Early in the spring I heard two men talking about this pond and its fishing as they sat next me in a railrord car on the D. & H. R. R. I was interested in what they said about the fishing, but I could not locate the pond, or they were careful not to mention it by name. Later, when I learned the particulars of the pond being stocked, I knew the pond the men were talking about.

Finish Fight with Foul-Hooked Tarpon.

In FOREST AND STREAM of June 20 I recorded a promise from an old friend in Texas to tell me about the results of a tarpon fishing trip which he was anticipating.

My friend, Mr. Wm. D. Cleveland, of Houston, Texas, writes me this morning, and I am glad to note that he has not lost his sand, as I began to fear, and that he has finally hooked and killed a tarpon under rather peculiar circumstances. But I will let him tell his own story. He writes under date of June 24 from Houston: "When I wrote you not long ago, I said hurriedly that I had been tarpon fishing and was going again that afternoon and would advise you of the results later on.

"Morgan's Point is a piece of land extending into the water between San Jacinto and Galveston bays, distant twenty-five miles from here. The Government some years ago cut a channel about a mile and a half long across this point, 200ft. wide and 30ft. deep. About May 15 several parties reported that tarpon had made their appearance in this channel on the side next to Galveston Bay, as they had done for the last five years, and I concluded that I would like to know how it felt to have a big tarpon on my line, with a stout rod and a good reel. I made one leader of brass wire, one of lace leather, and bought such hooks as I thought were the right size

nd kind, took my Cheney rod and went out about June 1 in search of tarpon. I attached a float about 2ft. above the hook, put on a mullet and commenced to fish. In this way I fished probably five days at different times, from early morning until late at night, and while I had a great many strikes from large tarpon, in each instance they either broke my leader, my hook or my line. In one or two instances I bent the point of the hook in endeavoring to jerk it into the fish. There were hundreds of tarpon there of all sizes, from 40 to 150lbs., as I estimated them, jumping around, sometimes within 10 or 15ft. of the boat. Concluding that my tackle was not sufficiently strong to land such fish, even if I succeeded in hooking them, I wrote to Rockport for a complete outfit—rod, lines, leaders and hooks. They arrived on Wednesday last, the reel having on it 200yds. of line, and that afternoon at 6 o'clock I took the train for Morgan's Point. I had telephoned ahead for a boatman, boat and bait (mullet), and to have all ready at 5 o'clock the next morning. I arrived at Morgan's Point at 7:15, and had time to make all my arrangements for an early start. At 5 o'clock in the morning we had a cup of coffee and a couple of eggs (good ones; they did not break the yolk when they were opened), and within ten minutes we were fishing for tarpon. We had to go only about 300 or 400yds. at the far end of the bulkhead, where the bay has a fair sweep into the channel, and around which bulkhead the mullet come from deep into shallow water. I had perhaps seven strikes before I fastened to a fish, but when I did it was a good-sized one, weighing probably 150lbs. Each time a fish would strike he would jump out of the water 8 or 10ft. clear and shake the hook out of his mouth. When I hooked the big fellow it was about 8:30, and the tide was running out. Contrary to the usual actions of these fish when hooked—which is to run against the tide—he turned out through the canal and took to sea, jumping at least 10ft. clear of the water every 50ft. until he had jumped seven times. His plunge and his gait were equal to those of a wild broncho, and he traveled at the rate of about a mile a minute. With all the efforts of the oarsman and with all the weight I dared to put upon the tackle, it was almost impossible for me to prevent him from taking my 200yds. of line, and at one time he had out at least 500ft.

"After going about a mile he concluded he was wrong about the tide, and, circling through the bay a little, went back into the channel, going past where he was first hooked and down through the canal by the town. I presume there were 150 people in the town, and I gave a great yell that they might come and see me take him in through the canal. In less than five minutes I think every inhabitant of the place, black and white, old and young, was on the bulkhead watching the sport. Three-quarters of an hour had probably passed since he was hooked, when, after reaching this end of the canal and getting into San Jacinto Bay, he turned in the direction of the sunken boats or logs, and when I attempted to turn him went around a sunken log, which gave me some trouble.

"At last, however, I extricated the line and then had him in fair play again for perhaps half an hour. At the expiration of that time he turned back up the canal until he reached the spot where he first went around the sunken log, and there repeated the same maneuver, going around the log and turning immediately back behind me, though I was not aware of his shrewdness at the moment. It seemed impossible for me to extricate the line this time and after a great deal of pressure it evidently wore. The fish jumped out of the water, breaking the line.

"I had him in play probably an hour and a half, and I had him well hooked and partially under control.

"Ten o'clock had arrived, at which time I had breakfast, and at 11 o'clock I was out again at the same place fishing for tarpon. I had four strikes, losing each fish, when the tide changed and was running in and the wind was blowing quite hard, making an unusually rough sea.

"The boat had taken water to some extent, and not having many mullet in the well I had the boatman tie up to a hulkhead in order to bail out, and also to relieve the well or pool of the water.

"As I had made my arrangements to return to Houston at 2 o'clock, I told the boatman that if he would give me one more fresh mullet I would bait the hook, and when that was taken we would go in. He gave me the mullet, put his oars in the locks, and was ready to start when I threw my bait overboard. It had not gotten 3ft. from the boat before there was a mighty splash. Water was thrown all over me, and my mullet was taken by a tarpon. I was scarcely prepared for him, but at the same time I prevented his getting too much line, and the reel sang the prettiest kind of song, until he had gone about 50ft., that I ever heard. At this distance he jumped at least 10ft. out of the water, and finding I had him safe I gave him no more slack whatever. He turned immediately out the channel to sea against the tide, and continued his rapid gait, jumping clear of the water every hundred feet or so until he had jumped nine times. He kept up the pace until he had gone three miles to sea and into very deep water.

"I had no control of him whatever, and he had taken on several occasions during this outward sea movement nearly all my line, at least 550ft. After this distance he turned to the left and went at least two miles until he got into 5 or 6ft. of water. Then he turned back across the channel and went on the opposite side of it probably a mile and a half. After two hours and a half he went back into water 3½ to 4ft. deep, and I had some hopes of getting him into water where I could gaff him, but without warning he turned to sea again and did not stop until he had gone a mile and a half. This fish took us around over the bay for five and a half hours and a distance of not less than twelve or thirteen miles. I found I had no control over him and knew I had him foul in some way, because no pressure that I dared bring to bear seemed to turn his head, and when I got him broadside toward me and endeavored to hold him I would draw him broadside to me and not head foremost, which told me I had him hooked somewhere in the side.

"After I had worn out both Capt. Frank Marsh, my boatman and myself, and we had on several occasions almost decided to cut the line and let the fish go, we began to have a little control over him, and worked him toward shallow water, and at 6:15 I got him into water about 3½ft. deep, and the captain got into the water himself and worked up to the fish and gaffed him, as he had a gaff with a handle about 6ft. long. After he got the gaff into the tarpon he drew him toward the boat and I killed him with an oar.

"This was the greatest battle of my life with a fish, and during the entire time I did not give him an inch of slack line and did not have a chance to take a drink of water or light a cigar. The tarpon was hooked in the side back of the gills. I imagine he jumped over the mullet and jerked the hook into his side. This was why I had no control over the fish and made the fight last so long.

"During the struggle the waves were rolling pretty high, and I had to sit in the stern of the boat all the time with the bow toward the fish, and the captain pulling the oars under my directions.

"If the sea had been smooth I could have taken the bow, and it would have been comparatively easy for the boatman, but the high sea made it impossible for me to do this. The boat took water so often until it was nearly half full, and having seen people in the town with glasses looking at us, I concluded that by waving my hat they would understand and come to my relief and bring another boat, which was done, and we changed boats about an hour and a half I landed the tarpon, otherwise we would have abandoned him on account of the boat taking so much water. The tarpon weighed 105½lbs. and measured 6ft. 1in. in length. I will go down again tonight and report results. I would give anything in the world if you were here to join me in a trip of this kind.

"There is nothing on the face of the earth in the fish line that gives such sport, and I will never be able to fish for smaller fish again."

I am afraid that my friend does not give the tarpon time enough to swallow the mullet bait before he strikes, but the Texas method is so different from that practiced in Florida that comment at this distance is unwise perhaps. Certainly to land a foul-hooked tarpon gives one a heap of fishing. A. N. CHENEY.

CHICAGO AND THE WEST.

The Season of the Sand Fly.

CHICAGO, Ill., June 26.—This week has been signalized all over the middle West by the appearance in vast numbers of the sand fly, May fly, cisco fly, shad fly, caddis fly, or whatever other local name may be given to the creature, which I presume is somewhat the same in all instances, and a member of the family of *ephemeridæ* or soft-winged flies which come up out of the water, though they are popularly supposed to come out of the woods. Chicago and it suburbs this week have received a visitation from the "sand flies," as they are called here. The insects have fairly clogged up the electric lights during the night time, and in the morning the streets have been covered with them.

Yesterday morning I picked up one of these sand flies as it lay in its customary listless way upon the sidewalk, apparently careless whether school kept or not. It was not like the caddis fly of the Wisconsin lakes, whose habits I have had occasion to study from the angling standpoint. The caddis of those regions is larger and of lighter hue, and the wing is a trifle wider in proportion. This sand fly was of darkish color, body and all, and his wings were somber, though delicately veined. I could not call him so pretty and edible looking an insect as the pale green caddis of the Wisconsin waters, but none the less I took him to the tackle dealers and tried to find his artificial counterpart, or rather that of my caddis fly of larger type. To my surprise I could find no caddis fly in Chicago tackle stores, and indeed the only ones I ever saw here were sent me from a stranger. These flies were nicely tied, with the pointed, gray-mottled, upright single wing, and the long, upturned soft tail with the soft, hair-like "feelers" indicative of this delicate and graceful fly. Having tried these flies alongside a clumsier imitation, I had in past years learned the nice discrimination possessed by the black bass in such matters, even after dark, and I wanted just that sort of a fly and no other, because I am going up to the annual "Camp Forest and Stream" next week, and want to carry out the traditions by taking a few bass on the caddis of evenings. But I could not get my fly nor one approximately like it, and the best I could do was to get some imported May flies with upright but double wings and a body sticking straight out in a most awkward fashion, which I fear will be spurned by my fastidious fish. These May flies, however, I have trimmed down into something like the proper shape by free use of scissors, and I hope, if the night be very dark, to be able to persuade my bass that they are the correct thing.

I am surprised that I hear of no one in Chicago who takes advantage of the caddis season to enjoy the evening or night fly-fishing for bass, which is then absolutely the best of the season, and I am surprised also that our tackle stores do not carry this useful fly among their weird and variegated outfits of feathers. As to what luck my May flies have, we shall see later. We may be a trifle late for the caddis this year, for the season is early, but it shall go hard if we do not find out what makes the circles in the water over the sand beach just after sundown on a certain lake I wot of.

Last week I was out in Iowa, and I met several gentlemen who were just back from Spirit and Okoboji lakes, the two most famous fishing waters. They all said that the sport was very poor. "The shad fly was all over everything and the fish were not biting at all," said one angler to me. Now, the truth is that no doubt if he had understood the situation he could have had the nicest sort of fun right where the fish "were not biting at all." The bass do not care for heavy feed when the caddis is rising, and often will only play at biting a frog or minnow then, running with it and not swallowing it so eagerly as they will when they mean business. The boats come in without any fish, and everybody is discouraged. By sundown everybody goes to the hotel and sits around and kicks—yet at just about that time the bass are coming in over the sandy reaches where the caddis is rising in the cool of the evening, and there the main meal of the day is going on. The frog and the minnow and the crawfish are everyday fare for bass, but when the caddis comes it is the season of peaches and cream, and great is the joy thereof. I imagine my friend from Spirit Lake has overlooked a good thing. I have rarely enjoyed any of our lake angling for bass more than that we had on some evenings with the fly rods on our little lake, when it was so dark one could not see where his fly struck the water, yet every once in a while would hear the splash and feel the tug of a hooked fish. To be sure, the largest bass were not taken in this way, and we got a great many rock bass and croppies, but once in a while we struck a heavy bass, and often lost them in the rushes and weeds. I have seen dozens and perhaps hundreds of fish feeding furiously this way after dusk, on a water where everybody swore there was no fishing, and J. B. H. and I used to enjoy the wonder of the populace over our constant strings of bass. Yet still the dealers do not know the caddis fly in the trade. If they can do no better, they might by diligence be able to get a sand fly or two here in Chicago for a model this week.

The Muscallonge Season.

We are able now to give some information about the muscallonge season in Wisconsin this year, as several parties are back from their trips this week. On the whole the season must be called very unsatisfactory, if the opinion of the majority of anglers interviewed be taken as index. I have seen few 'lunge of any size at the offices of the railroads running into the Wisconsin fishing country. A box of fish stood in front of the Wisconsin Central office here the other day, but there were only a few 'lunge in it and none over 6lbs. There was a nice lot of wall-eyed pike in that box, of a curiously dark, coppery color, showing them to come from some far northern water, stained by the tamarack roots. This same road displayed a great pickerel, caught comparatively near the city, at Brown's Lake, Wis., the fish looking big enough to go 20lbs. in its jar of alcohol, though it was modestly marked 12½lbs.

A large party is just back from Big Sand Lake, Wis., where they put in a couple of weeks or more trying for 'lunge. This party was composed of Messrs. B Dicks, W. P. Mussey, L. M. Hamline, J. M. Sanborn, Stephen Sutherland, R. R. Street, C. D. Gammon, H. D. Nicholls, Alex. White, Al. Humberstone, J. Hansell, Dow Lewis and Mr. Hudson, of the Great Northern Hotel of this city. Big Sand Lake is northeast of Eagle River, Wis., and is the head of the Little Deerskin River. It is a great 'lunge water at times, and did not utterly disappoint these anglers this time, for they killed a number of fish, though none was very large. They had some weighing 22½, 18½, 16, 13½, 9, 7 and 6lbs. Almost all the party had the fun of taking his 'lunge, and the trip was a very good one in point of pleasure. Deer are reported very abundant in that region, and are being hunted by a good many residents and non-residents in the height of the close season. In the opinion of the above gentlemen, who base their belief on the statements of guides who have rowed on different waters this season, the muscallonge season is not up to the average this year.

These gentlemen bring down a curious and exciting story of a great muscallonge killed this spring on Little St. Germaine Lake, not far from where they were fishing, by one of their guides, Art. Matthews, who was at the time rowing banker McKenzie, of Eagle River. When I say "killed" I mean this more literally than is usual in the angler's sense of the term. This fish was literally killed, and, shades of George Washington! it was killed with a hatchet. Matthews saw the fish swimming on the surface (it was probably in the spawning season, when muscallonge are often speared thus on the surface), and either it was sick or injured in their opinion, for it allowed them to come up close enough to deal it a heavy blow over the head with a club. It then sunk and was supposed to be little hurt by the blow. On the next day the same fish, easily distinguished by its great size, was seen near the same place, and this time the men got up to it again and struck it across the head with a hatchet, splitting the skull across. Again the fish sunk, to the chagrin of the pursuers, and it was thought to be lost forever. Two days later it was found floating, quite dead. This fish measured 6in. across the skull from eye to eye and was 57in. long. Matthews thought it would weigh nearly 60 or 65lbs. It is the largest 'lunge reported from those waters at any time, so far as I can learn. The manner of its capture was singular enough to make it a historic character on the Eagle range.

Messrs. W. H. Haskell and Frank Gray have returned from a trip to Boulder Lake, above Trout Lake, on the Manitowish chain, and report very good success. They got one fish of 32lbs. and a second of 28lbs., with several smaller. I have not at this writing any word from Turtle waters, and do not hear from the Plum Lake or Big St. Germaine waters, where there should be some fishing this summer.

A Muscallonge Pocket.

But I have not told my biggest bit of muscallonge news, and indeed I hardly know how to tell it, for the news comes to me under the injunction of secrecy, and sometimes a newspaper man cannot tell all he learns in this way. In short, I have undoubtedly run across something which I did not believe existed to-day—a muscallonge pocket, a new 'lunge water which has been fished by only a very few. As to the exact whereabouts of this water I dare say no more than that it is between Ashland and Duluth, and beyond the range of waters which have generally been supposed to include all the 'lunge fishing; but I am at liberty to give the names of the men who have fished it. The gentleman who gave me the information is Capt. George C. Kober, and he says the friends who were with him make up what they call the Hummer Fishing Club, the other members being Messrs. C. E. Lewis and Henry Hoch, of Minneapolis, and Edward Sumner, of Chicago. This last trip was their second to this water, and theirs was by all means the largest catch of the season, nor is it likely that it will be equaled on any other water. It represents, in short, something of the old fishing which was common ten years ago in all the 'lunge waters where now the fishing is about gone. These anglers took thirty-four muscallonge of an average weight of 20lbs., and they took last fall fifty muscallonge averaging 26½lbs. They took last fall on one trip of a few days 1,200lbs. of wall eyed pike, and on that same trip killed 100 black bass averaging 4lbs. in weight. This summer they caught in two days 225 black bass, all running very large. Knowing what I do of the character of the fishing in these Wisconsin waters when they are first opened up, I do not doubt the above figures in the least. Under the circumstances I can make no comment on them except that which they convey of themselves as mere figures. Capt. Kober tells me that the fish were shipped to charitable institutions in Chicago. Would he be offended if I suggested that the usual custom nowadays is to restore to the water any muscallonge not needed in the camp or as special trophies? Would this not be as well as shipping

them, even to the poor? But he says that their fishing was done under the inspection of the Fish Commission, who gave permission for the fish to leave the State for the purpose indicated.

I confess to unmitigated surprise at learning that any such virgin water was left even in the Wisconsin wilderness, but this will give an idea of what it once was. I trust that our friends will keep this water equally good for many years to come, and continue to enjoy a royal sport in every way. And if they will oblige us by putting back the muscallonge they do not want to eat or have mounted or to send to friends, we will not grumble if they never tell where their new lake is.

A Kentucky Pike.

Away last winter a stranger came into the FOREST AND STREAM office here in Chicago and introduced himself as Mr. Dupuy, of Ironton, Ohio, saying that he bore a message and package from his brother James Dupuy, of that city. The package proved to be the head of a monster pike, and accompanying it were the light rod and reel on which it was taken. Mr. Dupuy and his brother were at all that pains to let FOREST AND STREAM know of their exploit, which was in many ways a notable and curious one. At that time I wrote mention of this fish and told of the details of its capture, but oddly enough the copy was lost and never appeared. I did not feel sure of this until I wrote Mr. Dupuy this past week and asked him about it, and now have his letter telling of his disappointment at not seeing his big pike in print, for which, under the circumstances, one could not blame him, though he will remember that good things are often abstracted from the mails or go otherwise astray, especially in a newspaper office, where it is impossible to do all the things that are intended to be done. This is an instance of what is technically called "grief" in the perfesh, and we will see what can be done to show innocence and a desire to make amends. I have a very clear recollection of the big pike's head and of the circumstances of its capture, but I do not at this moment recall the exact weight, though I feel sure it was over 20lbs. The fish was taken by Mr. Dupuy and his brother, and their companion or oarsman, in a deep creek which runs into the Ohio from the Kentucky side, called Tygart Creek. There is a deep reach in that stream, and the anglers had noticed a few of these big pike there at an earlier time. They went after this old fellow with malice aforethought, and were ready for a big fish, though they did not expect quite so large an one as this one proved. It was in November last, and at that time the pike seemed to have a habit of lying near the surface among the leaves. This fellow was thus lying close inshore, and struck the big minnow Mr. Dupuy offered him. There was a red-hot fight, and no gaff hook, pistol or club in the boat. The Kentucky friend of the anglers at length reached his arms under the pike and lifted him in that way, together with a lot of leaves and stuff which had gathered on the line. The pike was killed on light bass tackle.

I recall that this pike head was spotted with dark, regular, exactly round black spots on the jaws and gill covers. If there were any scales on the lower half of the cheek plates they must have been very faint. I recall distinctly that the shape of the snout and head was short, direct, and not dished out like that of the pike ordinarily speaking. It was almost identical with the lines of the muscallonge head. Mr. Dupuy said that the entire body had these regular black spots all over it, and not the oblong white spots of the pickerel. He said the spots were a trifle larger than the end of a lead pencil. They had faded a little under the action of the arsenical preparation used in preserving the head, but as I saw the head they were plainly visible. I have never seen a pickerel marked in that way, nor a Great Northern pike, nor indeed do I recall a muscallonge marked in just the same way, though this seemed to me more like a muscallonge than a Great Northern pike. The fish always remained a mystery to me, and I hoped further information concerning it from those who are more familiar with the big pike family in that neighborhood. I am told that the muscallonge is native to the Ohio water—or once was—and perhaps this old fellow was a 'lunge after all. I feel sure the readers of FOREST AND STREAM will be obliged to Mr. Dupuy if he will again state the weight of the fish, and give any further facts concerning it, correcting any mistakes my memory may cause. I should personally like to know just what that big Tygart Creek pike was.

A Thousand Trout.

Mr. J. M. Clark, of the Wilkinson Co., this city, tells me he and his party caught 1,000 trout in the Little Manistee, Michigan South Peninsula, on their two days' trip, Decoration Day. They took no grayling. The largest trout ran about 1½lbs.

Sad Epidemic.

Mr. A. Friese, of the Milwaukee *Sentinel*, Milwaukee, Wis., tells me that a sad epidemic has set in at the Mahnawauk C. C., which embraced some of the most energetic young sportsmen of that city, and nearly the entire club is now in a condition of matrimony. Nevertheless a number of the club will go to Mullet Lake camp of the Western Canoe Association, July 11, near Petoskey, Michigan South Peninsula, where the combined attractions of sailing and fishing are too much to be resisted. Trout and bass are both accessible from that point.

Among the Railroads.

The Chicago & Northwestern Railway has out a new and neat little tabulated list of good fishing points, how to get to them, what the expense and what the accommodations there, etc., etc., the whole better than the average railroad fishing gazette. It is alphabetical and covers the entire West, from Chicago to the Selkirks.

The Wisconsin Central road has put on its baggage cars a series of stalls for the safe and speedy handling of the hundreds of bicycles which go up each day to its summer country with tourists. Platforms are built over the wheel stalls and the trunks are put up there, so the wheels are safe. The wheel has come to stay in about every rank of life apparently, and this recognition is appreciated by many who like to go fishing and bicycling at the same time.

The Finest Fishing Library.

The finest angling library in the West, and probably in the entire world, is said to be that of Mr. Robert Clarke, of Cincinnati, who has 1,500 books on angling; among hese are sixty-five different Waltons. The second best library on angling topics is that contained in the Newberry library, of Chicago, which is especially rich in sportsmen's literature.

Dog's Best Friend.

On June 26 the lake steamer Milwaukee picked up a large Newfoundland dog which was discovered swimming by itself about ten miles from shore in Lake Michigan. When asked what it was doing out there the dog made no intelligible reply, but it would appear that this was a case where man was the dog's best friend.

The Sea Serpent.

A sea serpent 100ft. long was seen this week in Storr's Lake, near Milton, Wis. This will account for the disappearance of the serpent from its usual haunts near New York. Westward the path of empire, etc.

Vagaries of Muscallonge.

It is not all of fishing to fish. The best of it is catching something. A great many Chicago anglers spend a pretty penny going up into the muscallonge country and often come back after weeks of patient effort without even a muscallonge feather to prove their diligence. On the other hand, a plain citizen, with yellow whiskers and a straw hat, may jump right in where angels fear to tread and do business from the start. Last week a man and his wife who live in the little pine woods village of Eagle River, Wis., strolled out to the old and much fished water, Catfish Lake, to see if they could get a mess of fish for supper. In two hours they came back with three muscallonge, one weighing 43lbs., one 18lbs. and one 10lbs. A great many Chicago 'lunge fishers shed tears on hearing of this. But Fortune continues to turn her wheel according to her own notions.

The Bicycle in the Pine Woods.

The village of Eagle River, up in the muscallonge country, is nearly or quite on the edge of the world, and is in the middle of a wilderness of sand and pine. Yet a returned Chicago angler says that the only reading matter he saw on his trip was the posted notices of the town trustees of Eagle River, warning bicyclists not to ride on the sidewalks—an injunction almost equivalent to ordering them off the earth.

Another Hidden Lake.

Messrs. Stephen Sutherland and W. B. Wrenn are two ardent muscallonge anglers, and they have portaged often into many far waters in the past up in Wisconsin. Of late it has been thought about impossible to find any new water, but these two gentlemen claim that late last fall they did make a trip into an unknown part of the wilderness, whose whereabouts they refuse to disclose, and had a day of fishing such as one reads about in the old records, but not in the modern stories of the sport. They caught thirty muscallonge that weighed 600lbs. Their trip was hurried, and they describe the country as awful to get into, but they are planning a return this fall.

Bass Left to Rot.

Up in the pine woods of Wisconsin is a fine little bass lake called John's Lake. Perhaps one would better say that it once was a fine little lake. Not long ago a party of true sportsmen, seeking for the glory of a record, went in there and in one day caught 800lbs. of black bass, which they piled up and left to rot on the banks of the lake, after the fashion of certain of the early record-making muscallonge fishers who have sought to gain glory by telling of their takes in the early days ten years or more ago. To-day the guides say that John's Lake is not a fine bass water any more. But consider the exquisite sportsman's skill it must have required to take bass on that water when the anglers above referred to went in there—the delicacy of judgment, the rare art of angling, the absolute gentlemanly sport it must have been, to take 800lbs. of bass in one day—so many they had to be piled up and left to rot! Was not that a record? Unfortunately I can not learn the names of these men or I would gladly give them for publication. They deserve the immortality of shame.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

NEW ENGLAND FISHERMEN.

BOSTON, July 6.—Mr. C. H. Andrews has lately returned from a bass and pickerel fishing trip. He went with his doctor, being a good deal "under the weather." He did not derive the benefit expected from his spring trout fishing trip. The weather was cold and rough. But this time he has been out and "browned up," with a good deal of improvement, at which his friends are greatly pleased.

The landlocked salmon record at Rangeley Lake, already referred to, is a remarkable one. The first twenty-one salmon taken by guests of the Rangeley Lake House, and almost within sight of the house, actually weighed 135lbs. 2oz., an average of 6lbs. 7oz. to the fish. Fifteen of the same fish weighed 112lbs. 14oz., an average of 7lbs. 8oz. The catch of the above fish began May 9 and ended June 4. A great many large salmon have also been taken since.

Another sporting club of Maine gentlemen and a few Boston members has lately been formed. A number of the gentlemen have the honorable attached to their names, and the club might well be styled The Honorables. Camps are being established at West Sabois. The membership is as follows: Judge W. P. Whitehouse, Hon. Herbert M. Heath and Gen. W. S. Choate, Augusta, Me.; Hon. L. T. Carlton, Fish and Game Commissioner, Winthrop; A. M. Spear, County Attorney, Geo. W. Heselton, Dr. W. P. Giddings, Gardiner; Hon. W. T. Haines, Waterville; G. G. McCausland and Wm. G. Wood, of Boston. The old camp, purchased by the party with the lot, is to be used for the guides, and new and handsome camps erected for the party and guests. Fishing is excellent, and for a hunting region it is one of the best in the State.

The Maine Fish and Game Commissioners have reports from nearly all the best game sections, and these reports are most cheering for the hunters. Deer are believed to be more abundant than a year ago, while moose are believed to have stood up against the severe hunting given them last year fairly well. They have been seen in various parts of the State, in about the same numbers as a year ago. As for the caribou, they are a more uncertain quantity. The Commissioners believe that they are so far migratory in their habits as to be very hard to locate. Many have been seen since the departure of the snow of winter, especially in the upper Aroostook region. This is also the section where they were the most abundant last year. Moose have actually come down into the hay fields in several sections, if we are to believe the reports. As for partridges, the quantity is uncertain. They have been seen by fishermen and others in about the usual numbers, but it is too early to be certain about the broods.

Walter M. Brackett, the salmon painter, is at his salmon preserve, on the Northeast Branch of the Sainte Marguerite, just below the preserve of Mr. D. H. Blanchard. He will be absent several weeks.

Mr. C. P. Stevens is at home again from his spring fishing trip. His great success with landlocked salmon at Rangeley has already been mentioned in the FOREST AND STREAM.

Mr. Rodney P. Woodman has gone on his summer fly-fishing trip to Parlin Pond and the ponds above. Some good reports are due from him.

SPECIAL.

TROUT OF SQUATTICK LAKE, QUEBEC.

Editor Forest and Stream:

I have just returned from a trip from here across Lake Temisconata, through the two Touladi lakes, to the Fork; then up the Squattick branch, through Squattick Lakes Nos. 1 and 2 into Lake No. 3, where I camped on the east shore, at the mouth of a lovely stream running into the lake. At this spot, while my guide, Tom Frazer (one of the most intelligent, energetic and trustworthy men I ever had), was cooking my evening meal, I took some lovely and very gamy trout out of the brook, or rather out of the lake just where the tail of the brook disappears.

But what I sat down to write about is this: The next morning after camping at this spot, Friday last, the 26th inst., I paddled up the lake to within about 300yds. of the mouth of the Squattick River, which forms the discharge of Lake No. 4, seven miles further south. Here I had some of the best fly-fishing that in an experience of forty years I have ever enjoyed. I took a great many fish, and between 9 and 11 A. M., in heavy rain, I landed seven trout that weighed 26½lbs., the smallest being 3¼ and the largest 4¾lbs. I was fishing with two flies—a Parmachenee-belle (tail fly) and a brown hackle, tied as a fluttering fly by Abbey & Imrie, of Vesey street. On this last I took all of these seven large trout, and not with a morsel of worm, or a bit of fish skin, or anything else on the hook: but on the bare fly, taken from the surface with that swirling upward rush which brings an angler's heart into his mouth, so to speak.

For years I have come every season to these waters, and the fishing is simply splendid, and seems to get better year by year. The lakes I have named are very little fished, for they lie in a remote region, where there is no settlement or any sign of man. Yet they are comparatively easy to reach; for one embarks at the door of the house, Satre's Inn, here, and, with the exception of one portage of 300yds., need never leave the canoe again. The scenery, especially going up the Touladi River, is of the loveliest. There is fly-fishing all the way, except while in the deeper water of the lakes, and there I took grand trout with my bass rod, trolling with a tiny spoon about the size of the nail of one's forefinger. The only drawback to one's pleasure is the flies; they are pretty bad.

GEO. W. DUMBELL.

NOTRE DAME DU LAC, Quebec, June 30.

THE "SOCK-EYES" OF THE FRASER.

THE particular salmon with whom we propose to travel are known as sock-eyes to the vulgar, to the learned as *Onchorhynchus nerka*. They are grown-up salmon, recently wed, and bent upon spending their honeymoon upon the headwaters of the Fraser River. Between the time when they were born among the golden gravels of the Upper Fraser—probably about four years ago—and to-day no one knows anything about them. They went down the Gulf of Georgia, we believe, and out into the North Pacific, and were lost to us in the great deeps. Neither do we know how they find their way back to the breeding grounds; we don't know whether the currents guide them, or mere blind instinct; we only know that once in four years they come in enormous numbers, that the second year the numbers are less, and that they go on decreasing until the bumper year comes round again. Almost everything connected with the salmon is a mystery. His birthplace we know, of his life we know scarcely anything, and those who know him best disagree most about his death. Some of us have seen the great shoals swarming up the Northern rivers, have seen the Fraser fairly wriggling with fish, have seen them lying two and two at intervals of a few feet in the gravelly streams of Alaska, or dead in hundreds on the mud flats at the head of the streams, where bears and bald-headed eagles gorge on their carcasses, or floating upright down the streams, red with corruption, and breaking to pieces as they float; but we have never seen them recovering, never seen them making their way down stream, cured of their summer folly. What is more, the fish of the sock-eye sort are all of an even size. Every run is made up of thousands or millions of fish averaging 7lbs. If they go back to the sea and return in one, two or ten years' time to the breeding grounds, they must return as they went, neither larger nor smaller, but just 7lbs. fish. This is not the case with the big spring salmon, who varies from 12lbs. to 50lbs.

In July the first of the great shoal come round Cape Flattery, on Vancouver Island, and news is sent post haste to the fishers on the Fraser that the Indians at Becher Bay are busy with the salmon. The Indians at Becher Bay are the outposts of the hostile army. Like other outposts, they are few in number, and the fish they take are scarcely missed from the shoal. Perhaps I ought to have said that even before the fish-eating Indians commenced their onslaught at Becher Bay the seals had been at work, but these ravenous foes hang upon the flanks of the army of fish from the ocean to the river's mouth. I have seen them, in the gray of the morning, swimming up on the flood, many miles from the mouth of the Stickine River in Alaska, and the fish only know from what depths of ocean they followed them thither. From Becher Bay onward the troubles of the sock-eye increase. His course is a well-known one, and his enemies lie in wait on every mile of it. Round every kelp bed there are spoons spinning, but these the sock-eye passes by untempted. The

spring salmon, his big cousin, is fooled by these, but the sock-eye will not look at them. Though exceedingly swift travelers, the sock-eyes have no idea of going straight. Perhaps it is because they find their way by groping along the shore; perhaps it is only that they love to play in the shallow bays along the coast. However this is, they keep close inshore, and at Boundary Bay, just before they reach the yellow tidal waters of the Fraser, they pay for their folly. Here the waters are shallow, though well out from the bay there are splendid deep waters where the road would be safe, as it is broad; but the fish do not consider this. Instead, they forge along inshore until they reach the outward curve of the bay. Here the shore seems to change a little; a fine fringe of what may be called seaweed runs along it, and here and there in this fringe a post occurs. By-and-by a spur of this same seaweed appears on their left. Doubtless it is but a portion of the bank on their right which has drifted seaward, and there is still a wide stretch of open water on either side, so they pass on until the road gradually narrows and there is a wall of this fine mesh on either side of the shoal, with but one narrow open way in front. Then perhaps the shoal hesitates. They have come far, and become involved in this weed bed. Some dash at it on either side, but though it gives to their rush they cannot break through. They swim round, but the impervious weed is on all sides of them. Just then there is a heavy plunge in their midst, and a sea hawk rises with one of their fellows writhing in its claws.

The fish are swimming near the surface now, and if they look up they will see upon every pole which rises from the wall of mesh either a hawk, an eagle, or a great gull, ready to pounce upon them. They dive and try to swim under the weed. They cannot. The water is shallow and the weed rises from the very bottom. Meanwhile hawks and eagles are busy, a panic ensues, a few fish dart through the narrow way. It is more open beyond, and after all it leads in the right direction. The general impulse is to go forward; no one wants to turn back and, like sheep, they follow their leaders through the gates of death. For after this it is all over with the salmon. Before long the wide pool narrows again. Again a straight way lays beyond them, and before long they are crowding and jostling each other in a pound 50ft.×30ft., where they stay hopelessly confused, and dashing wildly from side to side until a steamer comes along with a scow in tow. On the scow is a crane. Chains from the crane are hitched on to the net which is below the pound, and some thousands of strong free fish, who had an hour ago the whole sea to swim in, are drawn up to the surface and ladled out in scoop nets, knocked on the head, thrown on the scow and carried off to the American canneries at Point Roberts, where they go through a sausage machine and become "canned salmon."—*Temple Bar.*

THE INTERSTATE PROTECTION OF FOOD FISHES.

BY DR. BUSHROD W. JAMES, PHILADELPHIA FISH PROTECTIVE ASSOCIATION.

[Read before the American Fisheries Society.]

SOME years ago the subject of the United States Government exercising a certain fish-protecting control, or at least supervision over the rivers which run through two or more States, and which are frequented by shad, herring, salmon, trout, bass and other species of food fishes, was presented before this American Fisheries or Fish Protective Society by the late United States Fish Commissioner Marshall McDonald, and it was ably defended by some members of this Society, the U. S. Fish Commission, I think, generally supporting it; but the majority of opinions outside seemed at that time to be unfavorable to the measure.

The proposition was made for the purpose of securing protection to the fish along the coast, and also when they are in the act of passing across the State lines in order to enter their spawning grounds in the upper rivers and their tributaries. Each part of the discussion was clearly in favor either of United States or of State supremacy, but decisions have been made (by the Supreme Court of the United States) that the measure would be unconstitutional, so that each State maintains its exclusive right over its fishing streams—except in a few instances, such as the States of Pennsylvania, New York and New Jersey, where these States have entered into an interstate protective agreement, which still remains imperfect, however, till Delaware joins in the compact. This agreement specially relates to the shad, which, running up on our Eastern coast and into their habitat rivers and streams, attain the perfection of flavor and superiority of quality in the waters of the Delaware River. For many miles the four States herein mentioned have exclusive rights to this desirable fish, and it having been proven that non-protection would finally result in extermination, the wisdom of interstate legislation was acknowledged and joint protection laws adopted. Delaware doubtless holds the law under protracted consideration because of the vast numbers of fish that have annually fallen into her nets, but when she becomes satisfied that the proposed legislation will actually produce better effects for the fisheries of her own domain as well as that of her sister States she will, I have no doubt, accept the proposed legislation without further demur.

It stands to reason that if a coöperative law guards the fish during the spawning season the number will increase in surprising ratio. Another thing to be considered is the unpalatableness of fishes that are hurrying into shallow waters in order to deposit their ova. The flesh is soft and somewhat flavorless, and of late years particularly the roe alone of spawning shad is regarded as valuable. In some of our markets the body of this fish can be purchased for a small sum in comparison to the price paid for the crisp, bright flesh of the male, while the roes bring fancy prices, according to the wealth of the purchasers.

I must confess to an idea that a single debate is not sufficient in such a matter, but that we should urge it from time to time, until all the individual States thus interested arrive at some suitable interstate legislation that will produce lasting benefit to all concerned.

We would refer in this connection to the acknowledged benefit accruing from the fish hatcheries that have deposited several varieties of young fish in the upper streams of many of our important rivers. If artificially hatched fry produce such commendable results, is it not easy to understand how protection of the breeding fishes and their young must necessarily amount to still greater good because of the very much larger number that would be produced through the natural course of fish spawning, increased production meaning increased revenue?

We must consider that it is the bounden duty of the States to provide in every possible, honorable manner for the increase of every industry within the limits of their jurisdiction, and that the supplying of food fish is, and always has been, a very prominent industry, in our coast and lake bordering States particularly. We have had it demonstrated to our perfect conviction that indiscriminate fishing with the numerous devices of modern invention has very nearly ruined the food fishing interests in certain waters, and that whole towns and bays have been nearly impoverished by the lack of supply for home consumption as well as for trade.

We have also had very satisfactory demonstration of the astonishing benefit already derived by the protective system recently adopted by several States, especially in reference to the Delaware River. Therefore we cannot but express the firm conviction that the governments of the respective States should act in such a manner as to make mutual State laws to suit the various localities, not taking the laws of Pennsylvania, New York and New Jersey as the text, but let the legislation for each part of the country be consistent with the requisites of each. New York and Pennsylvania may well be satisfied with the outcome of their legislation thus far, and the example of each might well serve as a beacon for all other States. But year after year passes and border waters still remain unguarded to a very great extent.

Maryland is now making efforts through her State Fish Protective Association and her Commissioners to join with Pennsylvania in protecting the Susquehanna and its tributary branches. They have already succeeded in exterminating all authorized means for fishing in this great river which runs through Maryland territory, where the objectionable pounds and weirs once almost depopulated the upper waters of this valuable fish, the shad, just as it was aiming to reach the breeding places along the upper branches of the Susquehanna.

The Potomac is yet but partially guarded. Maryland has passed a law which applies to the Potomac and its tributary rivers, forbidding fishing from April 15 to June 1, but it has thus far only received the co-öperation of Virginia, and the law cannot be properly enforced until West Virginia laws concur in the project. Thus two interstate laws are held somewhat inoperative, each because of the non-concurrence of one single State for each in a compact which would in reality receive equal advantage if they would but study the matter with unbiased consideration. Delaware evidently holds back because she has the opportunity of access to the large schools of fish as they turn with unwavering instinct toward the calm, pure, shallow waters of the Upper Delaware River and its communicating streams in southern New York and northern Pennsylvania. But can the State of Delaware claim the same commercial value for the fish as she takes them, and the same fish as taken in the upper stream under the protective laws of the three adjoining States? I think prices will and must speak, and this very season we have some proof. Before the legalized season in Pennsylvania it was possible to buy large roe shad for from 25 to 35 cents, while the males sold for much less. Some of the fish were quite satisfactory, but most were soft, devoid of their usual rich flavor and objectionable, though undoubtedly fresh. Then came a week or two when right fresh shad could not be had in any quantity, and then came the "real fine Delaware shad," no larger than the former, but possessing the true, rich flavor peculiar to the perfect up-river fish, with its firm, white flesh, and these were entirely unattainable in the market at retail under 45 or 50 cents for the smaller, while the choice specimens ran up to a higher price. Now, if the more Southern States were content to legislate with the Northern, and permit the spawning fish to ascend the streams unmolested on certain days of each week, the shad season would not begin so early in the year, but the catch would be more valuable in the end. We think it would be wise to teach those who are interested in the fisheries that when a roe shad is large and flabby and the eggs quite large and distinct from one another, the flesh thereof is really quite unfit for good food, and that in selfishly taking the roe the increase of the number of fishes by spawning for the next season is lessened by many thousands, for each large roe fish that is caught and eaten diminishes the spawn supply accordingly where indiscriminate fishing is permitted. Another thing that is to be taught is that all roe fishes that ascend with the schools in the running season do not deposit eggs, and therefore it does not preclude the possibility of obtaining the desirable dainty fish to wait until the spawning fishes have gone to their haunts. When these questions are fully understood, Delaware and West Virginia, as well as all the other States, will doubtless see the plausibility, in fact, the necessity for this interstate legislation.

But while States in juxtaposition may be prevailed upon to pass joint laws, it cannot be looked upon as a certainty that they will always maintain them when it is found that the interest of one State come into apparent opposition to those of its neighbors which border on the same waters. Hence is seen the proof of the positive requirement of good conjoint laws. They must not be too restrictive upon one territory nor be too lenient with another, and yet they must be of such a nature as to be the means of adding many hundreds of thousands of dollars of increased revenues to each State interested to the already present value of the food fish industry.

Another view to take of this very important subject is the probability that when the people of these States are more enlightened upon the subject and take the matter into practical consideration each State will be willing to coöperate, knowing that self-interest alone cannot make the best laws for all. This subject must naturally arouse some doubt in the minds of legislators of neighboring States when each State is allowed to legislate only in its own way upon that which is truly a mutual affair.

The dissatisfaction that will surely exhibit itself in making interstate laws will at first soon melt away before the proofs of the success of such agreements.

The increased number and value of the food fishes which have been hatched in the different authorized fish hatcheries through the country, and the fry from which have been deposited in rivers in many parts of different States, show the value of the plan too plainly to ever allow it to fall into disuse; but when the spawning fish are so protected that they also will produce more largely, the industry will once more become peculiarly lucrative, not only to individuals, but to States and the country.

Wealth always begets wealth if properly directed, and our State governments are not so rich as to be indifferent to augmenting their revenues. Therefore let us still keep it before the eyes of the proper authorities that State legislation positively requires conjoint laws to improve the present situation.

RHODE ISLAND FISHING.

PROVIDENCE, R. I., July 6.—There is good fishing off Pawtuxet just now, where they are catching squeteague in large numbers with a light rod, and excellent sport it is too. Every Rhode Islander knows what a squeteague is and what delicious eating it is, but not everybody knows how to catch one. To land the majority of those that bite is a work of art, for their mouths are very tender and they easily break away. The expectant angler sorrowfully exclaims, "By George, he weighed 8lbs. if he weighed 1oz." A good story is told about a well-known Providence piscator and how he lost a 20 pounder the same way. He was fishing alone from one boat and two friends were in another some distance away. Presently the hero of the yarn began hauling in at a great rate, and just as he was about to land his squeteague the "snout" of the line broke and away went Mr. Fish.

"That's too bad!" yelled the angler to his friends, "that's the biggest fish I ever had on a line. He must have weighed 20lbs."

"How do you know?" called back his friends.

"I guess I've caught fish enough to know," was the reply.

All went well until about an hour later, when one of the fishermen in the other boat caught a little 4lb. squeteague with the selfsame "snout" in its mouth that the other man had lost.

However, catches of from six to twenty pretty good-sized squeteague are being daily made at Pawtuxet.

John O. and George A. Lewis, of Wickford, have captured in their trap in the West Passage of Narragansett Bay a rare species of fish for these waters, that is known to ichthyologists as the *Trichiurus lepturus*, but to ordinary individuals as the cutlass fish or silver eel, whose home is mainly in the waters of the Gulf of Mexico, although it has been known to come as far north as Woods Holl, Mass., and one was captured off Wellfleet in 1845. This, however, is the second one found in the West Passage, the first ever seen there having been caught about five years ago. The present specimen is an unusually fine one, measuring 3ft. in length, the average being about 20in., and its width is between 6 and 7in., with a scaleless covering that resembles in color polished silver. This together with its length helps give it the effect of a scabbard constructed of that metal, and an allied species found in European waters is designated as the "scabbard fish." The Messrs. Lewis shipped the fish to the Smithsonian Institute at Washington.

A gray eagle which measured 6ft 6in. from tip to tip was shot by Walter Greene at his farm on Barber's Heights near Hazard's quarry, Wickford, about ten days ago.

A turtle with the initials E. D. and date 1818 plainly engraved thereon was found in Davisville a few days ago. It was marked by Ezra Davis seventy-eight years ago. There is said to be another turtle similarly marked in that vicinity.

Farmers in the northern part of the town of Stonington report gray foxes very plentiful in that section, and that they are doing great damage to the flocks of turkeys.

W. H. M.

ON THE GRAND CASCAPEDIA.

PROVIDENCE, R. I., June 29.—*Editor Forest and Stream:* Salmon killing of the most extraordinary kind has very recently been indulged in on the Grand Cascapedia River, just north of New Richmond, Bay of Chaleurs, in the Province of Quebec. Two thorough Providence sportsmen, Messrs. Edmund W. Davis and Benjamin J. Bliven, the latter being prominent as a Pawtucket manufacturer, were the lucky men. Mr. Davis is no novice in a canoe or around a salmon pool He has been a most enthusiastic and successful salmon fisherman for years, and is the owner of fishing rights adjoining the middle grounds in the Grand Cascapedia.

About four weeks ago Mr. and Mrs. Davis left Providence for Woodman, their country place near the fishing preserves, Mrs. Davis being as ardent in the pastime as her husband. As the guest for the month of June, Mr. Bliven enjoyed the princely hospitality of Woodman's hosts. The weather was superb and fishing conditions were never better. The inexorable rules governing visitors, the use of rods and the number of fish killed each season, prevented Mr. Bliven from trying his favorite flies in the preserves, but his admiration of the skill and success of his host in the day's fishing on the 15th will never be lessened by his own prohibition.

In the first day's fishing Mr. Davis killed thirteen salmon, and in the next half day seven salmon, including the largest and finest in the lot, tipping the scales at 41lbs., was killed. The handsome fish began the day's sport in the middle ground and made the fourteenth to the record on the little diary-book leaf. It was fully an hour, though, before this salmon was placed safely in the canoe. The gamy fighter had given Mr. Davis and his attendant with the gaff hook an enforced sail of nearly two miles and left some weary forearms on his captors, but plu kily Mr. Davis resumed his fishing. There was some singular similarity of the fishing on the two different days. For instance, the largest fish killed were the first of the fishing on each day; and the smallest, weighing 16lbs. each, were the last of the two days' record.

Each member of the middle grounds club is entitled to kill forty salmon during the season on the preserve, and the extraordinary feat performed by Mr. Davis in the day and a half leaves him only as many fish again to kill during the fishing period. This is the record of the 15th of June and the succeeding half day: Whole day, June 15, 1896—35, 34, 32, 30, 28, 26, 25, 24, 24, 24, 24, 23 and 16lbs.; half day, June 16—41, 33, 33, 32, 29, 22 and 16lbs.; total weight, 551lbs.

The preserve, though a close corporation, so to speak, i fast getting a world-wide reputation, and already th Grand Cascapedia River is attracting wealthy sportsme from Scotland, England and Europe. Among the te

members of the middle ground club are Robert Dun, Wm. K. Vanderbilt, Attorney Cadwallader and Dr. Mitchell, of New York, and Mr. Barnes, of Boston.

These gentlemen own riparian rights along the river front and control many miles of the water, having bought out the trap and seine fishermen who in years past have killed off the fish in great quantities for the market. Only three members can fish at the same time in the preserves. There are eight guides, plenty of canoes and lots of other necessary paraphernalia. The Grand Cascapedia is eighty to ninety miles in length, and no fishing is tolerated above certain grounds in the river, this regulation being necessary to protect the spawning.

During ten days, covering the period of Mr. Davis's record, Mr. Bliven tried his luck along the river outside the middle grounds. He visited some splendid pools, and Mrs. Davis marked up to his piscatorial skill 318lbs. of salmon, the fish weighing as follows: 24, 39, 27, 25, 29, 22, 24, 28, 14, 26, 14, 17, 27lbs.

TROUT REARING.

PLYMOUTH, Mass., July 1.—*Editor Forest and Stream:* Referring to an article on the growth of trout fry, by Mr. Cheney, in FOREST AND STREAM of June 27, wherein he cites the remarkable size of Long Island trout, it would certainly seem that they must carry off the palms for extraordinary and rapid growth. At all the trout hatcheries we have ever visited in Massachusetts nowhere have we seen trout fry even approaching those spoken of by Mr. Cheney, and the superiority of our own fry at the Nook hatchery at Plymouth led me to send specimens to various State commissioners and fishculturists, many of whom have replied, complimenting us upon their size. Nevertheless we certainly have been outdone at the Long Island hatcheries, and it would be interesting to know something of the conditions, manner of feeding, etc., that bring about such much desired results. The specimens sent from our hatchery were taken from rearing boxes, where the fish were very much crowded, but were doing remarkably well, the death rate not being more than twenty fish per week per hundred thousand for the past three months. From one trough 1×20ft. were counted 25,000 splendid fry in June.

From the start and as long as it could be obtained haddock spawn was fed to the fry, and a better, more cleanly and nutritive food in my opinion would be hard to find. It is reasonable to suppose that had the fish been given more space a better average size could have been obtained, and I for one should be pleased to learn from the columns of FOREST AND STREAM something of the range and treatment given the brook trout fry at the Cold Spring Harbor station on Long Island.

Such information could not but be of value to all interested in fishculture, and let us hope that soon we may learn something in regard to the matter either from foreman C. H. Walters or from the interesting pen of Mr. Cheney.

C. C. WOOD
(Supt. Plymouth Rock Trout Co.).

A LAKE WINNIPISAUKEE BASS.

WHEN I took my annual vacation in August last I fully intended making a trip into northern New Hampshire to fish in the various streams and ponds for trout and black bass. I mean by that, I expected to spend at least two weeks in the woods. But I find that as I grow older the "little folks" have a claim on my time; I must "camp out" with them. Long trips with the "older boys" must be sacrificed. I had several days' fair fishing near the "old home" and all enjoyed the outings very much.

One cloudy day we took the steamer at Weir's and went across Lake Winnipisaukee to Long Island, where Drs. F. E. and J. A. Greene have summer residences. I carried my rod with hopes of catching a few bass. Before reaching the island the rain began to fall as if it meant to continue for the day at least. As we neared the land we saw both doctors and several others fishing from the wharf. Soon they spied us on the boat and sang out; "We are having fun right here, doctor." On reaching shore I noticed that they had caught fifteen or twenty bass, but they were small. They told me that the fish were biting quite well and to prepare to take a hand.

It did not take me long to comply, and with a lively helgramite for bait I cast out. In less than a minute I felt a pull at my line, and as I struck the fish leaped out of water, and we all saw that it was a big fellow.

"Heavens, that's a whale!" ejaculated Dr. F. E.

"How in thunder did you get hold of him so soon?" said Dr. J. A.

But I had no time to explain how I had hooked him. I was too busy. All the other fishermen ceased their sport to watch the fight. Each offered suggestions, of course. One says, "Let him have the line." Another, "Pull him in or you will lose him." Dr. J. A. said, "That's your fish, jerk his head off if you want to."

Meantime the bass and I were having a lively time. Once he came straight for the wharf and I felt sure that he would escape under it among the piles; but he changed his mind, suddenly turning round and putting out as though he did not intend to stop until he had reached the opposite shore. A steady pressure on him checked his flight, and I had him turned again. Three times did he leap clear of the water in his efforts to rid himself of the hook, but it was too secure.

At last I had him "winded" and near the wharf, when it was discovered that there was no landing net about! Dr. F. E. had one at his house, 300yds. away. There was nothing to do but hold that fish until some one could bring it; and when it came we found that the handle was too short to reach to the water.

By that time the bass had got his "second wind" and was fighting for liberty. Dr. J. A. suggested that I swing him off to a shallow place to the end of the wharf, and he would wade in and secure him. This was done, and after twenty minutes of great excitement and anxiety we succeeded in landing him. He certainly was a beauty, weighing just 5¼lbs.

I received congratulations on all sides.

"It was skillfully done;" "You certainly did it well;" "I fully expected you would lose him when he started for the wharf;" "Gee whiz! but didn't he fight!"

We caught several more, but not nearly so large. I was called the mascot of the party, having landed the largest bass that had been taken off the island that season.

A. J. M.

PHILADELPHIA, Pa.

Texas Tarpon.

TAYLOR, Tex., June 22.—*Editor Forest and Stream:* I have just returned from a two weeks' fishing trip at Ropesville, Tex., and thinking a few figures showing the results might be of interest to some of the readers of FOREST AND STREAM, I give below a detailed list of my catch while there. The dimensions given in the following were ascertained by careful measurement. The catches were made with rod and reel, using the 36-strand Thomas J. Conroy silver king line:

June 5—One tarpon, 3ft. long.
June 6—One tarpon, 3ft. 6in.
June 7—Heavy wind, no fishing.
June 8—One tarpon, 5ft. 1in.
June 9—Many strikes, failed to land anything.
June 10—Three tarpon. One of 5ft. 10in., one of 4ft. 10½in., one of 4ft. 8in.; one large jackfish weighing 25lbs.
June 11—Two tarpon. One of 5ft. 11in., one of 5ft. 9in.; one jackfish, 23lbs., and eight large speckled trout.
June 12—Thirteen speckled trout in one hour.
June 13—Eight speckled trout in one hour; one shark, 5ft. 11in.
June 14—One tarpon, 4ft. 8in.; one tarpon, 4ft. 7in.; one tarpon, 5ft. 8in.; one tarpon, 6ft. 8in.; one shark, 4ft. 6in.; one jackfish, 20lbs.

The 6ft. 8in. tarpon had a girth measurement of 3ft. 3in., weighed 195lbs., and was landed in one hour with a broken rod.

June 15—One tarpon, 6ft. 3in.; one tarpon. 5ft. 2in.; one kingfish, 4ft 1in.; two jackfish, 21 and 23lbs.; two sharks, 4ft. 1in., 5ft. 3in.
June 16—Did not fish any.
June 17—One tarpon, 5ft. 3in.; one tarpon, 5ft. 4in.; one tarpon, 4ft. 2in.
June 18—One tarpon, 5ft. 2in.; one jewfish, 427lbs.; one shark, 5ft. 11in.
June 19—One jackfish, 20lbs.; one jackfish, 40lbs.

The following named gentlemen from Taylor also spent one week tarpon fishing at this place and were quite successful, as the following records will show:

C. H. Booth, six tarpon, 5½ft. average; one jewfish, 365lbs.; one kingfish, 4ft. long.
Lawrence Woodward, eight tarpon, 5ft. average.
J. W. Womack, seven tarpon, 5½ft. average.
N. F. Smith, five tarpon, 5½ft. average.
G. E. King, one tarpon, 5ft. 8in. average.
M. R. Kennedy, three tarpon, 5½ft. average.
Col. W. Keliher, four tarpon, 5¼ft. average; one jewfish, 380lbs.

Besides the above these gentlemen landed numerous jackfish, sharks, etc. The Ropesville accommodations are fairly good, and the sport will delight the heart of any true angler.

BRYAN HEARD.

Tim, Jim and Jack.

EUSTIS, Me., Camp Jack.—After spending two weeks at Tim Pond, Mr. Charles Bell and wife, of England, formerly of New York, returned to Camp Jack on June 17; Mr. J. L. Faunce, of Boston, arrived the same day; and during the next four days Messrs. Bell and Faunce landed twelve trout, largest 2¾lbs., smallest 1½lbs., in Little Jim Pond. During their visit of nine days Mr. Bell and wife, with George Douglas as guide, saw over fifty deer, some feeding, some swimming, others splashing water to drive away the flies. In all Mr. Bell's sporting Little Jim Pond "takes the cake" for deer. Mr. Bell and wife left Eustis June 26 for New York for a short visit, thence to England.

Mr. Barrows landed a fine trout in Little Jim, weight 3 1/16lbs., and saw ten deer at once in the pond.

OTIS WITHAM.

Barnegat Bay.

ASBURY PARK, N. J., July 6.—I have spent the last two days on famous Barnegat Bay and find the reports from the various fishing points not exaggerated. Fishing one tide at night in the manner I have previously described in FOREST AND STREAM, John F. Seger and myself took sixty-two tide runners, in weight 2½ to 4½lbs. It appears to be almost useless to attempt to take the large fish during the day. This applies particularly to the upper portions of the bay from the pier northward. We found the water very clear and not in the best condition for fishing, still any one who knows the nature of the fish will have no difficulty in procuring good sport if the instructions I have given are followed out.

LEONARD HULIT.

Tarpon in New Jersey Waters.

BRIDGETON, N. J., July 6.—A tarpon 3½ft. long was taken in the pound net at Stone Harbor Thursday last. About the same time another tarpon was taken in the net at Atlantic City. An experienced tarpon fisherman who saw it estimated its weight at 100lbs.

On Wednesday last two boys, who were fishing for weakfish at the mouth of Back Creek, Delaware Bay, took seventeen drum, the largest weighing 60lbs. They lost four lines. The next day the same boys, at the same place, caught eight drum, the largest weighing 90lbs.

N.

Up and Down Stream for Trout.

NEW YORK, July 4.—*Editor Forest and Stream:* I thank you for the exhaustive reply to my question in regard to the relative merits of up or down stream fishing for trout. Unfortunately, though, it leaves it still an open question, and I fear I shall not get the box of cigars which I think I have won.

I was brought up in the wilds of western Massachusetts, and I can safely say that any man or boy there who would fish up a stream for trout would be considered a candidate for an idiot asylum.

SPLIT SHOT.

Maryland Weakfish.

STOCKTON, Md., June 27.—Trout (weakfish) are biting freely now in the bay. They are in much finer condition than those taken outside, though not quite so large, running from 1 to 4lbs. The catch is from ten to sixty or more to the man of a morning.

O. D. FOULKS.

Bass at Asbury Park.

ON Tuesday evening of last week Mr. W. H. Moynan landed a 24lbs. bass at Asbury Park, N. J. This was the largest caught in several seasons; last summer's record fish weighed 21lbs.

The Kennel.

FIXTURES

BENCH SHOWS.

Sept. 7 to 11.—Rhode Island State Fair Association's fourth annual show, Providence, R. I.
Sept. 7 to 11.—Toronto Exhibition Association's eighth annual show, Toronto, Can. C. A. Stone, Sec'y of bench show.
Sept. 14 to 17.—Montreal Kennel Association's bench show, Montreal. G. Lanigan, Sec'y
Sept. 22 to 24.—Milwaukee Kennel and Pet Stock Association's second annual dog show, Milwaukee Louis Steffen, Sec'y.
Oct. 6 to 8.—Danbury Agricultural Society's show, Danbury, Conn. G. M. Rundle, Sec'y.
Dec. 15 to 18.—Central Michigan Poultry and Pet Stock Association's show, Lansing, Mich. C. H. Crane, Sec'y.

FIELD TRIALS.

Sept. 2.—Morris, Man.—Manitoba Field Trials Club. John Wootton, Sec'y.
Sept. 7.—Kennedy, Minn.—Coutinental Field Trial Club's chicken trials. P. T. Madison, Sec'y, Indianapolis, Ind.
Oct. 9.—Brunswick Fur Club's annual meet. Bradford S. Turpin, Sec'y.
Oct. 26.—Hempstead, L. I.—Natioonal Beagle Club's trials. Geo. W. Rogers, Sec'y, 250 W. Twenty-second street, New York.
Oct. 28.—Greene county, Pa.—The Monongahela Valley Game and Fish Protective Association's second annual trials. S. B. Cummings Sec'y, Pittsburg.
Nov. 2—Bicknell, Ind.—Continental Field Trial Club's quail trials. P. T. Madison, Sec'y.
Nov. 2.—Oxford, Mass.—New England Beagle Club's trials. W. S. Clark, Sec'y, Linden, Mass.
Nov. 10—Columbus, Wis.—Northwestern Beagle Club's trials. Louis Steffen, Sec'y, Milwaukee
Nov. 10.—Leamington, Ont.—Peninsular Field Trial Club, Leamington, Ont.
Nov. 10.—Central Beagle Club's trials. L. O. Seidel, Sec'y.
Nov. 16.—Newton, N. C.—E. F. T. Club's trials. S. C. Bradley, Sec'y, Greenfield Hill, Conn.
Nov. 17.—Chatham, Ont.—International Field Trial Club's trials. W. B Wells, Sec'y, Chatham, Ont.
Nov. 23.—Newton, N. C.—U. S. F. T. Club's fall trials. W. B. Stafford, Sec'y.
Dec. 14.—Athens, Ala.—Dixie Red Fox Club's second annual trials J. H. Wallace, Sec'y.

The Snaring of Foxes.

Editor Forest and Stream:

To those not of a sporting disposition it seems strange that any person can work, toil and travel for miles in order to secure a few shots at wild birds, and spend hours to the music of the hounds in pursuit of a fox, but the class of people who cannot realize the pleasure of sport will never be acquainted with all that makes this world fit to live in.

Here in Prince Edward Island we can perhaps have a day's sport with as much advantage as any place in Canada. We have plenty of foxes, mostly red, but there is quite a percentage of black ones. When the hounds start one a person is always anxious to see whether he is black or red.

I started one bright, calm morning last winter, before sunrise, with my good friend Mr. Oulton—as true and good a sportsman as ever flashed his eye along the barrel of a gun—and crossing Nail Pond to a bunch of woods of about fifty acres, we let the dogs loose. They were not gone ten minutes when we were greeted by the well-known howl, and knew they had found a fresh track. The air was clear and the entrancing sound of those dogs could be heard many miles as they emerged from the woods out on the ice. After following the trail about half a mile along the beach they soon came to where reynard had prepared to spend the day among the clumps of ice. As we were following along we noticed the fox going across the pond like a red streak. His proximity was also discovered by Bob and Fan. The chase is one not to be forgotten. Away they flew through swamps and over fields to the westward, and we soon came to the conclusion that the fox did not belong to our locality, and that we were in for a long walk.

After following the almost straight course for about five or six miles to Skinner's Pond settlement, we met the dogs. We learned afterward that they had been further on about five miles and chased the fox back to where we met them. We knew at once that they had lost the track, and could not account for it till a man told us that he had seen the fox take along the road, and before the dogs came up several horses had passed over the track. The dogs seemed to take in the situation and began to search for the track. They must have scented over forty acres of ground when Bob suddenly gave tongue.

In a short while we got a sight of the fox starting from a few low bushes. He seemed to have made up his mind to have the chase ended, as he came almost straight in Mr. Oulton's direction and passed him about 60yds., when the report of his No. 8 finished that chase.

We then repaired to a friend's dwelling, and after partaking of some refreshments started for another track, it being then about 9 o'clock A. M. The dogs soon gave tongue again, and after a tight run of about three hours we found that the fox had taken to his den. The dogs' back track soon brought us to the spot. A large pine stump with a hole underneath told us plainly he was there. How to get him out was the puzzle, as the ground was frozen hard, and to dig him out would be a day's work. My friend conceived the idea to trap him. We stopped the hole, went to a house and procured a steel trap and a nice cod line. We set a snare in the hole and the trap outside, knowing that he had to starve or come out of that hole. Well, that fox actually stayed in for three days before he made the venture, and then of course he could not avoid the snare. The pole must have hoisted him just clear of the ground. In his struggles he got one of his hindlegs in the steel trap. Poor reynard! he must have died hard, caught by both ends.

CHAS. DALTON.

[Snaring foxes is not a sport, and we give space to our correspondent's article to the end that he and others given to similar practices may the more emphatically note that fact.]

"Is Death the End?"

FOUNTAIN POINT, Mich., June 7.—*Editor Forest and Stream:* I have read "Is Death the End?" by E. K. Whitehead, in the issue of May 23. That question has come to many under like circumstances. This much may be said: Till able to say when, or where, or how life begins, it is at least modest not to assert when, where, and how it ends. The burden of proof is with those who aver that death marks the end.

J. B. DAVIS.

WAITING AND WATCHING.

THEY say that the name of the station is changed, and that the dog is dead, but I remember, and I think I shall remember always.

In a sharp V of a valley between two tall, unheeding mountains, stood a little brown station, all alone. It looked like a knot in the end of the brown rag of road that hung over the low ridge beyond it. "Hope" was the name in the middle of the weathered signboard, with "Winnepeg, — miles," at the nearer end, and "Vancouver, — miles," at the farther.

There was small token of life about the building so far as even we in the observation car could see, so when the conductor came back from the office with his orders we wondered why the train did not go on. But pretty soon a tall old man with a red flag under his arm came from up the track ahead to the station platform. Some of us had alighted, and to us he volunteered, while he rolled his flag closer:

"Rock on the tack."

"Is it very large?" asked some one.

"Nope, they'll git it off purty soon; like 'nough in 'bout ten minutes."

That accent was unmistakably from the "States," and I came nearer where I could hear all he said. He sat down on a pile of boxes and in reply to some remark said meditatively:

"Nop, trains don' hev much 'casion to stop here long nowadays. Used to be a purty decent mine up yonner," jerking his head toward the little road; "then they war some doin's here"

"Mine abandoned?"

"Eaup," he was going on, when another idea struck him; he looked around uneasily.

"They hain't none o' you seen Rolly, hev you?"

"Who's Rolly?"

"W'y, Rolly, he's the dorg"; his eyes grew anxious; "he's a great institution 'round these parts, Rolly is."

He rose and went quickly to the door of the station, opened it, and put his head inside. We heard the click of the telegraph instrument.

"Say, Bennie, where's Roll?" he called. His voice was different from that in which he spoke to the men outside. The answer was inaudible.

"Humph! Curious, ain't it? When did he go?" Again the inaudible reply.

"Well, he must 'a' heard the whistle."

He came back to the travelers, but with his eyes on the brown road over the ridge,

"Didn't it pan out?" asked one.

"Huh? Oh, the mine! I dunno. I guess 'twould ef ——" but the old idea was too strong—his eyes sought the slope again.

"Now, where in time is that dorg? He hain't use' to missin' trains."

"What was the matter at the mine?"

"Oh, there was ghosts came there, 'n' that scart everybody, 'n' now they won't no one go nigh but Rolly, and he's interested. Wish't he'd come anyhow."

"Well, what is it about Rolly, my friend, is he your dog?" asked a big, quiet man standng near with his wife.

"Nope. That is, he is and he ain't—one way he's mine and two he ain't—one way he's mine, cause I feed 'im and hanker after 'im if he ain't 'round. One way he ain't mine, he's Bennie's, 'cause everything I've got that Bennie hankers after is his'n, an' he thinks a heap o' Rolly. Bennie's the telegraph here.

"'Nother way he ain't mine nor Bennie's neither. He hisself thinks he b'longs to a man 't hain't been 'round here quite a spell—the last contractor at the 'Hope.' He left in a leetle hurry one night, bein' found with some mine pay-money mixed into his own inside pocket by mistake, 'n' he forgot the dorg."

One traveler, acquainted with Western euphemisms, asked: "Did they hang or shoot him?"

The old fellow grinned. "Shot 'im; sent the remnants East in a box. We hain't lookin' for 'im back, but Rolly is. Yes, sir, he's on hand every train, an' between times he goes up to the mine to see ef his man has slipped by unbeknownst an' gone up there."

Just then the conductor, passing, said: "Nearly ready; all aboard."

We started reluctantly for the car, all of us with our eyes on the brown road now. The old man walked with us.

"Can't think what on 'arth keeps 'im. He'll cry all day ef he misses this train."

We were all on board now. The conductor stood, watch in hand, his eyes too on the road.

"There he is!" some one shouted.

"He knowed he was late an' took the short cut," exclaimed the old man.

Our eyes left the road, and at the other end of the platform met a small, smooth-coated, black-and-white mongrel, all dusty and panting, crouched with quivering flanks by the steps of the last car, a Pullman.

The dog's eyes were on the porter. The porter looked to the conductor for a sign, the conductor looked at his watch and his orders and nodded. Then the porter lifted the eager little brute into the car vestibule.

We in the observation car all waited with eyes on the door of the nearest Pullman; all but the quiet man who had retired into the front corner of the car behind his newspaper.

"Blest if I want to see the beast disappointed," he said to his wife.

"Does he go through the whole train?" I asked of the old man.

"Yes, miss, all but the col'nist car and the em'grant; he knows that hain't the kind."

Just then the Pullman door opened and the porter came through, followed by the dog, stepping high and nervously. There were a great many in the car and the dog was bewildered. The porter picked him up and put him on one of the seats, a double row of which ran back to back down the center of the car. The dog put his paws on the back of the seat and looked all around, ears up, nostrils moving, flanks quivering, tail straight out and slowly waving.

Suddenly he gave a sharp yelp and bounded over the center seats down the aisle like a young tornado and stopped with both paws on the quiet man's knees, yelping, dancing, tearing the newspaper down upon himself.

The man took the paper away and the dog leaped toward his face with a squeal. But the squeal broke half way, and the dog fell back on all fours, still as a stone. The quiet man looked at him kindly and put out a hand to pat him. The dog came closer, his eyes always on the man's face, and softly put his paws on the knees again. The man said:

"Well, Rolly!"

The dog's head went on one side a moment; the name was all right, but the voice—the voice—

He got down and backed off, his tail between his legs, his ears wavering; he gave one low, questioning whine, then slowly answered the porter's call.

At the top of car-steps he paused and came back. With head on a side and paw raised he looked again, and then with a sharp sort of bark turned back and went down.

A moment afterward the conductor's watch snapped; he waved his hand and the train drew out, up the broad cañon of the Chanting Bow. But our eyes were all turned back to the platform, where the dog stood, poised, head on a side, and foot lifted, looking after us.

The quiet man didn't draw back till we rounded a curve; then he found a cinder in his eye.

"Nice scenery," he said.—*M. C. P. in the Evening Post.*

THE DEVELOPMENT OF THE POINTER.

CHARLOTTESVILLE, Va.—*Editor Forest and Stream:* In order to ascertain the true status of the pointer as a field dog, it is necessary to compare his qualities with those of the English setter, as that breed has justly stood highest for a number of years in public opinion as such.

A few clubs and numerous private individuals have spent much money in importing the best pointer blood they could get hold of, and no doubt some first-class stud dogs have been from time to time introduced into the country, but I expect that English bereders have very seldom let a thoroughly good bitch leave home, and that that is one of the chief reasons why improvement in the breed has been so slow.

I have looked over the records in Major Taylor's book, and note that scarcely a year has passed without some pointer coming to the front in the open stakes. Special stakes are of little value in proving that the winners were first-class. They might only have been the best out of a collection of duffers, for all that any one can tell to the contrary who did not witness the performance.

We know that the proportion of pointers bred for field trials has hitherto been very small as compared with that of setters, also that some men are prejudiced against them, as probably the specimens they have met with have been deficient in quality.

I admit that the average pointer, though good in other respects, is wanting in energy and range, though intelligent and easily educated; but the average setter is no less faulty. He is too nervous, sensitive and timid, and consequently very hard to train thoroughly.

A young dog of either breed is high class if he has plenty of courage, energy and range; if he naturally hunts in the right style, is intelligent, good tempered (not too sensitive or sulky), and has a good nose. Having bred one of this stamp, it is only a question of training as to how he turns out.

But to return to the subject: No doubt others must know of as hard luck as any that has come under my own observation. I know of four first-class young pointers whose untimely end must have done much to retard progress in breeding, viz.: Tapster, Zig-Zag, Kent Elgin and Manitoba Shot

Another serious cause of delay in the production of first-raters is in the attempt many breeders are making to combine field and bench qualities in the same individuals. A stud dog with a fine bench show record, supplemented by a win of a fractional part of a third prize at a field trial, seems to satisfy the uninitiated that if they purchase his puppies or stud services they will be sure to secure some fine field dogs; but unless a stud dog is uncommonly strong in all respects he very rarely sires anything equal to himself, except in cases where the bitches are extraordinarily good. Hops and Vera Bang were two of the best I ever saw, and the former produced four (Rip Rap, Tapster, Zig-Zag and Maid of Kent), and the latter one (Kent Elgin), splendid specimens of field dogs by King of Kent. Probably the dams of Strideaway, Tick Boy and any other high class ones that he sired were extra good too; but King of Kent has some rare qualities of his own, and has, I believe, done better as a stud dog than any of the other importations. If there had been no good stud dogs in the country before the advent of Bang Bang, King of Kent, Duke of Hessen and Mainspring, one would think that there ought to be plenty of pointers equal to the best setters by this time, but I doubt if this is the case.

We have two champions in Rip Rap and Jingo, with several others, such as Delhi, Tick Boy, Strideaway, Lad of Rush, Tippo, that seem good enough to follow them in due time—but there ought to be more.

Of course we know of younger ones coming on of both sexes, and there certainly is more good material to breed from than there ever was before; so perhaps pointer men are not doing so very badly after all. But they certainly would do better if they would study more carefully the peculiarities of each individual before breeding from them. Simply to breed two good ones together indiscriminately is chance work, and what has probably brought setters to their present degenerate state. Injudicious nicking is very liable to cause virtues to be exaggerated into faults.

In summing up the future prospects of these two great breeds of shooting dogs, I think the pointers have decidedly the advantage; there are more good ones than there ever was before, whereas good setters are getting scarcer every year. Experience is teaching sportsmen that pointers are more apt to make satisfactory shooting dogs than setters are.

Pointers will work in any ground that setters will, stand heat much better, and can put up with as much cold and rough weather as any ordinary man cares to be out in.

C. E. MCMURDO.

Pointer Club of America.

A SPECIAL meeting of the board of governors of the Pointer Club of America was held at the office of Mr. James L. Anthony, 66 Broadway, New York city. Present, Messrs. Anthony, Odell, Lewis, Jarvis and Webster.

It was resolved to donate two special prizes of $10 to the best pointer dog and bitch respectively owned and exhibited by members of the Pointer Club, to be competed for at the coming bench show of the Rhode Island State Fair Association at Providence; George Jarvis, judge.

The proposed field trials of the club were then fully discussed, and after careful consideration it was resolved that

Whereas, The time intervening between this date and December, at which time it has been proposed to hold the first annual field trials of the Pointer Club, is so short, and

Whereas, The committee has been unable to agree upon rules that it believes would be satisfactory to all competitors, as well as to the club, and

Whereas, The committee has been unable to ascertain at this date that the grounds where it was proposed to hold the trials can be had upon satisfactory terms, it is

Resolved, That the trials be postponed until December, 1897.

Resolved further, That the committee be hereby authorized and directed to prepare the necessary rules and make the necessary arrangements between now and the annual dinner, to be held by the members of this club during the New York show, and that it report such rules and arrangements as it may recommend to a full meeting of the Pointer Club to be held at such time for their action and approval. After the consideration of some other unfinished business the board adjourned.

FREDERIC S. WEBSTER, Sec'y.

Collie Club Stakes.

THE following stakes have been opened and will close on the dates announced in connection with each stake. Entries for the Sweepstakes and Lottery Stakes should give name, pedigree and date of birth of each entry, and for the Futurity Stakes the name and pedigree of the dam, together with name of dog bred to and date of breeding:

Annual Collie Sweepstakes, to close on Aug. 1, 1896: For collies born in the United States or Canada, between June 30, 1895, and July 1, 1896, entrance $2, payable on Aug. 1, and an additional $3 to fill on Dec. 1; $50 will be added to the stakes; the winner to receive 50 per cent. of the stakes, 25 per cent. to go to the second, 15 per cent. to the third, and 10 per cent. to the fourth. To be decided at New York, February, 1897.

The Lottery Stakes, to close on Nov. 1, 1896: For puppies whelped between March 1 and Aug. 15, 1896. Entrance $2, and additional $3 to be paid on or before Jan. 1, 1897. To be decided at the Mascoutah Kennel Club show, Chicago, 1897.

The Futurity Stakes: Entries of dams to be made prior to whelping, at $2 each. Stakes to open on May 1 and remain open until Oct. 31, 1896. All produce of each dam so entered shall be eligible for competition, provided entry is made individually of the puppies before they have exceeded the age of three months. A fee of $1 to be paid for each puppy so entered, and on July 1, 1897, an additional $2 to be paid to entitle the entry to compete for the stake, which will be decided at a fall show of 1897. The division of the above stakes to be 50 per cent., 30 per cent. and 20 per cent.

Entries of bitches which have already whelped will be received up to July 10, 1896.

All entries to be made with

JAMES WATSON, Sec'y,
No. 203 Broadway, New York City.

Disqualification of Club Members.

HORNELLSVILLE, N. Y., July 4.—*Editor Forest and Stream:* I have been on the Pacific coast since April 14. On my return I hear that I have been disqualified by the A. K. Club. I feel that I have been hit a foul blow below the belt, and tried and convicted without a hearing. The world is not moving when Judge Lynch can flourish in this State. I feel that I have been hit, but I can't find out what hit me, who hit me, or where they hit me. It seems that the Bull Terrier Club sassed the anti-croppers, so they have hung up the Bull Terrier Club officers until they eat humble pie, but I was not at the meeting, and did not have anything to do with the resolutions. I could not make the other fellows apologize even if I tried.

I can't understand why I am disqualified because the other fellows are stubborn. I always supposed a man could only be fired for something he did or left undone himself, not for what others did, and that before being shot he had a right to have a trial. But firstly I want to know what I have been doing; when, why and where I have done anything to be disqualified for.

J. OTIS FELLOWS.

Queens County Agricultural Society.

HEMPSTEAD, L. I., July 6.—The Queens County Agricultural Society, which has become a member of the American Kennel Club, has decided to add a dog show to the numerous attractions of its annual fair, to be held at Mineola, Long Island, N. Y., Sept. 22 to 25, of the present year.

Premium lists will be ready for distribution at an early date, and if the show meets with any success it may be looked for as an annual fixture.

The fair grounds at Mineola are within easy distance of New York and Brooklyn, from which points there is an excellent train service. The fair is unusually well attended, and exhibitors of dogs will be spared any feeling of *ennui*, as there will be a variety of attractions: bicycle races, trotting and running races; horse, cattle, sheep, swine and poultry shows, etc., etc. The dog show will be under the management of Jas. Mortimer, Hempstead, L. I., to whom all correspondence should be addressed. The first show of dogs held in the United States is said to have been at Mineola, October, 1874.

POINTS AND FLUSHES.

In our advertising columns this week A. L. Goodwin, Clearfield, Pa., offers foxhounds for sale. E. A. Carrier Westchester, Conn., offers setters. Loki, Cincinnati' offers pointer and setter, both broken. H. S. Reynolds' Poughkeepsie, N. Y., offers cockers. Muckross Kennels' Springfield, Vt., offer setters, beagles and Boston terriers.

A ripple of merriment went the tour of schipperke circles when the fact transpired that Mrs. Stennard Robinson, who is putting her foot down on docking, and is determined to crush out the practice, had assisted Her Royal Highness to choose a schipperke pup that had had its tail cut off.—*Stock-Keeper* (*England*).

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address. Prepared Blanks sent free on application.

BRED.

Dr. H. M. Quimby's Nick of Kent, English setter bitch, May 27, to Kent III.

Mr. W. H. Worth's
Hilda, Gordon setter bitch, May 17, to Pilot of Lorain.
Lawn Nola, Gordon setter bitch, June 9, to Pilot of Lorain.

WHELPS.

Mr. W. H. Worth's Lawn Fayaway, Gordon setter bitch, whelped, June 23, eight (seven dogs), by Pilot of Lorain.

SALES.

Mr. W. H. Worth has sold
Rustic, Gordon setter dog, to Mr. J. B. Blossom.
Fantine, Gordon setter bitch, to Mr. Chas. Sanger.
Ripple, Gordon setter dog, to Mr. J. B. Blossom.

Wheeling.

FRENCH CYCLING PHRASES.

IN French a "scorcher" is *un brûle pavé*, which signifies that our Gallic brethren go us one better in the matter of cycling nomenclature, for their riders actually burn, while ours only scorch in their flight. Curiously enough, however, we have an equivalent for this phrase in the cowboy country, where a man or animal "burns the earth" when he goes unusually fast.

The French term for scorcher is taken from a little book called "Handy English-French Phrases Appropriate to Bicycling," which contains such gems as "*Où puis-je trouver un atelier où l'ou répare les bicyclettes?*" (Where can I find a bicycle repair shop?), and "*Combien me prendrez-vous pour me conduire, moi et mon bicycle, à la gare de ——?*" (What will you charge to take me and my bicycle to the railroad station at ——?).

The book is intended for Americans touring in France, but it would no doubt prove equally serviceable to Frenchmen touring in this country, for bicycle language is new and not lacking in intricacy on both sides of the Atlantic.

Along with the phrases and proper terms for various parts of a bicycle the book gives such information as the following, contained in sections 45 and 46:

"Am I right in understanding that there is no duty on wheels brought into France by a member of an American bicycling club as his private property for use in touring, and to be taken back out of the country before long?"

"Yes, but you must make a declaration at the Custom House."

Section 88 and what follows deals with the all-important topic of roads:

"How do you find the French roads for bicycling?"

"They are generally very good, but not as uniformly smooth as many of the new American roads."

"You surprise me. I understood the roads in France, as on the Continent generally, were famous among bicyclers, while correspondingly the American roads are reputed to be poor or bad?"

"Yes, that is the popular theory, but it is not correct. The French national roads are, of course, good, but the surface is not uniform and there are many flints or other hard stones used, which cause a series of annoying bumps to a bicycle.

"The French roads are about the same in effect as the worst parts of the roads in Central Park, in New York. In the United States there are now built, or in course of construction, a great number of very fine new roads, mostly Telford pattern."

"Well, at least in cities like Paris, one has the famous asphalt pavement."

"Yes, but the city of New York has now more and better asphalt pavements than Paris; the city of Buffalo, in the State of New York, has more asphalt streets than Paris and all the capital cities of the Continent put together."

Section 94 puts the question, "How do you find the American machines compared with those of France?"

Which is answered, "I think the American machines are generally lighter and more serviceable than the French, also better."

"What about using American pneumatic tires on French roads?" is another question.

The answer is, "American tires are apt to be readily cut up by the flints in French roads. They can, and generally should be, guarded or reinforced by having a wide rubber band or adhesive tape glued on the outer edge of the tire, that is to say, on the periphery of the wheel."

"Is that device effective?"

"Yes, it has been found in practice to work satisfactorily. The rubber band thus applied takes and relieves against many cuts which might otherwise injure the rubber tube of the tire. Some tourists, however, prefer to have the heavier English or French tires put on their wheels in place of the American ones. It is well for American tourists to take with them a full supply of puncture-repairing material, with extra links of chain and spokes appropriate to their wheels."

GEAR.

EVERY bicycle rider understands what is meant by the term "gear," but few can give a good off-hand definition of it or one that will present a clear idea without a great deal of circumlocution. By gear is meant that application of chain and sprocket wheels by which the speed of the rear or driving wheel is increased so as to make it equivalent to a wheel of a larger diameter.

In the old "ordinarys" the front wheel, which was the driving wheel, turned once for each complete revolution of the pedals. When the safety was introduced the size of the driving wheel was reduced so that its diameter was less than half that of the old high wheel. To secure a reasonable degree of speed it was necessary to make this smaller wheel turn faster, and accordingly toothed cogwheels were placed on the hub of the rear wheel and on the shaft of the pedal cranks, and connected with a chain. The diameter of the front cogwheel or sprocket was greater than that of the rear sprocket, and it had an increased number of teeth; so that when the first sprocket turns once at each complete revolution of the pedals, the rear sprocket and driving wheel, to which it is attached, turn from two to three times, depending on the ratio of the sprockets.

All standard driving wheels measure 28in. in diameter. The gear is determined by the ratio of the rear sprocket to the front spocket as compared with the diameter of the driving wheel.

Any one can figure it out in his head by dividing the number of teeth on the front sprocket by the number on the rear and multiplying the result by 28.

For instance, with 16 teeth on the large sprocket and 8 on the small, dividing the former number by the latter gives 2, which being multiplied by 28 gives the gear of the bicycle as 56.

In the gears most commonly in use at the present time there are either 7 or 8 teeth in the rear sprocket. The following table gives the combinations that are most frequently met with. The first column is for the number of teeth on the rear sprocket, the second the number on the front sprocket, and the last gives the gear:

8	16	56	7	16	64
8	17	59½	7	17	68
8	18	63	7	18	72
8	19	66½	7	19	76
8	20	70	7	20	80

A comparatively low gear is best for a hilly country, as it is easier with such a gear both to climb grades and to hold back when going down hill. In fact it is dangerous for the ordinary rider to use a high gear in such a country. Gears ranging from 63 to 70 would seem to be best adapted for such riding.

As to the number of teeth on the rear sprocket best adapted for hill-climbing, there is a diversity of opinion, but it would seem that the supporters of the 8-tooth rear sprocket have the best of the argument.

The higher gears are only adapted for good roads and a comparatively level country, or else for very powerful riders. Aside from racing men they find their principal supporters among the scorchers who affect ram's horn handle bars and toe clips and other abominations.

High gears necessitate going up a hill at a good rate, and their use on country roads is very fatiguing to riders unless physically in the best condition.

French Fashions.

IN France the ruling fashion at present seems to favor extremes in cycling costumes, and nothing excites comment unless particularly daring on the part of the women, or incongruous on the part of the men. Bloomers or knickerbockers are in great vogue among the women, and a costume frequently seen includes short stockings, such as children wear in summer, and bare knees. On the other hand the men are sometimes seen riding in full dress, including silk hat, and in a recently reported case yellow kid gloves and a monocle.

The other day in Paris a man was drawn from his bicycle by his long coat-tails becoming entangled in the wheels of a passing vehicle. He escaped with his life, but there is no telling what might not have happened if the coat-tails had been stronger.

A Hint for Horse Owners.

A TRAINED ape has lately been giving exhibitions of bicycle riding on the Pacific Coast, and he is said to thoroughly enjoy a spin on his wheel.

Here in the East we have an elephant who sports his ponderous weight on a three-wheeled affair resembling a cross between a boy's velocipede and a tricycle.

Wheels in one form or another are fast displacing the horse, and if this useful animal is to compete with bicycles and trolley cars his well wishers should put him on wheels too, and devise some means for using to better advantage his great muscular powers.

A Practical Charity.

MRS. FAWCETT has made a suggestion, which, if acted upon, should make the factory girls of London bless the day when cycling became a fashionable craze. In her opinion, cycling would be for the hard-working young female toilers of the East End not only an amusement, but an invaluable means of obtaining the fresh air and exercise of which they are continually in such need. The girls would like the cycle, but machines are expensive, and beyond their means. Therefore Mrs. Fawcett, at a Mansion House meeting, urged the ladies, when they purchased new "mounts," should bestow their old ones upon girls' clubs, or other agencies which exist for the benefit of factory girls.—*London Queen.*

Insurance Against Theft.

WE would suggest as an effective method for insuring bicycles from theft that the number be stamped on some conspicuous part of the frame in figures large enough to be read at a distance of 10 or 15ft. If such a plan were generally adopted the number could not easily be effaced or concealed, and riders would enjoy a protection that is unknown in these days of detachable name plates.

OCTOBER.

3. Cor. Atlantic City, mosquito class, Atlantic City.

SHOULD the occasion arise next year for a series of trial races in the 15ft. class, such as has just been held at Oyster Bay by the Seawanhaka Corinthian Y. C., they may be made still more interesting and useful by the addition of special prizes. This year and last no prizes were offered for the trial races; but a first, second and third prize for each race, or a prize for the winner by points in the series, might be of advantage and would be no more than is due to the contestants. It is hardly likely that the offering of such prizes would render the races any less valuable as a test, though they have been allowed under the special circumstances to assume a rather informal character and not strictly regulated by the rules. Certain additional prizes might also be offered, as for instance one for the best amateur design taking part in the races, one for the best amateur-built boat, one for the best rigged craft, and one for the "one-design" boat belonging to a *bona fide* one-design class of limited cost which shall make the best showing in the races. It would be too much to expect the race committee to attend to all the extra work involved, but a special committee of three experts might be selected to watch the races and inspect and judge the boats, apart from the main work of selecting a defender. The class is one specially suited for the aspiring amateur, and it may well be utilized to encourage good amateur work alike with the stick, the drafting pen and the saw.

THE successful defender of the Seawanhaka Corinthian international cup last year, as well as one of the leading contestants in the late trial races, was marked by a peculiar and distinctive rig that could in no way be mistaken for the ordinary boom and gaff rig carried on nearly all the other boats of late years and this. In spite of this well-known fact the old pictures of Ethelwynn have been pressed into service by some enterprising journals and passed off as veritable portraits of different new boats. One group of pictures, purporting to represent truthfully the five boats selected for the final trial, showed no less than three with the Scarecrow rig, one of which might really have been Ideal, the other two being radically different from the boats whose names they bore. Another and larger picture, printed with a detailed description of El Heirie, showed the sail plan of Ethelwynn, different in every particular. A little knowledge is a very dangerous thing in the business of faking technical subjects.

The Ogdensburgh Cup.

THE interest in the 15ft. class is certain to continue through the season and will by no means terminate with the races for the Seawanhaka cup next week. There are many good boats in the class, and all are improving with constant racing. The special open race of the Ogdensburgh Y. C. on July 28 promises to be well attended in spite of the distance, as several New York owners have already promised to send up their boats, and entries are also promised from Montreal and other points. The cup is the most valuable one offered this season, costing $300, to be the personal property of the owner of the winning boat. Special rates on 15-footers from New York to Ogdensburgh have been made by the New York Central R. R.

CHART OF LONG ISLAND SOUND YACHTING COURSES.

The 15ft. Class of 1896.

THE new 15ft. class of 1896, as represented by the starters in the recent trial races of the Seawanhaka Corinthian Y. C. to select a defender for its international challenge cup, is not only the largest in point of numbers ever known in this country, but is one of the most unique and interesting. It is impossible to estimate closely the true number of boats built for it this year in all parts of the country, but the 27 entries for the trial races represent probably not over 20 per cent. of the total. Many of these small craft are of a class distinct from the racers, designed and built for general use, cruising, sailing and for racing in local classes, the main consideration in most of them being cost, with a limit of $175 up to $350, the former for such "one design" boats as those of the Tappan Zee Y. C., the Winthrop Y. C. and the New York C. C.; the latter for boats of superior design and construction, such as the smaller size of Scarecrow and La Gloria, built by the Spalding-St. Lawrence Boat Co. from a standard and not a special design, but in which a low cost is not the first desideratum. Outside of these are many boats built from special designs and nominally at least of racing build and fitting.

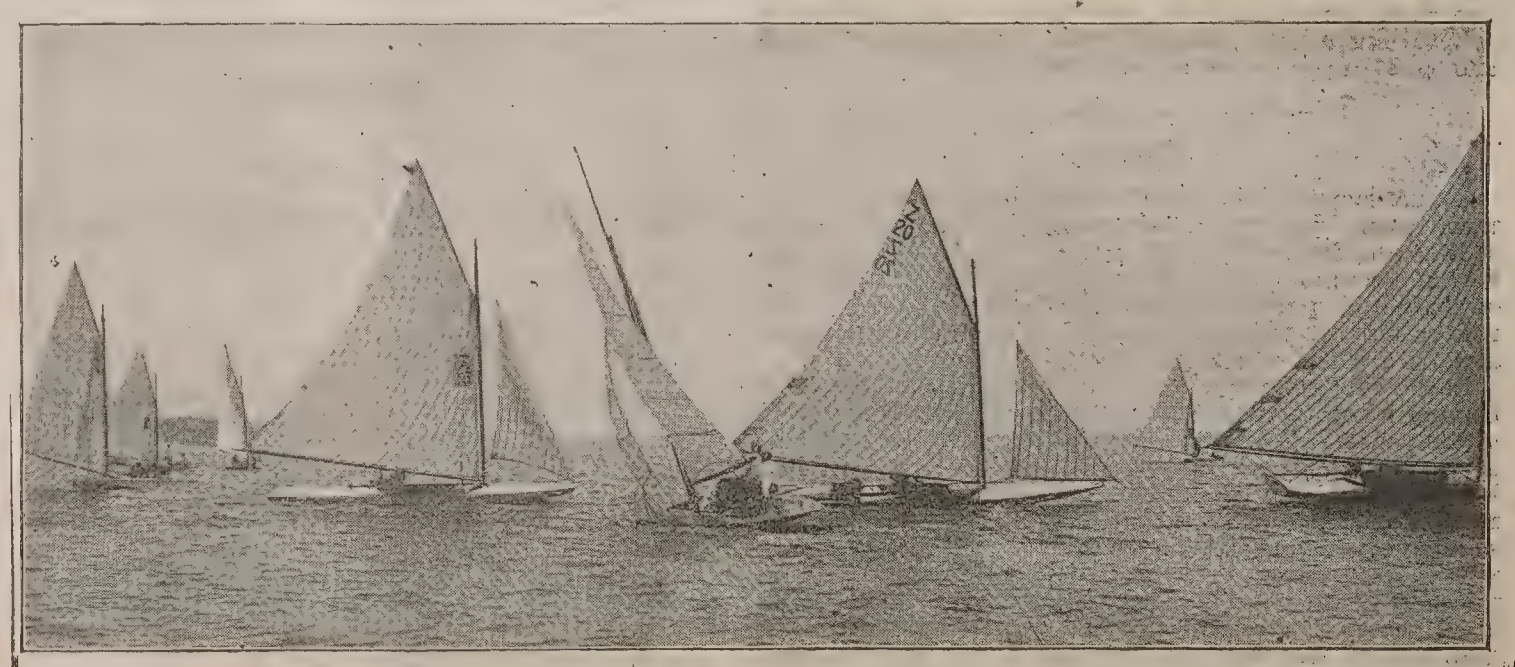
There are two plain facts about this class which are not fully recognized by the generality of yachtsmen and writers: that the class is purely English in its origin and as purely American in its present composition. It had its beginning last year in the construction of Ethelwynn, Trilby, Olita, Indienne and Question to meet the English yacht Spruce IIII. The latter was designed under the then existing rating rule of the British Y. R. A. to a rating of 0.5, and raced in England during the early part of the season in the half-rating class. Under the terms of the agreement between the Seawanhaka C. Y. C. and the Minima Y. C., the races in this country were to be sailed under the S. C. Y. C. rule, with a limit of 15ft. racing length in place of 0.5 rating. This agreement was to the advantage of Spruce IIII., as it enabled her to increase her sail plan for the lighter conditions of Long Island Sound as compared with the Solent. It was also advantageous in that it encouraged a rather larger hull than would have been possible here under the Y. R. A. rule, as to keep within the measurement of 0.5 and yet have sail enough it would have been necessary to reduce the waterline to under 14ft. This agreement as to the use of the Seawanhaka measurement and class resulted in the production of a shorter and more powerful yacht than the true half-rater. Prior to last season there were in this country no regular racing 15-footers (though there were a few cruising boats of about that measurement), and only two half-raters. One of these was the handsome little fin-keel designed and built by A. E. Payne for the steam yacht Sagamore; the other, Trust Me, was built by the Herreshoffs, not for racing, but merely as a handy craft for afternoon sailing on the Hudson, the moulds of the half-rater Wee Winn, designed in 1892 for the Solent class, being used.

At the present time the half rating class is extinct in Great Britain, not only nominally, but actually. When the rating rule was abolished last fall to make way for what is called the "linear rating," the classes were so rearranged as to produce a larger boat, both in length and sail area. From the measurements published of the new boats of the 18ft. linear rating class they will measure 16 to 17ft. by the Seawanhaka rule, and at the same time they would in all probability require a larger sail plan for American waters, thus far outclassing the present 15ft. fleet. The same is true of the new 24ft. linear rating class, as compared with the corresponding American class of 20ft. racing length. This reversal is rather to be regretted, as it must operate to a certain extent against such international racing as that inaugurated by the challenge of Spruce IIII. If, as we hope, the cup may again be successfully defended this year, a challenge from Mr. Linton Hope may be looked for in 1897; but it will be necessary for him to build a special boat for the purpose, and he cannot test her fully in the home racing, as she will inevitably be too small for even racing in the 18ft. class. It is a matter for regret that when the Y. R. A. rule was amended last year the work could not have been done in some connection with the American clubs, in order that the rules of the two countries might be brought closer together rather than being moved further apart.

The American 15-footer of this year stands between the old half-rater and the new 18-footer, but is distinctly different from both, and there is no valid reason for the Anglomaniacal affection of misnaming it a "half-rater."

There was material for at least a week's study in the fleet anchored in Seawanhaka Harbor on the morning of June 22; in fact so great a variety of features in design, construction, rig and fittings has never been brought together in the history of yachting. The small class on the Clyde and the Solent is more or less stereotyped in design, rig and construction; and the best built-up of American classes, the 40-footers, was much smaller in numbers and more uniform in detail than this fleet of midgets. In the hurry of the racing but little opportunity was afforded to study the various boats closely and to ascertain their correct dimensions, but still very much could be gleaned by the careful observer. The dimensions were difficult to obtain in many cases; but few of the boats had been measured, so that both sail area and waterline were unknown even to their owners. In nearly all the nominal dimensions were about 14ft. 6in. l.w.l., with 240sq. ft. of sail. The two notable exceptions were Kittie IIII. and Knot In It, whose nominal waterlines were about 10ft., with sail areas of nearly 400sq. ft. Just what the true figures are will not be known until the boats are measured for some future race.

It is by no means an easy matter to sort out and classify such a mixed fleet; but we shall venture to do it on an original basis, as follows: Bulb fin type, centerboard type, scow type, one-design classes, freaks, Manowtasquok. This classification may be objected to as not strictly scientific, but any one who thinks that he can improve on it under the circumstances is quite at liberty to rearrange the names. The yachts themselves we shall group as follows:



Bulb-fin type: Riverside, Trilby, Saghaya, Microbe.
Centerboard type: Ideal, Two Step, Die Hexe, Maudeen, Yola, Ulmec, Terrapin, Vesper, Nit.
Scow type: El Heirie, Paprika, Question, Hope, Willada, Columbia.
One-design yachts: Florence, Nike, Isabel, Tornado, Cyclone.
Freaks: Kittie IIII., Knot In It.
Manowtasquok: Manatasquok.

BULB-FIN TYPE.

Taking first the bulb-fins, Riverside, the new Olmstead boat, was described last week. Mr. Olmstead's fin-keel of last year, Trilby, has been much improved this season, and under the handling of Mr. F. B. Jones has made a very good showing in the fleet. The new boat is to all appearances an improved Trilby of moderate proportions, with no extreme or freak features and like Trilby a very shapely boat to the eye. Mr. Olmstead has declined to accept the popular verdict, with which we have fully concurred, that the bulb-fin had no chance of success in this small class, and has done much to prove the correctness of the other view. He certainly deserves great credit for the attempt to test this question thoroughly, and for the manner in which it has been carried out; the yacht was constructed under his personal supervision and he steered her in all the races. In fitting she has no bulkheads, but is all open below; the well is oblong, with square corners and straight sides, and is just large enough for the two men. In bad weather it can be completely covered by a watertight hatch leaving the men to sit on deck inside or outside of the coaming. The rig is a simple boom and gaff mainsail and a Wilson jib without a club. The gear is very simple. The mainsail is of Union silk. Trilby has already been described, a fin-keel of normal type with boom and gaff rig. Saghaya was designed and built by Seabury & Co. at Nyack, and is a well-shaped boat, with no freak or extreme features. She is of double skin construction, with bright topsides of pine or cedar and a green bottom. The two skins are united by a great many fastenings which show when under way, as in the old Herald canoes. This method does hold the two skins thoroughly, but is not pleasing to the eye. The boat had a boom and gaff rig and a very long open well from the mast aft, a bad feature in a sea. Microbe was not eligible for the trial races and did not start, but as she is one of the class and sails in the regular Sound races she may properly be mentioned here. She is one of the handsomest boats in the class, having that finish peculiar to English boats, seen here twenty-five years ago in the first canoes imported from the Thames. She is now brand new, having been in the water only a couple of weeks, and looks better than she will after a thorough baking by a July sun, but as she stands she is well worth looking at. She was designed and built by Sibbick, of Cowes, for Herbert B. Seeley, of the Larchmont Y. C., and apparently is of the last year's type of half-rater, with a very small sail plan and a lug mainsail, so miscalled, as the British lug sail of the past few years is nothing more nor less than a modified sliding Gunter sail. The yard is vertical, up and down the mast, the result being a sail very similar in appearance to the Scarecrow rig of Ethelwynn, Ideal and Bogie, but with greater weight aloft and less effectiveness and convenience of handling. The fin rakes aft and the bulb overhangs, as in Wave and May, the Sibbick one-raters. The planking and decking are of Spanish cedar in single thickness and apparently ribband carvel construction. The wire tye of the yard leads down through the deck to a tackle fast to the keel at the heel of the mast. The spars are of bamboo.

CENTERBOARD TYPE.

The winning yacht of last year was absent from these races, but was represented by two younger sisters, one being an exact duplicate and the other practically the same with an increase of 2in. in the beam. Two Step, the handsome boat exhibited by the Spalding-St. Lawrence Boat Co. at the Sportsmen's Exhibition, was built from the same moulds as Ethelwynn, and rigged in the same manner with a little more sail. She has been under sail longer than any others of the new boats, but has not been tried with the others, having sailed entirely alone except in three races. Not being satisfied with the leg o'mutton

Hope. Trilby. Kittie. Paprika. Vesper. El Heirie. Willada. In It,

AT THE FIRST MARK — FIRST RACE.

sail, the owner has changed the entire rig, giving her a boom and gaff mainsail and a jib cut low on the foot and laced to a club. Under a sail plan unsuited to the hull the boat has shown exceptional speed down wind in light weather, and finished fourth on the first day, though a long way astern of the leaders. In the second race she outran the fleet, but threw away all of her advantage by bucking the ebb tide out in the Sound and missing the slack water and light land breeze. She was well handled in the starts and at the turns, and evidently might have made a high place on the list with a good rig. She was not seen after the second day. Ideal has already been fully described both directly and through Ethelwynn. She carried the peculiar Stevens sail plan, the Scarecrow rig, with wire halyards and all its special fittings. Owing to late completion she went into the races with a rough bottom and in a poor state of preparation; no opportunity could be had to measure her and readjust her sail to the waterline, and as a consequence she sailed with 20ft. less than allowed, measuring but 14.46 instead of 15ft. Her helmsman, Mr. Duryea, never saw her until a short time before the start on Monday, and under the circumstances he did all that was possible with her. On the first day he took her over the line ahead of the fleet, but on the

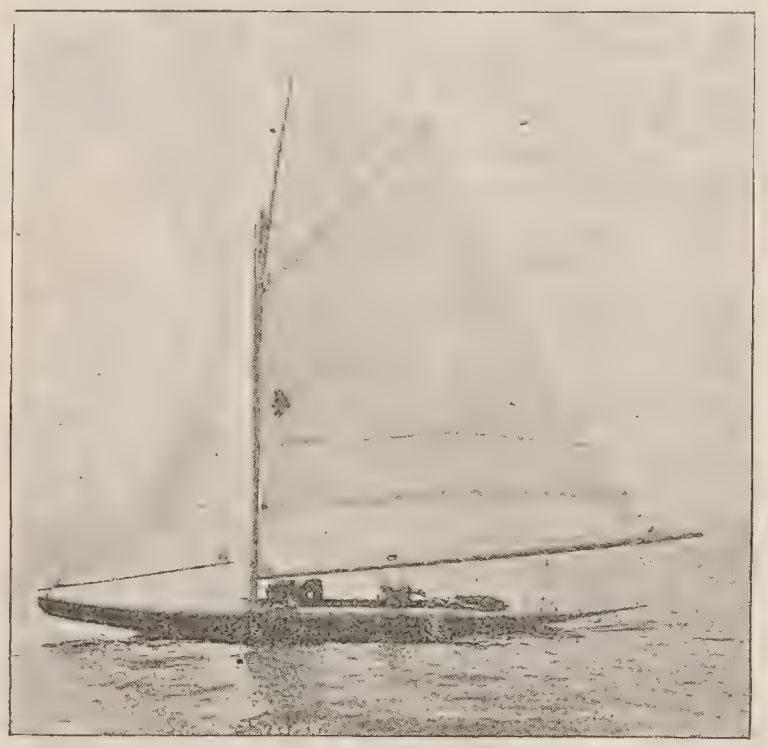
two other days he calculated too finely and was caught by the tide and the falling of the wind, once being over before the gun and once being swept on the wrong side of the bows of the committee boat just before the gun. All of these three boats have strong watertight bulkheads at each end of the cockpit and comparatively large open wells, 6ft. long and 3ft. wide, leaving 18 to 19in. of side deck. This arrangement, so widely different from Question and other boats in which the crews are compelled to squat or lie flat on deck, has much to commend it in Sound racing, the races being nearly all in light to moderate weather. The safety of the boat from all final danger is secured by the watertight bulkheads, and the large well gives every opportunity to work quietly and quickly in handling light sails, a very important consideration in sailing two and three rounds of short courses. The crew have space to move about, to change their positions and to eat in comfort, if they have been thoughtful enough to carry grub and water, something that not a few have neglected. These races mean sometimes seven to eight hours aboard the boat, and a man's physical comfort, as affected by a large cockpit and low floor compared with a small cockpit or a perfectly flush deck, may be a material factor in winning, apart from other considerations.

Die Hexe is somewhat after the type of Ethelwynn, but over 8in. wider and with no freeboard and a very strong sheer, giving her a most peculiar appearance. She was designed and built by Mr. Wyckoff, of Clinton, Conn., who sailed as crew, his brother steering. The rig was similar to that of Ethelwynn, the leg-o'-mutton mainsail, with slide on mast, but with long battens in the mainsail. The boat

EL HEIRIE,
Defender of Seawanhaka C. Y. C. Cup, 1896.
Designed by C. H. Crane. Copyright, 1896, by J. S. Johnston, N. Y.

had a smooth bottom, coated with a preparation made by her builder, but was hastily built and with no attempt at a fine finish.

The only Herreshoff boat in the race was Mr. F. M. Hoyt's Gnome, to the eye an improved Olita, with a long fore overhang and a very short after overhang, the tuck of the broad square transom being immersed. She was painted white, with bright oak plank sheer and pine deck. Her original rig was a Gunter sail with battens, the ordinary canoe sail, but in the first race she tried a boom and gaff mainsail. While Olita was all open, with a very large cockpit and practically no compartments, Gnome had a self-bailing cockpit above the waterline and emptying into the trunk. She was fast off the wind, but when sheets were blocked down she slid to leeward like Olita.



One of the most interesting of the fleet was the Butler boat Vesper, designed by Butler Ames and sailed by his uncle, Paul Butler, with Mr. Ames as crew. The fitting and rig was of the same sort that has so long won the admiration of canoeists on Mr. Butler's numerous craft. The boat was of the Sorceress type, about 6ft. 5in. wide, with a midship section that was a flat segment of a circle, with no bilge, the keel contour being a similar circular segment. The deck line aft was very different from Sorceress, being carried out to a transom somewhat similar to Ethelwynn's, the overhang being quite as long or longer. The fore overhang ended in a stem with a quick turn upward. The sheer was moderate, with a low freeboard. The whole form of the hull was suggestive of a big teaspoon, and all the lines, both fore and aft and thwartships, were fair and easy sweeps. The boat relied on her beam alone for power, there being nothing that could be called a bilge. The workmanship was quite up to the usual standard of Stevens, the Lowell canoe builder, a single skin of ¼in.

mahogany in full length planks, with the ribband carvel construction of the Butler canoes. Owing to the new varnish the bottom was very far off the form in which the Butler canoes are raced (the work of care, elbow grease, pumice stone and vaseline); but it was by far the best bottom on any boat in the races. The well was long and shoal, above the trunk, which was also very long and fitted with a centerboard made of two sheets of brass riveted at the edges and filled with lead, its dimensions being 5ft. long, 18in. wide and ⅛in. thick, and its weight 125lbs. It was fitted with an arm of 2½×½in. steel and 2ft. long, fitted at the upper end and at right angles to one long side, by which it could be moved fore and aft in the long trunk or shifted into almost any position. The rudder was of the spade type, almost a square, and fitted to ship from the deck in an open trunk. The mast was stepped in two bronze brackets secured to the fore bulkhead across the fore end of the well, its heel being just over the centerboard slot. The spars were all of spirally wound veneer, five layers being used for the mast. They were of large diameter, but beautiful sticks, strong, stiff and light. The rig was made up of a "Butler" mainsail, in shape much like a boom and gaff sail, but with a sprit batten in place of a gaff to support the peak. The material was a real silk, specially woven in a Lowell mill for the purpose. The sails were not cut out until the Friday night preceding the races, and were hurried together in the quickest manner possible. The cloths ran with the boom from luff to leach. The jib had a club on its foot. They set very poorly indeed, and no doubt the boat suffered much in consequence. She was shipped to South Norwalk and launched for the first time on the day before the first race, being hastily rigged and sailed across to Oyster Bay. She sailed all the five races of the week, but much of the time of both her crew when ashore was given to work that should have been done weeks before. The model, and in fact the whole experiment, is an interesting one, and we hope that the boat will be worked up and raced later on.

Ulmec, already described, was chiefly notable for the ambitious name of Defender II., bestowed on her by her recent purchaser, and for her very brief career, she withdrawing early in the first race.

The Clapham boat, Yola, is a new craft and by no means as good looking as the previous 15-footer Imp. The model is very far from handsome, its most striking point being a peculiar downward turn of the counter toward the transom. She is a rather wide boat, of shoal body and apparently with a large sail plan. The rig was an awkward one, a boom and gaff mainsail with a revolving jib, the club of the jib forward of the stemhead and having a stay from the masthead attached to its out end. The centerboard was of a type affected by several boats of the class, and which might profitably be dealt with by timely legislation before it has gone too far. The board is a long, narrow plate of metal, not pivoted, but sliding up and down in the trunk, being shiftable fore and aft. When raised, as in running, it stands so high that the boom must be lifted over it in jibing. On one occasion when working about the harbor we saw this done on Yola, the crew lifting the fore end of the boom well up the mast as it swung over. Such a dangerous expedient as this, and it was probably worse in some other boats than in this instance, cannot be prohibited too soon. Most of the evils of modern canoeing are traceable to the failure of the American Canoe Association to take timely action in the case of devices of this extreme nature.

Nit was designed by her owner, W. N. Murray, of Jamestown, R. I., and built under his direction. She was a very trim-looking craft, but

VESPER.
Designed by Butler Ames. Copyright, 1896, by J. S. Johnston, N. Y.

with a small rig and showed no speed in the races. Maudeen was a lapstrake craft of the pram order, so far as her bow was concerned; she had two centerboards, a small one forward of the mast, after the fashion of Spruce last year. Terrapin, designed by her owner, an amateur, was a well-shaped craft, but not fast enough for the company she found, being intended only for cruising and general sailing.

SCOW TYPE.

The wonderful stories told last year of Question, recounting her phenomenal speed obtained at a total cost of $35, and compared with $1,000 for a Herreshoff 15-footer, have produced less results than might have been looked for from their wide circulation, and outside of Question and her blood relations but one of the scow type was present. This one, however, was not only interesting in her design and the personality of her designer, but proved to be *the* boat, the choice of the committee after a week's deliberation. In form and finish she is so far superior to the other boats of the type as hardly to be classed with them, but she has the distinctive features of a large boat on a short measured waterline, a small beam when heeled to an effective angle, a long and easy list line, and a weather bilge in the air to act as ballast to windward. The general idea of the design was taken from the descriptions of Question, but Mr. Crane has worked out the details in a way of his own, producing a well formed and well balanced boat; evidently of high power, but still fast in light winds.

Closely in line with El Heirie as an advance on the crude model of Question is Paprika, designed and built by L. D. Huntington, of New Rochelle, who last year designed and built the original Question. Paprika has the same flat floor and rounded bilge as El Heirie, but the form is less fair and symmetrical. With a large sail plan, which she carried very ably in a blow, she is fast in extremely light airs, and in a strong breeze at once goes to the front; but in the ordinary weather of the Sound races she cannot hold the ordinary type of fin-keel or centerboard on any point of sailing. The same is true of her older sister, Hope, to all appearances a duplicate of Question, but more carefully designed and built, and of another of the same model, Willada. Hope has proved quite fast in a breeze, but in light weather none of these boats, including the original Question, did anything remarkable; in fact their reputation in the whole series of races rests solely on the manner in which Paprika went to windward in a moderately fresh breeze on Tuesday, with Hope following, but at quite a respectable distance. All were rigged alike, with boom and gaff mainsails. Question still clung to her small jib of last year, set tack up.

It must be said for these four boats that they had special advantages in the way of skilled handling and local knowledge. In order to give every chance to Paprika, Com. Rouse very kindly gave up the idea of starting Olita after he had done everything possible to make her fit for the trial races, leaving L. B. Huntington, Jr., to steer Paprika, with her owner, C. Sherman Hoyt, as crew. In the absence at college of Mr. Iselin, owner of Hope, she was steered by Philip Howard, who we believe was with L. B. Huntington, Jr., on Question last year in the trial races, L. D. Huntington being crew. The other two boats were also well handled.

Paprika had a rather large cockpit, Hope and Willada had small cockpits and Question none at all, all the work being done from the deck. The only wonder is that the boats were so well sailed considering the discomfort, fatigue and exposure when lying flat on a narrow convex surface of hot canvas or perhaps wet and slippery. Two of the boats, Hope and Question, met with a curious experience on the day preceding, the first being caught in a squall inside Oyster Bay and capsizing, the latter losing her board. Mr. Huntington went over to New Rochelle and brought back the old board in time for the race, the one lost being of the sliding variety. Both Hope and Paprika were fitted with these vertical sliding centerboards, the latter of aluminum.

Columbia is not really of the scow type, but more of the skiff or skipjack model, with straight sides and pointed bow. She was most patriotically painted in red, white and blue, showing on one side a white deck, red top to her centerboard and blue side, the colors being reversed on the other. She showed nothing notable in the way of speed.

ONE-DESIGN CLASSES.

Of the one-design boats, three were from the Tappan Zee Y. C., designed by C. E. Davis and built by Samuel Avers, and two were from the New York C. C., designed and built by Henry Rigby, of Canarsie. The Nyack boats were much wider and more powerful, but by no means as shapely as the Canarsie craft; the latter made a very good appearance both at anchor and under way, the skipjack sides being carried out into long ends of very good proportions. The Nyack boats not only have more beam, but carry it aft, being very broad across the counter and correspondingly heavy in appearance.

FREAKS.

The two freak boats, Kittie IIIII. and Knot In It, have already been described, together with their performances in the races.

MANONTASQUOK.

This yacht certainly deserves a class by herself; we do not know

PAPRIKA.
Designed and built by L. D. Huntington. Copyright, 1896, by J. S. Johnston, N. Y.

where to class her among the others, and the owners might object if we did. She certainly deserves a description, as she is unlike anything ever seen or likely to be seen again in the class. She is an oblong box with straight, vertical sides, a straight sheer, the deck corresponding to the top of the box; and the two ends beveled upward. She is rather neatly rigged with boom and gaff mainsail. Her centerboard is about the size and shape of a New York theater billboard, and extends high in air when the boat is at anchor. Her owner had engaged the services of a well-known Corinthian to act as crew, but the gentleman did not appear at Oyster Bay on the morning of the race—in fact, his friends are still unaware of his whereabouts. The owner in the first race boldly started out single-handed and sailed probably a mile of the first leg before withdrawing.

Taking the fleet as a whole, while it was marked by much merit and originality as well as care and skill in designing, the most striking point was the lack of trial and preparation, from which some of the best boats, such as Vesper, suffered in common with the less elaborate and costly attempts. In one way there was no good reason for this, as a full year's notice was given of the trial and cup races, and the varied fortunes of Ethelwynn last fall in her contests with Spruce were heralded far and wide; so that the class had become a national rather than a purely local affair. Should the racing continue next year in the same line, of another defense of the cup in the 15ft. class, there will be quite a number of this year's boats still available: the chances of added speed being much greater through the complete

IDEAL.
Designed by W. P. Stephens. From a photo by J. S. Johnston, N. Y.

working up of existing boats than through the outbuilding of them by new ones. Thus far there is nothing to show just what progress has been made in a year, but we are of the opinion that the winner of last year, if put in the best possible condition, would easily be among the first three of the present fleet.

Seawanhaka International Cup.

MESSRS. G. H. DUGGAN and F. P. Shearwood, the representatives of the Royal St. Lawrence Y. C., of Montreal, arrived in New York on July 5 and will spend the week at Oyster Bay in preparation for the international races beginning on July 13. They bring with them the 15-footer Glencairn, designed by Mr. Duggan and owned by James Ross, of Montreal, commodore of the club and also a member of the Seawanhaka C. Y. C. This yacht was selected as the best available after many trials of the new fleet built this year for the selection of a challenger; Sothis, owned by Messrs. Duggan and Shearwood, though fast in average weather, having too little freeboard and too large a cockpit for a strong breeze and short sea. These defects were remedied in the new boat, which is 23ft. over all, 6ft. 3in. beam, 5½in. draft and with a waterline of but 12ft. 6in., giving her nearly 300sq. ft. of sail. The Royal St. Lawrence Y. C. has gone into the matter of design in this class very thoroughly this year, building a number of boats and racing them all through the spring. Starting with the general idea of Ethelwynn as a basis, the club has found a decided advantage in speed by adopting something of the scow type, with flat bottom and round bilge, with the resulting power in proportion to measured waterline, and at the same time a very short waterline has been taken, as in Glencairn.

Indian Harbor Y. C. Special Races.

GREENWICH—LONG ISLAND SOUND.

Tuesday, June 30.

THE Indian Harbor Y. C., of Greenwich, Conn., sailed a special race on June 30 for the 34ft., 30ft., 21ft., 15ft. and cat classes, the starters being:

SPECIAL 30FT. CLASS.

	Length.
Vaquero III., H. B. Duryea	....
Musme, J. M. Macdonough	....
Hera, R. N. Ellis	....
Mai, O. G. Jennings	....
Asahi, Bayard Thayer	....
Esperanza, A. S. Van Wickle	....
Carolina, Pembroke Jones	....

SPECIAL 34FT R. L. CLASS.

Dragoon, F. M. Freeman	34.00
Acushla, Wilmer Hanan	34.00
Vorant II, G. G. Tyson	34.00

SPECIAL 15FT. R. L. CLASS.

Gnome, F. M. Hoyt	15.00
Paprika, C. S. Hoyt	15.00
Glance, F. L. Downing	15.00
Microbe, H. B. Seeley	15.00
Trilby, G. G. Tyson	15.00

SPECIAL 21FT. CLASS.

Celia, W. S. Gould	....
Vaquero, W. G. Brokaw	....
Maysie, Wm. Osborn, Jr	....

CABIN CATBOATS—30FT. R. L. AND UNDER.

Dorothy, George Hill	28.30
Volsung, J. De Forest	....
Oconee, C. T. Pierce	26.00
Weasel, T. E. Ferris	24.85
Mary II., Wm. E. Elsworth	24.10
Presto, F. M. Randall	22.60

OPEN CATBOATS, SHIFTABLE BALLAST.

Fugitive, G. E Schabbehar	27.00
Punch, Clark Bros	23.90
Brant, J. C. Varian	20.00
Bubble, A. M. Bradley	20.89
Presto, J. D. Ayres	15.00

Dorothy is the Crosby cat Step Lively, just purchased and renamed by George Hill, of the Atlantic Y. C. The courses were: For the larger classes, from off Captain's Island around Matinnicock Buoy, Center Island Buoy and home, 15 miles For the open cats and the 15-footers, around a triangle of 3-mile sides on the Sound. Some delay was caused by the grounding of the committee tug, Henry Hoehn, and it was 12:10 when the start for the 34 and 30ft. classes was given, Hera being over with the gun, followed by Asahi. The cats and 21-footers were started at 12:15, being timed:

Vaquero III.	12 15 19	Brant	12 17 10
Presto	12 15 26	Fugitive	12 18 00
Celia	12 15 42	Weasel	12 18 33
Dorothy	12 15 58	Bubble	12 18 47
Volsung	12 16 08	Punch	12 19 11
Oconee	12 16 37	Presto	12 19 47
Maysie	12 16 47	Mary	12 20 00

Glance led the 15 footers across at 12:20. The wind was light from the S. to S.W., making a beat to the Matinnicock Buoy, finally falling very light for a time. The turn was timed:

Vaquero III.	1 47 50	Dragoon	1 59 22
Esperanza	1 48 50	Vorant II.	2 02 10
Carolina	1 51 59	Celia	2 10 00
Acushla	1 54 36	Vaquero	2 11 42
Asahi	1 54 38	Volsung	2 12 18
Hera	1 55 40	Oconee	2 16 40
Musme	1 56 00	Mary II.	Not timed
Mai	1 56 03	Dorothy	Not timed

The second leg was begun with spinakers to starboard. Soon they were shifted to port and the yachts were left drifting for a time. It was after 3 o'clock when the breeze came again, sending main booms over and spinakers as well, and carrying the boats to the second mark, the Center Island Buoy, where they were timed:

Acushla	3 31 08	Hera	3 37 37
Dragoon	3 32 07	Mai	3 37 53
Asahi	3 33 31	Carolina	3 39 37
Esperanza	3 33 41	Musme	3 41 21
Vaquero III.	3 34 22	Vorant	3 40 00

There was wind enough for a reach across to the finish, the final times being:

SPECIAL 30FT. CLASS—START 12:10.

	Start.	Finish.	Elapsed.
Asahi	.. .. ..	4 31 33	4 21 33
Esperanza	.. .. ..	4 32 19	4 22 19

Punch	12 19 11	2 20 40	2 01 29	1 23 37
Bubble	12 18 47	2 28 20	2 09 33	1 27 06
Brant	12 17 10	2 49 00	2 31 50	1 47 48
Presto	12 15 26	Did not finish.		
Fugitive	12 18 00	Went wrong course.		

Asahi wins a handsome prize offered by Com. C. T. Wills, while Esperanza wins second prize, given by the club. Acushla wins the cup given by J. Kennedy Tod, and Dragoon takes second prize. Celia wins the cup given by Rear-Com. G. G. Tyson. Paprika wins a cup given by E. C. Benedict, and Trilby takes second prize. Volsung wins the cup given by Vice-Com. W. B Higgins, subject to measurement, in which case Presto takes second prize. Punch takes the cup offered by P. M. Stewart, and Bubble wins second prize. The race was managed by George E. Gartland, D. M. Merritt and C. E. McManus.

Rochester Y. C. First Club Race.

CHARLOTTE—LAKE ONTARIO.

Saturday, June 27.

THE first club race of the Rochester Y. C. was sailed on June 27, the starters being:

First class: Weno, yawl, Capt. Herriman; Nox, cutter, Capt. Wm. Miller; Iris, cutter, Capt. Christie; Facile, cat, Capt. Wm. Wood.

Second class: Nixie, sloop, Capt. Smith; Zanita, cat, Capt. McDuff; Althea, sloop, Capt. Hamilton; Nydia, cutter, Capt. Robbins; Jean, cat, Capt. Walls.

Third class: Chic, yawl, Capt. Teal; Priscilla, sloop, Capt. Delano; Viola, sloop, Capt. Waters; Zenobia, cat, Capt. Edington; Zuella, sloop, Capt. Macy.

After a close race Nox was beaten by Iris, the times being:

FIRST CLASS.

	Finish.
Iris	3 13 30
Nox	3 15 00
Facile	3 12 12
Weno	3 18 00

SECOND CLASS.

	Elapsed.
Nydia	0 45 30
Nixie	0 48 12
Zanita	0 50 00

THIRD CLASS.

Priscilla	0 47 24
Chic	Not timed.
Zenobia	Not timed.
Violet	Not timed.

Nox has never before been beaten in a club race. She is a handsome little craft designed by Will Fife, Jr., in 1892, and built by her owners, the Miller Bros., amateurs, who have sailed her with great success in all the Lake Ontario ports. She is a deep cutter, but with steel centerboard; 36ft. over all, 24ft. l.w.l., 8ft. beam, 5ft. 6in. draft. Iris was designed in 1894 by W. P. Stephens and built last year by the Spalding-St. Lawrence Boat Co. She is a cruising cutter, 32ft. over all, 21ft. l.w.l., 7ft. 6in. beam and 5ft. 4in. draft, with iron keel.

New Rochelle Y. C. Annual Regatta.

NEW ROCHELLE—LONG ISLAND SOUND.

Friday, July 3.

THE New Rochelle Y. C. fared well on July 3, on the occasion of its annual regatta, in having a fine, bright day, with warm sunshine and a breeze that kept the boats moving at a good speed all over the course. In comparison with the light weather that has spoiled so many races this year, the breeze, though light, was most satisfactory, all the yachts being able to make a race. The fleet of starters, sixty in all, was as follows:

CUTTERS AND SLOOPS—51FT. CLASS.

SPECIAL—34FT. CLASS.

Acushla, A. G. Hanan	12 11 35	3 52 08	

The yachts were started in four divisions: I., all over 30ft. racing length except special 30ft. class; II., all of 30ft. and under, except 15ft. class; III., 30ft. special class; IIII., 15ft. class. Divisions I. and III. sailed three rounds of the triangle marked by the Gangway Buoy and Old Hen Buoy, 22 miles; Division II. sailed four rounds, and Division IIII. sailed three rounds of the triangle between the starting line, Hen and Chickens Buoy and Middle Ground Buoy on Execution Reef, 17 and 12¾ miles. The start was made off the mouth of Echo Bay at 12:10 for the first division, with five-minute intervals for the others. There was some sharp work at the line when the 30-footers went over in a close bunch. Microbe, sailed by A. Bryan Alley, led the 15-footers, closely followed by Ideal.

The fleet soon split up in a way that made it difficult to follow, the larger boats starting with a beat to the Gangway Buoy, while the smaller started in the opposite direction for a free reach to the Hen and Chickens Buoy. In the 15ft. class Ideal at once took the lead, with Hope second, Microbe falling astern until she and Die Hexe were in company. Ideal gained on Hope on the windward work of the second leg, but Hope held her on the free reach across to the end of the round and on the short reach to Hen and Chickens. On the second windward leg Ideal gained a little, while Die Hexe and Microbe were having a hard battle for third place, Question being last boat. Ideal held her lead of Hope until near the end of the windward leg of the third round, when, having broken tacks, the latter came up and almost caught her at the Middle Ground Buoy. The short leg in was most exciting, Hope making a hard stern chase and finishing but 17s. after Ideal. The full times were:

The steamer Aurora carried a large party of members and ladies over the course, and by easy steaming around inside the triangle a perfect view of the whole race was afforded to the spectators. The regatta committee included Messrs. C. P. Tower, chairman; W. N. Bavier, P. A. Meyrowitz, J. R. Thomas, A. P. Weston, sec'y.

Horseshoe Harbor Y. C.

LARCHMONT—LONG ISLAND SOUND.

Thursday, July 2.

THE Horseshoe Harbor Y. C. sailed a special open race for several classes on July 2 and were in great luck in the matter of wind, having a strong and true S.W. wind all the afternoon. The course was a triangle from off the club house, Larchmont, around the Execution and Whortleberry Island buoys, 5 miles, sailed three times by the larger and twice by the smaller yachts. The wind was light at the start, but at once freshened up and made a fine race. The starting signals for the three divisions were given at 1:50, 1:55 and 2 P. M. The fleet had a beat to the first mark and a free reach to the second, where the yachts were timed:

Asahi	2 20 30	Punch	2 37 00
Vaquero III.	2 20 30	Hope	2 38 50
Departure	2 26 30	Paprika	2 39 15
Volsung	2 23 20	Ideal	2 40 00
Houri	2 31 15	Microbe	2 42 35
Vaquero	2 31 25	Kittie IIIII	2 43 25
Fugitive	2 35 00		

They jibed and set spinakers to port for the run to the line, the first round being finished:

Asahi	2 37 05	Fugitive	2 52 15
Vaquero III.	2 37 35	Edna	2 55 50
Departure	2 43 15	Punch	2 56 30
Volsung	2 41 05	Hope	2 58 30
Gavilan	2 44 20	Ione	2 59 40
Adele	2 44 50	Paprika	2 59 35
Mollie Bawn	2 44 05	Ideal	3 00 30
Vaquero	2 49 20	Kittie IIIII	3 03 10
Houri	2 49 30	Microbe	3 04 30
Presto	2 47 30	Caprice	3 17 40
Caper	2 52 25	Susan D.	3 30 35
Ethel	2 52 40		

After the windward work of the second round the times were:

Asahi	2 57 25	Vaquero	3 15 45
Vaquero III	2 58 45	Fugitive	3 18 20
Volsung	3 06 00	Punch	3 22 50
Departure	3 08 02	Hope	3 28 20
Gavilan	3 09 15	Paprika	3 30 50
Adele	3 11 15	Ideal	3 30 55
Houri	3 14 45		

The leaders were timed at Execution:

Asahi	3 05 35	Gavilan	3 19 20
Vaquero	3 07 10	Adele	3 20 05
Volsung	3 15 05	Houri	3 25 30
Departure	3 18 20		

Ideal found the breeze too much for her and lost some time in jibing. After the run in the boats were timed at the line:

Asahi	3 24 20	Punch	3 51 20
Vaquero III.	3 25 35	Caper	3 52 35
Volsung	3 34 30	Vaquero	3 44 10
Departure	3 40 10	Houri	3 44 30
Adele	3 40 55	Hope	3 57 05
Molly Bawn	3 41 05	Paprika	3 58 30
Gavilan	3 41 20	Ione	3 59 45
Fugitive	3 45 30	Ideal	4 00 40
Presto	3 45 20	Kittie IIIII	4 08 40
Ethel	3 50 25	Microbe	4 11 50
Edna	3 50 40		

This finished the race for a part of the fleet, the larger ones starting for a third round, which was finished:

Asahi	4 10 00	Presto	4 40 40
Vaquero III.	4 12 50	Ethel	4 46 35
Volsung	4 37 50	Caprice	4 47 20
Adele	4 38 50	Caper	4 49 05
Gavilan	4 39 00		

The full times were:

30-FOOTERS—START 1:50.

	Finish.
Asahi, Bayard Thayer	4 10 00
Vaquero III., H. B. Duryea	4 12 50
Departure, C. B. Seeley	Withdrew.

Ione, C. M. Bird		1 59 45	1 59 45

OPEN CATS—25FT CLASS.

Fugitive, G. E Schabbehar	27.00	1 45 30	1 45 30
Punch, M. H. Clark	22.25	1 51 20	1 44 20
Edna, George Dixon	24.06	1 50 40	1 47 22

MIXED CLASS.

Susan D., K. Whiting	14.50	Did not finish.	
Caprice, F. F. Proctor	14.10	2 47 20	2 47 20

The winners are: Asahi, Hope, Paprika (2d), Houri, Gavilan, Volsung, Presto, Ione, Punch, Caprice. Hera met with some mishap and withdrew, while Molly Bawn was disabled by the parting of her throat halyard.

YACHTING NEWS NOTES.

May, steam yacht, E. D. Morgan, Jr., has been laid up at Port Jefferson all winter, and recently came to New York to coal up. She sailed on July 3 for Newport, where she will fit out. When off Fort Schuyler, Throgg's Neck, in a dense fog about 4 A. M., she took the ground in hard sand and stuck fast as the tide fell in spite of all efforts to get off without outside aid. The Chapman Wrecking Co. sent tugs on the evening tide and hauled her off, apparently without damage. She is now painted a dark red from the plankshear down, only the bulwarks being black.

Charles Day Rose, owner of Satanita, has ordered a new cutter of the largest class of J. G. Fay & Son, to be designed by Mr. Soper, superintendent of the firm.

The Roberts Safety Water Tube Boiler Co. has been steadily improving its plant for some years and now has it in a condition where work of the highest quality can be turned out in very short time. The concern has just filled an order for a boiler of 150 horse-power from the Erie Basin Dry Docks for the yacht Sultana. The contract time was two weeks, the yacht being required by July 4, but the boiler, of the best workmanship, was turned out in eight working days from the receipt of the order.

Pavonia Y. C. Annual Regatta.

JERSEY CITY—NEW YORK BAY.

Monday, June 29.

The Pavonia Y. C., of Jersey City, sailed its annual regatta on June 29 over the regular club courses on New York Bay. There was a moderate westerly breeze during the race, which was sailed in good time. The day was fair and bright, and the members who followed the race on the steamer Laura N. Starin enjoyed a pleasant day. The times were:

CLASS A—SCHOONERS.

Adele Rae, Charles Rae	16.08	Did not finish.	
Maggie P., C. H. L'Esperlen	16.03	Did not finish.	

The winners were: Forsyth, Nomad, Elcas, Mary II., Presto, Tempest, Mavourneen, Chic. Mavourneen wins, subject to measurement.

Beverly Y. C.

THE 233d race, first championship, was sailed off the club house June 27.

The early morning was a flat calm, so that several boats were unable to get to the line in time.

At the start there was a trifling N.E. air, fading out to a calm, but succeeded by a light southwesterly air which took the boats over the line.

The old Surprise, rebuilt, won in second class, while in third class Colymbus surprised every one by winning handily.

In fourth class Grilse, as usual, won in the jib and mainsail division, while in the cat division Mr. Burgess' new Elsa proved very fast, winning by 10 minutes.

Hebe and Vif made a very pretty race in the fifth class, Hebe leading on first round, but Vif taking the lead on the second.

Judges—W. Lloyd Jeffries, S. G. King.

SECOND CLASS CATS.

	Length.	Elapsed.	Corrected.
Surprise, J. M. Codman, B. Y. C.	24.03	3 02 22	2 48 01

Imp, George B. Dabney, B. Y. C.	14.05	2 33 06	2 18 28

Surprise, Colymbus, Elsa, Grilse and Vif take first prizes and legs for pennants; Mist, Melro and Aovist take seconds.

Silence has not been measured.

Stamford Y. C. Special Class.

STAMFORD—LONG ISLAND SOUND.

Monday, June 29.

THE Stamford Y. C. sailed successfully a special race for the 30ft., 21ft. and 15ft. classes on Monday. Two triangles were laid out, one of 3 mile sides, sailed twice by the 30ft. class, making 18 miles, and one of 2-mile sides, sailed twice by the 21ft. and once by the 15-footers; 12 and 6 miles respectively. The first leg of each course was S.W., or to windward in a good breeze. The 30-footers started at 11:35, going over in a bunch. The 21-footers went away at 11:40, with Celia in the lead. The 15-footers started at 11:45, Paprika being first. Gnome was handicapped 11m., but started in for a stern-chase. Asahi was first of the 30-footers, but on the second leg, with spinakers set, the breeze fell, and let the rear boats up on the leaders. The first round was timed:

Celia	1 21 00	Vaquero III.	1 21 00
Vaquero	1 21 10	Musme	1 21 10
Asahi	1 19 31	Esperanza	1 21 33
Wawa	1 19 51	Carolina	1 21 38
Mai	1 19 51	Hera	1 22 26

The 21-footers had a close finish, Celia ahead, but she was disqualified for luffing Vaquero. The times were:

30-FOOTERS—START 11:35.

	Finish.	Elapsed.
Asahi	2 50 14	3 15 14
Vaquero III.	2 51 43	3 16 43
Esperanza	2 52 14	3 17 14
Wawa	2 53 12	3 18 12
Mai	2 53 38	3 18 38
Musme	2 54 28	3 19 28

Microbe	1 21 52	1 36 52

The race was managed by the regatta committee, E. E Bruggerhof, J. R. Whiting, Jr., and Stewart W. Smith.

Corinthian Fleet.

NEW ROCHELLE—LONG ISLAND SOUND.

Wednesday, July 1.

THE Corinthian Fleet, of New Rochelle, sailed a special race for the 30ft. and 15ft. classes on July 1, open to all yachts in the classes enrolled in any organized yacht club. The course for the 30-footers was from off the club station, Echo Bay, around Matinnicock buoy, thence around the Gangway buoy and home, seventeen miles. The 15-footers sailed twice over the triangle from the starting line past Execution striped buoy, then past the Hen and Chickens buoys and the Premium Point buoy, turning at the latter after the first round and sailing the second round in the reverse direction. There was a moderate S.W. wind. The start was made from the gun, the 30-footers at 12:50, the 15-footers at 12:55. Vaquero III. led over the line, followed by Hera, Asahi, Esperanza and Departure. The first leg was a reach with booms to port, after turning the buoy they had a beat to the second mark, at which the order was: Asahi, Esperanza, Hera, Vaquero and Departure. The finish was made under spinakers, Esperanza running Asahi very hard. Paprika led the fleet in the 15ft. class and won easily. The times were:

30-FOOTERS.

	Length.	Start.	Finish.
Asahi, B. Thayer	30.00	12 50 00	3 30 02
Esperanza, A. S. Van Wickle	30.00	12 50 00	3 30 25
Hera, R. N. Ellis	30.00	12 50 00	3 32 47
Vaquero III., H. B. Duryea	30.00	12 50 00	2 46 24
Departure, C. B. Seeley	30.00	12 50 00	3 40 37
15 FOOTERS.			
Saghaya, H. C. Smith	12 55 00		3 34 49
Paprika, C. S. Hoyt	12 55 00		3 17 25
Kittie IIIII, H. Morse	12 55 00		3 44 30
Hope, H. Iselin	12 55 00		Disabled.
Question, L. D. Huntington	12 55 00		3 24 09
Microbe, H. B. Seeley	12 55 00		3 30 20
Willada, W. G. Newman	12 55 00		3 22 17

Hope broke the jaws of her gaff and withdrew. Asahi and Paprika won first prizes, Esperanza and Willada second. The race was under the management of the regatta committee, Messrs. W. W. Hollingsworth, R. F. Clark, W. R. Corwine and E. T. Birdsall.

The Payne Bill.

DETROIT, June 26.—*Editor Forest and Stream:* I have noticed in your paper for the past few weeks arguments in favor of granting American registry to yachts built abroad, especially to steam yachts. You state that American-built yachts are years behind the times, and that to your eye they are not as pleasing as English-designed vessels. I fear that you judge our home-built yachts by a British standard. However, there are Americans who can see beauty in the American model and in the appearance of our home-built yachts. Perhaps it may be well to examine the reason why the English yachts differ so much from the products of our own shipyards. An Englishman usually builds his yacht so that he may take a cruise to the Mediterranean, which is an outside passage requiring some days and a very stanch vessel. An American builds his yacht to cruise along our coast, where the harbors and sounds are numerous, so that a light draft and speedy craft is much more serviceable than a lumbering, seagoing, deep draft, square-rigged vessel, which requires a very large crew and is expensive to run and keep up. Every time a yacht owner wishes to go to Newport or up the Sound he does not want to get on board of an ocean steamship; he wants a swift, comfortable, economical yacht, and I believe that is what our American shipyards endeavor to turn out. The American yacht owner who goes abroad in his craft is a rarity; he prefers journeying on a trans-Atlantic greyhound, and where one has the nerve to sail in his own craft he is heralded from one end of the land to the other.

In appearance, the American steam yacht, I admit, does not as a general rule fill the eye of a true salt as well as the British craft, but for our waters I believe the American yacht is superior. But few seagoing craft have been built in this country; however, those that have been constructed have proved their worth, several having traveled over many seas—around the world in some instances.

I fail to see why it is just and right to grant American registry to foreign-built yachts when the same privilege is denied foreign-built cargo vessels. It seems to me that the Government is legislating in favor of the millionaire's pocket and granting benefits to foreign labor in foreign countries when it grants to the rich privileges denied to the struggling ship owners. I am an American who believes that it is unfair to permit our moneyed men to spend abroad vast sums for yachts when that money could be spent in our own country and among our own laborers. Let the yacht be designed abroad and built here, or better yet, import good designers and encourage their trade on this side of the water by the Payne bill. If you remember, the first ships in the new navy were designed abroad and built in American shipyards, and the later vessels designed in America were great improvements on the imported designs, placing our ships superior to those of all nations, and yet we did not have them built abroad.

You are on the wrong tack, Mr. Stephens; you should use your influence to encourage better work on American designing tables instead of on foreign ones. There is at the present day near your city an academy for instruction in designing and building vessels of all kinds, from the largest to the smallest craft (Webb's Academy, Fordham Heights). Your motto should be "American-built ships for Americans."

P.S.—Will you kindly publish this letter as a fair thing to the other side? RICHARD P. JOY.

Our correspondent might have omitted the postscript; in opening this discussion some weeks since we determined to pursue our usual policy of giving a fair opportunity to both sides. We are familiar with Mr. Joy's strong views as to a certain end, the revival of American shipping, and in this he has our hearty sympathy, but we do not share the equally strong views which he holds as to the best means. We fear that he has not followed carefully the entire discussion, or he would understand better our position, taken long years ago, in the interests of the American designer, and he would not bring up against us a point we ourselves made a short time since, that the new vessels of the United States Navy, built virtually in competition with British designs, had surpassed the latter.

After intimating that it is our judgment and not the American steam yacht that is at fault, Mr. Joy a little later on admits the inferiority to the British yacht which we claimed.

The difference in type between the British seagoing steam yacht and the American coasting yacht has already been discussed by us and does not enter into the question; to make it plainer to our correspondent we will state again that we are fighting the system of designing, to call it by a name to which it is not entitled, by which steam yachts are produced by the firms which are back of the Payne bill. Assuming that a contract is signed for a yacht of a certain type, seagoing or coasting, as the case may be; the builder ignores the designer entirely and starts on a mode of procedure that is nothing short of a disgrace to the name of American shipbuilding. The drafting room is searched for all the plans of steam yachts, regardless of quality or age, and this collection is put into the hands of an under draftsman, a German or Scandinavian, to be hashed up into a new design. Meanwhile the foreman of the pattern shop is set to work to hunt out old patterns, from which engines of a kind can be put together at the least possible expense. What wonder is it that the result of such work is a nondescript failure, devoid of style and shipshape appearance, faulty in dimensions, elements and model, and with out-of-date engines that fail to make the required speed. This is no fancy picture, but the plain truth. Our correspondent alludes to the yachts which have proved their worth in foreign voyages. Does he refer to Wadena, cut apart and lengthened in order to make her fairly safe; to Atalanta, treated in the same manner; to Columbia, whose owner has made one short trip at sea in her, returning by land; or only to the one yacht, Eleanor; which has made a record for a really creditable performance in sea service? Where is the swift, comfortable, economical yacht which carries her owner from New York to Newport? Is it Nourmahal, Electra, Alicia, Anita, Thespia or the others mentioned?

We are looking at this question solely from a yachting standpoint, and without reference to the general issue of free ships; and considering that a yacht is a means of spending money and not of making it; that the maintenance of a national system of yachting and a large pleasure fleet is of vital importance to a nation with such a sea coast as ours, and that yachtsmen ask nothing in the way of aid or subsidy from the Government, we believe that they should be allowed a certain freedom in return.

Leaving aside all theory and looking at the facts of history, we believe that the best interests of American yachting, both in steam and sail, will be advanced by a continuance of that policy under which such a marvelous advance has been made in the sailing fleet, and which has done so much for the American designer, builder and workman.

The assumption that the Payne bill is in the interest of either the designer or the workman is contradicted by the every-day facts. Given his monopoly of the business by the exclusion of all foreign-built craft, will the builder be any more willing to acknowledge his own incapability and to pay for the skill of the designer than when he was to a certain extent in awe of foreign competition? Will he, assured of this monopoly, raise the wages of his hands above the lowest point at which he can employ smuggled foreign labor?

It is through the influence of the FOREST AND STREAM, more perhaps than through any other single factor, that American yachtsmen have been brought to a tardy recognition of the very different functions of the trained designer and the practical builder; and that the yachts of to-day are designed by such experts as the late Mr. Burgess, A. Cary Smith and Herreshoff, the builders in the meanwhile finding more work than in the old days, when they aspired to combine the two distinct occupations. We hope to continue the same work until the yachtsman who desires a steam yacht will go as a matter of course to the designer instead of sending his captain to a builder. We would like to push it further until even the commercial man, slow as he is to learn where his best interests lie, awakened to the appreciation of the fact that if he would reduce his coal bills, increase his carrying capacity by getting rid of ballast by the hundred tons stowed in the end of a vessel to trim her, and convert what is too often a very small margin between profit and loss into a balance on the right side, he must look to the expert designer and not to the mere builder. We should like to see the art of naval design in America placed where it was fifty years ago, ahead of the world; when this is indeed the case there will be no need of Frye or Payne bills to insure "American ships for Americans."

Editor Forest and Stream:

Inclosed you will find a clipping from the platform of the Republican party:

"We favor restoring the early American policy of discriminating duties for the upbuilding of our merchant marine and the protection of our shipping interests in the foreign carrying trade, so that American ships, the product of American labor employed in American shipyards, sailing under the Stars and Stripes, and manned, officered and owned by Americans, may regain the carrying of our foreign commerce."

I should like to call attention to what is evidently a misprint. In the fourth line "the product of American labor employed in American shipyards" should read "the product of foreign labor employed in American shipyards." WM. B. COLLIER, JR.

We fear that our correspondent is inclined to treat lightly and flippantly that sacred fiction that, in the shipping industry at least, only American labor is protected by such laws as the proposed Payne bill. Plain as it is to all thinking people, the truth should not be spoken aloud, that this great nation that once led the world in the designing, building and running of ships relies to-day on Great Britain first and the northern nations of Europe next for the majority of not only the muscle but the brains of its entire shipping business. There was indeed a time when the American ship was the product of American labor, both in the office, the mould loft and the shipyard, but thirty years or more of that policy which animates the Payne bill has extinguished both the skill and the ambition of the American builder, and he is content to quietly open the side gate of his yard to foreign labor of all classes, from the designer and draftsman down to the humblest "boat yarder" who handles a shifting spanner or a spud wrench.

The Evasion of Waterline.

Editor Forest and Stream:

In the name of the designers of Kittie IIIII. and In It, I most strongly object to the charge of unfair intentions made in the article published in the FOREST AND STREAM of July 4, entitled "The Evasion of Waterline Measurement." As I was concerned in the building of one of these boats, I challenge the statement that there was any violation of any rule covering the measurement of the 15ft. class.

The builders of these boats are certainly guilty of an offense, one which in all ages has subjected a man to the vilification and ridicule of his contemporaries, an offense for which the greatest and noblest of mankind has suffered, an offense that entitles its committer to no consideration in the court of the present and that can look only to posterity for a rational hearing and a just finding. This offense is that of originality. Had the builders of these "freaks" been content in suppliance to follow the path of imitation, had they refrained from striking out broadly and boldly in a new direction, they would have failed, as many others failed, unnoticed; for both curiosity and malice abhor the commonplace. But let it be said of them that they failed not because they imitated, but because they originated.

But aside from that, these men accepted the invitation of the Seawanhaka Corinthian Y. C. and built their boats in good faith at their own expense, and the loss entailed by the failure is theirs to shoulder. They asked nothing but the opportunity to sail their boats in the races, and this the club granted, knowing that while the boats were extremes, they did not violate the text of the rule. If the party most concerned, the Seawanhaka Corinthian Y. C., failed to object to the presence of these freaks, what business is it of the outsider to do so? Yet their presence seems to have a nettleish effect upon certain people. They have wrought themselves into a white fury over what they are pleased to consider an evasion of Rule II. of the L. I. Y. R. U.

No one knows better than I do how difficult it is to deal justly with such a question as that involved in the form of these freaks, but let us remember that if men confined their efforts to imitating older models, and had never made bold and unprecedented advances, the splendid speed machines of the present day would not be in existence. It has been by a series of such daring innovations that the American designer has taken his present position at the forefront of the craft; to this spirit of originality we owe our successes, and if in the future we are to continue our victories, it will be by a display of that courage which dares to court failure by an appeal to extremes.

THOS. FLEMING DAY.

The question of the intent and wording of Rule II. is entirely too broad a one to be narrowed down to a discussion of the ethics involved in the designing of two particular yachts for a certain contest. Even admitting all that Mr. Day claims for the owners and designers of these two boats, and that they were within the letter of the rule, there still remains the question where the line is to be drawn, as it must be evident that a point can be reached which does unfairly evade the rule. If the rule is to be so construed as to make it a dead letter, then it were better out of the book; if it is to be construed in accordance with what many believe to be its intent, then the question must be taken up of what is a fair line. Our correspondent makes an excellent plea for originality and enterprise in designing, the truth of which in the abstract we fully recognize. At the same time there is probably no other sport in which the crank inventor flourishes as in yachting. It will not do to accept every new invention under the broad cloak of originality, but one must use his best judgment and draw the line somewhere between the practicable and the impracticable. So far as our individual judgment goes, after some consideration of the theories embodied in the two yachts mentioned, we are decidedly of the opinion that the experiment is one that can do very little to advance the general knowledge of yacht designing; and that the unquestioned skill of the designers of the boats might have been employed to far better advantage in some less extreme line of experiment.

The Cleveland Centennial Regatta.

THE Cleveland Y. C. will hold a series of open races on the occasion of the centennial celebration of the city of Cleveland next month, the programme being as follows. Every effort will be made by the club to secure a large attendance of yachts and to offer a hearty welcome to all yachtsmen.

Monday, Aug. 10: Reception of yachts and guests by reception committee. Registering of yachts. Review of yachts at 2 P. M., under command of Commodore Worthington. Meeting of captains and sailing masters at Cleveland Y. C. house at 8 P. M.

Tuesday, Aug. 11: Races for 25ft. and 35ft. classes and for open boats under 20ft. C. L. Meeting of captains and sailing masters at club house, 8 P. M.

Wednesday, Aug. 12: Races for 30ft. and 40ft. classes. Meeting of captains and sailing masters at club house, 8 P. M.

Thursday, Aug. 13: Races for 46ft., 55 ft. and for yachts above 55ft. At 8 P. M. refreshments will be served at club house to visiting yachtsmen and members, concluding with distribution of prizes.

Prizes.—First class, yachts over 55ft. c. l.—First prize, $275 and marine glass, value $25; second prize, $175 and rug, value $25. Com. Geo. W. Gardner also presents a solid silver cup, valued at $200, to be given to winner of first prize in this race, and which, when won three consecutive years by the same yacht in races sailed at Cleveland, is to become the property of that yacht, the cup to be held by the winning yacht each year, and a bond for same to be given the Cleveland Yacht Club, and the cup to be returned to C. Y. C. before the date of the next race.

Fifty-five-foot class (55ft. and over 46ft. c. l.)—First prize, $200 and silver punch bowl and ladle, value $50; second prize, $100 and yachting suit, value $25.

Forty-six-foot class (46ft. and over 40ft. c. l.)—First prize, $125 and silver champagne bottle holder, value $20; second prize, $100 and mackintosh, value $25; third prize, $75 and chair, value $20.

Forty-foot class (40ft. and over 35ft. c. l.)—First prize, $100 and rug, value $25; second prize, $75 and buckhorn library ornament, value $25; third prize, $60 and barometer, value $15; fourth prize, $40 and copy of "Lorna Doone," value $5.

Thirty-five-foot class (35ft. and over 30ft. c. l.)—First prize, $100 and high grade bicycle, value $100; second prize, $70 and tankard, value $20; third prize, $50 and tablecloth and napkins, value $10; fourth prize, $30 and two pairs yachting shoes, value $6

Thirty-foot class (30ft. and over 25ft. c. l.)—First prize, $100 and yachting suit, value $25; second prize, $70 and barometer, value $20; third prize, $50 and stein, value $15; fourth prize, $30 and 100 cigars, value $7.50.

Twenty-five-foot class (25ft. and under, c. l.)—First prize, $75 and marine glass, value $25; second prize, $50 and suit of yachting clothes, value $15; third prize, $30 and loving cup, value $15; fourth prize, $20 and pair of yachting shoes, value $5.

Open class (open boats, 20ft. and under, c. l.)—First prize, $30 and 100 cigars, value $7.50; second prize, $20 and pair yachting shoes, value $3.

Entries.—Entries are restricted to club yachts in cities where there is a yacht club, but unattached yachts may enter from cities where there is no yacht club. In any case, entries are restricted to *bona fide* pleasure yachts.

Postponed Races.—In case of a postponed race the race will be sailed the next day.

Rules and Regulations.—These races will be sailed under the rules and regulations of the Cleveland Y. C., and pamphlets giving the rules, etc., can be had from the regatta committee, at the club house, on application.

Entry of Yachts.—All yachts must enter and receive sailing number from the race committee, at the club house, before 2 o'clock of the day preceding the race for their class, and must give a certificate of measurement from the secretary of their club, or be measured by the C. Y. C. measurer. The race committee reserves the right to measure any winning yacht after the race.

Course.—The course will be an equilateral triangle seven miles on each side for all classes above 30ft., and a triangle of five miles on each side for all classes of 30ft. and under.

The first leg will run N.E. from start, which will be from between two stake buoys set in front of club house. Second leg W. by N. ¼ N. Third leg S. by E. ¼ E.

The buoys marking larger triangle will have red flags flying, and buoys marking smaller triangle yellow flags.

Starts.—Tuesday, Aug. 11.—The preliminary gun will be fired at 9

A. M.; at 9:15 starting gun for 35ft. class; at 9:20 starting gun for 25ft. class; at 9:25 starting gun for open boats under 20ft. c.l.

Wednesday, Aug. 12.—The preliminary gun will be fired at 9 A. M.; at 9:15 starting gun for 40ft. class, and at 9:20 starting gun for 30ft. class.

Thursday, Aug. 13.—The preliminary gun will be fired at 9 A. M.; at 9:15 starting gun for yachts above 55ft. c.l.; at 9:20 starting gun for 55ft. class, and 9:25 starting gun for 46ft. class. The handicap gun will be fired five minutes after the starting gun, and when more than one class starts the handicap gun for first class starting will be the starting gun for next class.

Time.—All announcements and starts are based on central standard time.

Rendezvous and Anchorage.—The rendezvous for anchorage will be inside the west breakwater, where there is good holding ground and protection. The west end of west breakwater is best holding ground.

Ferry.—A ferry will run continually between the west pier and club house.

Bulletin Board.—All other announcements will be posted on bulletin board at club house.

The following is the programme for events on Lake Erie in August: Aug. 3. regatta at Port Dover, Ontario; Aug. 6, regatta at Erie, Pa.; Aug. 10-14, regatta at Cleveland, O.; Aug. 17-20. interlake regatta at Put-in-Bay, O.; Aug. 24, international regatta at Toledo, O.

Race committee: Phil P. Wright, chairman; G. H. Gardner, W. R. Huntington, E. A. Overbeke, J. N. Richardson, John Barth.

Executive committee, P. W. Rice, chairman.
Refreshment committee, R. S. Aikenhead, chairman.
Entertainment committee, E. E. Beeman, chairman.
Reception committee, W. R. Huntington, chairman.
Finance committee, E. W. Radder, chairman.
Fleet Captain, W. R. Huntington.
Centennial regatta committee: Com. Geo. H. Worthington, chairman; Geo. W. Gardner, E. E. Beeman, P. W. Rice, E. W. Radder, John Barth, E. A. Overbeke, J. N. Richardson, B. D. Munhall, W. R. Huntington, Thos. Robinson, R. S. Aikenhead, W. P. Francis, G. W. Luetkemeyer, G. H. Gardner, Phil P. Wright.

Larchmont Y. C. Annual Regatta.

THE Larchmont Y. C. this year prepared for the largest regatta that it has ever held, and but for one unfortunate fact the expectations of the committee would no doubt have been fulfilled. There was present in and about the harbor a very large fleet, of which no less than ninety-five had entered for the regatta, all classes from the big schooners down to the 15ft. being represented. After a clear warm day on Friday, a strong breeze sprung up from the eastward about midnight, raising a sea off the harbor that tumbled the largest yachts about with little ceremony, and drove down a pall of dense fog in the morning. The club steamer and committee boat were on hand with hundreds of ladies, racing men, committee men and general spectators, but the fog hung dense and obstinate over the whole of the Sound. Such yachts as came in reported the weather as worse outside than about the harbor. After waiting until long after noon, the regatta committee posted notice that the regatta was postponed until July 18, the open race already scheduled for that date being abandoned. The wisdom of this decision was generally concurred in, though every one was disappointed. It would have been in no small degree dangerous to have started so large a fleet, and composed of yachts of all sizes, over short overlapping courses in such weather.

Defender and Valkyrie.

DEFENDER still lies idle in New Rochelle Harbor, a boom of logs having been placed around her to protect her from attack by hostile rowboats. On July 4 Capt. Dixon sailed from Southampton for New York with a crew, it is stated, to fit out Valkyrie and take her back to British waters.

A. C. A. Membership.

APPLICATIONS for membership may be made to the purser of the division in which the applicant resides on blanks furnished by purser, the applicant becoming a member provided no objection be made within fourteen days after his name has been officially published in the FOREST AND STREAM.

Rifle Range and Gallery.

The Power of the Modern Small Bore.

THOUGH small bore smokeless powder rifles of various models especially adapted to the use of sportsmen have now been on the market for some time, the question as to their value as game killers seems no nearer solution than ever. Some hunters who have tried them condemn the small bores as utterly worthless, while others of equal or greater experience cannot say enough in their praise.

Nor is this diversity of opinion to be wondered at when we see how the military men themselves, the originators of the weapon, differ in their judgment, and how they cite results in support of both sides of the argument that are just as certain of verification as they are difficult of reconciliation.

On the one hand proof is given of the skulls of men and bears being shattered as though by some powerful explosive within by the passage of small bore bullets, while on the other hand unanswerable facts are brought forward to show that men and animals have been shot through and through without suffering any great inconvenience.

It is safe to assume in both cases, however, that some important factor has been overlooked.

As Lieut. Whistler pointed out long ago, the shattering effect of the bullet all depends on the range, for while at short distances the effect is often terrific, at long ranges it is comparatively trifling. And now comes Dr. Enrique Pedraza, a Spanish military surgeon who has had experience in the Cuban war, with further testimony to this effect. The doctor in an article to the *Revista de Ciencias Medicas*, of Havana, which has been reprinted in the *Lancet*, says that his preconceived ideas on the subject were that the small bore nickel-coated bullets ought to produce a "clean and minute wound with little hemorrhage, easy to close on the field and therefore likely to heal rapidly in the hospital, more especially as the bones would be bored through rather than shattered, and as there would be little chance of foreign matter being introduced into the wound by the projectile itself." His expectations were not realized by the first cases of primary wounds from Mauser projectiles which he saw at Manzanillo, and he was greatly surprised and disappointed.

"With longer experience, however, he learned that the benign results he had expected to see do occur, but only when the enemy is 150yds. or more distant. When the patient is shot at from 10 to 70yds. the destruction of the tissues is very great, and it is this that has given rise to the suspicion that explosive bullets were being used, especially as the orifices of entrance and outlet are sometimes so small that they can scarcely be seen. The explanation suggested is that the shock which the enormous velocity of the projectile produces on entering the soft parts causes them to behave as a fluid or semi-fluid does when inclosed in a box and 'shot through,' the hydraulic pressure bursting the sides, or, if an opening be left, driving a column of the fluid through it. * * * In striking contrast to such wounds are those produced at 150yds. or more by the Mauser rifle. Here the entrance and outlet are very small, and there is but little evidence of internal destruction, even bones being tunneled through without fracture, and as aseptic treatment is possible from the first, a rapid recovery may usually be anticipated. Thus, in one case where the projectile entered the abdomen in the eighth intercostal space on the right side, passing through the stomach and coming out three fingers' breadth on the left of the sternum, though the ninth rib was fractured and the patient suffered from vomiting, hamatemesis and fever, he very soon improved and recovered completely. In another case the projectile entered the left frontal eminence, passing out by the right parotid region. The patient suffered from concussion of the brain, ecchymosis of both the right eyelids, with some difficulty of vision of that eye, but recovered in twenty-six days."

But why does the projectile of the small bore tear at short ranges and not at long ranges? Chiefly, no doubt, because of its tremendous rotary motion in connection with its great velocity, which imparts to it an erratic motion.

Beyond 150yds. it has settled down to a regular flight, and its effects may then be classed as similar to those produced by the ball from a black powder rifle of equal caliber, such as the .32-20, at shorter distances.

Leaving aside for the moment the question of caliber, the modern mall bore differs from the black powder rifle chiefly by reason of the greater velocity imparted to its projectiles and their more rapid rotary motion. While the .45-70 U. S. Government rifle is credited with a muzzle velocity of 1,270ft. per second, the small bores reach nearly double this figure, ranging from 2,000ft. per second upward, and while the black powder gun as made at the Springfield armory has one turn of the rifling for 22in. length of barrel, the twist in the case of the smokeless powder small bore sometimes approximates as high as one turn in 6in.

With a pent up energy behind it double that given the older projectile, and a spiral path to travel that turns nearly four times where the other turned once, it is no wonder that the steel-clad bullet leaves the modern rifle with unprecedented viciousness.

Reduced to a nutshell the case seems to be thus: at short ranges the modern small bore smokeless powder rifles have a power for tearing and shattering far in excess of what our preconceived ideas based on experience with other rifles would lead us to believe; while at longer ranges the projectile pierces without much shock and the effect then corresponds to that produced by any small bullet.

The use of half-manteled bullets increases the shock at long ranges, but when mushroomed to their greatest extent these bullets hardly equal the diameter of the calibers commonly used for large game, while their weight is considerably less.

Cincinnati Rifle Association.

CINCINNATI, O., June 28.—To-day was an off day for most of the boys, judging from the scores made. A stiff fishtail wind proved a serious handicap. Below are the scores made:

Conditions: 200yds., strictly off-hand, standard target, 7-ring black:

Presque Isle Rifle Club.

THE Presque Isle Rifle Club champion cup shoot was held at their range Saturday, July 4. The severe rain storm interfered with the making of any large scores. The cup was won by Mr. Germann with a total of 223 out of the possible 300. Conditions: 200yds, Standard American target, 7 ring black, off hand. The following is the official score:

J G Germann	9	7	8	8	5	9	7	6	10	8—77

1897.

March 23-25.—NEW YORK CITY.—The Interstate Association's fifth annual Grand American Handicap at live birds.

June (third week).—CLEVELAND, O.—Fourth annual tournament of the Chamberlin Cartridge and Target Company.

The Syracuse "Herald's" Tournament.

THE Syracuse *Herald's* shooting tournament was held in Syracuse June 29-July 4, on the State fair grounds. The scores which follow show the character of the work accomplished:

FIRST DAY, JUNE 29.

Thirty-two shooters took part in the 16 events scheduled for to-day. A wind that blew strongly militated against good scores, still the boys rolled up some big totals at times. Fulford made the excellent score of 24 out of 25 in event No. 7, the conditions being 15 singles, expert rules and 5 pairs; Fulford lost his 11th bird in the singles.

As stated elsewhere, four sets of traps were used, four events being decided at each set. Nos. 1-4 in the table given below were at known angles and were shot at No. 1 set of traps; Nos. 5-8 were shot on No. 2 set and were all decided under the expert rule. Nos 9-12 were shot on No. 3 set of traps and were at unknown angles; No. 13-16 were shot on No. 4 set of traps and were also unknown angles:

SECOND DAY, JUNE 30.

Good scores were the rule to-day, although there was quite a breeze blowing. In No. 4, 10 targets, unknown angles, the "Fulford squad" did some good work, breaking 56 out of 60, Kelsey dropping the 4 targets by the squad, all the rest going straight. Fulford again broke 24 out of 25 in No. 7, this time losing the first target of his last pair; the conditions were: 15 targets, expert rule, and 5 pairs. The programme to-day was the same as on June 29. Scores:

Trap-Shooting in Chicago.

CALUMET HEIGHTS GUN CLUB.

June 27.—In the trophy contest of the Calumet Heights Gun Club held to-day Patterson won in Class A, Marshall in Class B and Chamberlain in Class C. The attendance was small owing to the near approach of July. Weather conditions to-day were clear atmosphere with a north wind blowing. Regular programme arranged for the Fourth of July. Scores to-day were:

Trophy contest:

Class A.

Patterson.....1111111011111011111111011—22

Nos. 1 and 2 were at unknown angles; No 3 was "snipe" shooting; No. 4, "snipe" shooting at 5 pairs; No. 5 also "snipe" shooting at 10 singles and 5 pairs.

EUREKA GUN CLUB.

June 27.—The Eureka Gun Club held its regular shoot this afternoon at Auburn Park. The trophy contest and the E. C. cup shoot were the main events on the programme. The conditions of the trophy contest were 25 targets, unknown angles. Steck was the winner in Class A, Glover in Class B, and Dr. Morton in Class C. Scores:

Class A.

Steck.....1111011111101111111111101—22
Stannard.....1011001111111111011011111—20

Steck		0111111111101110110111111—21

The E. C. challenge cup contest was a handicap affair. Shooters are divided into classes A, B and C. Class A stands at 20yds., Class B at 18yds., and Class C at 16yds. A strong wind quartering from the right behind the targets made their flight low and the shooting hard. Deering won the cup, which he holds subject to challenge. Scores:

The Rose System Explained.

It is a remarkable thing that the unjust system of dividing purses in trap-shooting sweepstakes at present generally observed should have been permitted to exist even for a short period of time. The idea that a man could get a larger share of the purse by losing a bird or target than by killing or breaking the same is absurd, not to say unjust. It sapped the very principles of a just competition; that is to say, one in which the competition was to determine the superiority of the contestants, and the rewards which were to go to those who were truly the best. It had the fatal failing that honest competitive work and greater skill often resulted in direct loss. The system became the father of the dropper and the pooler, two gentlemen who have done much to keep shooters away from the traps and to harass those who participated.

That the faults in this system were fully understood a long time ago is proved by the promulgation and trial of several other systems, such as the Pumphrey, the McMurchy, "Jack Rabbit," etc. Each of these systems had its merits, and we look upon the "Jack Rabbit" system as barred only owing to the amount of work it entails upon the cashier's department. It was not until the Rose system was brought to our notice that we felt at all satisfied that the right theory and practice had been hit upon.

Some eighteen months ago a New England correspondent sent us a system of dividing purses in trap-shooting sweepstakes that seemed to fill the bill exactly. It absolutely did away with all cause for dropping for place—the more a man broke, the more cash he received—paying a man according to his deserts. The system also did away with the injustice and anomalies of class shooting which were inseparably a part of the old system, making it impossible for one man to receive less for a higher score than another received for a lower score.

The system pleased us so well that we described it at length in these columns, calling it the "straight-out" system, a name which still sticks to it in certain localities. Within two weeks of the publication of that description we received from Mr. A. R. Rose, of Salida, Col., a letter in which he informed us that the system we mentioned had been devised by himself many months prior to that date, adding that he had copyrighted some score blanks on which appeared a full explanation of his system and its workings. He inclosed us some blanks which showed that he had gone very fully and carefully into the matter. Our hat was off at once to Mr. Rose, and we gladly accorded him the honor of discovery of a system which we believed, and still do believe, would do much to increase the popularity of trap-shooting were it generally adopted.

As with all new ideas it has had to make its way against considerable opposition, chiefly, it must be said, through ignorance of its equitable methods rather than through a correct apprehension of its actual workings. But it is making its way to the front rapidly enough to satisfy us that our first conception of its merits was correct.

The indorsement of the system by the Interstate Association at its annual meeting last winter was a great step toward a more general recognition of its merits. It was tried at the Interstate's tournament at Charleston, S. C., and the Palmetto Gun Club now advocates the use of no other system. It will be used on both days of the Portland (Me.) tournament, July 22-23. At Binghamton, N. Y., it is the only system used at either club shoots or tournaments, and we are informed that all purses in the New York State shoot of 1897 at Auburn will be divided under this system. It has also been used this year at the State shoots in Montana and Iowa, as well as at various other shoots East and West within the past few months. Where it was used at one shoot last year we think it is safe to say that it was used at five this year.

While attending the large tournaments of the circuit of 1896 we found ample proof that the system was attracting a great deal of attention. Never a day passed that we were not asked to show and explain the workings of the system. The opinion we heard expressed regarding it satisfied us that we had made converts of many. The only ones who held their peace or who were very guarded in their statements were the crackerjacks, and for cause. They realized that if the system was generally adopted all chances of "a big pot alone" would be gone, and that they could no longer make "big killings." We can assure them, however, that a shooter who shoots consistently well during a tournament is more certain of filling his pocketbook under the Rose system than under the older method of dividing purses. But above all, it is fair to all shooters alike.

In order that readers of FOREST AND STREAM may become perfectly familiar with the workings of the Rose system, and thus be enabled to figure out the results in events under both systems, and compare the results so respectively arrived at, we have decided to give the explanation of the Rose system given by the Interstate Association in its programmes. This explanation runs as follows:

(1) Decide upon the number of moneys into which the purse is to be divided, and then find the ratio into which it will be divided from the following table:

If into
2 moneys—at the ratio of 5 to 3.
3 moneys—at the ratio of 5 and 3 to 2.
4 moneys—at the ratio of 5, 3 and 2 to 1.
5 moneys—at the ratio of 8, 5, 3 and 2 to 1.
6 moneys—at the ratio of 13, 8, 5, 3 and 2 to 1.

(2) For the sake of example in working out this system, let us take a 15-target event, $1.50 entrance, 4 moneys, 24 entries, $10 added to the purse, targets at 3 cents each. This will give us a net purse of $35.20, targets taking $10 80 out of the total purse. Suppose when the event has been shot there are three straight scores: one 14, four 13s and one 12. Under the old percentage system of 40, 30, 20 and 10 per cent. class shooting, it is manifest that the single 14 would have the best of the four men with straight scores, while the man with 12 would also be better off financially than either of the four men who broke one more target than he did. Under the Rose system this temptation to drop for place is done away with. Proof of this is given below:

The ratio points are 5, 3 and 2 to 1. Therefore,
No of ties for 1st money 3×5=15
No. of ties for 2d money 1×3= 3
No of ties for 3d money 4×2= 8
No. of ties for 4th money 1×1= 1

27)$35.20($1.30 per ratio point.
27
82
81
10 cents over.

Therefore,
each man with 15 receives $1.30×5=$6.50
each man with 14 receives 1.30×3= 3.90
each man with 13 receives 1.30×2= 2.60
each man with 12 receives 1.30×1= 1.30

Under the system usually adopted at tournaments, the three men in for first money would have received $4.69 each; the man with 14 alone taking second money, $10.56; the four men in for third money would have drawn down $1 76 each, but the shooter who had the luck to drop one more target would have received fourth money, $3 52, or just double their share.

It may seem from the above that the system is a complicated one, and would involve a great deal of work in the cashier's department. To disabuse one of this idea, we give an example of an event, the third event on the second day of the Iowa State tournament, working out the example by a system learned from the cashier at the Binghamton, N. Y., tournament. It will be noticed that he rules each page off into five columns; in the first he enters the names of the shooters; in the second he places their respective scores. He then ascertains the place obtained by each man and puts in the third column the number of points due to him. At the bottom of this column he figures up the total number of points, dividing the net purse by that sum. In the fourth column he places the amount due each man, checking it off as soon as the amount is paid, or the cash equivalent placed in the pay envelope. The fifth column is utilized for figuring the net purse and for finding the value of each point.

Event No. 3. 15 targets. Entrance $1 50. Added money ——. No. of entries, 27. Price of targets, 2 cents. No. of moneys, 4.

	Score.	Points.	Amount due.
Grimm	15	5	3.35
Hoffman	11		
Gilbert	12	1	.67
Schricker	15	5	3.35

		48	
Add amount over			.24
			$32.40

27 entries at $1.50.....=$40.50
Deduct for targets at 2cts. each= 8 10
Net purse.....=$32.40

48*)32.40(67 cents per point.
288
360
336
24 cents over.

* Divide net purse by sum of the points.

Under the older system each man who broke 15 would have received $2.16; each 14 would have drawn down $4.86, while the 13s would have received exactly the same amount as the straights—$2.16; each 12 would have been paid 54 cents. Where is there any equity in such a division?

Another case may be quoted to show the peculiar injustice of dividing purses under the old system: In one event shot at the expert traps at the Pittsburg, Pa., Gun Club's tournament, June 23-25, there were six men tied for second money, four men tied for third money and two tied for fourth money. Under the percentage system of 40, 30, 20 and 10, each of the above twelve received precisely the same amount of cash, although six had broken 14 targets, four had broken 13 and two had broken 12.

In our issue of June 27 Mr. Hough writes as follows: "Reforms do not seem to come suddenly, however, and they are rarely to be attributed to the efforts of a few or of a faction. They seem to come about gradually, and to represent the sum of the best opinion on both sides of the questions involved. What was once universal in trap-shooting may be uncommon to-day, and what is usual to-day may be unheard of in the future. For instance, I asked Charlie Budd what he thought of the Rose system of dividing purses. His immediate reply was that 'it would not do; the shooters would not have it.' Mr. Grimm more carefully replied he 'had not carefully gone into the system, and did not know what to say of it.' It is very possible that both of these shooters three or four years from now will be shooting cheerfully under that system, and perhaps nearly forgetful of the old class shooting days, with its obvious unfairness and temptations."

It is a matter of special interest to point out that Charlie Grimm was one of the 15s in the example we have worked out above, and who was so obviously benefited by the Rose system; on looking over his scores of the whole shoot we fail to find any case, save one, where he could have been benefited by the old percentage system. The exception is in event No. 6 on the third day, when he broke 20 straight and took first money, there being 10 other competitors. Charlie Budd was also one of the 15s in the example quoted. It must be remembered that Mr. Hough's interview with the two noted shots mentioned above took place *prior* to the Davenport, Ia., tournament, from which our example is taken. It would be interesting to learn from both Budd and Grimm what they think of the Rose system *now*, and what objections, if any, they may have to that system of dividing purses.

Tournament at Aurora, Ill.

CHICAGO, Ill., June 27.—The tournament held here this week was well attended, especially on the second day. All seemed pleased with the working of the traps and the targets. Some very good scores were made, notably that of Eddie Bingham, of the Du Pont Powder Co. Eddie started in to win everything in sight, and how well he succeeded can be understood by his breaking 161 out of a possible 170, shooting at pairs, unknown angles, reverse pulls, and three traps unknown angles and traps. Mr. Hickey, of Galesburg, the gentleman who shoots sitting on a high stool, was about equal to Eddie, while Zigler, of Hinkley, only lost 14 out of 180. The race track here having a sky background to the north affords one of the best shooting grounds in the State. Being near Chicago and accessible from all points by rail, the management announce another tournament for the last of October.

There was hot competition in the merchandise shoot, 20 prizes donated by the merchants of Aurora. Following are the scores of the shoot:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15

FOX RIVER.

Dedham Sportsman's Club.

BOSTON, Mass., June 27.—The Dedham, Mass., Sportsman's Club held its weekly shoot to-day. The attendance was satisfactory, while the scores were exceptionally good. Mr. Cole made four clean scores, Mr. Gordon having three straights to his credit. Mr. Cole won the gold badge with 19 out of 20. The club holds an all-day shoot July 4, and also sends a team of eight men to Hopedale on the same day to shoot a race with a team representing the Hopedale Gun Club. Scores of to-day's events were:

Events:	1	2	3	4	5	6	7	8	9	10	11	12
Greener	4	8	7	8	5	4	8	8	9	6	8	10
Brown	8	6	5	7	7	5	5	7	7	..	..	..

McIntosh	..	..	..	..	..	..	..	..	7	7	10	9

Nos. 1, 4, 8, 9 and 11 were at known angles; Nos. 2, 10 and 12 at unknown angles; Nos. 3 and 5 reverse order; No. 6, 5 pairs, and No. 7, Hurlingham. All were 10-target events.

ROBERT SMITH.

Limited Gun Club of Indianapolis.

INDIANAPOLIS, Ind., June 24.—The Limited Gun Club shot to-day for a gold badge offered by the Indianapolis Brewing Company. Conditions: 50 targets, unknown angles. The winner holds the badge and title of club champion for one year. Scores: Tutewiler 43, Townsend 42, Parry 42, Robinson 41, Grube 40, Deschler 40, Rich 40, Hearsey 40, Lilly 39, Sielken 39, Moore 39, Kimberlin 39, Morris 38, Cooper 37, Comstock 37, Griffith 35, Wildhack 33, Buch 32, Socwell 32, Craft 31, Hay 27.

In the shooting which followed Cooper and Robinson each broke 48 out of 50.

ROYAL ROBINSON, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

Another shooting club has been added to the already large number in the State of New Jersey. The Arlington Shooting Association is the name of the new organization, and the opening shoot was held at its grounds on Schuyler avenue, Arlington, N. J., July 4. The organization took place on June 26, and the following officers were elected to serve one year: M. Herrington, President; Fletcher Walters, Vice-President; Herbert Frapwell, Secretary and Treasurer; John Chasmar, Captain.

The Interstate Association will hold a tournament on the grounds of the Portland Gun Club, Portland, Me., July 22 and 23. There will be ten events each day, and the targets will be thrown at 2 cents each. Purses will be divided by the Rose system, four moneys. Information relative to the tournament will be cheerfully furnished by S. B. Adams, Secretary Portland Gun Club, Box 413, Portland, Me.

The sixth annual convention and trap-shooting tournament of the Arkansas State Sportsmen's Association will be held at Hot Springs, Ark., July 21 and 22. American Association rules will govern all events, and purses will be divided on the Equitable plan. Ten events will be shot each day.

At Elkwood Park, at 1 P. M. on July 10, the preliminary handicap will take place. Handicap 25 to 31yds., 50yds. boundary. Fifteen live pigeons each, $15 entrance, birds extra. For the convenience of those who contemplate shooting in the Hollywood Futurity, July 11, an inside boundary same as at Hollywood has been laid out, which will not interfere with the contestants in the preliminary handicap. There will be birds enough for sweeps before and after the main event.

The Endeavor Gun Club will hold its regular monthly shoot on the club grounds at Marion, N. J., on July 11, commencing at 2 o'clock P. M. The regular monthly meeting will be held on Friday evening, July 10, at 8 P. M., 642 Newark avenue, Jersey City. It is desired that all members will attend, as there is important club business to transact.

The Climax Gun Club, of Plainfield, N. J., will hold its regular club shoot on July 8, beginning at 2 P. M., at the club grounds, on South avenue, near Fanwood Station.

The Question of One Cent Targets.

CHICAGO, Ill., June 28.—Mr. Paul North, of the Cleveland Target Co., writes the following interesting communication upon the question of cheaper targets at tournaments. Speaking from a long practical experience in tournament management, his opinions will be worth consideration upon the latest thing in shooting matters:

"The article in the June 27 issue of the FOREST AND STREAM is quite an interesting one to the writer in many ways, and the interview with Chas. Budd brings up a matter that is interesting to all trap-shooters, as well as to clubs intending to give tournaments.

"At all the large tournaments that have been given for the past two or three years where 3 cents each has been charged for targets from $1,000 to $2,000 have been added to the purses as an attraction for the shooters to attend the tournament, and it goes without saying that a club that would attempt to give a tournament and not add any money to the purses and at the same time charge 3 cents each for targets would find that they would have a very slim attendance.

"A tournament where 40,000 targets are used at 3 cents each and $1,000 added to the purses is no better for the shooters than one where the same number of targets are thrown at 1 cent each and $200 added to the purses, but still the $1,000 tournament would draw nearly twice the number of shooters as the $200 one.

"Charlie figures on throwing 16,000 targets a day, and from his estimate on expenses I see that he intends to use three sets of traps, but he does not benefit by his experience in attending tournaments as much as he should.

"Most tournaments are made expensive for the clubs giving them on account of their using too many sets of traps, and in that way running up their expenses to a high figure.

"Taking the Hazard tournament as an example—as it was the largest shoot of the year—and you will find that on the first day they had an average of over 100 shooters in every event and that they threw 18,000 targets (a record for three sets of traps), and did not quite finish the programme. The second day the attendance had fallen so that 14,000 targets finished the programme, including the unfinished part of the day before. The third day 11,000 targets were enough to finish the programme, and there was plenty of daylight left to have thrown many more.

"This makes 43,000 targets thrown in three days, where $2,000 in cash was added to attract the largest number of shooters gathered together during the last few years.

"Now how does Charlie expect to throw 48,000 targets in three days and attract shooters to attend his tournament in numbers sufficient to consume that many targets. Certainly throwing targets for 1 cent each and adding $200 will not do it, as at the Hazard tournament targets were practically thrown for nothing and $700 added in addition.

"The great mistake most clubs make in running tournaments is in having too many sets of traps, and increasing their expenses on that account.

"My experience has been that with one set of traps from 6,000 to 8,000 targets can be thrown a day, with two sets from 10,000 to 13,000, and with three sets from 14,000 to 18,000, according as to how well the shoot is run and how well the squad hustlers perform their work.

"With the attendance at the Hazard tournament 40,000 targets could have been thrown in the three days from two sets of traps, and consequently the other set of traps was run for three days at an expense for trappers, pullers, etc., of about $45 to throw the 3,000 extra targets.

"At our tournament just finished we threw 30,000 targets in the three days, and could easily have thrown 10,000 more, as all shooting was over long before sunset each day.

"We used two magautraps and the expense for trappers for three days was $18.88, or just about what it would have been for one day had we used two sets of the ordinary traps.

"Using two traps, a gun club can easily give a tournament, charging but 1 cent each for targets, and with the members of the club giving their services for refereeing and office work, come out a little ahead.

"However, until the shooters have been educated up to it they will prefer to pay 3 cents each for targets and have $500 to $1,000 added to the purses.

"At most of the smaller tournaments where there is no added money the usual charge for targets is 2 cents each, but at the present price of targets and the appliances for throwing them 1 cent is a reasonable charge, and 1½ cents should be the most that should be charged.

"We will throw all targets at our next shoot free of charge the same as this year, and when the shooters have figured the matter out they will see that it is equal to $1,500 added money.

"We hope to see Charlie Budd try his tournament, and if he can make the shooters see the matter in the right light he will have a good many shooters present, but not enough to consume 48,000 targets in three days."

Boston Gun Club.

WELLINGTON, Mass., July 1.—A sultry, stifling day in the city, but Boston Gun Club visitors Wednesday last were favored at Wellington with sufficient breeze to render it comfortable shooting. The afternoon's sport was varied, and in the prize match some good scoring was done. The final contest takes place next Wednesday, and as but 2 birds separate first and second—Miskay 105 and Gordon 103—the winner of prize, a rifle, remains in doubt:

Haverhill Gun Club.

HAVERHILL, Mass., July 5.—Score made by the members of the Haverhill Gun Club at first practice shoot since organization.

The shoot was held on the grounds of the club, at Hoyt's Grove, this city, and it would be difficult to find grounds better adapted to the purpose anywhere. Shooting commenced at 2 o'clock on the afternoon of July 4, and some 1,500 targets in all were thrown.

About one-half the members participated, together with three or four visitors.

Events:	1	2	3	4	5	6
Targets:	*25*	*25*	*20*	*15*	*10*	*10*
Short	17	16	9	10	6	8
Leighton	18	16	14	8	4	5
Brooks	8	7	8	6	4	6

Blake	1	0	..	..	..	..
Putnam	8	10	6	7	5	..
Miller	9	4	2	5	2	..
Holden	8	12	11	6	..	..
Welch	13	14	13	..	..	..

Events:	1	2	3	4	5	6
Targets:	*25*	*25*	*20*	*15*	*10*	*10*
Ingham	5	4	8	6	3	2
Tenney	7	5	..	..	..	..
Crapean	10	9	4	4	..	..
Lambert	..	9	8	7	2	4
Hilliard	..	11	15	..	..	..
Merritt	..	13	7	6	5	..
Webster	..	6	6	6	6	6
Sherman	..	6	11	5	..	..

Event 5 was at 5 pairs doubles, and the other events were about equally divided between known and unknown angles. Most of our members are "green hands" at the trap, which will account for the low scores; for the grounds, traps and background are as near perfection as is possible. GEO. F. STEVENS, Sec'y.

Coney Island Rod and Gun Club.

BROOKLYN, N. Y., July 1.—The regular club shoot of the Coney Island Rod and Gun Club was held at Dexter Park, L. I., to-day. Before the club shoot Dr. W. A. Littlefield and Wm. Lair shot a match at 25 live birds, for $10 a side:

Dr. Littlefield (30)	0021121202112021222122022—20
William Lair (30)	1120100121201222012122200—18

Club shoot, 7 live birds:

Henry Knebel, Jr. (30)	1111111—7	J B Voorhies (28)	1201222—6
Dr. Van Zile (30)	2222222—7	William Hughes (28)	1011112—6
Dr. Littlefield (30)	1221111—7	J E Lake (29)	2001112—5
John Schliemann (28)	1112122—7	F W Pfaender (30)	0210101—4
William Lair (30)	2012112—6	Hugh McLaughlin (28)	0000200—1

Shoot off for badge, miss-and-out: H. Knebel 5, Dr. Littlefield 4, Dr. Van Zile 2, J. Schliemann 0.

Michigan Trap-Shooters' League.

HOLLAND, Mich., June 26.—The tournament of the Michigan Trap-Shooters' League, which closed here to-day, was held under the auspices of the Holland Gun Club. The scores made on both days were as below:

Huntingdon Gun Club.

HUNTINGDON, Pa., June 27.—The Huntingdon Gun Club held an all-day shoot to-day. The weather was cool and cloudy during the greater part of the day, making it pleasant for the shooters. The attendance was light and the shooting only fair, but in point of sport and sociability the affair was a decided success.

All events were at known traps and angles, with the exception of the following: Nos. 13, 18 and 19, unknown angles; No. 14, walking match; Nos. 15 and 20, 5 pairs.

Events:	*1*	*2*	*3*	*4*	*5*	*6*	*7*	*8*	*9*	*10*	*11*	*12*	*13*	*14*	*15*	*16*	*17*	*18*	*19*	*20*

Goldfield's Tournament.

GOLDFIELD, Ia., June 26.—The two days' shoot of the Goldfield Rod and Gun Club closed to-day. Fred Gilbert and Harry Wilson, State champion, shot closely throughout the shoot. Scores:

No. 1, 10 singles: Limeberger 10, Wilson 9, Geo. Agood 9, Wood 9, Fox 8, H. Agard 8, Gilbert 7, J. G. Smith 7.

No. 2, 15 singles: Fox 15, Wilson 13, Wood 13, Shoen 14, Limeberger 12, Smith 11, Guy Agood 11, Agood 10, Gilbert 10.

No. 3, 20 singles: Wilson 19, Limeberger 18, Wood 18, G. Agood 19, Geo. Agood 17, Gilbert 16, Smith 16, Fox 16, Shoen 12.

No. 4, 15 singles: Gilbert 15, Fox 14, Shoen 13, Wood 12, Limeberger 12, George Agard 12, J. G. Smith 11, Fox 11.

No. 5, 9 singles and 3 pairs: Fox 13, Limeberger 12, Gilbert 11, Wood 11, Wilson 11, George Agard 11, Guy Agard 10, Smith 8.

No. 6, 15 singles: Beisel 15, Smith 15, Wood 12, Limeberger 12, Guy Agard 12, Fox 12, Wilson 12, George Agard 12, Gilbert 11, Smith 9.

No. 7, 5 pairs: Guy Agard 9, Wilson 8, Gilbert 8, Limeberger 8, George Agard 6, Fox 5.

No. 8, 20 singles: Agard 18, Wood 17, Gilbert 17, Fox 16, Smith 16, Beisel 16, Limeberger 13, Guy Agard 13, Wilson 11.

No. 9, 15 singles: Wood 14, Gilbert 14, Limeberger 12, Wilson 13, Shoen 11, Fox 10, Beisel 10, Geo. Agard 8, Guy Agard 9, Martheson 7, McTyce 7.

No. 10, 10 live birds: Gilbert 9, Geo. Agard 9, Wilson 9, Limeberger 8, Shoen 8, Guy Agard 7, Fox 6.

No. 11, 20 singles: Gilbert 20, Wilson 19, Wood 19, Limeberger 19, Beisel 17, Guy Agard 17, Geo. Agard 14.

No. 12, 15 singles: Wood 15, Gilbert 14, Geo. Agard 14, Wood 14, Guy Agard 13, Shoen 12, Limeberger 12, Smith 12, Fox 13, McIntyre 10, Dorr 10, Hewett 10.

Omaha Gun Club.

OMAHA, Neb., June 27.—Herewith find score of the Omaha Gun Club's regular weekly shoot:

Carmichael	111111111011111111111111—24
Brucker No. 1	111111111110111111110111—23
Whitener	111111111011110111111111—23
Marsh	111111110111111111110011—22

Limited Gun Club.

INDIANAPOLIS, Ind, July 1.—The Limited Gun Club began shooting for class badges July 1 instead of July 8, as had been announced.

The change probably had the effect of reducing the attendance. However, 22 shooters participated.

Conditions: 25 empire targets, classes A and B unknown angles, class C known angles.

The day was bright and hot and the shooting difficult:

Class A: Britton 25, Tripp 24, Moore 22, Tutewiler 20, Robinson 20, Parry 20, Comstock 19, Cooper 19, Beck 18, Wildhack 16, Townsend 15.

Class B: Kimberlin 20, Mott 20, Hearsey 18, Sielkin 18, Griffith 17, Socwell 16, Morris 15, Deschled 15, Lilly 13.

Ties on 20 at 10 targets: Kimberlin 8, 10; Marrott 8, 8.

Class C: Kershner 23, Craft 20. ROYAL ROBINSON, Sec'y.

Marietta Gun Club.

MARIETTA, Ga., July 2.—The regular weekly shoot of the Marietta Gun Club was held to-day, known traps and unknown angles:

Gramling	111111011101000100011111—17
Meinert	101011001111110010101l101—16

PUBLISHERS' DEPARTMENT.

A Trip to Japan.

THE Canadian Pacific Railway Company issues under the title of "A Woman's Pleasant Venture" a neat little brochure descriptive of an inexpensive trip to Japan taken by a lady who traveled alone. With regard to the cost of such a trip the writer says:

"For instance, I found that a three months' trip to Japan, all traveling expenses included, did not cost me as much as a trip of the same duration in Europe usually does. The largest expense is the initial one of the 'round-trip ticket.' Once arrived in Japan, you find everything very cheap, and as the country has a depreciated currency, you get a large premium on your English or American money.

"Train travel in Japan, first-class, does not cost more than third-class travel in England, and the trains are very comfortable.

"You can hire a 'rickshaw,' with a coolie to draw it, for 37 cents a day. Your hotel bills run from $1.50 to $3.50 a day, while special terms can be made for a stay of a week or longer. The hotels are generally run in foreign style, and are usually very much better than those one finds in most places in the Southern States. The large ones at Yokohama and Tokio are quite equal to the first-class European hotels.

"If you intend staying any length of time in Japan, you can hire a little house and some bright, willing native servants and live for almost nothing.

"I can think of no more delightful rest for a person tired out by the work and worry of our busy Western life."

The pamphlet will be sent on application to Mr. E. V. Skinner, E. P. A. Canadian Pacific R'y, New York.—*Adv.*

New Winchester Catalogue.

CATALOGUE No. 57, which has been issued by the Winchester Company, contains 130 pages of matter interesting to riflemen and shotgun shooters Several pages are devoted to a description of new specialties in the line of shotgun ammunition, wads, shells, etc., and several new nitro primers are listed for the first time.

The new model of 1895 repeater is fully described, and a table is published showing the standard lengths and sizes of barrels furnished with single shot rifles of various calibers. The extras in single shot rifles now include palm rests, Schuetzen butt plates, etc., and the component parts of double set trigger are listed for most models. In all there are fourteen pages of new matter.—*Adv.*

Save Your Wheel.

A DROP of oil at the right time and in the right place means long life and good working condition to a bicycle. Don't condemn a wheel when the trouble may have been caused by your neglect to oil it properly.

Oil frequently and use but little oil at a time. The best oiler for this purpose is the "Perfect" Pocket Oiler. This oiler regulates the supply of oil to the exact amount needed. It does not leak and will save you the annoyance of finding that all the oil has escaped from your can when you especially need a drop for your wheel. The "Perfect" Oiler only costs 25 cents, and is well worth the slight difference in price over the cheaper cans.—*Adv.*

Gold Dust Smokeless.

"GOLD DUST," the handsome powder that Mr. W. L. Colville is introducing to Eastern shooters, is, strangely enough, very popular in a number of States whose predilection is unmistakably for silver. In the West it has made a very enviable record, which it will no doubt duplicate in the East. "Gold Dust" is said to contain no nitro glycerine and no gun cotton. As there is a broad margin in loads without dangerous pressures, it should be a very safe powder to use.—*Adv.*

THE finest chicken shooting in the world is found in the States of Iowa and Minnesota, and the crop for 1896 promises to be the largest for years. Along the line of the Chicago Great Western Railway (Maple Leaf route) birds are particularly plentiful. Write to F. H. Lord, General Passenger and Ticket Agent, Chicago, for points on some of the choice spots and how to reach them.—*Adv.*

MESSRS. W. W. HART & Co. have received from Washington a diploma and medal for their taxidermy display at the World's Fair in Chicago.—*Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, JULY 18, 1896.

VOL. XLVII.—No. 3. No. 346 BROADWAY, NEW YORK.

For Prospectus and Advertising Rates see Page x.

Readers accustomed to buying the FOREST AND STREAM *at news stands, and who are going out of town to points where they cannot purchase from newsdealers, may have the paper mailed from this office for any length of time at the rate of forty cents per month.*

BIRD DAY.

THE idea of setting apart one day in the year for the planting of trees by the children of the public schools of the United States was first suggested nearly twenty-five years ago by the Hon. J. Sterling Morton, now Secretary of Agriculture. Since its establishment, the observance of Arbor Day has become very general in many parts of the Union and is still increasing. On the first Arbor Day more than a million of trees were planted, and it would be hard to calculate the full usefulness of this day. Not only has the supply of trees about our towns and villages been by this means increased, but a very general interest has been aroused in the subject of trees and their uses, a sentiment cultivated for them and for the study of plants. A strong impression has no doubt been made on many young minds, which is exerting and will continue to exert an influence for good in the country at large.

Now comes the suggestion that a bird day should be established, a day devoted altogether to birds, in which the children shall tell what they know about birds, and give the result of their study and observation of them throughout the year. The idea of bird day seems to have originated with Prof. C. A. Babcock, Superintendent of Schools in Oil City, Pa., who wrote to the Department of Agriculture in the year 1894, urging the establishment of such a day, and stating that a certain date in May would be observed as Bird Day in Oil City. The Secretary of Agriculture replied very cordially, approving the suggestion, and the day was observed in the Oil City schools with much enthusiasm. It was observed again there in 1895 and in 1896. This year an independent movement was started in Iowa by the Superintendent of Schools at Fort Madison with great success, and the matter has been taken up in Nebraska.

In his letter to Mr. Babcock, Secretary Morton very truly says: "It is a melancholy fact that among the enemies of our birds two of the most destructive and relentless are our women and our boys. The love of feather ornamentation so heartlessly persisted in by thousands of women, and the mania for collecting eggs and killing birds so deeply rooted in our boys, are legacies of barbarism inherited from our savage ancestry. The number of beautiful and useful birds annually slaughtered for bonnet trimmings runs up into the hundreds of thousands, and threatens, if it has not already accomplished, the extermination of some of our rarer species. The insidious egg-hunting and pea-shooting proclivities of the small boy are hardly less widespread and destructive. It matters little which of the two agencies is the more fatal, since neither is productive of any good. One looks to the gratification of a shallow vanity, the other to the gratification of a cruel instinct and an expenditure of boyish energy that might be profitably diverted in other channels. The evil is one against which legislation can be only palliative and of local efficiency. Public sentiment, on the other hand, if properly fostered in the schools, would gain force with the growth and development of our boys and girls, and would become a hundredfold more potent than any law enacted by the State or Congress. I believe such a sentiment can be developed, so strong and so universal that a respectable woman will be ashamed to be seen with the wing of a wild bird on her bonnet, and an honest boy will be ashamed to own that he ever robbed a nest or wantonly took the life of a bird.

"Birds are of inestimable value to mankind. Without their unremitting services our gardens and fields would be laid waste by insect pests. But we owe them a greater debt even than this, for the study of birds tends to develop some of the best attributes and impulses of our natures. Among them we find examples of generosity, unselfish devotion, of the love of mother for offspring, and other estimable qualities. Their industry, patience and ingenuity excite our admiration; their songs inspire us with love of music and poetry; their beautiful plumages and graceful manners appeal to our æsthetic sense; their long migrations to distant lands stimulate our imaginations and tempt us to inquire into the causes of these periodic movements, and finally, the endless modifications of form and habits by which they are enabled to live under most diverse conditions of food and climate—on land and at sea—invite the student of nature into inexhaustible fields of pleasurable research."

Many causes contribute toward the constant diminution of our birds of all sorts. Chief among these are the clearing away of the forests, the draining of the swamps, the increasing slaughter of game birds, the demand for feathers to supply the millinery trade, and the breaking up of nests by egg-collecting boys. There has been abundant legislation looking to the protection of both game and small birds, but as such laws are not upheld by the public sentiment of the community they are not effective. The establishment of a day to diffuse knowledge about our birds and to awaken general interest in them cannot fail to be useful. It is easy to arouse in a child an interest in and love for almost any branch of natural history, and nothing appeals so strongly to children as birds. When once they are made to understand something about our feathered friends they will go to almost any lengths to protect them.

There are abundant means for appealing in the right way to young minds on this subject, but the details of the observance of such a day must of course be left to school instructors. It is unnecessary and perhaps it is not desirable to go so far as to take up the study of ornithology in the schools. What is necessary is to awaken an interest in bird life, and when this is once done the rest is easy.

Economic ornithology has been defined as "the study of birds from the standpoint of dollars and cents." Many estimates have been made as to the value of birds to the farmer, and while such calculations are and must be only general, it is unquestioned that the birds of our country add each year uncounted millions to its wealth. In fact, it is certain that but for the birds agriculture in the United States would come to a standstill. The ignorance which prevails on this subject is as astonishing as it is universal. It is but a few years since the State of Pennsylvania expended many thousands of dollars in bounties for the destruction of birds which are now known to be actually of very great benefit to the farmer, who was thus taxed for a purpose which actually decreased the product of his fields. The excellent work done by the Biological Survey of the Department of Agriculture, and by some of the experiment stations of State Boards of Agriculture, is going far to dissipate the general ignorance on this subject. Much remains to be done, however, and whatever work is undertaken can be enormously advanced by interesting the rising generation in this subject. Teachers can exert a powerful influence for good by giving this subject some attention and thought, and there are perhaps few ways in which more practical good can be accomplished than by establishing in our schools a day devoted to the birds.

SNAP SHOTS.

In a note describing the doings at a fishing resort in the Eastern States, recently received by FOREST AND STREAM, proud mention is made of one catch which deserves a word or two of comment. It is apparently hoped that if publicity is given to this catch anglers will be attracted to the locality, and the note names an individual who, in two half days' fishing, captured 600 speckled trout. All men who handle the trout rod are eager to get good fishing, and in order to obtain it are willing to do a great deal of work and to suffer more or less of hardship, and as a rule the harder the work and the greater the discomfort the more highly the catch is valued. We opine, however, that the capture of these 600 trout will not attract to the resort in question very many of the better class of anglers. It is possible to pay too high a price even for good fishing, and the danger of being obliged to associate with an individual guilty of such wanton fish slaughter, or with persons who countenance such slaughter as this, would be such a high price. Any one who for sport would destroy such a quantity of fish must be so entirely careless of the rights and feelings of other people that he should be carefully avoided. We can imagine such a man to be greedy, pushing, selfish and assertive; one whom all decent and self-respecting anglers would wish to shun.

The use of birch bark as stationery is as old as the hills, and yet is something always as novel as pleasing to the newly initiated. The mention of birch bark writing paper by a correspondent recalls an incident in the life of Rev. Dr. Samuel H. Coxe, of Utica, as told by his friend Gen. R. U. Sherman. It was of an occasion when birch bark slips took the place of hymn books. Dr. Coxe and Gen. Sherman were members of the old Walton Club; and one Sunday nearly forty years ago, back in the '50s, when the members of the club were gathered at the historic camp site on the Fourth Lake of the Fulton Chain, Dr. Coxe was asked to conduct religious services. There were in the party George Dawson, Ned Buntline, Gen. Sherman and some forty others, among them a goodly number of singers. Mr. Dawson wrote from memory several appropriate hymns on slips of birch bark, and led the choir in a solemn melody that would have honored a grand cathedral. "Without taking any set text," Gen. Sherman afterward related, "the Doctor opened with the declaration that 'when I go into the woods I leave my white neck cloth behind.' What followed showed that white neck cloths were not necessary to provide eloquence, deep religious sentiment nor profound thought. His address was a convincing effort to show how intimate was the connection between nature and revelation, and that

'The groves were God's first temples.'

Most of the persons who were present to hear this impressive address have gone to their long homes, and the few survivors are 'in the sere and yellow leaf'; but none ever forgot the reverent sentiment inspired by this offhand but masterly effort." Dawson, Buntline, Coxe, Sherman, perhaps all who were in the Walton camp on that Sabbath morning have passed from earth.

We cheerfully give room to the letter which Gov. Richards, of Wyoming, sends us concerning the course of the authorities of his State in relation to the Bannock Indian troubles of last year. Gov. Richards tells us that from the beginning it had been the purpose of the Wyoming authorities to determine by legal process the merits of the question involved as to the hunting rights of the Indians. We have never questioned the righteous intention or the strict legality of what has been done by the higher authorities of the State; our criticisms have been upon the local officers, who, if they meant well, appear at least to have made a terribly bad bungle of the execution of those intentions; and what we have said about the killing of the Indians has been based upon the official report made to the War Department by its own agents. We are quite ready to assent to the proposition of Gov. Richards that the killing of the Indians on the specific occasion described by him may not be, except figuratively, designated as an infliction of the death penalty for a misdemeanor. It will occur to most folks that in any section of this country outside of the immediate vicinity of Jackson's Hole twenty-seven constables and deputies would probably be able to conduct safely nine individuals under guard, without shooting their guns off in the confusion and killing and wounding their prisoners. The FOREST AND STREAM has always contended for just such an adjudication of this Indian hunting question as has now been reached; we took pains to procure and publish an advance copy of the full text of the decision of the Supreme Court, and we now renew the expression of satisfaction then given that the decision was in favor of the State authorities and that thus one tremendous agency of game destruction has been removed.

We conclude this week our third annual review of the game parks of this country. In number and size these preserves are assuming increased importance every year, and are becoming more and more an appreciable factor in our game supply and shooting resources. In addition to the parks stocked with large game there are numerous preserves devoted to individual and club purposes, for the shooting of indigenous game. While the multiplication of such preserves abridges in some degree the common opportunities of sportsmen at large, they are likely to have a considerable and healthy influence on game protection, for they will serve as so many object lessons of what may be accomplished in keeping up the supply under wise limitations.

The committee appointed by the New York Legislature to inquire into the advisability of the State purchasing additional lands in the Adirondacks, to solidify the holdings in the State Park and for the better protection of the Hudson watersheds, went into the North Woods last Monday to gather material for its report next winter. The Fisheries, Game and Forest Commission will ask for the issue of $1,000,000 of bonds to purchase lands that have been offered for sale to it at the price of $1.50 per acre.

The Sportsman Tourist.

A CABIN IN THE OLYMPICS.

AWAY up over the hills, miles away, by a trail through dense fir and cedar forests, or here and there skirting a lovely little lake, away toward the foothills above which the towering, jagged, snow-covered peaks of the Olympics look down on the blue waters of beautiful Puget Sound, in a little clearing just in the edge of a big patch of cedar timber, where the ground is rich, black and deep, and where the giant trunks stand so thickly as to shut out the sun, is a little cabin. It is built of cedar logs halved, flat side in, with roof of "shakes" of the same material (which splits almost as straight as it could be sawed), and floor of solid cedar planks, smooth and tight, split, of course. The whole building is neat and comfortable beyond the imaginings of urban dwellers, and evinces patient, skillful labor with axe and cross-cut saw. This is the home of the owner, James, not James something or anything, but just Thomas James, who for five years has been holding down a homestead claim here away back in the wilderness, and who, unaided, put up this log cabin 20ft. square, with its heavy logs and long, heavy, peeled saplings for rafters, running from gable to gable. Here during the winters he hunts and traps alone, while in summer he usually gets a job in some of the numerous logging camps alongshore, which are rapidly sending, in huge rafts, this magnificent timber to mill. Every few days during the winter he comes down to the waterside for a mess of ducks and to look after his traps along the creek, and here I made his acquaintance, and we having a love of the woods and pursuit of the denizens thereof in common, he invited me up to his cabin, and I, wishing to see his claim and also to gain a better knowledge of the country, gladly accepted, starting one fine afternoon last winter when the heavens had ceased weeping awhile, and reaching his cabin along toward evening, finding him whiling away the long hours with his violin.

The trail for considerable of the way was new to me, and there being no wet snow on the ground I enjoyed the trip immensely as with Marlin on shoulder I kept my eyes busy in search of game, but nothing larger than grouse caught their attention. Here and there openings in the forest afforded delightful glimpses of crowned peaks that looked so near and yet so far, and once I came out of the gloom upon a little gem of a lake that mirrored its wall of motionless firs, and upon whose quiet bosom three or four butterballs were preening their feathers. Upon the shore of this lake some would-be homesteader had built his log cabin with more or less enthusiasm and visions of profit, but after a sojourn sufficiently extended to allow the magnitude and hopelessness of the labor of making an impression on that heart-breaking forest to trickle through his mentality, he had folded his blankets like an Indian and silently stole away. He had sense. But there was the cabin, doorless and floorless; and empty painkiller and cough balsam bottles telling of coughs, colds and rheumatism; and other empty bottles from which the *pro tempore* hermit had essayed to draw spiritual consolation when he wrestled with the powers of darkness during the long, lonesome winter evenings. In the center of the floor was a pile of ashes and overhead was a hood to corral the smoke, from whence it shot through a shoot into the open air, among the trees, heavenward, anywhere from that gloomy place. There was a wrecked bunk in one corner with browse scattered around; scraps of paper lay rotting, and all was, as Mantalini would say, "demnition moist and unpleasant." And so looking and musing on man's mistakes, I put one foot before the other along the trail, and after a while sat in James's comfortable and cheerful cabin and rested, and felt pretty good and hungry watching him prepare his back supper of coffee, spuds, venison and good bread and butter, after due consideration and appreciation of which I felt better still.

And then we didn't fill pipes with the fragrant weed and watch the curling smoke go sailing skyward, because neither of us smoke, but we swapped hunting experiences until bedtime, and then, while the fire murmured drowsily in the little old cookstove, we retired to sleep the sleep of the innocent on what? Browse? Home-made slats? Bless your soul, no! But a nice yielding woven wire mattress that was just taut enough and not too taut, making a soft place for every bone and muscle and fixing the tired body up in great shape for the morrow's tramp. And when the morrow came, it being about the time for running one line of traps, we started out, skirting a cedar swamp for a way, then past an abandoned homestead where delusion was again apparent, on through the dark forest, crossing a noisy stream high up on a 100ft. log that spanned the stream and bed, and that swayed with us suggestively, up a hill, across a plateau, around the base of a young mountain, and then descending into a deep gorge kept alongside a beautiful stream where hide the lovely trout and where were hidden traps for the wary mink and otter; but none rewarded our search this day. The line ended at the upper end of a pretty lake, and when we reached the lake I left James to finish the line while I looked for some grouse along the hillside. I saw but one, and before James returned I had decapitated that and was ready to accompany him homeward by another route, for trail there was none.

On the way he pointed to a big hemlock tree and said: "I was over here one day a year ago, and when I got along here my attention was accidentally drawn to something dark colored in that tree that didn't look exactly as though t belonged there. I was quite a way back yonder when I spied it, and cautiously reconnoitering I found it was a black bear quietly snoozing up yonder on some convenient limbs. I couldn't get the shot I wanted from where I was and moved round a way to a better position, losing sight for a few minutes of the bear, and when I got to where I thought I could see him all right, lo and behold he wasn't there at all. He had seen or winded me and slipped down, and though I caught a glimpse of his movement in the thick bushes I never saw him again."

"That was aggravating," said I, "to have a bear up a tree in nice position to be shot and have him get away like that."

"Yes," he replied, "but there's many a slip 'twixt the gun and the bear. They are mighty smart, and though there are many in the country it's only once in a while you get a shot, and even then they are apt to get away, though badly hit, for there are no bear dogs around."

I asked him how many he had killed the year previous and I think he said eight or ten, little and big, half of them cubs. As we walked along he said: "I was out deer hunting one day two or three miles from the cabin on a light snow that had fallen the night previous, but I had found no deer during the forenoon and I had given up and was pointing for home, when I heard a singular noise off a little distance in the woods and stopped to listen. It sounded somewhat like a leaning tree rubbing against another, a sort of complaining, whining sound trees will make sometimes, you know; but there was no wind at all. Directly I heard the sound again, and locating it as well as I could I went as noiselessly as possible toward it, and after going some distance was brought to a standstill very suddenly; for there, not more than 30ft. away, at the foot of a cedar whose branches almost swept the ground, stood a full-grown cougar facing me, with her body almost concealed by the limbs and her tail waving slowly back and forth. I was considerably surprised for a minute, but I knew that I'd got to shoot pretty quick and mighty straight too; so I took a long breath, drew the sights down fine between her eyes and pulled. The old .45 was true to her instincts and the cat dropped like a log, and when she'd about done kicking I walked up to her and found a hole as square between the eyes as you ever saw.

"'That's pretty neatly done,' I said to myself, and not a particle of buck fever about it. So I pulled the beast out a little, stood my gun up against a fir tree about 15ft. away, took off my coat—which was pretty heavy—and hung it over the gun, for it was snowing a little though the morning was warmish, and proceeded to skin the cat. I'd got well along with the job when I straightened up a bit to rest my back—I was on my knees—and found myself looking square into the face of another cougar that stood just the other side of a smallish log some eight or ten steps away, and almost in a line with my gun. Here was a nice fix. A good healthy cougar staring at you, and your gun half way to the beast. I wanted that gun the worst way, but there was only one way to get it. Wishing wouldn't get it. I had to crawl for it. So I started, on my hands and knees, with my eyes on the cat, and my heart, well, I don't exactly know where it was. What I should have done had the animal leaped I don't know. I just trusted to luck and kept crawling toward the cat and that gun, that seemed so far away and the cat so near. But luck was with me. The beast never moved. It had probably never seen such a performance before and was just paralyzed. I reached the gun, took the coat off, and in less time than it takes to tell it I had a fine bead just where I wanted it, and the cat fell just as the other did, with a hole in the same place. I was disturbed no more and took home two very pretty hides, the second smaller than the first and evidently a yearling or maybe a two-year-old."

"Now that's something like," said I. "That's the way I want to shoot my cougars. Well, not just that way. I don't care about bearding a cougar in his face just like that, but I want to hit him just where you did, because if you don't hit him fine you're liable to get mussed up some, eh?"

"Right you are," quoth James. "The head's the only sure place to hit 'em."

"I'm with you every time," said I, "whether it's with a rifle or a handspike, aim for the head," and so we plodded along homeward, admiring the beauties of nature while we took an occasional header into the brush or slipped on a concealed stick on a side hill and plowed the earth for a space.

Along in the afternoon we raised the latch of the James villa, and after a hospitable lunch I bade my host and entertainer good-bye and somewhere in the gloaming I pulled up at the other terminus pretty much tired, after having wounded a grouse badly and lost him in the thick brush.

Some time in March James was down in the valley one day and told me he had killed a bear and cub not long before, having found them under a big rock in their winter nest not many minutes' walk from his cabin, and that if I would come up pretty soon we would get a mess of trout and he would show me how he got the bear. That was enough to tempt me, of course, so among the first days in April I went up again early one morning, catching him at rather a late breakfast; but, as he had only himself to wait on and nothing else to do, that wasn't so very reprehensible.

First we went out to the scene of the bear killing, a half mile perhaps from the cabin. Here, in the thick forest, on comparatively level ground which extended for probably a mile or two in every direction, lay a huge rock with not a stone visible anywhere else, and the conclusion was natural that it had ridden there on a glacier some days previous. I say rock, but it was now two, though originally having been one, for when the glacier let go of it it split into two almost equal parts which fell apart at the top to a distance of 10ft., but at the bottom only from 1 to 2ft., having a cleft through which one could almost see from one side or end of the rock to the other, the break not being perfectly straight, and being through the longest diameter of the big stone. The size of it was 40×20ft. by about 20ft. high, as near as I could estimate the height, and it was covered with moss, with here and there a low brush. When it split and fell apart, naturally the bottom raised from the earth at the center, leaving a space or cavity some 2 or 3ft. high at the crack, lessening thence each way to point of contact of sides of rock with the earth. In this cavity the bear had made her nest, being able to enter it from only one end, and now, standing at this end, we will let Mr. James tell the story:

"I had known of the existence of this rock, of course, for several years and had seen what a nice place it would be for a bear to den up in, and had come by this way one or two years, but had found no bear. Along in the latter part of February I was up one day at the lake looking at some traps I had there, and it being convenient to come by this way home, I thought I'd look in here and see if any bear had found this nice spot this season. As soon as I came near I saw bear sign sure enough. D'ye see where she had clawed off moss from the rock? And see where she had broken off sal-lal bushes around here to make a nest with? And there is a bunch of stuff she had raked together that she forgot to take in; had enough before she got to that, I s'pose. I said to myself, 'There's business here now, certain, and it may turn out mighty interestin' before we get through; for I'm going to stir up the animals before I leave.' So I lay down here and tried to make out where the brute was, but couldn't see anything, for it was dark in there off to one side the split; so I got up and went round to the other side the rift, where I could walk in, which I couldn't from here, for you see the split is nearly closed here. After I had tiptoed along in to nearly the center of the rock I heard a cub squeal, and then I didn't wait any longer there, but backed out in a hurry, for it would be a ticklish place to get caught in a crack in a wall by a mad bear. You see, the cavity underneath don't extend clear through, and when I heard the cub I hadn't quite reached the cavity, so the bear hadn't seen my legs, or, fortunately, heard me. Well, when I got back here again, finding everything quiet, I determined to crawl in and see how the land lay. You see those rocks just inside the opening here, bedded in the ground and projecting from it nearly 1ft.? Well, I had to crawl over them, of course, and there isn't any too much room between them and the rock above, and if a bear made a charge on me and I had to crawfish over them rocks it would be mighty awkward work, and might get me into a heap of trouble; but I couldn't get in any other way, so I concluded to chance it far enough to see what there was in there, anyway." [And right there I thought of the story of Israel Putnam and the wolf den in ante-Revolution times. Remember? But James hadn't any comrades to fasten a rope to his heels and pull him out after he had shot.] "So I straightened out on my belly and, pushing my gun ahead, slowly and quietly pulled myself along until I was a full length inside the rocks you see there. Then I waited until my eyes could penetrate the dim light, and little by little a black mass showed up curled up and motionless in a nest of sticks, bushes and moss to the right of the rift and where the cavity was deeper than elsewhere. There was my game, but where to shoot I didn't know, for I couldn't make out head or tail. I was only about 15ft. from the bear, and if I could have told where to shoot one shot would probably have done the business. I was in a cramped position and couldn't get my gun to my shoulder with any ease, but I managed to get it pointed at what I judged was the vitals of the brute and so that I could work the lever for a second shot, and then I put two shots into that mass without any waste of time, I tell you, and the way I put full speed astern on James was a sight, I believe. It's a wonder I didn't leave part of my clothes in there. But I got out all right, pumped another shell into the gun and faced the music for further revelations, expecting as like as not that the bear would charge out unless mortally hurt. But she didn't come and made no movement that I could hear.

"Waiting a few minutes for the smoke to clear away, I carefully crawled in again little by little, looking carefully every foot until I was able to see the bear sitting up licking her wounded legs, for there's where I had hit her, curiously enough, and paying no attention to me whatever. I suppose that being awakened so suddenly and painfully from sound sleep she was dazed and so careless of anything save her hurts. I got a bead on her head this time, and pulling quickly crawfished as before, but there was no movement inside, and waiting a spell I cut a long pole, and crawling in once more prodded the carcass a few times, and finding it dead I came out, and going around to the other side walked in through the cleft until opposite the nest, when I stooped down and luckily found the bear within reach. So I pulled her to the cleft, which was here a little wider than elsewhere, and after much labor got her out and pulled her backward clear of the rock and then went back and found the cub, which could have been but a few days old, as it was only about 15in. long, with eyes not yet open, but curiously enough having its skull broken, whether by accident or design of the dam is a puzzle. The bear was small-sized and was hit in three legs by the first two bullets, which I found flattened against the bones. The last shot struck just back of the eye, passing through the head. The hide was in fine condition, black and glossy. Now, if you like, you might crawl in there. You'll get a better idea of how it happened."

And I did. And as I lay there on my stomach in that contracted passage, going through the performance "in my minds's eye, Horatio," I found myself questioning whether if I had found that bear I'd have tackled it alone or rather had gone off and got somebody to be present at the obsequies, in case there had been obsequies—my obsequies, you understand. And I became of the opinion while I lay there that James had in his make-up quite a stock of what is called "sand." Some folks might call it by another name; it don't matter.

Then I crawled out of the hole, went round to the other side of the crack, walked in there, stooped down and looked in, took a general survey of rock and surroundings; then we went back to the cabin, from whence we went to the creek, a mile or two away, and brought back a bountiful catch of lovely trout running from 10 to 13in., and in the pleasant afternoon I followed the devious trail homeward, while the sun dropped below the hoary peaks of the Olympics and shadows deepened in the east.

O. O. S.

STATE OF WASHINGTON, June, '96.

MAN, PANTHER AND PINE KNOT.

CENTRAL LAKE, Mich., July 2.—Some twenty years ago a woodsman named Almon Young was living on his farm near Barker's Creek, a station about twenty miles south of this village, on the C. & W. M. Ry.

Like most of our settlers, he devoted a portion of his time during the early spring months to the manufacture of that delicious product known as maple sugar, and at the time of which I write his "sugar bush" had, as they say in New Hampshire, been "tapped out," the sap spiles driven, the troughs set (they had not in those days arrived at the dignity of tin buckets), and everything was in the full tide of successful operation.

Sugar at that time was more costly than now, and as a farmer's work is less pressing during the early spring than at any other season, a good deal of it was made and for the most part traded off at the nearest country store for such supplies as the family most required.

Nowadays comparatively little sugar is made, the manufacture of syrup being found more remunerative.

Well, as I was saying, Mr. Young went down one morning early to his sugar camp, and before he reached it became aware that all was not precisely as it should have been. As he expressed it during a subsequent conversation, "things looked kinder upsot." A further complication was manifest in the presence of a large wolf.

Now the sugar makers, among other primitive methods

in use at that time, were accustomed to control the ebullition of the heated sap by dropping into the same a piece of fat pork, and certain fragmentary portions of this substance, which had been placed for convenience or safety upon some of the logs of the camp, had been dragged down by the unwelcome visitor and diverted from their legitimate purpose and destination. The snow was deep, game was scarce, and under the circumstances no self-respecting wolf could be expected to pass by without sampling it, a more or less attractive chunk of fresh "hog meat." At any rate, this particular wolf had decided upon his course—that is, the first course of his breakfast—and when the farmer had hove in sight had disposed of this item on the bill of fare, and was seeking more of the same sort.

Like other hunters, Young had but little fear of these animals, and although unarmed, he advanced with a shout, expecting, of course, that the wolf would turn tail and flee. He didn't; on the contrary he displayed a most formidable looking set of teeth, and deciding that if raw farmer was not the second item of the *menu* it ought to be made so at once, he sprang forward with a savage growl. To say that Mr. Young was surprised wouldn't express his feelings—he was a good deal more than that; but promptitude in such a situation is more than half the battle, and the woodsman held his ground, took in the newly added features of the situation, and at once decided that something had to be done or he might be late home to dinner.

As I said, he was unarmed and the wolf was between him and his axe, which was sticking in a log near the camp, but the beast growled some more and kept coming. Young afterward remarked that "It seemed as though the critter was three hours on the way, but he guessed arter all it wa'n't much more'n three seconts."

The ancient Scots had a proverb: "Willing hand never lacked weapon." (I wonder if O. O. S. remembered it when he reached for that handspike and knocked the stuffing out of the panther out on the Pilchuck.)

That, by the bye, was the best panther story I ever read, but it somehow reminded me of the performance of the play entitled "The Fatal Cow-House, or the Murdered Milkmaid," as reported by the author of "Little Pedlington." You will recollect that the hero and the heavy villian at last met in the fatal cow-house, where they providentially found two shields and two broadswords, and as Cy Larkin might have said, "Jest naterally fit it out."

But this may be regarded as a digression, and you needn't print it unless you choose. In fact, I only put it in in order that O. O. S might realize how these panther stories affect a fellow.

Every one who has read "Woodcraft," or has camped much in our Northern forests, knows that hemlock knots make a mighty good fire (Miss Fannie Hardy says she likes poplar and I suppose she knows whereof she speaks, but I have lived in a poplar wood, and I prefer any one of some twenty different sorts of timber for my fire).

Besides raw pork, Mr. Young had thoughtfully provided a fair-sized woodpile, upon the top of which lay a series of huge knots, which he had collected where had lain the trunk of an enormous hemlock tree, the softer portions of which, long since rotted away, had left the great resinous knots exposed to view and easily drawn from their resting places in the decaying wood.

Readers familiar with the works of the historian Barbour, or with those of Sir Walter Scott, may remember that just before the battle of Bannockburn the Bruce terminated an existing difference of opinion between himself and Sir Henry de Bohun by bestowing upon the helmet of that gentleman a slight taste of his battle axe. Young may not have been familiar with the above incident, and had he been his axe was out of reach, but he sprang for the woodpile and grasped the largest knot at hand; but just in time, for as he swung it aloft the animal, with a furious snarl, leaped right at his throat.

But the stern training of the backwoodsman had brought foot and hand and eye in perfect unison. Like a flash he moved aside and on the wolf

"the whiles he passed,
Fell that stern dint, the first—the last,"

and the fierce brute with a muffled growl rolled lifeless on the snow.

The catastrophe was so sudden and satisfactory that the most of us would have felt disposed, in Mr. Young's place, to have spent a little time in rejoicing and self-congratulation; Young merely remarked to himself, "Well, ef they's any more o' them critters that's pork-hungry, I guess we'll manage to give 'em a bellyfull, somehow."

His family, however, attached more importance to the incident, and that old hemlock knot is now, since the death of the old woodsman, treasured among their most cherished possessions. KELPIE.

YELLOWSTONE TROUT AND GAME.

MAMMOTH HOT SPRINGS, Wyo., July 2.—*Editor Forest and Stream:* If the spirit of Izaak Walton is roaming over the earth looking for happy fishing grounds—grounds that go near to make up a sportsman's paradise—it must keep very near to the mountain streams of the Yellowstone National Park in the summer months. There are other places where more fishermen congregate, and of which good fish stories are told, but in the Yellowstone Park men who never handled a reel, and have been afraid to admit that they loved to go fishing, have suddenly made the discovery that they can beat the expert fishermen of the East in casting a fly so that it will bring the fish to the hook.

Secretary Hoke Smith.

Hon. Hoke Smith was out here in '94, and when asked if he did not want to go trout fishing, he replied, "I want to bad enough, but I am no expert; I won't be able to land any fish! It takes an expert!" Mr. Huntley, general manager of the Transportation Co., finally induced Mr. Smith to accompany him on a fishing expedition to Willow Creek, and the result is that Mr. Smith is now an avowed disciple of Izaak Walton. They were at Willow Creek exactly one hour and forty minutes and returned with 138 trout, principally of the rainbow variety. Mr. Smith caught fifty-two of the 138, which was exceedingly good for one who had never fished for trout before.

Secretary of War Lamont.

Last year Hon. Daniel Lamont visited the Yellowstone Park with a party of friends. When asked if he fished, he said, just as Mr. Hoke Smith did, "Why, it requires an expert to catch trout." Mr. Lamont was in the Park just a week and he caught enough fish to feed the Democrats still out in the cold the remaining term of the present administration. He says that now he is a fisherman, and not afraid to acknowledge it when he goes back to Washington.

Judge Lamoreaux on Segregation.

Judge S. W. Lamoreaux, Commissioner of the United States Land Office, of Washington, D. C., who was in Yellowstone Park recently on a tour of inspection, said: "I spent a week in the Park, which, being under our department, I was anxious to visit. As a result of my visit there I shall have something to say on the question of cutting off the northeast corner of the Park, when I get back to Washington. That question has been before Congress for a long time. There was a bill before Congress at the recent session with that object in view. The idea is to enable a railroad to build through what is now a part of the reservation.

"The members of the Montana delegation were anxious for me to visit the locality, and assured me that I would be able to find no objection to the proposed change of boundary. Well, I rode into the northeast corner on horseback—it was too rough for a vehicle—and I discovered that the Montana delegation did not know what it was talking about. None of its members had ever visited that section of the country.

"The proposition is to move the boundary line from the top of the mountain to the base of the mountain. I discovered that the side of the mountain is covered with forest, and shelters all the kinds of game that are to be found in the Park. The elk and antelope seek these mountain slopes in hot weather, and in winter work down into the beautiful valley below. If we fixed the stream at the base of the mountain as the dividing line we would drive all this game out of the Park, and I have accordingly determined to report adversely on the proposition.

"No railroad company has ever been organized to build the proposed line along the mountain side, but I understand that 100 men of wealth stand ready to jump in and bid for the concession should the boundary of the Park be modified in the manner proposed. Such a railroad might be a money-making enterprise, but I do not think the game in the Yellowstone Park should be sacrificed for the benefit of a railroad corporation."

Judge Lamoreaux and party put in several days fishing. The judge and a friend went out for two hours on a Sunday and they brought in eighty-three fish, weighing 118lbs. The judge immediately called Mr. Jay Haynes, the Park photographer, to have himself and his string of fish photographed for the benefit of his friends in Washington, who would be sure to laugh at his fish story without the indisputable proof from the camera to confirm it.

Buffalo, Wild and Tame.

For several years before the passage of the severe Federal law which provides a penalty of two years' imprisonment and $1,000 fine or both, hunters made their way into the Park and inflicted serious injury upon the herd of buffalo there, and now it is doubtful if over 120 of them remain in the whole Park. In 1890 it was supposed by Uncle Sam's guardians that there were 300 in the herd. A good buffalo head is reported to be worth $500 and the hide $150, so the temptation to slip into the great reservation and break the law has been great. The Park is sixty-two by sixty miles square, and is guarded by a small force of soldiers, who cannot cover the whole territory.

The Government has made an effort to preserve the buffalo and other wild game, and placed a good man, Capt. George Anderson, in charge, but with the few soldiers under him he has been unable to catch every hunter who has slipped in. It is a big territory, covered by mountains, great cañons, rivers and forests; nevertheless Capt. Anderson has brought a number of men to book and captured and saved some fine specimens.

Col. Waters, of the Lake Steamboat Co., has, it is reported, purchased quite a good-sized herd of buffalo at Montreal, Canada, and will place them on Dot Island, a piece of land containing about 150 acres, four miles from the north shore, in Yellowstone Lake. Among the buffalo recently purchased is a bull buffalo weighing 2,200lbs. Mr. Waters has secured a permit from the Government which allows him to have all sorts of game native to the Park, including elk, deer, mountain sheep, bears, antelope and smaller game. F. J. L.

Natural History.

COLOR OF THE SCARLET TANAGER.

DR. R. W. SHUFELDT'S interesting paper on the scarlet tanager published in a recent issue of FOREST AND STREAM has called forth a letter to him from one of our subscribers, Mr. August Koch, of Williamsport, Pa., from which we are permitted to print some extracts. That the color of the scarlet tanager is subject to great variation is well known, and it is of interest that such variations should be noted. Mr. Koch says:

"I have read your very interesting article on the color of the scarlet tanager just published in FOREST AND STREAM. My collection contains some specimens of tanagers, descriptions of which may be of some interest to you, and I have therefore thought that I would send you some notes on specimens which are normal except for the points mentioned. All except one of these specimens was taken during the month of May.

"No. 1. Full dress, scarlet, except that two of the smallest wing coverts on each wing are red. Back of neck and central part of back have a strong sooty—almost melanistic—appearance. Upper tail coverts, green and sulphur yellow mixed with red.

"No. 2. Three of the smallest wing coverts on each wing are red, forming conspicuous bands over the wings.

"No. 3. A bright yellow spot on each wing, the spots consisting of a group of yellow dashes on smallest wing coverts, some of them being in the center of some of the black feathers. A fine male, otherwise in normal plumage.

"No. 4. The color is an admixture of bright orange and scarlet, a beautiful effect being produced by the two colors.

"No. 5. The fourth tail feather on the right side is perfectly white, except for a bright rosy tint at the termination of the feather. The specimen is otherwise normal.

"No. 6. A confirmed albino, the ground color of which is a creamy whitish with some admixture of very light sulphur and pink. The pink and sulphur become stronger toward center of abdomen, forming a stripe on the latter.

"No. 7. A male in the dress of a female, except for a large black spot on each wing, including all of the small wing coverts, and similar to the red part of the redwing blackbird. This last specimen was taken Aug. 24, and another in the very same dress was taken, I think, the 1st of September, and presented to Dr. B. H. Warren. I am rather disposed to think that the black spots change to green later in the season, after migration. The sex of both these birds were determined by dissection.

"While collecting in the vicinity of Apalachicola, Fla., last spring, I noticed a scarlet tanager in full dress March 26, 1896. I am rather sorry that I did not shoot the bird to observe the amount of green among the red plumage at that season while in the South."

THE SOUTH AMERICAN OSTRICH.

BY ADOLF ERICH BOECKING, PH. D.

(Concluded.)

THE flesh of the nandú is regularly eaten by the Indian, the Gaucho and the hunter. It is coarse, somewhat resembling horse meat in color as well as in taste, but is not inferior to the average beef. No doubt domestication and a modified diet would improve it, but the white people eat only the young birds or the wing and liver of the full grown. My deerhounds and setters refused to eat it raw, even when hungry, but they would gnaw it when cooked. The setters never noticed the track of the bird. During the season when the ostrich is in its best condition, it is very fat, and this fat, when fresh, is excellent to cook with, but it cannot long be preserved. The natives use it for tanning, for which purpose it is excellent. From the skin of the neck, stripped off unsplit, some Indians make stockings for their children and purses. From the skin of the abdomen with the tail plumes still attached, we are told that showy head dresses used to be made for the chiefs of the Abipone Indians. Stout snares are made by young people out of the long shafts of the wing feathers, and with these attached to the end of a bamboo pole they catch the tinamous. Bridles and ornaments for horses are sometimes platted from these same tail shafts by the men. The long wing and tail plumes are exported for use on women's hats and bring from $10 to $25 per pound.

Instead of being a stupid bird, this ostrich is one of the wisest and most wary. About the dwellings of white settlers, who have neither the time nor the inclination to disturb him, he becomes so tame that he unconcernedly mingles with the poultry and milch cows as if he too were domesticated. He is always fearful of men on horseback, but is not at all disturbed by the approach of people on foot unless they are followed by dogs. These he greatly fears. On the plains he often associates with the deer or the guanaco, and an alarm of any kind will send them rushing away together.

A bitter enemy of the ostrich is the little spur-winged lapwing of the pampa, which attacks the great bird whenever it ventures near its home. They hover over him with loud cries, darting at his neck and head, and ultimately driving him off, while they remain behind to mount high in the air and exult over their victory.

The Indians and the Guachos kill the ostrich for his flesh and for sport, using the bolas, the Indians prefering the *bola brava*, which has only two balls joined by a 6ft. cord of raw hide, while the Guachos commonly use the *bola mansa*, which has three balls on shorter cords. Of course the pursuit is always on horseback, and at least two men take part in it. They approach the bird under cover as nearly as possible, but as soon as the troop becomes restless put spurs to their horses and follow. They always endeavor to cut off one individual from the herd and follow it. While the ordinary step of the ostrich covers only from 20 to 24in., when it is trotting it lifts its wings and covers 3½ft. with each stride; but when more closely pressed and running hard, its head and neck are stretched forward, each step is 5ft. long, and its legs move so quickly that they can hardly be seen. If too closely pressed it dodges, turning at an angle of 25 or 30° from its previous course. When the pursuer is within reach he throws the bolas, which, after revolving a few times, strike the bird and it falls, usually killed by its own momentum. Should the first thrower miss, the second will not; but if the bird should succeed in reaching heavy, wet ground or underbrush, where the bolas cannot be used, it escapes.

When pursued in this manner, the ostrich prefers to run against or across the wind, and if there are bushes in sight, or swamps or shallow lagoons, it makes for them at once. It jumps gullies and creeks a dozen feet wide, and while in the air may be seen to flap its useless wings just as its remote ancestors used to. I have never seen the ostrich swim, as has been reported; nor have I ever, after repeated trials, been able to drive a bird into the water.

The ostrich is often coursed with a mongrel breed of hounds employed by the natives. Thoroughbred greyhounds cannot be used to advantage in the tall, rank grass, for they run too close to the ground to keep the game in view. Besides this they are constantly in danger of getting lost in the grass. In coursing, care must be taken that at least one of the hounds in the leash is accustomed to the sport, for the ostrich has a habit of kicking backward when gripped, and the inexperienced dog is likely to be hurt and perhaps cowed, unless there is an old dog present to back him up and show him how to seize. My coursing was done with a brace of kangaroo hounds, but they never seemed so fond of this sport as of following four-footed game.

In stalking the ostrich with a rifle it is to be remembered that they can carry a good deal of lead, if shot in the front part of the body. A shot which enters the entrails will at once disable a bird.

In more remote parts of the pampa, where people are seldom seen, the ostrich is still afraid of a rider, but does not seem to recognize a person on foot as especially dangerous. There they can be decoyed to within shot of the hunter, if he will wave his handkerchief or his hat on the end of a ramrod. The birds will slowly, cautiously and with many pauses move up quite close to the hunter, unless he should betray himself by some incautious movement, or the wind should change so as to notify the birds

of his presence. The report of the gun does not seem to alarm them, unless there be among the herd some individual that has previously been shot, and if one of them is knocked down by the ball the others in the herd will caper about it in frantic gambols. The wounded bird keeps with its companions as long as it can, but when too weak to follow, turns aside to die.

If caught young, the ostrich becomes wonderfully tame, and these semi-domesticated birds may be seen everywhere in their native country. When thus kept as a pet, it is unnecessary to confine it, for its attachment to the locality is so strong that it is certain to return even if it should have been absent for days. One afternoon Gaspard the cook came riding up to the house clad only in his shirt, and holding tied up in his trousers four little ostrich pullets a day or two old, which he had picked up during a ride. The little birds were put in a room by themselves, but called continuously for their father, and ran against the walls so often that their heads became quite sore and so that I was almost determined to restore them to liberty. As night drew on they became more quiet and at length huddled together in a corner, and the next morning, when, holding an old dry ostrich skin before me, I entered the apartment and strewed some minced meat on the floor, they at once began to eat and were won over to civilization. Afterward they would follow me like dogs, paying no attention to scores of their wild relations which were in full sight. Their principal diet was grass, but they were very fond of anything which came from the cook. They preferred fresh beef or mutton to anything else, and after they had grown up and discovered the situation of the meat house it was necessary to protect the windows with wire nettings to keep them out. With the dogs and with the poultry they lived in entire harmony.

There is no question but that these birds would breed in captivity, and in fact they have so bred in Berlin, in Regents Park (London), and at Frankfort on the Main. There is no doubt that they would do well in Texas and it may be hoped that some time this experiment may be tried.

THE SCREECH OWL IN CAPTIVITY.

ONE hot evening in June while sitting under a tree I was surprised to hear above me a noise sounding like the click of a revolver. Looking up, I saw the originator of this sound—the small but useful screech owl.

The tree next to the one under which I was sitting was full of old woodpeckers' holes, and in one of these I suspected this owl had her nest, so I waited to see into which one she would go. I did not have long to wait, because as soon as she made the noise she was answered by the young ones, who were waiting for the fat mouse which she held in her foot.

She hopped from the tree where I first saw her into one of the smallest holes on the under side of the tree. When she left, after feeding her young, I climbed the tree, and in the hole I found four young owls whose plumage was white, barred with light gray. They were fully feathered and almost able to fly. I took two, which proved to be a pair.

In a short time they became very tame and would take meat from my fingers and would nibble my hand if I put it into the cage empty. When about four months old, one of them began to show rufous feathers, while the other one was gray, finely mottled with brown, and in a few weeks the upper parts of the first became a light rufous streaked with dark brown, with a line of white on each side extending above the wing. All the under parts became white except the breast, which was now barred with light brown, while the other one was dark gray on the head and back, and on the breast was everywhere barred with fine black lines, excepting a stripe of white in the center of the breast. Up to this time I had not named them, and now I decided to call them Red and Gray.

When hungry or thirsty they have a cry which is started very low, rising gradually and then sinking down low again, sounding like *twoo whoo hu-hu-ah*, and made in a very harsh tone, sounding like a moan. After doing this several times they will finish with a cry of *whoo-whoo-whoo-ah*, which begins very low and gradually becomes higher and which I think is a cry of question. They have another cry which they make when their curiosity is aroused and which sounds like *whoot* or *huet*. While doing this they raise their ear tufts about an inch.

If a cat or any other enemy comes near either of them, it puts its wing before itself as a guard, puffs up its feathers, clicks its bill several times, and hissing a warning *cre-e-e*, it advances toward its enemy.

Usually the cat, or whatever it may be, is so frightened by the appearance of the little owl that it suddenly remembers it is not good for its health to stay in that neighborhood and runs away.

When I put a mouse into their cage, the owl which is the nearer to it will have it before it can go 3in., and then the other one goes all around the cage and looks into every corner, perhaps imagining that it can scare up another mouse. As it does not succeed, it then hides in some dark corner of the cage, and then giving a sudden rush it will look all over the cage again. I suppose it thinks that if it hides the mouse will come out and then it can catch it by giving a rush.

When meat is placed in their cage they jump on it as if they intended to break the bottom out of the cage, but sometimes they will jump down onto the floor, and walking up to the meat select a piece, and if it is too big to swallow whole they will tear it into small pieces, shutting their eyes whenever they take a bite.

They are now over a year old and have obtained their adult plumage. Red is 9¾in. in length, and her upper parts are rufous, lightly streaked with black, and her under parts are white and her breast is a very light rufous, streaked with brown and black; while Gray is gray on the back, lightly streaked with black, with under parts white, excepting her breast, which is light gray streaked finely with black. Both have yellow eyes and ear tufts about an inch long, and have toes just barely feathered.

About April 15 the screech owls begin to nest in a hollow in some tree, often where a woodpecker lived last year, near a house. They lay from four to six white eggs, measuring about 1.52×1.25, and by June 15 the young have begun to fly.

This owl is nocturnal in its habits, and hides during the day, but as soon as night falls it comes out to try to catch something. If in your rambles through the woods you should ever happen to meet one in the daytime, do not kill it. If there is a farmhouse anywhere near its nest it is sure to go there about every night and to begin its mournful moaning. I remember when a boy I paid a visit to a cousin who lived in the country, and was just enjoying a pleasant sleep when I was awakened by one of these owls, and in my fright I thought it was about five times as large as it was. After looking all over the room it quietly left, much to my relief.

This little owl is harmless, but because it flies around in the night and makes a moaning noise, it is killed by nearly every farmer and small boy whenever it is seen or whenever they can get near it. I was sitting one evening during summer near an open window when one of these little owls came and sat on the sash of the window, and uttering a low, bubbling sound, which seemed to me to be more pleasing than the loud song of any of our warblers, it flew away. W. DOYLE.

The Rosebreasted Grosbeak's Food.

AUGUSTA, Me., July 5.—*Editor Forest and Stream:* A remarkable bird has been seen here of late, and according to accounts should be called the farmer's best friend. It has been approached within a few feet and was seen to coolly pick potato bugs off the vines, and after apparently shelling them, as birds do seeds, swallowed them. It made quite a meal of them before flying. This bird was about as large as a robin; its head was black, shaped somewhat like a parrot's, with a parrot's beak; the body was a sort of drab color, with a beautiful red shield on throat and breast; the wings were black, having on each wing two prominent white feathers, making a very beautiful bird.

Will some one name it?

[Undoubtedly the rosebreasted grosbeak (*Habia ludoviciana*), which has long been known to destroy this pest. The attention of readers of FOREST AND STREAM was first called to this habit of the grosbeaks in a note from Mrs. Violet S. Williams, of Coralville, Iowa, printed in 1879. The habit had already been observed by Prof. Bessey, of the Iowa Agricultural College, and his observations were confirmed by those of Mr. F. E. L. Beale.]

Game Bag and Gun.

GOOSE SHOOTING AT SILVER LAKE.

LET me tell you of a goose hunt that Charles and I had in November.

The wind is northeast and it looks like snow. As this is the best time for the sport, we load our traps and after an hour's drive come to the lake. Putting the horse in the barn, we walked to the stand or rather house. It is a little house among the bushes and forms one end of the stand or hide, which is about 100ft. long. As we open the door we are met by Add, Oliver, George, Hub, and last, but not least, William, who is the champion shot of the crowd. We see at a glance that the signs are right. They all say, "You're just in time. Flight is on. We have got twenty since daybreak."

Our courage was way up and we kept sharp watch until dark, but saw nothing. While waiting for supper I will tell you about the place. On the west side of Silver Lake is a point called Widgeon Point. This is the best place on the shore, as the geese in their flight cross here and are decoyed with live decoys placed on the beach and with loose ones used as flyers. The club has 200 live decoys, and it is a common sight to see sixty of them in the air at a time. The work of training this flock devolves on Hub and George, and they are first-class at the art. The whole thing is owned by a club of five members. Thomas Arnold is the principal owner, and a right good fellow he is. The rest are good, clean sportsmen and gunners you would be pleased to know.

The stand is about 4ft. high, made of boards and covered with bushes to resemble the woods along shore. It is fitted with electric bells to give warning to those in the house when a flock is seen. It is placed about 30ft. back from the water, the shore in front raised and covered with white sand.

On this beach are tied the "pinners" or line decoys, and these are the watch dogs of the business. Some of the pinners are very valuable, as for instance Old Scituate, One Wing, Young Bill and Johnam. They have about seventy in the beach all the time. Some are birds with part of a wing gone, and old One Wing, as his name implies, has only one wing; the other was shot away in years past when he with others was making his journey over this country. He is now mated to a goose, and is doing all he can every fall to entice his brothers and sisters perhaps into the same trap that caught him. The back of the stand is lined with pens for extra geese to go on the lines when their turn comes.

The flyers are in pens on the hill. When a flock is seen a good pull on a line opens a door, and out comes a flock of eight, ten or fifty geese, as George may think necessary for the work in hand.

But what is that Oliver is saying—"Come, get down to supper. There will be geese in the morning and we want to get into bed as soon as possible." I would like to tell you about Oliver, but am making my story too long. Those that have eaten his ox-tail soup and have listened to his lemonade story will never forget him.

While we were at supper the door was opened by Tom and Millard. Millard is sometimes called Old Sleuth, and he looks it with his gun weighing 20lbs. When he shoots both barrels you hear it in the next county. He is the sole shooter of that gun. Hub tried it once, and you can see his form in the side of a goose pen now. He thinks both barrels went off at once. Thomas was wreathed in smiles when he heard that the boys had got twenty that day. After his supper he told us about the "law" and "'thority" as a certain person understood it, and then we turned in, but not to sleep. Tom did it all. He worked his mill until about 4 o'clock, when I heard Oliver in the large room, and right here I give up all hopes of ever correcting him.

The fire was out; it was snowing outside and there was no kindling in the house. There was a blue smoke in the room and Oliver was doing his best to free his mind, but all of a sudden "Whir-r-r!" goes the bell. We rush out and find that George has nine geese inside the blocks. They come up to the decoys; two go one side, the rest come up in front. Tom says, "You take these in front, I will take care of the two on the side." At the words "Get on to them" from George, we rise up over the stand. "Ready! Fire!" is the word. The guns break, and seven white bodies float on the water. Looking up we see Tom doing a war dance. "Got one with each barrel, and did not shoot until after you fired." "Glory enough." We got nine at this shot.

While we were eating our breakfast a large flock lit in the lake, but were wary and would not come on.

The bell rang every other thing, but we did not get another shot till about 2 o'clock, then five were seen. George let the south flyers go; away they went, sixteen of them. The five wild ones joined them and came up over the beach. It was a sight to make your blood run hot. Twenty-one in the air and seventy on the beach and all in full cry. Old Scituate was up on his toes and calling his goslings for all he was worth, while the rest in the pens joined in the music out of excitement. Talk about music. We had it there. The five lit near enough to shoot, and when they got so we could pick out the decoys we fired and killed four. One flew over the stand. I fired, and as my gun broke I heard the guns go off like crackers on the Fourth of July. He came down all right and "was a bird."

Our next was about an hour later, a flock of twelve lit and then another of thirteen. They did not come on until dark and then came so we could not shoot. We waited and soon they swam into the lake and we thought we had lost them. It was so dark we could hardly see when Tom said he could see them.

"We must shoot now," said he. We got up. Tom gave the word to fire. I heard a roar and looked to see Millard beside me laughing. "Did you hear my gun?" I guess I did. I can hear it yet. We picked up thirteen from this shot, and while the boys went into the house to load the guns Charles and I picked up our traps, said good bye and went home. The score was twenty-seven geese, and thus ended the best time I ever had at a gunning stand. F. E. W.

Game Photographs.

FOREST AND STREAM prints from a photograph a wood scene that should bring a faraway look into the beaver trapper's eyes the moment he sees it. There are fallen logs, in a tangle of brush trees denuded of leaves mostly, and down a slight incline, surrounded by the brush, is a pool. Ripples of water are waggling the shadows of the trees, which were caused by a beaver that had just dived, alarmed by the approach of E. Hofer, who took the photograph.

WIDGEON POINT—WIDE AWAKE.

No picture is so suggestive to a sportsman as one which shows where game has been. Sportsmen's papers print photographs of the tracks of deer, bears and other game, and these are more suggestive than a view of the game itself. A fox's track, leading away across the snow-covered fields, or the ripple where a fish has slapped the water's surface, is full of life to a sportsman. There is a chance with such evidence before him of exercising his craft and skill.

It is related of an amateur photographer of field scenes that one day he tried to catch a running gray squirrel with his little camera. When the negative was developed he found that he had a picture of the animal's tail alone, but because of the very incompleteness of the scene he values that picture above any six in his collection.—*Atlantic Highlands Press.*

Florida Quail and Turkeys.

GULF HAMMOCK HOUSE, Levy County, Fla., July 8.—Owing to the drought of April and May, quail and turkeys hatched out in great style and are strong and healthy. We never had such a showing for sport. C. B. W.

AMERICAN GAME PARKS.

The "Forest and Stream's" Third Annual Report on Game in Preserves.

Part One.—Fenced Parks.—Concluded.

The present report deals with game in fenced parks or in localities where from natural conditions there is no fluctuation of the supply that cannot readily be accounted for, and where the number of animals can be determined with a reasonable degree of accuracy.

While it is not always possible to make an exact estimate of the game in fenced parks, the correct figures can generally be pretty closely approximated. The winter is probably the best time for taking such a census. When the snow is on the ground an expert can form a very correct estimate from the tracks, even if the animals are not seen. Elk, on account of their habit of banding up, are among the animals most easily counted.

The following table is of interest by showing the increase of the various species of game animals from year to year. The figures were furnished by the owners or their representatives, and the increase, unless stated to the contrary, is in most part due to births:

BLUE MOUNTAIN PARK, AUSTIN CORBIN ESTATE, 26,000 ACRES, 1889.

	1891.	1892.	1894.	1895.	1896.
Buffalo	25	32	40	55	75
Elk	60	150	400	750	1000

Virginia deer	..	..	..	125

[1] Dead.
[2] Elk and deer transferred from Long Island to Blue Mountain Park.
[3] Forty-four elk were acquired by purchase, seven births, deaths no doubt due in large part to injuries received at time of capture or in transport.
[4] Fourteen Virginia deer and four black-tails were acquired by purchase; five deer were born, species not stated.
[5] Species not stated.
[6] Fifteen Virginia deer and five black-tails.
[7] These elk were purchased in the spring of 1893. There were five bulls and fifteen cows, 1 to 2 years old.
[8] No report in 1895.
[9] All died in good condition.
[10] Bull buffalo dead. Two half-breeds from cross with Galloway cows.
[11] Two escaped and one died previous to this report.
[12] Large increase reported.
[13] November, 1893, acquired by purchase ten 2-year-olds and twelve 3-year-olds. January, 1894, fifteen yearlings.
[14] See letter from Supt. Halleck.

NE-HA-SA-NE PARK, Lake Lila, N. Y., June 25.—*Editor Forest and Stream:* As nearly as we can find out, the antelope and black-tail deer died a year ago last winter, when nearly half the game through the Adirondacks died, and this was the trouble with our elk. Our game wintered finely last winter and the elk are showing up some nice calves this spring. F. G. HALLECK.

Blue Mountain Park.

CAN the large game of America be preserved? has been very thoroughly answered in the affirmative by the (we were going to say) experiments of Austin Corbin in the Blue Mountain Forest, New Hampshire, but the experimental stage was passed three years ago and the enormous increase, by breeding in all the herds, proves that it would not take many years to restock all the public lands of which the boomers have not got hold; and with strict laws properly enforced our forests would again resound with the sounds which gladden a sportsman's heart.

At the Blue Mountain Park a whole mountain and two large valleys have been inclosed by strong fencing. Fifteen keepers are constantly on the watch, their cottages being connected by telephone with the superintendent's residence and the central station, so that if help is needed it can be obtained at once. Reports are made every morning to the superintendent of all animals seen the previous day and any occurrence calling for attention.

It is only seven years ago that the first few animals were turned loose, yet to-day there are over three thousand.

Within the forest there are as near as can be figured sixty buffalo and fifteen calves. The increase has been in the same ratio as domestic cattle. Of moose there are 150, the original stock having trebled in four years. The elk number nearly 1,000; the increase has been in the same proportion as the moose. There are 1,000 deer, including the Columbian black-tail, the mule deer, the English, red Hungarian and Virginia white-tail. The English deer are the most fruitful and the hardiest. There does not seem to be any cross breeding, so far as can be noticed the different strains seeming to herd by themselves, though an occasional deer may be seen with both the moose and elk.

Fourteen wild boar were loose in the forest, five males and nine females, in the spring of 1884. There are not less than 1,200 within the fence to-day; of this number fifteen have met their death at the hands of hunters. The average weight was 250lbs. dressed, but some have been seen who would tip the scale at fully 400lbs. It takes a big bullet, .44cal. at least, to penetrate their shaggy hides, and unless a vital spot is reached even that will not stop them. The bristles are so strong and thick around the breast and shoulders that even a large bullet will not penetrate.

Hunting the boar is a difficult task. It takes several men and nearly a dozen dogs. Of the latter you can never tell how many you will bring back, for the boar when cornered is a fighter and more than a match for three dogs; in fact he could whip the whole dozen single-handed.

The *modus operandi* is: You mount your men on mustangs or polo ponies that are easily handled, then you loose your dogs, boarhounds and setters, which latter are little fellows in comparison to the hounds; but they have keen noses, and make up in intelligence what they lack in weight. Well, if you have good luck this result follows: the dogs strike the scent—the little fellows first always—there is a great deal of sniffing and whimpering, then suddenly one big dog lifts his head and utters a most musical howl, and the whole pack join the chorus and start with heads down and tails up; but no boar in sight. This continues for an hour or perhaps two, for it seems as if the pig would never stop; but he does when you least expect it. He does not stop because he is tired, but to get a chance at the dogs who have been annoying him. He usually selects a big tree trunk to back up against. The dogs form in front of him and bark at him, then one more courageous than the next dashes in, but if the pack does not back him up he is sure to get hurt. The hunters by this time have overtaken the dogs and unsling their rifles, getting ready for a shot. This is the critical moment; the boar and dogs are moving all the time, and if the aim is not true there is a probability that one of the dogs will be laid low instead of the boar. The best dog in the kennel was lost in this way in 1894.

The first shot seldom kills, and three or four are necessary to finish him. Being dead, the pig is loaded on one of the horses, taken to the central station, dressed and hung up. After a few days the cutting up and distributing is done, and several people are made glad with a feast of roast wild boar, "a dish fit for the gods."

Considerable attention must be given to the dogs, so that they will not stray, a few dogs having been lost in that way, and there is a well-defined idea that the said dogs fell victims to some herd of pigs, as they never returned to the kennels.

The dog kennels are well filled, there being about seventy-five in all. They comprise Great Danes, French boarhounds, English and American foxhounds, boar setters, beagle hounds, fox terriers, etc.

Of the Himalayan wild goats it is impossible to say how many there are, as the only time they have been seen was early in the morning and then at such a distance up the mountain that it was impossible to count them. The same may be said of the Rocky Mountain sheep.

The Flemish rabbits have nearly all fallen a prey to the native foxes, who will not be eradicated no matter how many are shot each winter. The American Brer Rabbit, however, is too cute for Mr. Fox and consequently thrives. The two breeds do not affiliate.

There are a large number of trout in the streams and black bass and pickerel in the lakes, while among the uninvited guests in the preserve are lots of coons, porcupines, etc. There is also a colony of pine martens that helps deplete the stock of small game.

The accidental death of Mr. Austin Corbin on June 4 will not cause any alteration in the plans set out for the care of Blue Mountain Forest, as Mr. Austin Corbin, Jr., will give it the same care and attention that his father did; in fact the scheme to found this grand preserve was conceived by the younger Mr. Corbin, who has always taken the greatest interest in all the arrangements and who is thoroughly versed in the habits of all the animals.

The writer suggested to Mr. Austin Corbin, Jr., that this was a grand chance for the National Government to purchase the whole property and the animals, but Mr. Corbin said very emphatically: "The property or animals are not for sale to the Government or anyone else. My father took great pleasure in the possession of the Blue Mountain Forest and its inhabitants, and I shall not change any of his plans." T. H. RYAN.

In an article in the *Journal of Education* on the elk of Blue Mountain Park, Mr. C. I. Rice says:

"They are perfectly harmless, as a rule, except in the fall, when the bucks in a greater or less degree lose their fear of man. After the middle of August each year printed notices, giving warning of the pugnacious disposition of these animals, are given to all visitors as they enter the park.

"Personally I have never seen the least disposition on the part of an elk to do anything but run away; there are, however, occasional individuals of this species that for some reason or other become depraved and attack everything. I know of only one such having been at Blue Mountain, and an account of the close of his career will illustrate the toughness of this animal and his indifference to ordinary chastisement, as well as its unreasoning disposition to attack anything that comes in its way after its temper is soured.

"A number of men engaged in repairing roads, seeing this old buck approaching, succeeded in getting their horses into a barn and closing the doors. Not to be deterred from carrying out his purpose of attacking something, the elk retired across the road, and, lowering his head, as if charging upon one of his own kind, came against the building like a whirlwind, and with such momentum as to push the points of his antlers through the boards. Finding, after two or three attempts, that he could not break in, he started around the barn to reconnoiter. This gave the men a chance to make a dash for the house across the road, the door of which stood open, and, as they found when they got in, could not be closed. After making a circuit of the barn the elk saw where the men were and tried to make an entrance through the open door. In this he was foiled by the size of his antlers, but he showed his determination by elevating his muzzle, thereby laying his antlers back on his shoulders and pushing his head as far in as possible. One of the men, thinking to drive him away, found an old ash scythe-snath, and standing on one side of the door, belabored the animal with full strength on the nose, but with so little effect that he hardly winced. An hour or two of this captivity grew monotonous, and it was decided to try more heroic measures; some one in the party had a .44cal. revolver, and, aiming not to kill, put five balls into the old belligerent before he began to move off. A few days later Superintendent Stockwell was in the park and ended the matter with a rifle ball just as the elk was about to charge on him."

Part Two—Unfenced Preserves.

Cutting Preserve.

Cutting Preserve includes the northeast quarter of Riversdale in Township No. 12, St. Lawrence county, N. Y. It has been well cared for during the past year and only six deer have been killed on the entire preserve.

I find it very difficult to keep people from going in and killing deer in June and July, when the weather is warm, and a trespasser can camp anywhere and the deer come down to the water to get rid of the deer flies.

I am not posted as to the law relative to the fine, but it seems to me that if one-half or three-quarters of the fine could be paid to the informant it would then become so dangerous for a man to kill a deer out of season that very few would be killed at that time; but as it is now, a man living on the outskirts of the Adirondacks will go into the woods out of season and get a deer and go home and divide up with his neighbors; but if his neighbors could get a large part of the fine they would be more inclined to report the unlawful killing of deer.

In order to prevent the illegal killing of deer I have been obliged to keep a man constantly on the watch, and in spite of that we have from one to two deer killed out of season every year. After the open season commences it is then not so easy for a man to camp anywhere that night may overtake him, and deer are not coming to the water the way they are in hot weather, and we have no trouble in keeping trespassers away, but during the close season it is very difficult both in the early summer and during the winter, for during the winter men from lumber camps often go out hunting for deer to supply their camps.

On account of the protection that we have given to the deer and having allowed so few to be killed, we know the quantities have increased on the preserve a great deal during the past year. On the east side of my preserve the deer have been very nearly exterminated on account of the hounding having been allowed and the woods being full of hounds after deer during the whole season, and they are not satisfied with the season, but put their dogs out late in the fall.

I think that there should be more deputy game wardens for the months of June and July than there are at present employed, for the deer during that time are getting very little protection outside of the preserves.

As to the fishing, the brook trout are now much more numerous and larger than they have been, for we have taken only enough fish for camp use, none being taken to be carried away and no more being taken than are actually wanted in the camp.

We have during the past year put quite a quantity of yearling salmon trout into the lake which borders on my preserve (Lake Ozonia), also a quantity of lake trout fry are to be put in this season.

The beaver on my preserve appear to be doing well and have not been molested.

The partridges seemed to be more abundant last season than in the previous years.

I have done nothing toward introducing any exotic game species. FRANK A. CUTTING.

Morehouse Lake Club.

With an experience of forty-five years of from two to six weeks in the Adirondacks each year (spring and fall) I see that brook trout in public waters are becoming very scarce, while in private waters they are in most cases increasing. As to deer, it is my opinion that there was a continual increase in the number of them from the time the last wolves and panthers were destroyed, which was about fifteen years since, until the winter of 1894–5, when from some unknown cause a great many died. But just so sure as hounding is stopped deer will be entirely wiped out. Hounding keeps them wild and not so easily approached by the still-hunter. W. W. MOSHER.

Adirondack Timber and Mineral Company's Park.

It is less than one year since I obtained possession of 30,000 acres of the best game country in the Adirondacks and converted it into a private park in accordance with the game laws relating thereto. It is safe to say that fully 500 more deer are in the park than there were a year ago. This marvelous increase is accounted for by the fact that no deer were allowed to be killed in the water or that was being run by dogs anywhere during the last hounding season. Hounding was practiced on all lands surrounding the park. Deer were driven into the waters in the park, where they got away from the dogs and remained in the park. My gamekeepers saw them every day in the lakes that were driven there from outside the park. Seven deer passed through one small lake in one day and the dogs not allowed to pursue any further. A year ago last winter I don't think that over fifty deer wintered within three miles of my house. But judging from the report of competent judges who traveled over the ground last March, hunting dogs that were killing deer on the deep snow, I should say that fully 500 deer wintered within three miles of my house. The dogs made sad havoc among the deer and always will on the borders of woods so long as dogs are allowed to be used, no matter how short the season, as these dogs will be kept. I think fully 200 deer were killed. One large black dog killed eight deer in one day. This we know, for we followed the dog and found eight carcasses, and two were driven into an open place in the ice and drowned. There were thirty days in which this dog could kill deer just as easily as on that day. I had from two to five men on the ground for two weeks of the last deep snow trying to clean out the dogs. We killed one, but the one that killed the eight deer in one day we did not get until about ten days ago. I offered a reward for the dog dead or alive, and he was finally shot on the Beaver River Club grounds at Stillwater. Grouse were unusually plenty last fall, and as this spring is favorable for their increase I anticipate an abundance next open season. Of course there has been no time for increase of trout, but I hope by proper protection to make better trout fishing. I inclose rules adopted in regard to fishing. CHAS. FENTON.

"The following rules and regulations in regard to fish-

ing in the waters of the No. 4 park and private park of the Adirondack Timber and Mineral Company must be observed by every person having the right or permit to fish in the above-mentioned parks, viz.:

"From the commencement of the open season for catching trout to July 1, no more than 8lbs. of trout must be caught by one person during any one day.

"From July 1 to the close of the season only 4lbs. of trout must be caught by one person in one day.

"Three trout may be caught in one day, even if their combined weight exceeds 4lbs.

"As the trout in Sunday Brook are mostly below the legal size, this brook will be kept for stocking purposes. No person will be allowed to catch trout from Sunday Brook at any time.

"No trout taken from the waters of above-mentioned parks shall be sold on any account."

CHARLES FENTON, Lessee and Manager.

The Adirondack League Club.

THE Adirondack League Club has 105,000 acres of land in Hamilton and Herkimer counties, New York, a large portion of which has been preserved from indiscriminate hunting since the incorporation of the club in 1890.

To quote from the year book:

"When the club acquired control this tract had been open to the public, but its fish, deer, bears, partridges and other game were less depleted than in other regions, because of its comparative inaccessibility. Prompt action was taken for the betterment of the fishing by restocking all its waters with such varieties of trout as were found to be best adapted to the varying conditions of food and water. Up to 1895 many hundred thousand trout fry were hatched and carefully put out in the small inlet streams of the lakes and rivers. It was determined to follow the modern methods of more rapid and successful stocking by feeding and rearing a large proportion of the fry until they were capable of more effectively taking care of themselves. In the winter of 1894–5, 25,000 two-year-old trout from 5 to 9in. long were successfully distributed. In the spring of 1895, 250,000 trout fry were distributed. During the past winter 17,430 one and two-year-old trout were distributed. There are now (April, 1896) in the troughs, rearing boxes and pools at Combs Brook hatchery 530,000 fry, of which 200,000 are salmon trout and 330,000 are brook trout. These are being fed and will be gradually distributed only as needed to make room for the growth of those left in confinement. The club's great hatchery at Combs Brook is equipped for large and successful hatchery operations, and the members are assured that their utmost skill and persistence with the rod cannot deplete the lakes and streams.

The club has not been inattentive to the important subject of adding to the supply of natural food for trout, such as the fresh-water shrimp and frost fish. Nearly a quarter of a million frost fish have been hatched for distribution this spring.

The deer herd on the preserve has increased during the club's possession, due to natural increase and to reasonable restrictions on killing by club members, and also largely due to their fierce, indiscriminate pursuit on adjacent unprotected lands. It is literally true that this preserve is a harbor of refuge for deer driven off from public grounds.

The result of this legislation (limiting of jacking and hounding) will certainly be to largely increase the number of our own herd. The club has for several years forbidden jacking, so that the limitation is no deprivation to our members, while it will be of great advantage to have it in force elsewhere. While the club's officers took little part in securing the limitation of hounding, knowing the addiction of some of our members to that fascinating sport, yet it is believed that the two weeks' limitation, if it becomes a law, will soon restore all the delights of still-hunting, and make that sport as productive in results as the more destructive methods which are now limited.

The eighty miles of boundary line of the League tract is thoroughly and legally posted, for the most part with enameled tin signs. The club's compliance with the terms of the law making poaching on private preserves a misdemeanor has just been tested and confirmed by the conviction of two gentlemen who doubted, trespassed and attained conviction, fine and repentance. Our troubles with poachers have never been more than an annoyance, and we are in a position to entirely stop it this season.

West Canada Lake Preserve.

The 5,000 acres in this preserve are located in the northeast corner of Township 8, Hamilton Co., N. Y., and contains the West Canada Lakes, Brook Trout Lake, and two small lakes known as Twin Lakes. These lakes have the highest altitude of any lakes in the mountains, and are noted for their wild beauty, secluded situation and remarkable abundance of fish and game. The West Canada Lakes have an elevation of 2,348ft. above tide water, and are the fountain head of the West Canada Creek, the principal tributary of the Mohawk.

This property is situated on one of the divides in the wilderness, and within a radius of four miles are other lakes, and in the opposite direction the Cedar, Miami and Jessup rivers flow to the Hudson, and the Moose and Black rivers to the St. Lawrence. J. I. WENDELL.

Upper Saranac Association.

It is the impression of the officers of the Upper Saranac Association that game in our region has not at all decreased in the past ten or fifteen years, nor has fishing deteriorated in any of the back ponds. In the Saranac Lakes themselves, the introduction of pickerel, supposed to have been malicious, has interfered with the breeding of speckled trout, though the lake trout have held their own pretty well, a fair number of large fish having been taken last year.

We have had no experience with the introduction of breeding of extinct game species. SAM'L B. WARD.

Liberty Club.

MERIDEN, Conn.—I have been looking up the game birds and find that the English pheasants are increasing fairly well. Warden Stiles says that three or four pheasants' nests have been found in the woods this spring. The ring-necked pheasants are the only ones that have been liberated so far, but the club are thinking of trying some Mongolian birds. Quail wintered well. They made good use of the sheds put out for them to roost in. Partridges hold their own, and will continue to be plenty if we can keep the boys from snaring them.

I think the farmers are as much to blame for the scarcity of game as anybody. I have heard of two pheasants' nests that were found and the eggs taken, and if that business continues the pheasant will have a hard row to hoe. I have a hen sitting on some pheasant eggs that I intend to liberate around Meriden if I have any luck with them. T. A. JAMES.

The Forest Lake Association.

The Forest Lake Association was incorporated in July, 1882. The association owns 3,000 acres of forest land in Pike county, Pa., between the Delaware and Lackawaxen Rivers, and the tract is stocked with deer and partridges. The club house is situated on an eminence 1,500ft. above tidewater. There are three lakes on the property, which afford good fishing for bass, pickerel, perch, etc.

Vilas Preserve.

"During the five years that the Vilas Preserve has been preserved and in charge of keepers, there has been a steady increase of deer. During the season of 1895 deer were so numerous that they were constantly seen by parties traveling through the woods. Until the hounding season, they were unusually tame, and were frequently seen in our camp, a settlement of five buildings. Hounding is not permitted on the tract.

"Our own experience does not justify any increased restriction in hunting deer in the Adirondacks. In many sections the laws are indifferently enforced against residents. To make the restrictions severer punishes the law-abiding man, and tends to awaken opposition to the law. The laws of '92 and '95 were sufficient to cause steady increase in the deer and yet give a fair hunting season. If any localities have suffered, it has been through the violation of existing laws." E. A. CARPENTER.

THE BANNOCKS AND THE WYOMING AUTHORITIES.

CHEYENNE, Wyo., July 9.—*Editor Forest and Stream:* In your issue of May 30, 1896, in an editorial under the heading of "Indian Hunting Rights," you do a great injustice to the people of Wyoming. It is there asserted that in connection with the arrest of certain Indians for unlawfully killing game the officers made the most of the opportunity and shot down some of the unresisting and defenseless savages, and that after having thus taken the law into their own hands and inflicted the penalty of capital punishment for misdemeanors which the law punishes only by fine and imprisonment, the Wyoming authorities took the case into court to determine the actual rights of the Bannocks as secured to them by the conditions of their treaty with the Government. I believe that in justice to the people of Wyoming you will accord me space for a brief correction of the above statement.

The authorities of Wyoming attempted in the first instance to have the hunting rights of the Bannocks determined by legal procedure, and in fact never proceeded against them in any other way. Upon the 7th day of June, 1895, William Manning, a constable at Marysvale, in the basin known as Jackson's Hole, arrested an Indian who had in his possession 50 elk hides and about 50lbs. of meat. He was fined $15 and costs, the costs being afterward waived. On the 24th day of June, Constable Manning, with two deputies, attempted to arrest five Indians for the wanton destruction of game. These Indians drew their guns on the posse and refused to submit to arrest, although they understood English and had heard the warrants read. They said they would kill anyone who attempted to arrest them. After being joined by twenty-five other Indian hunters, they jeered at and ridiculed the officers, and twitted them with their inability to arrest them. This party had over 500 elk hides and not enough meat to last them two days. Constable Manning returned to the settlement, organized a posse of thirty-seven deputies and on July 4 arrested ten Indian hunters with their squaws. They had over ninety elk hides and not over 100lbs. of meat. The Indians were fined $75 each and on being unable to pay it were started under guard for the county seat, but on the way there they all escaped from their guards. On July 7 Constable Manning with a posse of twenty-seven deputies, armed with proper warrants, arrested nine Indians, having in their possession about 200 elk, moose and antelope hides and very little meat. In this party were several well-educated Indians who talked and understood English perfectly. The warrants were read and fully explained to them. Judging from the fact that one lot of prisoners had recently escaped from their armed guard, and from certain suspicious actions of his prisoners, Mr. Manning alternated each Indian on the march with a guard, which of itself was an evidence to the Indians that the officer was determined to take them to the settlement for trial. At a point where the trail passed through a heavy growth of young pines each Indian, at a given signal, wheeled his horse and dashed into the thicket. In the confusion a few shots were fired and one Indian was killed and one wounded, the rest escaping. If the officers had desired to make the most of the opportunity they could have killed them all, being twenty-seven to nine, and all men accustomed to rapid and accurate firing. They were as well aware before the occurrence as they were convinced by evidence afterward that the killing of an Indian under any circumstances would endanger their lives and those of their families and neighbors, as well as call down upon them the censure and ill-will of the Indian Department, the Indian Rights Association, and a press ignorant of the facts.

The consequences of the killing of this one Indian are too well known to need further comment. It was the only casualty of the Jackson's Hole trouble. He did not suffer capital punishment for a misdemeanor punishable by fine and imprisonment, but was killed by an officer in attempting to escape after a proper and legal arrest, and such occurrences are so common in every portion of any settled and civilized and Christianized country as to excite no comment whatever.

At the first term of the District Court after the killing of this Indian I called the attention of the judge of the district to it and requested him to investigate the same, and if it appeared to have been unlawful to take the proper steps to have the offending officers punished. He did so, but found nothing to warrant action by the grand jury. When the United States District Court convened a grand jury was summoned by the United States Marshal and the fact of the killing of this Indian was laid before them by the United States Attorney for Wyoming; witnesses being brought here from Jackson's Hole, from Washington, and also Indian witnesses from the Bannock Agency in Idaho. The grand jury found no grounds for an indictment of the officers.

The proposition for an agreed case to test the law as to the hunting rights of the Indians came from the Interior Department at Washington, a special agent coming to Wyoming to arrange the matter with me. We claimed that they had no right to hunt in this State except in conformity with our game laws. This view we attempted to enforce by legal procedure, beginning in our lowest court before a justice of the peace. The proceedings have been declared regular and according to law by our State courts and the United States Grand Jury; and the Supreme Court of the United States has now decided that the State authorities were right in the position which they assumed in the matter, and that the Indians were and are amenable to our State laws.

WM. A. RICHARDS, Governor of Wyoming.

Sea and River Fishing.

MEN I HAVE FISHED WITH.

II.—Billy Bishop.

"IF these hills should come together where would I be?" asked Billy when he found himself alone in Quackendary Hollow, where he had been sent to cut cordwood. This was his excuse for returning from a lonesome spot which his superstitious mind peopled with all kinds of creatures which might even draw the hills together and crush him, as they had done on many occasions, he said, in Holland, where his grandparents came from. The scarcity of hills in that country may not have been known to Billy, but that was a matter of no importance to him.

The hollow lay half a mile above the village of Greenbush and was then well timbered and uninhabited. Twenty years later it had quite a settlement and was often called "Nigger Hollow." But Billy Bishop was fonder of the society of man than of those weird inhabitants who worked evil in the dark forests by day or in open fields by night. On the hill above the railroad was a field which formed part of the farm of Mr. Frederick Aiken, and a dilapidated barn in it was prominent in the sky-line from the river road above the first creek. This was the "spook-house lot" and the "spook-house barn," the house which gave the name having burned before my recollection. Billy told me that spooks danced in the barn on certain nights and that in the shape of stumps of trees a dozen of them had chased him down the hill one night, but before daylight they changed into bats and flew back. This was certified to by John Pulver and Jakey Van Hoesen, chums of Billy and rivals in doing odd jobs about Isaac Fryer's tavern when thirsty and time was plenty. The weight of evidence was convincing. These things happened in 1841, the date being fixed by the death of President Harrison and the fact that Billy said: "Ef I'd 'a' knowed he was a-goin' to die so soon I'd never 'a' woted fur him."

At this time Billy may have been forty years old, may have been sixty, it was all the same thing to me; he was old. All men over thirty were old, and ten to thirty years more made no difference.

"Ef you got a lantern I want to borry it to-night to get some worms outen yer garden," said Billy, and it was a revelation to me to see him pick up a quart of big "night walkers" in a short time.

"What are you going to do with the big worms, Billy?"

"Bobbin' fer eels; don't yer want to go, to-morrer night?"

"Yes, if mother will let me; come around till I ask her."

"Well," said mother, "he may go with you, Mr. Bishop, if you will take care that he doesn't fall overboard and you don't keep him out too late at night."

"All right, ma'am, we can't stay late, because I'm only goin' here in the crik beginnin' about sundown, and eels don't bite at a bob much a'ter ten o'clock, nur fur that matter much a'ter nine. I'll take keer of him all right an' mebbe I'll have some eels to skin fur yer bre'kfas', ma'am."

The worms had been put in a keg with plenty of earth and set in a cool place. I was home from school early in the afternoon, for the mystery of bobbing for eels was to be unfolded to me by a master of the art. Billy was on hand an hour before sundown, and getting a few yards of stout linen thread and a knitting needle from my mother we started for the woodshed to arrange something, but just what it was to be was a mystery. First Billy cut off about 6ft. of thread and fastened it to the middle of the knitting needle by a knot and two half-hitches, two young eyes watching every move. Next he threaded a big worm straight through from one end to the other, ran it the whole length of the thread and fastened it so that it would not slip off. This was repeated until the thread was full and was 6ft. of living worms; then he wound the string around the fingers of his left hand until the upper end was reached, when he cut off the knitting needle, took the coil from his hand and laid it on a piece of fish line, which he doubled over and tied hard and fast, cutting through to the threads and leaving a number of worm-covered loops at each side, and the "bob" was made. The fact that it was a dirty job did not disturb Billy nor me; in fact, we boys made many of them afterward, and neither dirt nor the possible suffering of the worms were ever given a thought, and at this ripe age it seems to be no worse than the ordinary baiting of a hook with "our mutual friend," as a late writer in the English *Fishing Gazette* called that humble beast which we have termed a "barnyard hackle" and scientists have dignified with the title of *Lumbricus terrestris* to signify his ownership or occupancy of the soil. It simply seemed a trifle worse because the labor of impalement and the consequent dirt all came at once. These things are a matter of taste and temperament, nothing more.

With the boat at anchor in the little creek, just below Hiram Drum's slaughter house, which was about as far up as a boat could go at ordinary times, Billy told me how to proceed.

"In swifter water we'd had to use sinkers to get the bobs straight down," said he; "but we won't need 'em here. You see, you want to let your bob down till it touches the bottom and then raise it a couple of inches, for eels they swim near the bottom and hit the bob just right."

"But you didn't put any hooks in my bob, Billy; how can I catch 'em when they bite?"

His back was to me and he was looking upward. He smacked his lips, put something in his pocket, and said: "I have to take a little sasferiller fer my lungs, the doctor told me. O, no! we don't want no hooks; the eels just gets their teeth tangled in the threads and comes up, if you bring 'em easy, then when they are just up to the surface of the water lift 'em quick and gentle inter the boat an' they drop off theirselves; but if you jerk 'em they're gone, er ef you hit the side of the boat with 'em they're gone. Drop yer bob over easy, so," and he lowered his bob into the water without a splash. Soon I felt a jig, jig, very sharp, and said to Billy, "I've got a bite." "Pull up," said he, "never let 'em more'n touch it," and he landed an eel in the boat. I tried it, but Billy said I was too quick, for the eel left. He took several before I boated one, for what with jerking the line and slapping them against the side of the boat they dropped back into the water, if they even got fairly started on the way up.

It came easy after once getting the hang of the thing, and it soon came natural to haul up slowly to the surface and then swing them into the boat. Good fun this is in shallow water, when no better fishing offers, and many a night have I rowed from Albany down the Hudson to Van Wie's Point—some six miles below Albany, more or less—with a friend or two and spent a pleasant evening, in later years, fishing behind the dyke and just above Van Wie's light, and then rowed back to the city about midnight with a bushel of eels, weighing from nothing up to two pounds or more, for the larger eels are not so easily captured in this way, their weight tearing them loose in the air.

The night was clear and starlight, bats circled about picking up insects here and there. Billy told me that they could be caught if I threw up my cap and said, "Bat, bat, come into my hat and I'll give you a pound of cheese." There was no room in the boat to do this, but I tried it afterward and did not get any bats. A large bird flew just over our heads with slow and noiseless flaps and Billy said something in Dutch. "What was that?" I asked. "They're bad, them things that fly at night a-making no noise, an' I doan' like 'em," and he took a little medicine for his lungs. The moon, a few days past the full, came up slowly just south of the spook-house barn and Billy said if a bat flew across its face I must say:

"Hookum skookum,
Rollicum kookum,
Holliche Bolliche,
Baniche spookum,"

"Ef you don't," said he, "you'll go blind on the side next the moon." No bat crossed the moon that night to my knowledge, nor do I ever remember seeing one cross it, but the charm has been remembered and held in reserve should such a thing happen, for no man cares to lose an eye when it can be so easily avoided by simply following the directions of a man so skilled in spook lore as Billy Bishop.

This night we had fair success, and when Billy put me ashore he saw me safely home only a few doors below, and said that he would send us up a lot of dressed eels for breakfast, and he did. During the fishing Billy faithfully followed the directions of Dr. Getty and took his medicine frequently, as I could testify, but he did not seem to be as disgusted with it as I was when the same doctor prescribed his great tablespoonful doses for me. I mentioned this fact to mother, and she said that Mr. Bishop was older and more accustomed to medicine, and knew the importance of following the doctor's orders better than I. No doubt mother was right, but I can't help thinking that what Dr. Getty gave Billy must have tasted better to him than what he gave me, but I was young.

Several times afterward Billy Bishop took me with him when he went eeling. Mr. John Ruyter, the tanner, said it was because Billy was afraid to go alone, but it is possible that a luncheon which mother left on the table for us on our return may have had its influence. Father said that Billy was not good company for a boy, and besides that, "it would be better for Fred to stay at home and read or study instead of being out bobbing for eels; his mind runs too much on such foolishness;" but mother argued that a boy must have some fun and could not study all the time, and Billy Bishop was a kind-hearted man who had never done anything wrong, and the result was that we had eels for breakfast many times.

Billy occasionally played the fiddle for dances, not for the balls and parties of the more fashionable sort, but just dances, where the musician did not become wealthy all at once. I was too young to know much of this, but once he told me in a low voice, while putting on a fresh bob when the water was warm and the old one was spoiled, that he had played for a dance a few nights before, and the big boys had been "pizen mean. They asked me out for 'freshments an' I laid down my fiddle an' bow, an' when I come back they'd sawed that bow 'cross a candle an' it was that greasy that it sp'iled the strings, an' I was done fur the night. Who done it I do'no, but there was Bill Fairchild, John Stranahan, Pole Sherwood an' a lot on 'em there, an' they made out like they was awful sorry."

Poor Bill Fairchild in after years died of burns received while rescuing the books from the burning freight house of the B. & A. R. R., for which he was a bookkeeper; the others have gone to rest with old Billy, and no more will they grease his bow nor pour water in his fiddle when he goes out for "'freshments," but I was told that Billy learned to take his fiddle and bow with him when called from labor. The humor of these things did not strike Billy in the least. This was evident when he asked me: "Now, what fun was ther' in that? They hed to pay me fur the evenin' and it stopped the dancin'. I tell ye there was folks there that was mad, but bless ye, they couldn't find out who done it. No one done it. It done itself! They tried to make me believe it was spooks, but spooks don't come to dances where folks is; they catches you all alone, in the dark."

Some years later, probably about 1845, when a large country store was kept in the brick building on the corner of Columbia street and Broadway, and in great letters announced "I. Fly, Headquarters," there was a large shad seine being knit in the hotel of Isaac Fryer, just above. About a dozen men had an interest in it and they knit away every evening, Billy Bishop and Jakey Van Hoesen being busy filling the needles with twine. I somehow used to drop in there and knit a little early in the evening, but the men stayed late. No one went down Broadway except Billy, and Mr. Fly would have a man or two in waiting to scare him. Sometimes a few stones rolled after him would be enough to start him on a run, at others "spooks" would spring at him from the churchyard, and although the victim may have been well fortified with Fryer's whisky his starting for home required the courage of a Tam O'Shanter, which he did not possess. He would go up street with friends and around the back way until his tormenters found it out, and in despair Billy told the story of his persecutions, when he was furnished with an escort and saw no more spooks.

Once he confided to me a great secret: "If the eels don't bite good," said he, "just go to a stable and look over the horses' legs. You'll find a scab on the inside of every leg, and when this is big and comes off easy just take it and put it in your bob and the eels 'll come for miles to get at it; it smells powerful strong an' they can smell it for miles."

"Why don't we use it in our bobs?"

"We don't need it, they bite well enough as it is, we don't want all the eels in the river; what could we do with so many?"

That was sufficient, and if the thing was ever tried I do not know. Perhaps the idea originated in Billy's brain or was told to him by some joker, yet it is possible that the very powerful odor of that gland would either attract or repel the fish in a decided manner. Let some eel bobber try it and report to FOREST AND STREAM; my time for bobbing passed years ago, but if opportunity offers I will try it tentatively in the interest of knowledge.

Once the shad seiners of the village had arranged to make some hauls at the lower end of the island which lies opposite Albany, and Billy had brought up his little boat the night before and left it at the ferry where "Old Josey," the ferryman, kept his skiff for late night service after the steamboat had finished the day and the horse-boat had carried the early night passengers. The fact became known to "Pop" Huyler, the blacksmith; Charley Bradbury, the livery man, and Steve Miles, the carpenter. After some deliberation and discussion of the case they decided that a short piece of board, fastened edgewise to the under side of the keel and at an angle of about forty-five degrees to its length, would be about the best thing that could be done at the time. Bradbury furnished the board and Miles affixed it, and the boat was replaced in the water with the improved combination centerboard and rudder. The big scow came up the river bearing the great seine on a platform over its stern and four stalwart oarsmen made her stem the current past the ferry. A crowd had assembled when Billy appeared with a pair of oars on his shoulder, and casting loose the painter shoved off his boat, put the oars in position and began to row. The boat seemed bewitched, for it kept going round in a circle, no matter how the oarsman tried to keep it straight, and Billy, pale as a ghost, dropped his oars and was evidently praying in Dutch. The boat drifted near the dock below, when Pop Huyler kindly called to the old man to throw him the rope; he did so, and Billy was safe, but weak and faint.

"Must ha' been spooks in the boat last night, Billy," said Pop.

"Yes," he replied, "I 'spect so; might ha' know'd there'd be bad luck, fur a hen crowed yestidy an' the fust man I see this mornin' was cross-eyed."

"Sure," said Charley Bradbury, "that's enough to bring bad luck; but Billy, come up to Brockway's tavern and take something and say that Dutch prayer once more and that'll fix 'em all right."

While Billy was repeating the exorcising words Miles got help and pulled the boat on the dock and ripped off the board, launched the boat, and then after much persuasion Billy tried it again, and behold, the spell of the witches, spooks and other evil-doers was broken, and Billy, with great good humor, joined the party just in time to help haul on the line as the seine boat reached the shore, fully convinced that while spooks might temporarily annoy him, he could triumph over them in the end. Old Vose, who played the clarionette in the band on top of Fly's "headquarters," heard of it and got Billy to repeat the verse which could so undo the work of witches; and as neither Billy nor he could write, Bill Fairchild volunteered to act as amenuensis, and what he wrote no man knows, for when Vose asked his landlady to read it for him she became angry and burned the paper. No doubt but her method was a good one, for no one ever heard that Billy's boat was ever bewitched again.

Good old Billy! He died after I left the place, and is remembered by very few. Spooks can no longer chase him at night, grease his fiddle-bow, nor obstruct his boat. The hills have at last come together above him, but he is safe.

FRED MATHER.

The Upper Dam of the Rangeleys.

ANDOVER, Me., July 10.—The record of the big pool below the upper dam was broken yesterday when, it is estimated by conservative anglers, over 100lbs. of trout were taken from it. The oldest angler never saw its parallel. I arrived at the pool at about 3 P. M.; found Mr. Stewart and Kit Clarke from New York, Mr. Parish from Philadelphia, and Mr. Dougherty from Willimantic, Conn. Most trout under 1½lbs. were returned to the pool. Mr. Dougherty alone took sixty-six fish during the day, but he kept only eleven.

J. W. B.

Abigone.

BROOKLYN, N. Y., July 8.—*Editor Forest and Stream:* I read the accounts of other men's good catches in your paper, so I will tell of mine.

On July 4, fishing in the Delaware at Egypt Mills, Pike county, Pa., at Swartwood's farm, I caught a black bass weighing 5½lbs., and measuring 21in. Is not that a pretty big one for a river fish?

ANGLING NOTES.

From the Restigouche.

THERE are letters and letters, as I long ago found out to my pleasure and cost. As a rule, letters to me mean a lot of work, pleasant work to be sure; but when the unanswered letters pile up on my desk until I can scarcely see over them I wish that some of them had gone astray in the mails before they reached me, as there are only twenty-four hours in a day in this century, and nature and the medical men insist that a man should devote a few hours of the twenty-four to sleep and not all of them to writing.

Then there are other letters which cause one to forget all the annoyances that flesh is heir to, and bless the man who invented postal facilities and express organizations. I have just received one of the last-mentioned letters.

I have no doubt that when Mrs. Barbauld wrote "Man is the nobler growth our realms supply," she was thinking of a fisherman. Perhaps of a fisherman having the best of sport with the grandest of fish, who remembers his friends "chained to their desks," and shares his sport with them so far as he can. The letter is from Mr. Archibald Mitchell, of Norwich, Conn., and is dated on the Restigouche River, June 29, and reads in part as follows:

"I drove down river to Campbellton last Saturday, which is twenty miles from here, and paid a visit to Mr. Mowat. I was much pleased to find him in better condition than I expected. No complications of a serious nature appear to have set in, and the chances of his final recovery seem to be good. He was quite cheerful and appeared to take as much interest in fishing as ever. He was able to talk a good deal, and I spent a very pleasant hour with him.

"I am going to start for home to-night via St. John and Boston. Have had fine fishing and this has been an unusually good season. There had been a long spell of dry weather up to about the last of May. We had two 6in. rises of water in June and the fish coming in good numbers at the same time gave us excellent sport. This morning I killed my fifty-sixth salmon on a No. 6 dusty-miller. I will send you the fish by to-night's express and hope you will receive it in good condition. I inclose in this letter the identical fly on which it was taken. It may seem small to you, but on some of the pools No. 8 is being used with good success. An angler on the river killed four fish at Deeside last Saturday on a No. 6 dusty-miller. It seems delicate work, but the salmon usually take the fly pretty well down, and when both hooks (the fly Mr. Mitchell sends to me is a double-hook fly) are buried in their throat they seldom break away. My son arrived here last Wednesday, and in addition to the fifty-six salmon which I had killed he has taken eight, which makes sixty-four to one rod, for we both fished in one canoe, using the same rod. This is better fishing than I expected to get and I may not live long enough to strike it so rich again."

The fish when it arrived was as fresh as though just out of the river, and was a clean, bright salmon of 27lbs. in weight. Three days from the time it was killed on the Restigouche I dined on a portion of it in northern New York, and as I lighted a cigar after dinner I had a certain feeling which made me think I could say to my friend most thankfully: "Your fish rod and your gaff staff have comforted me, and my hope and wish is that you may duplicate your score next year."

A personal letter received from Col. Archibald Rogers, of Gov. Morton's staff, dated in camp at head of Restigouche River, concludes: "I wish you were here to enjoy this fishing. I have just killed three salmon of 28, 25 and 23lbs."

In Albany I heard that three rods had killed about 200 fish on another part of the Restigouche.

From the Cascapedia.

Mr. Robert C. Lowry, writing me of his fishing on the Grand Cascapedia, says: "We arrived May 30, and that afternoon I killed a 40-pounder, of which I immediately wrote an account in FOREST AND STREAM. My friend, Mr. Mershon, was with me and together, up to June 22, we killed thirty-two fish. His average was 30½lbs. and mine 27⅜lbs.; in fact never before have we known the salmon to average so large in size. He killed three fish weighing 40, 41 and 43lbs., and quite a number 30 to 38lbs. fish, and I did almost as well. As there are two runs of salmon still due in the river, we have no doubt but what there will be pretty good fishing there through most of July and possibly even in August; for the first year I fished the Grand Cascapedia I killed eight salmon between Aug. 3 and 8. There is no trouble about getting plenty of trout from 3 to 6lbs. weight and occasionally heavier."

From England.

Recently I quoted from the letters of Mr. John J. Hardy in the London *Fishing Gazette* and from one he sent me about the fly-casting tournaments, particularly about the salmon casting records. Last year I quoted from a letter of Mr. Hardy's directly after he had won the championship, and I also quoted from a letter written to me by Mr. Enright, of Castle Connel, the Irish champion, who, unopposed, won the championship this year. Mr. Hardy was the first long distance fly-caster and rod maker to denounce the style of rods used at the tournaments in England, and in fact the only one to my knowledge to this date. When he said that the rods were specially made for the purpose, and were unfitted for ordinary angling, and the lines were what English anglers have since called "faked" lines, he was fresh from victory in an international contest, and must have written from a sense of conviction that the contests were a sham so far as ordinary angling tools were concerned. Had he remained silent it is quite possible that the angling world would have remained in ignorance concerning the special tools made for what an English writer has called "showmen casting with faked rods." It was in the flush of victory that Mr. Hardy demanded a change in methods and tools to conform to those ordinarily used in angling by the average angler, and for this he should have full credit; and he was competent to speak on the subject, for he had just won the championship of the world with the longest cast made with a salmon rod.

He writes me this morning that he is agitating a reform in casting tournaments through the London angling papers, and says, "You can help us if you will to put things on a satisfactory basis. As records at angling tournaments are made with rods an ordinary man could not use,

anglers over here deride (and rightly too) them as useless and misleading. The platform also at Wimbledon was an unfortunate mistake as upsetting all comparisons with previous records. I would be glad, first of all, if you would tell me how American records are made, whether from a platform raised above or level with the water. In the second place, whether you have any standard of 'weight for length.' I notice in the *Fishing Gazette* a report of the Chicago Fly-Casting Club's contest in which a rule is laid down: 'Rods not to exceed 8½oz. or 11ft.'

"Any information you can give me to help to guide us at this end, where this casting with trick rods, etc., has I think come to an end, I will be very glad to have."

The records of the National Rod and Reel Association were made from a platform raised above the level of the water 10 or 12in., I should say. Perhaps Mr. Henry P. Wells or M. Gonzalo Poey can furnish the exact figures. At Central Park, where the tournaments were held, it was necessary to have a raised platform; for a strong wind on Harlem Mere would get up enough sea to wet the platform, raised as it was. If Mr. Hardy has access to Mr. Samuels's book, "With Fly-Rod and Camera," he can see illustrations of the platform and the casters in the very act, from instantaneous photographs.

The rules provided that "No single-handed fly-rod shall exceed 11ft. 6in., and it shall be used with a single hand." There was no provision as to weight, but all rods were weighed by the judges and formed part of the record. There was no allowance of distance made for difference in length of rod, but in "light rod contests" an allowance of 1½oz was made in favor of rods with a solid reel seat.

In what was known as the B. F. Nichols contest in 1882 all contestants were to use the same rod, which was 10ft. long and weighed 6½oz Mr. Hawes won that year with a cast of 71ft.

In minnow casting for black bass (spinning in England) the rods were limited to 10ft. in length. In heavy bass casting the rods were limited to 9ft. in length. Single gut leaders were required in all fly-casting contests, and the stretcher fly in trout casting, and the single fly in salmon casting "must remain on." Each contestant was allowed a given time, at first it was fifteen minutes and finally ten minutes, in which to cast, and if any accident occurred, except a broken rod, no allowance in time was made for repairs. One year Reuben Leonard made much the largest cast in the salmon casting class of any of his competitors, but I noticed that his fly was gone and so informed him, and as he had not time to put on a new fly and again get his line out, his best cast with a fly on his leader was less than that of Mr. Hewitt, who won first place.

As to the fly-casting rules of Western clubs I presume Mr. Hough can enlighten us, as I have none at hand adopted in recent years. I had read what Mr. Hardy refers to as a condition of the Chicago Fly-Casting Club's contest, but it refers to the "Distance and Accuracy" Class.

A Peculiar Condition.

There is another clause in the Chicago club's manifesto which I cannot understand, and I have assumed that it was an error. It reads: "An extra gold medal will be awarded to the member beating the world's record of 102½ft., *any weight or length of rod.*" The italics are mine, and the conditions, if they are as I have quoted them, absurd in the extreme. Reuben Leonard made the "world's record of 102½ft." with a single-handed fly-rod limited in length to 11ft. 6in., and a "rod of any length" lets in a 20ft. salmon rod as a starter against a single-handed fly-rod.

I have already given in a previous issue of FOREST AND STREAM information about the weight of the rods used in American fly-casting tournaments, and will send Mr. Hardy a copy of national rules. In all the fly-casting conducted on this side there never was a suspicion of "faked" or "trick" rods or lines. As I have stated, rods may have been specially made in some instances with more powerful action than the ordinary angling rod, but in two instances that I now recall I have used winning rods and found them little if any different from rods of my own that I use for fishing and that were made for fishing alone.

Weight for Length.

The greenheart rods made by Forrest & Son, of Scotland, are weight for length as follows: 10ft., 9½oz.; 11ft., 11½oz.; 12ft., 14oz.; 13ft., 17oz.; 14ft., 22oz.; 15ft., 26oz.; 16ft., 32oz.; 17ft., 38oz.; 18ft., 45oz. These I take to be approximate figures for ordinary rods; they are, however, sufficient to show that the average of English rods are heavier than ours. Mr. Henry P. Wells, who has figured the weight of rod woods, gives the following as the weight of a cubic foot: Six-strip split-bamboo, 61.96; greenheart (light colored), 60.26, and greenheart (dark colored), 68.18, the figures being pounds and hundredths of a pound.

Mr. Wells once gave me some greenheart for a rod that was exceptionally light in weight, quite a bit lighter proportionately than the figures given in the table for light-colored greenheart, and it made one of the best wood rods I ever used.

Deer's Fat for Lines.

A writer, reviewing the English tournament, says: "Two points worthy of notice were the vast superiority of double-tapered lines over level lines, and the value of the use of deer fat or mutton fat. Both these points should be borne in mind by all fly-fishers. Modern dry-fly men who do not use double-tapered lines should do so, and once one realizes how deer's fat assists the fly-fisher it will always be used. It not only preserves the fine end of the line, but it also enables the angler to pick his line off the water with greater ease and accuracy, and after all there is as much in this latter as there is in driving a fly forward." I warmly indorse all that is said in favor of rubbing the casting line with deer's fat or with mutton tallow, for that matter, for though the latter may not sound so sportsmanlike, it is quite as good for the purpose as deer's fat.

Some half dozen years ago I wrote an item about the use of deer's fat on casting lines, and John Danforth, of Camp Caribou, Maine, having sent me about 2lbs. of deer tallow, I offered to divide it among those who first applied for it. The demands for it were so great that I got a second supply and distributed it in tin boxes holding about 2oz. each.

The fat is rubbed over so much of the line as is ordinarily used in fishing, and then it is well distributed by drawing the line through your fingers. The best enameled lines are improved by this treatment as well as undressed lines. The fat must be renewed occasionally, but the angler will know without telling when the fat is gone from the line.

A. N. CHENEY.

CHICAGO AND THE WEST.

Camp "Forest and Stream."

CAMP FOREST AND STREAM, Wisconsin, July 3.—When J. B. H. and myself each year start out to pitch the tabernacles of Camp FOREST AND STREAM, we always take the 1:25 P. M. train over the Wisconsin Central road. We could take other trains, over that or other roads, but we always take that one, because we have gotten into the habit of it, and because it takes us to the prettiest place out of doors. But there is another and a subtler reason for this preference. This 1:25 train lands us at Mukwonago, Wisconsin, at about 4:30 in the evening. It takes about an hour for neighbor Dillenbeck to change his little mules to another wagon suitable for carrying our menage. Then it takes three-quarters of an hour to buy two loaves of bread, and a quart of kerosene and a setting of eggs, all of which things we need about our camp. Yet another hour is consumed in the drive out to our lake. By the time we have shaken hands with everybody at Mr. Schwartz's, and gotten a bundle of hay, and have driven still further on into the wilderness lying about Lulu Lake, the sun is just 8in. above the top of the hill on Mr. Mullins's farm across the lake. Therefore, each year we find ourselves, upon our approach to our chosen camping ground, in the exciting position of woodsmen overtaken by night in a wild and unknown country and forced to hasten in making camp. This novel situation we have found so pleasing that we have always taken the 1:25 train.

But this year we played the drama too realistically. Heretofore we have been contented to pretend ourselves threatened by rain, and have hurried up the tents and spread out the bedding and pulled the nails out of the grocery box with military promptitude and precision. It never occurred to us that it might rain, really and truly, if we kept on making believe so strongly. This year it was cloudy when we viewed our 8in. sun from the top of the tall bluff which looks on Lulu Lake, and before we had our plunder out of the wagon it was plain to see a storm was threatening. It was dark by the time we had up the sleeping tent and had kindled the annual fire upon the hearthstone of Camp FOREST AND STREAM. The dozens of things which one takes on a trip and doesn't need were lying around on the grass in the way, not having yet found that order and system which are usually the product of the second day in camp. We had no time to cook more than a few slices of bacon and to boil a hasty pot of coffee before bang! came the wind and rain together. Our lantern blew over and took fire, making a lurid centerpiece in a darkness pierced otherwise only by the streaks of lightning. Our tent fly flapped ominously and the dishes jingled in a fine tattoo. Fearing an explosion in the interior of the lantern (which was a high-priced concern with a wooden handle and a fluted roof, and no good on earth), I kicked it down the hill. This left the world to darkness and to us. We piled our supper dishes and everything else into the middle of the sleeping tent, and finished our first meal in the middle of a vast confusion lighted up by the rays of a 5-cent tin torch—which I had forgotten to throw away—and which proved to be the best camp light we had ever had. It blew and blew, and we ate and ate, and let it blow; and then we kicked a space clear among the boxes and minnow pails, and lay calmly down to sleep, and let it rain and rain. On the morning following the sky, new washed, was fresh and clear and smiling as at the joke it had played upon us. We finished the building of the city in calmness and deliberation.

The second of the tents was erected, the one which serves as shelter for the tin cans, the rubber boots, the fishing rods, and such other duffle as does not feel well under one's bed. The banner bearing the fore-front of FOREST AND STREAM was stretched tightly upon the tree trunk which stands between the two tents, and over this were placed the two silken flags of the country—the prettiest that ever floated over land or sea. Our table—thanks to the wild and unsettled character of the region—we found standing unhurt as we had left it the year before, built against the trunk of the big oak tree. At the foot of this we arranged the articles of daily use, the same mostly dependent from nails driven into the tree. The hempen water pail—the only one of the kind I ever saw and the best thing one ever put into a camp kit—was set at a point 5 degrees to the left of the northwest leg of the table; the frying pans followed at intervals of like space; the two small camp axes came next, then the camp kettle, then the soap and towels, then the dish-rag, then the coffee pot, then the 5-cent tin torch. This brought one around the tree to the starting place near the northwest leg of the table, above which, and consequently below the tin torch, sat the pan containing the blue plates, and the speckled granite plates, and the four cups, and the six knives and forks. Be it understood, we often have visitors at Camp FOREST AND STREAM. After we had established these things, we cleaned out and walled up afresh our spring of icy sweet water. Then we cast abroad over the hills and found us a pond where frogs of excellent quality were assembled in convention, to our great joy. After that we made us a tidy pile of firewood of twigs and sticks, and concluded the labors of the day by planting a wild rose tree, in full bloom, at the foot of the FOREST AND STREAM banner, the same being the nearest thing to a green bay tree we could find to offer in appropriate tribute. Then it was evening of our second day in camp before we had time to think of the slipping by of the hours. We voted that we had never had a prettier camp, and added that the lake had never seemed more lovely. J. B H. was sure that the makers and controllers of FOREST AND STREAM belonged also for the time here in Camp FOREST AND STREAM, in the fairest place we had been able to find for it in many States.

But it being evening of our second day, and we being discontent to eat bacon alone or to devour at once all of the eggs, we bethought us of the fishes that swim in our lake. It was the season of the caddis fly, and we knew very well from our experience in earlier years what that meant. We had some quasi caddis flies in our fly-books, and soon were trying a tiny fly-rod along a bar, just at the dusk of evening. In a few minutes we had four fat and excellent rock bass, two for supper and two for breakfast, and with these four we were content.

I have earlier spoken of the extreme conservatism displayed by J. B. H. on matters pertaining to the equipment of the camp, mentioning the fact that last year he was reluctant to admit the new-fangled contrivance of an aluminum frying pan to the charmed circle of his fireside. This year we had three aluminum frying pans, nesting together nicely, all with their handles sawed and arranged for one capable of being packed in less space. One of these pans we used for frying fish, one for eggs and a third we kept for any sudden or extreme emergency, as of company in camp. And each and all of them we this year put in action upon another new camp device, a "stove" over which J. B. H. shook his head with the gravest of skepticism when the subject was broached to him.

I have previously mentioned this "stove" as being made of a Damascus gun barrel, but being then uncertain of its merits was reticent about further description. I should like to claim the honor of the discovery of this stove, but no one on the FOREST AND STREAM staff is allowed to prevaricate openly where he is sure to be found out, so candor compels me to state that I got the idea from another paper (*Shooting and Fishing*), which published it as the invention of a Maine man (I think a Mr. White). The stove as there outlined consisted of a piece of gas pipe driven into the ground, the top plugged and then bored to admit the ends of the swinging rings in which the pans and kettle rested, just as they rest in the holes in the top of a cook stove. The coffee pot rested on a bent wire similarly suspended at the top of the upright pipe. The idea of this affair seemed to me to be practical, and I went to Mr. M. E. Moran, of the gun department of Montgomery Ward & Co., and laid the matter before him, and between us we improved upon the original, as I think. Mr. Moran took a Damascus gun barrel and sawed it off about 15in. from the breech. In the smaller end of this he fixed a spike made of an old rifle barrel, and the larger end he plugged with an iron rod, into which he drilled four holes the size of the wire of the rings. He had the top of the plug set a little lower than the end of the tube, so the holes would not be mashed by hammering the upright barrel down into the ground. The course of the wire rings in the Maine stove was straight out from the top of the upright, there being a loose plate set on below them to keep them from getting too hot. Mr. Moran made his stove a little different. The plate was made circular, about 4in. in diameter, and was bored so that it fitted tightly about 4in. below the top of the upright, where it was pinned firmly in place. The wire of the ring went into the hole in the plug in the top of the upright, then bent down sharply until it came to the edge of the fixed plate; then it made an angle at right angles to the upright, and bent out in the circle which supported the pan. The angle or shoulder of the wire was thus protected and supported by the circular plate, the vessel thus having a much firmer support, while at the same time the whole ring could be swung around freely, over or from the fire, its foot or shoulder being stiffly held up in place. The iron hook supporting the coffee pot was treated in exactly the same manner, making boiling coffee, warm coffee or cooler coffee possible by simply turning the hook about its pivot. It may easily be seen that with this device there was to be no spilled coffee, no tipping over of frying pans, no hot faces, burned fingers or ill feelings of any sort. Moreover the whole outfit was very light, small and compact, taking up no room at all compared to the smallest of camp box stoves. It seemed to me a good thing, and I thanked the inventor, but to J. B. H. it seemed different. He shook his head and said two little logs had always made a stove good enough for him and his fathers before him. Remembering his ultimate delight in the aluminum frying pans, I urged him just to try this new stove; so we drove down the Damascus upright deep into the ground in the center of our fireplace, so that only about 8in. of it stood above the ground, and so that the rings of the top of the stove were only about 4in. clear above the ground. The affair stood firm and rigid, and even the eye of skepticism could see how steady the pans would be, how small the fire beneath them need be. J. B. H. stood and looked at the Damascus stove a moment ere ever he scratched a match beneath it. "Well, I'll be blamed!" said he. Evidently the occupation of his two little side logs was gone. I notice that he still uses these little side logs on each side of the fire, but he explains that he does this only to confine the heat to the bottom of the pans. In effect the logs are the side of his stove; the revolving rings are the top. Since using this camp rig we have been happy. Our tiny fire does not make cooking unpleasant. We do not get hot and we do not spill things. We get a meal in about one-half the time it formerly required to do so, and we cook it much better. Moreover, we find that we can put a broiler across one of the rings and broil handsomely over the coals. Our coffee boils in a few moments and is always "just right," and when we get one article cooked it does not get cold, waiting for another to get done. We simply set the plate of bacon and eggs on the broiler on one of the rings and swing it to the edge of the fire, where it keeps warm while the fish are frying in the center of the stage. Cook? Well, I should say we could cook. And J. B. H. enjoys the vest-pocket Damascus stove and the handleless aluminum frying pans as much as anybody now.

As to the fishing on our little lake, which is only about a mile by three-quarters of a mile in size, we can not say very much, for this year we have found the fishing so disgustingly easy that we have not exploited it very thoroughly. I do not think the black bass are so very abundant, but we have been too lazy to find out about it, and indeed have not tried for them at all. Camp FOREST AND STREAM is an odd mixture of conservatism and radicalism. We hold fast to the old ways, but are always experimenting with new ways. This year we took a notion to try fly-fishing, and on the very first morning we went out we caught twenty rock bass and one black bass on the May fly, and for almost the first time in my life I saw rock bass, in plain sight, in the middle of the day, deliberately rise and swallow down an artificial fly. On another time, in the evening, we went out and caught five fine rock bass in as many minutes, the best time for the fly being just after sunset. The family of Mr. Schwartz, our neighbor, have been beneficiaries of our fishing. Our table needs but half a dozen fish a day, and the rest we take to our neighbors, always confining our catch to two dozen fish a day, of which we throw back the small ones, retaining only the fattest and sauciest for

our use. Usually our day's fishing is over by 10 o'clock in the morning. We "fix things" the rest of the day.

Without doubt the main discovery of our camp this year has been that of the "croppy bar." We have found a place in the lake where a submerged conical bar runs up out of the deep blue water to within 10 to 15ft. of the surface. Here we have taken the largest and finest croppies I ever personally saw, some weighing over 1½lbs., and a few nearly 2lbs. Fishing here with small minnows, we have on three mornings taken seventy-two fine croppies, stopping at twenty-four each day. I think we could easily take 100 a day if we liked. We keep about a dozen a day, and have about concluded that we must leave that croppy bar alone after this, as the fish are too eager and importunate to suit us. We have found these deep-water croppies the best eating fish in the lake, and this is why we have stopped trying for black bass with frog, or for rock bass with the fly. I don't know what we are going to do unless the fishing gets harder.

Last night we had a grand dinner, J. B. H. and I. We had soup, very fine, and for a wonder done so that we could eat it as the first course and not the fifth. We had fish, fried, and a great roast of croppy—a big one, baked carefully during an anxious fifty minutes in the Buzzacott oven, to the accompaniment of a dressing compounded after much deliberation. I had never eaten a more delicate or a better cooked bit of fish. We had bacon and eggs of course, and we had Maryland beaten biscuit and cold butter from our spring cold storage. Also we had frogs' legs, big ones, off from certain vast bullfrogs whose home we had discovered, and some fine apricots of California, and coffee as good as any ever brewed. Really, it would be almost wicked to have any better time than we had last night.

In regard to the frog legs, there occurred almost the only adventure which has come into our tranquil life in camp. We were just on the point of pushing out from shore in our boat one morning when we discovered, or rather uncovered, a big bullfrog which had gone to sleep under the boat after a night of song and dissipation. Him we assailed with eagerness, holding close gaze upon his fat hindlegs. The frog saw that his only refuge was under the boat, and we endeavored to land a knock-out blow before he got under cover. Meantime we did not notice that the boat was drifting under the projecting limb of a tree. I heard a loud "Look out!" from the other end of the boat, and turned to see J. B. H. just disappearing in the lake over the side of the boat, pushed out of the boat by the limb of the tree. Rescue was an easy matter, and the first thing he wanted was to know where the frog had gone to. Having found and slain that quarry, he went to camp and changed his clothes, taking no hurt nor alarm, in spite of his seventy-five years of age. We enjoyed that frog's hindlegs very much.

One invention of our camp this year we have found a good one, and that is our coffee bags. We have in the past been much bothered by certain ants, daddy-long-legs, crickets and the like, which would find their way into the tightest canisters we could get. This year we put up our sugar, coffee and salt in small rubber bags, and we find these water-proof and ant-proof, besides having the merit of taking up no room when not in use. A tin vessel is the hardest sort of thing to pack for transportation. Bags and sacks are better vessels. Our hempen water bucket is a gem. The fluted lantern which we so highly prized before we had tried it has for years been a first-class nuisance, taking up nearly as much room as a horse and buggy. I am pleased to say that it will trouble us no more. Last night it began to cut up its antics again, going all ablaze in its inner chambers and nearly setting the tent afire. This time I kicked it so far down the hill that it went into a dozen pieces, and these can be had by anyone inquiring at this hill. Next year we shall take up the question of a camp lantern, and I think we may take a small bicycle lamp, which will not demand much room.

It would seem that the fame of FOREST AND STREAM, the newspaper, has gone abroad in the land, and that the Camp FOREST AND STREAM has attained at least a local significance. The other day J. B. H. and I were returning from one of our voyages of exploration among the odd hills and hollows of this glacial country when, as we neared the shore of our lake, we spied a boat with three fishermen in it something like a quarter of a mile away. We walked along the beach, apparently observed by the occupants of the boat, for, as we turned toward our path up the bluff to our camp, we heard a hail across the water in an unknown voice: "Hurrah for FOREST AND STREAM!" This we answered in the dark, as it were. Later the boat came ashore and one of the party introduced himself as Mr. Bridgman. "I am a distant relative of yours, I think," he said, "and have been for some years. I am one of the big FOREST AND STREAM family." Was not that a pleasant little happening? Indeed, all things in this camp are pleasant. I am glad to add that our new found friend caught a 3½lbs. bass that evening—a beauty, and the largest we have seen this week—thereby beating the veteran J. B. H. that day on the bass question.

We had started out with one frog to get a bass for supper, and in a lilypad cove we got our strike, but the bass broke away in the lily stems. I had to criticise J. B. H. for letting our supper get away in that fashion, but the fly-rod soon got us enough rock bass, that courteous and obliging little fish being ever present and apparently anxious to be eaten.

There are some big pike in our little lake, not many of them, but a few large ones, 20 to 30lbs, such as are taken one or two every year or so. We have never tried for these, and as they have gone into the deep water at this season we may not get any. One of these fish weighing 45lbs. was washed ashore dead in the ice this spring at Troy Lake, a few miles from us. Several bass fishermen in our lake, and some good ones, have had their lines broken by heavy strikes of some mysterious monster, and one gentleman last year played a 20lb. fish and had it up to the boat, when it broke away at last. Some day we shall get mixed up with one of these fish, perhaps.

We know of some trout not a dozen miles away, and we have a whole lake full of small-mouth bass waiting for us, and a certain creek full of big large-mouth bass, and a lot of other attractions to which we shall have to hurry to get around. Some of these things we hope to see duly attended to before we leave.

It is no fun writing copy on a tackle box on your knee, while J. B. H. is fixing up to go out after a croppy or so for supper. What if a croppy should pull him in? As between copy and croppy, who can doubt where duty lies?

E. HOUGH.

FLY-FISHING

On the North Shore of Lake Superior.

[*Continued from page 27.*]

WHEN we all arose the next morning the indications for fair weather were of an adverse character. The clouds were trooping along the upper element with their shapes and aspects momentarily changing—now watery gray and again white as snowdrifts against a dark blue sky. The trees and bushes were bending and rustling, and the tossing waves rose high on tiptoe to kiss the northern breezes, which bade fair to increase as the morning wore away.

Ned proposed a trip after breakfast to an outlying island which we had never fished. There might be trout galore poising around its bold shores of dismantled rock, but Kenosh said he never heard of a trout being captured there.

"Well, we will try it anyhow," said Ned, and that suppressed all talk about the absent trout.

Kenosh was not pleased at the way his declaration was received, but being a sapient half-breed tightly closed his mouth, as did Iago when he declared, "he never would speak word."

The breakfast over, the table cleared and rods ready for action, we all solemnly trudged down to the boat and then hastily embarked for the island of no name and no trout. The north front of the ragged and rifted island, which had stood for untold years against the most terrific storms from the cold regions of the north, ran up from the lake with a wavering surface in curves of weird sculptured fantasies from the fingers of nature.

We started in with great zeal on reaching the desired waters, sending our feathered messengers over the most seductive chasms, but no silver and scarlet beauty of the wild, waving waters and lonely isle left his lurking place to peep over the surface at lures of lavender or livid, pink or purple, sky dyed or scarlet deep. Even the "dusting brush" was disdained as well as the lively Parmacheneebelle. Nowhere could we get a rise, nowhere see a poising or fleeting trout. On completing the circuit of the shoreland, the triumph of the wily half-breed was assured and he was so tickled over it that he turned to Ned as we were leaving the island and exclaimed in exulting tone:

"What I tell you, no fish here?"

"What is here then?" inquired Ned.

"Maybe bear," this with a merry twinkle in his eye.

"Oh," spoke up Jo, "may be three bear," and then another smile illumed the boat.

"Say, Ned," I here put in, "maybe burning bears," and then three of us made merry sunshine radiate.

"I never killed a bear and then shinned up a tree to escape from it," retorted Ned.

This rejoinder threw the parental half breed into such a state of gravity that we all laughed at him so hearty that his face turned to a lobster red. He then considerately retreated from the field of humor, saying, "I quit. I fool, you wise; you burn 'em, I shoot 'em."

This was received with another round of merriment and then the bear stories were shelved and we pursued our course to our old fishing grounds on the main shore.

On reaching the lofty and retiring walls so varied in form and sculpture, and so delicately fringed with ferns and flowering plants and stunted spruces, we started in for the *S. fontinalis* with the enthusiasm of an angling crusader.

It was some time before I coaxed one of the brook beauties to make the acquaintance of my winsome Parmachenee-belle—the leading fly. He, however, became so affectionate that he caressed and kissed her till he found himself struggling in the net. No more being aroused to the surface after patient and earnest efforts, we glide slowly along to some shattered cliffs which a stray sunbeam that had escaped from a somber cloud was gilding and burnishing, and there convinced a jeweled beauty that he knew naught of the wiles of the angler. He scorned my belle of the yellow plumes and lovingly embraced the romantic Esmerelda, but it mattered not which he favored, they were both as deceitful as the daughter of the sun, the entrancing Circe. He was not an ounce under 3lbs., and a poem in glittering scales and mottled dyes.

Again we advance, and on reaching some tattered ridges where stood dark masses of innumerable pines and spruces, we again wage a determined war against the rose-colored and orange-painted dandies, and the result was two matchless robed darlings in a very short time.

Noon approaching, and the half-breeds exhibiting sly indications of hunger, we turn around, headed for the distant camp. Ned's royal red "dusting brush" was not the terror it had previously been, but before we reached camp it had managed to pick up three fine trout, while my ladies, in all their pride of ravishing colors, were treated with infinite contempt. Ned being in the stern and the boat speeding along, he simply kept his lures dancing on the water, or rather trailing, or to be more specific, trolling, and thereby captured the trinity. Having now an over supply of trout for the larder, we discontinued the sport.

After we had dined quite royally we started on an exploring trip in search of a wandering stream called Clear Creek. We closely hugged the shore, fearful of missing it, and after going five or six miles were unable to locate it. We, however, did find a tinkling brook about a mile this side of Sand River, but not the one that answered the description given us. A magnificent pool was said to be at its mouth, where at sunset the trout were constantly leaping and frolicking till the shadows darkened its translucent water. It was located

"In a weird and mysterious spot
A ravine hallow'd for fairy grot,
Where mossy boulders and branches that lean
O'er the dark abyss are kept ever green;
For the gushing spout of a waterfall,
That leaps o'er the sloping granite wall,
With its refreshing foam and its spray
Keeps herbage and foliage forever gay."

It was like looking for the lost Atlantis to find this creek, and after reaching Sand River we hopelessly turned about and commenced the return. Ned said the shore we were passing looked so exceedingly trouty that he would endeavor to entice some of the fleckered family. I was satisfied in watching his strenuous efforts, and after he had hopefully delivered his flies for over a mile of the notched and jagged shore he was at last rewarded with a pound trout and then he withdrew from the angle.

Here we again came to the little silver brook, and thinking probably that it might develop some large and lovely pools further up its source, sent the tawny Kenosh to carefully investigate it. He vigorously started off along its wandering course, breasting his way through the thickets, and clambering over fallen timber, with an occasional tramp in the water. There was not much poetry in such a tiresome walk, though there evidently was in the music of the little tinkling stream, as it wandered through beds of pebbles and golden sand and grassy banks, by forests of spruce and hemlock and balsam.

These little mountain rivulets play the same tune over and over again, and though

"Men may come and men may go,
But they go on forever."

Kenosh put in an appearance after a long wait, and showed evidence by his tattered garments and flushed face, which was raining beads of perspiration, that he had faithfully performed his mission. He said, without any grand flourish or needless verbiage, that it was no good and didn't believe there was a trout in the serpentine creek. Not a pool did he find nor channel of icy water that looked anything like a hiding place for a ruby-tinted babe or a more matured and handsome member of the family *fontinalis*.

We were now fully five miles from camp, with the scenery of the clouds in the west indicative of an approaching storm. All the gold and silver-edged fleeces were fast disappearing in the east, and the gray and leaden clouds succeeding them were rapidly changing into dark storm rifts that presaged rain. The breeze had not yet caught us, though the half-breeds, who were pulling with all their might and main, momentarily expected to be battling with head winds and tossing seas. We soon reached a receding curve in the shore where towering mountains insured against the approaching gale. "A looming bastion fringed with fire" now burst forth low down in the horizon, and then the detonating thunder rolled on high and awed the earth. Deep went the oar blades and higher rolled the snowy crest at the bow. Every minute of time was measured at its full value, and as we looked back to a place which was clear an instant ago there was a cloud on it, hanging by the precipices as a hawk passes over his prey. The sudden rush of waters came in a brief time and just after we had reached harbor and ran for the shelter of our tents. The wind that came howling after the burdened clouds in black had consigned their treasures in pale columns along the lake and ruffled its surface into a wild sea, that tossed in snowy foam and battled against the ragged rocks until the entire coast line was one vast fountain of rising spray.

After the storm had passed away the warm violet skies appeared and smiled serenely, while the red light of the descending sun played upon the dismembered fragments and gave to cliff and column, wall and pinnacle, mountain and valley, a soft glow that radiated like blinking stars at close of sunset.

The passing day we supposed would here close our pursuit of the iridescent beauties, for we had planned to leave in the morning for Jackson's Cove, just ten miles distant, and formerly one of the best trouting places on the lake. As we talked the matter over Ned was fearful that the party of Detroit anglers, of which we have made mention elsewhere, were in advance of us and had doubtless cleaned out the place of the finny population we sought.

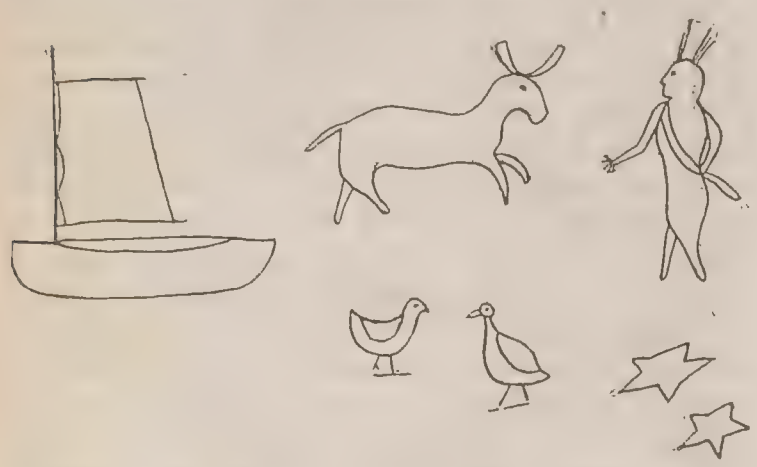
What was our disappointment on awakening the next morning to realize that a heavy southeast wind was blowing and the probabilities were that we would have to remain here another day. We, however, made the most of it and did our casting in the channel that was protected by outlying islands. Though a poor day for luring we managed to coax eight of the symmetrical beauties of the trout family to our lures, and slew them without remorse of conscience. Ned's red-headed devil did more execution than my shapely and deftly made flies, of which I used during the day the following: Henshall, silver-doctor, professor, Montreal, jungle-cock, black-spider, brown-hackle, scarlet-ibis and Parmachenee-belle. Ned would only change his dropper, holding the fiery-flamed "dusting brush" to the fore, of which I subjoin a *facsimile*.

THE "DUSTING BRUSH."

We, however, advise all professional fly makers to avoid duplicating the fly, as I am positive he has a caveat for it by this time.

It blew hard all day, and when we retired at night there were no indications of it letting up. The next morning it was not so bad, though not favorable for our departure, and so we remained another day.

About an hour after breakfast there was a decided and favorable change in the elements, a bright sun, serene sky and zephyr breezes prevailing. This tempted us to start the flies sailing, and on taking the boat went to the mainland and fished along the shore quite a distance, and happily found the trout inclined to rise to our lures. We caught enough in an hour and then discontinued the sport. These trophies gave us a very generous if not over abundant larder.



During the middle of the afternoon the trotting fever took complete possession of us again, and we therefore started out to make havoc once more in the ranks of the

delicately tinted and delightfully spotted *fontinalis*, and drink in the loveliness of the scenery and bathe in the golden glow that crimsoned the whispering forest and brightened the tinkling ripples.

Passing one of the islands where the Indians have chiseled some rude figures on its sea front in their peculiar lines, I concluded to make a copy of them as samples of their artistic skill. These are about as attractive to them as would be the finest and most graceful figures from the brush of a Raphael or a Tintoret.

We caught two trout apiece as per agreement, and then laid our rods aside, as we dreaded any wicked waste of the golden fins.

What a pure delight it was to gently glide over the undulating ripples in such golden weather. What beautiful sky and landscapes greet the vision everywhere. Beyond we see the aspiring pinnacles and green waves of forest lands, where the sea runs out to the belted horizon, and

INDIAN ROCK PICTURES.

where the blueness of the water met the blueness of the skies, radiant with all the marvels of its countless hues. The gentle south wind, with healing on its wings, and the perfume of tropic flowers softly stirred the murmuring water, filling the air with the ceaseless melody of its voices. The luster of a declining sun beamed upon it; the white foam curled and broke on the gray, curving rocks and crimson wooded inlets of the shore; innumerable birds with snow white plumage floated or flew above its surface, thus reviving memory and giving us fresh appreciation of the passage from Bayard Taylor's "Hymn to the Air:"

"What is the scenery of earth to thine?
Here all is fixed in everlasting shapes,
But where the realms of gorgeous cloudland shine
There stretch afar thy sun illumined capes,
Embaying reaches of the amber seas
Of sunset, on whose tranquil bosom lie
The happy islands of the upper sky,
The halcyon shores of thine Atlantides."

Islands, bays and inlets, headlands, cliffs and slopes, and anon some wandering brook with its tuneful melody from the mountain range, came in pleasing review. Wherever we drifted, for we hardly went faster, the tranquil beauty of the lake, the impressive grandeur of shoreland and the frescoed beauty of the skies charmed us so completely that we gave ourselves entirely up to the sweetness of unmeasured life.

Having reveled hours in this delightful mood, we at last break the charm and send the little craft speeding o'er the rufiled surface on the return to camp.

ALEX. STARBUCK.

[TO BE CONTINUED.]

TROLLING FOR A STEELHEAD.

THE preacher was expected at our house a few days since and there was no meat around except on foot, and I didn't want to kill that, for my yellow-legged pullets were all laying and this year's chicks weren't big enough unless I sacrificed two, and I didn't think I could stand that, so fish would have to take the place of flesh if I could make it. There are no woodchucks in this country.

Just after daybreak is pretty early at this time of year in this section, but I was out and moving about that time and on as pretty a morning as could be made to order. The air was moving also, gently, rippling the water just about enough for good trolling. There was the most delightful concert going on by the cock robins in a hundred trees you ever listened to, and old cock-a-doodle-do, from his perch in the hen-house, was showing what he could do in the way of noise.

I had been catching salmon trout from time to time with rod and light spinner, but this morning I took a trolling line and light spoon to vary the entertainment a little, and in a little time I had the boat afloat and 100ft. of line trailing astern in water eenamost as clear as the air around me and through which the pebbly or weedy bottom showed deceptively.

Down along shore I pulled for a few hundred yards in 8 or 10ft. of water without a strike; then I swung out and around back again in deeper water up past the landing 200yds. in much deeper water, and was thinking that this wasn't the salmon trout's morning, when the line straightened out as taut as a bowstring, and I could almost hear it twang, for it was pretty nearly all out of water as the fish rose to the surface. I was considerably surprised, for no larger fish than a 2-pounder had come to hand since last winter, but here was something huckleberries above any such persimmons, and realizing that I had business cut out, I rapidly took the oars and locks inboard and began to haul in on the line. Don't it feel good, though, to feel a lively log on the other end of a line stretched to almost its utmost! At first I didn't know whether the boat went or the fish came, but I got in line slowly until in the wonderfully clear water I caught the silvery gleam of a whopper of a salmon, and then I felt pretty well, thank you. When he had been drawn as close to the boat as he thought was safe, he refused for quite a while to make any closer acquaintance, but bored for the bottom or took wide sweeps, taking line as he pleased or as I thought judicious; for, as I said, the spoon was light, and I wanted that fish, for the preacher was comin'.

Back and forth, time and again, from bow to stern of the little 10ft. boat I went to free the line as the gamy fellow swept under the boat, and time and again as I had him almost up to the boat and thought he was played out would he make a terrific rush and the line cut my fingers again. I had no gaff nor anything to knock him on the head with, so I had to play him completely out that I might lift him in out of the wet by the gills; and when finally I had done this after a good deal of pretty fine work, and he lay in the boat gasping after a thump on the head with an oar handle, I thought he was about as beautiful 31½in. of spotted-backed, silvery-sided steelhead as ever feel into anybody's hands; and when I took him to the house, ere yet the coffee pot steamed upon the fire, and saw him run the scale pointer down to the 12lb. notch, I remarked:

"Now let the preacher come." O. O. S.

STATE OF WASHINGTON, June, 1896.

BOSTON FISHERMEN.

BOSTON, July 13.—The Bemet and Train party is at home after a very good fishing trip to Mooselucmaguntic Lake. Fly-fishing has been good in the vicinity of the Birches. The Williams party had good fly-fishing there from the 10th to the 21st of June, taking one 4lb. trout and one 3½lbs. on the fly. The Parmachenee-belle seemed to be the favorite.

The Wilson party, of Lewiston, had excellent fishing off Ship Island, in Molechunkamunk Lake, late in June. This is an island that only shows at low water, though before the flowage—21ft. at high water—it was out of the water altogether. The trout evidently gather there to feed. The Wilson party took one trout of 4½lbs. and a great many of from ¾ to 1lb. The fly-fishing a part of the time, especially at the edge of the evening, was excellent.

Mr. John G. Wright has an excellent report from the Commodore Club at Moose Lake, in Maine. A landlocked salmon was taken there last week some 14in. in length. It was taken trolling with a red fly or Stanley spinner, near the middle of the lake. The taking of such a fish would be nothing remarkable in many another lake, but Moose Lake has been stocked with salmon only a few years, never with any sort of force till three or four years ago, and the above salmon is the first result of this stocking ever taken. It was an event for the members of the club present and the news was wired to the absent ones. The fish was handsomely dressed and cooked, with a blue ribbon tied in the gills, labeled that it had cost the club $6,000. But all the same the club members are greatly pleased to make sure that their efforts are being rewarded. There were never any salmon in the lake till put there, and the surprise is that the one taken had grown so large in so short a time. At the present time the club has at its hatcheries, at the lower part of Tuttle Brook, 30,000 landlocked salmon and 50,000 trout, all hatched this year and doing finely. The little fellows will be turned out of the pools this fall, but are likely to be retained between two dams in the brook till they are larger grown. Along the brook salmon are quite plenty, evidently one, two and three years old. These fish do not yet seem quite ready to go down into the lake, and the club has never felt certain that there were any in the lake till the catching of the one above mentioned. Moose lake is well stocked with landlocked smelt, the natural food of the landlocked salmon, and the Commodore Club, made up of some of the first business and professional men of Boston and Maine, expects soon to own the finest salmon-fishing preserve in Maine. The Castle Harmony Club is also located on the other side of the lake, and is doing good work at restocking. This club is also made up of Boston and Maine representative men.

Mr. James H. Jones, of Faneuil Hall Market, has gone to Buckfield, Me., on his vacation and summer fishing trip. He will try the brooks in that section, and with his father make a trip to the trout brooks in Byron, camping out for a couple of days. His father fished those brooks as a boy, and will take great pleasure in trying them again.

Mr. Geo. H. Cutting, of Andover, Me., writes us that a great many deer are being seen at the present time, even more than a year ago. He has been guiding at the Rangeleys for some weeks, and thinks that the deer are unusually plenty. The warm weather and the flies drive them out into the fields and pastures, as well as down into the lakes and ponds. "Partridges," he remarks, "I have never seen so plenty, and if nothing happens to them there should be excellent shooting this fall."

Messrs. M. Allen and W. A. Crocker are back from a black bass fishing trip to Long Lake, Bridgton, Me. They report excellent luck, with about all the bass they wanted. A bass weighing 2½lbs. was received from them as a trophy by their friends at the store of the Carpenter, Morton Co. on Thursday. About all who return from the Maine bass waters declare that fishing has never been better.

Late reports from the Northeast Branch of the St. Marguerite say that Walter M. Brackett is having "the greatest luck on record." In his first seven days' fishing he had taken twenty-nine salmon. Messrs. C. G. Sias, C. H. Olmsted and Geo. Talbot have the greatest of praise for the salmon fishing at the St. John, at Gaspé, P. Q., from which river they have lately returned. They made a record of fifty-eight salmon. Mr. Richard O. Harding has been handsomely remembered by Mr. Olmsted. A fine salmon came in the other day.

The Maine Newspaper Press Association is to visit the Rangeleys for its annual excursion this year. But little fishing will be done, however, the party stopping for a night at the Birches, at the Mountain View, and at Anglers' Retreat. The recent fire at Bemis, on the line of the new Rumford Falls & Rangeley Lakes R'y, was not as disastrous as at first reported. The log station at Bemis was not burned, nor Capt. Fred's camps. The fire was confined to about 400 acres of woodland, and was got under control only by almost superhuman efforts by everybody. Sportsmen should exercise the greatest caution about kindling fires. The only safe place is on a sandy or rocky shore next the water, with a pail or bucket handy; and even then the fire should be of the smallest proportions, and thoroughly extinguished before being left.

SPECIAL.

Game Laws in Brief.

THE *Game Laws in Brief*, current edition, sold everywhere, has new game and fish laws for more than thirty of the States. It covers the entire country, is carefully prepared, and gives all that shooters and anglers require. See advertisement.

A TROUT ENEMY.

LEBANON, N. H., July 1.—*Editor Forest and Stream:* I inclose a very crude sketch of a fish taken from a hole in a partly dried up brook in this town. The party who caught it brought it to me for identification, and although fish warden of the town I was unable to give it a name, unless it might belong to the eel family and be what is called in local parlance a "chub eel." Its color was yellowish, with spots like those on a frog, with apparently no scales, eyes bulged out and well up on top of head, two large fanlike fins (one each side). The front upright fin on back was slightly pink on upper edge. The head on the fish gave the idea of a bullhead. Can you tell me through next FOREST AND STREAM what it was?

C. M. HOFFMAN.

[There is scarcely a doubt that the sketch represents the miller's thumb, blob, muffle-jaw or bullhead of the Middle and Northern States. This belongs to the family of sculpins and is known to be one of the worst enemies of trout

THE MILLER'S THUMB.

and salmon. Wherever fish of the salmon family are found this little pest in one or more of its various forms may be seen carrying on its work of destroying eggs and fry. Its small size allows it to burrow down into the piles of gravel and stones forming the salmon nest, and very few eggs escape its keen vision and rapacious jaws.

It has been shown by experiments in Washington that a small miller's thumb will devour twenty trout fry in about a minute. When it is remembered that the small enemy of the salmon family is one of the commonest of the fresh-water fishes and occurs in all salmon and trout waters as far as heard from, the limit of its capacity for mischief will be readily appreciated.

We learn from Mr. A. R. Fuller that there are at least two kinds of miller's thumbs in Meacham Lake, N. Y., where they spawn in June. He says their eggs are attached to the under surface of stones in cone-shaped masses, and the newly-hatched embryo sculpins are about ¼in. long.

For additional information on this subject see FOREST AND STREAM of July 21, 1892. Two of the Western forms are illustrated in Bulletin U. S. Fish Commission for 1894, facing page 202. The fish which we think is represented in the sketch above mentioned is shown in figure 74, plate 35, of Dr. Bean's book on "The Fishes of Pennsylvania;" also in "De Kay's Zoölogy of New York, Fishes," plate 5, figure 14.]

Round Mountain Lake.

EUSTIS, Me., July 7.—*Editor Forest and Stream:* The camps at Round Mountain Lake are lively just now, the fishing of the finest.

The party of gentlemen from New York who are here for the fifth year are enjoying the lake fishing. Arriving on Wednesday eve just before tea time, tried their luck at once and in less than an hour hooked over sixty, saving some fine ones weighing ¾lb. and 1lb. each, while some tipped the scales even heavier. They were much pleased with their success and pronounce the lake and its surroundings the finest in Maine.

On Friday the party went to Blanchard Pond, on this same preserve, and were rewarded by catching some big ones with the fly-rods, proving the rule that Dr. Eastman insists is the right one: "Flies are the only things to fish with."

Mr. Harding took the largest fish, weighing 2½lbs.

The Pitman party is still here and having great sport. Even the fact of getting frightened by a bear while unarmed and alone does not dampen their ardor in the least.

Mr. J. N. George, of Boston & Maine R. R., is here for a few days, and has made arrangements for a trip here with his family for September and part of October.

The old camp-fire has been started, and that means for all summer, "No go out." Guide Moody has begun to relate his experiences and any who come do well to rival them.

Parties are coming in now, although the weather is cool here. Round Mountain Lake is being favored with many of its old patrons and a good share of the new ones. X.

Princes Bay Weakfish.

PRINCES BAY, N. Y., July 13.—In the past few days large catches of weakfish have been made here in the bay with hook and line. Saturday, the 11th, three boats brought in ninety six fair-sized fish; that is doing remarkably well for this place, as the menhaden fishermen are netting them by the bushel. Sunday morning, the 12th, A. F. Mack, of this place, caught thirty-six weakfish with a piece of salt pork and a small piece of red flannel attached.

A. L. H.

Barnegat Bay.

NEWARK, N. J.—We caught in Barnegat Bay on July 11, in three hours' fishing, twenty-five striped bass weighing 3, 4 to 5lbs. each, trolling with spoon and white worms. Capt. Edward Parker, of the Lafayette House, Forked River, N. J., is a reliable man to go out with There are any number of weakfish caught.

Game and Fish Protection.

NEW JERSEY PROTECTIVE WORK.

From the Monthly Report of the State Fish and Game Protector for June.

THE work of netting the Passaic for the purpose of removing the carp has been begun, but it is making rather slow progress on account of the novelty of the undertaking. It was found that the river's bed was obstructed by numerous logs and sharp rocks, rendering the use of sweep seines very difficult or utterly impossible. Pound nets are now in operation and promise better results. There is little doubt when the approach of the cold weather causes the carp to move about more than they do in warm weather that their numbers will be materially diminished. Whether the stock of carp can be so reduced as to tend to their extermination by the fish to be introduced from Lake Erie is a question which the future will decide. The experiment is an inexpensive one, and the direct and positive benefit which we know will result will be the introduction of valuable food and game fish from the great lakes.

The menhaden fishing has just begun, and so far as I have been able to learn up to the present date there have been no violations of the law, no vessels appearing along the New Jersey coast which have not been duly licensed by the Commission. Fishing for menhaden began later than usual this season for several reasons. In the first place, the menhaden people had a great deal of stock on hand which commanded very low prices, and consequently there was little incentive to them to begin operations, especially if, in addition to their usual expenses, they were compelled to pay a license fee. Another reason why there was less anxiety to begin operations was because there is less demand for the product of the so-called "fish factories." A substitute for the oil expressed from menhaden has been found in a product of petroleum, which, while it answers the purposes of fish oil in a great many respects, commands a great deal lower price in the markets. From present indications, fishing for menhaden has seen its best day and is beginning to decline. The whale fishery gave way to the fishing for menhaden, and the latter promises in a few years to become so reduced in volume as not to give rise to continued fears of injury to the fish supply. There is little doubt that the annual catch of menhaden along the New Jersey coast will be less this year than it has been for a long time, and the people of this State will have the satisfaction of knowing that such persons as still continue the pursuit of these fish contribute a revenue for the defraying of expenses of keeping up the supply of other kinds of fish.

The most important litigation determined during the month was the appeal case of a number of Italians in the county of Atlantic. These men had for a considerable period paid attention to no law whatever, claiming that they had a right to do as they saw fit on their own premises or on property owned by friends where they had been given the privilege of gunning. A number of prosecutions instituted last fall were bitterly fought by the accused and when judgment was rendered against them in the lower courts appeals followed. I am glad to be able to report that the Court of Common Pleas of Atlantic county has sustained every conviction had.

The record of prosecutions for the month is the following:

By Warden Brown—David Williams, killing song birds; fined $20 and costs.
By Warden Hendershott—Israel Struble, Martin M. Bunn and Emmet Struble, having bass unlawfully in possession; fined $40 and costs.
By Warden Shinn—Samuel Reed, destroying birds' nests; thirty days in jail.
By Warden Hendershott—Floyd D. Aber, birdnesting; sentence suspended on payment of costs.
By Warden Hendershott—Elvin Hill and Harry G. Hill, having bass unlawfully in possession; fined $20 and costs.
By Warden Huston—Edward Pidcock, fishing for shad on Sundays; fined $100 and costs.
By Fish and Game Protector Shriner—Paulo Harrie, having oriole in possession; fined $20 and costs.
By Warden Brown—Edward Simon, having bass unlawfully in possession; acquitted.
By Warden Hill—W C. Fortner, using gill net; case undisposed of.
By Warden Ricardo—Sebastian Bena, netting fish: fined $20 and costs.

CHARLES A. SHRINER, Fish and Game Protector.

PATERSON, N. J., July 1.

Fisheulture.

NEW METHOD OF POND CULTURE.*

BY DR. JOUSSET DE BELLESME.

[Translated by Dr. Tarleton H. Bean, by permission of the author, and read at the twenty-fifth annual meeting of the American Fisheries Society.]

[At the solicitation of Count de Briey, President of the Central Society for the Protection of Fresh-water Fisheries of Belgium, M. de Bruyn, Minister of Agriculture, requested Dr. Jousset de Bellesme, Director of Fishculture of Paris, to deliver a lecture on pond culture at the Exposition of Fisheries and Fishculture at Antwerp in 1894. That lecture was published in the journal of the Belgian Society mentioned in January, February and March, 1895.

Dr. Jousset de Bellesme had previously published a brief account of his new method of pond culture in *Comptes Rendus Acad Sc.*, Paris, Nov. 26, 1894. A paper upon the same subject was published in a French newspaper, *Le Gaulois*, by A. de Marcillac, in March, 1895, criticising the method proposed by Dr. Jousset de Bellesme; and in *Revue des Sciences Naturelles Appliquées*, Paris, No. 17, December, 1895, M. Jules de Guerne takes exception to the statements made by the Director in terms unnecessarily severe; indeed, in such a manner as to arouse suspicion of an unworthy motive.

There is no question as to the value of the experiments herein described, and however much American fishculturists may differ from some of the distinguished author's opinions, they cannot fail to find in the article many useful hints for their guidance. We have to thank him for the information that the quinnat salmon will reproduce without going to sea, when three years old and weighing 13 to 15lbs, and that they can be successfully and profitably reared in ponds. For convenience the following table of equivalents of the weights and measures used in this article is given:

1,000 grams=1 kilogram=2^1_5lbs. avoirdupois.
1 centimeter=10 millimeters=$^2_5$in.
1 hectare=2.471 acres. T. H. B.]

In Belgium, as well as in France, ponds have not taken the rank to which they are entitled in increasing the food supply and supporting industries, because, instead of constantly improving their system of culture, the breeders of fish have remained hypnotized by obsolete methods, and have found nothing better than the indefinite perpetuation of the carp, which has been practiced from the thirteenth century.

It is desirable to abandon this plan and in this progressive age to give up ancient errors. After I have shown the result of the extended researches which I have made upon this interesting subject, I hope all your doubts will be removed and you will be convinced, as I am myself, that pond culture is susceptible of taking its place in the first rank of fishcultural industries.

At present it is rare that a pond suitably located yields 60 francs per hectare of surface, and again, how often they do not give more than a revenue of 30 or 40 francs per hectare every two or three years. It will be admitted that with such meager returns this industry will be greatly neglected.

I hope to demonstrate to you that if this had been differently managed the culture of the pond might be made to yield 700, 800 or even 1,000 francs per hectare.

I will divide my subject into two parts:

First—I will give a rapid survey of the present state of pond culture.

Second—I will have the honor to show you the new method which I have evolved from experiments continued about ten years at the Aquarium of the Trocadéro in the rearing and reproduction of the *Salmonidæ*.

I have often asked myself why the monks especially selected the carp among the numerous fishes which inhabit our fresh waters. Of course we can offer nothing but conjecture upon this point. My belief is that the carp in the fourteenth century was not exactly the fish which we know to-day, and that it was distinguished then from other species by qualities which it no longer possesses.

I fear that what I am going to say will excite contradiction, and I will be sorry if any one attributes to me bad intentions with regard to a fish which gives pleasure to the angler and is sought after by many people; but the love of truth leads me to state that from the culinary point of view and as a food the carp is far from occupying the first place among the fresh-water fishes which are offered in our markets. It ranks in the quality of its flesh below the salmon, trout, eel and frequently even the perch, gudgeon and barb. If any one disbelieves this statement it can be sustained by a glance at the list of prices of fish in our markets. It will be seen that while a kilogram of salmon costs 10 francs, of trout 8 francs, of eel 7 francs and of gudgeon 5 francs, a kilogram of carp costs about 3 francs. These are the average prices of the Paris market. Three francs a kilogram! Who hopes to establish that at this price the carp is an advantageous food? Leaving out the always disputed question of taste, the food value of the fish must be considered.

Buy a carp of 1 kilogram, cook it, it will not weigh more than	991.80 grams
Remove the skin and weigh it, it is	96.90 grams
Take out the viscera, which weigh	379.76 grams
Carefully remove the skeleton	201.78 grams
There remains of flesh only	312.36 grams

Thus from this fish, for which we have paid 3 francs, we obtain only 312 grams of flesh; that is for the flesh almost at the rate of 10 francs per kilogram.

If we take a salmon or a trout of 1 kilogram see what we obtain:

After cooking it weighs	965.70 grams
Skin	49.90 grams
Vicera	199.80 grams
Skeleton	122.10 grams
Flesh	593.80 grams

It is unnecessary to emphasize further the inferiority of the carp.

How then comes it that in spite of this inferiority, which has doubtless been remarked and commented upon by many other persons than myself, the carp still continues to be the only fish cultivated in ponds? There are several reasons for this; the carp really possesses several valuable qualities from the point of view of the fish breeder. Of all our fresh-water fishes its growth is the most rapid. At four years it weighs two kilograms and frequently arrives at this weight earlier.

It is extremely hardy and is not injured by freezing, nor by impurities in the water. Its culture is attended with uniform results; finally the carp requires less care than other fishes. Its food is vegetable and one may really say that this fish raises itself; this indeed is the principal cause of its success; many proprietors are satisfied with small results upon the condition that they do not cost any trouble.

I said at the commencement that this method is to be abandoned. Every medal has its r verse. We may say that the hardiness of the carp has been the origin of its degeneration as a species. The fishculturist grows careless about the selection of the breeding fish, and very often before having his attention called to it the carp have spawned in the pond quite promiscuously. Nevertheless he sells the young for restocking at the same price as if they had been of a good race; also through this negligence the pond deteriorates, as in Sologne, where the carp has greatly degenerated and has acquired a factitious quality of reproducing too early. The Sologne people have remarked upon this without comprehending its significance. They say in this connection that the carp is precocious.

As a result, it frequently happens that the alevins placed in a pond to grow begin to breed before they have reached a marketable size, and they have no commercial value. This characteristic has been acquired by living many generations in ponds which are too warm and has become fixed by heredity. High temperature stimulates the reproductive functions, and the animal becomes incapable of growing large.

Is it advisable to cultivate such a mediocre fish? Here are some figures which will answer this question, and without burdening you with a long and detailed enumeration, I will furnish the two extreme terms of this series.

First, the minimum.

In 1892, in Sologne, the proprietors of ponds had difficulty to sell carp at 70 centimes a kilogram. After deducting 4 per cent. and the expenses of fishing, which would give about 52 centimes a kilogram, and as a hectare produced an average of not more than 80 kilograms, this is a yield of about 45 francs a hectare, but it should be noted in this regard that the ponds are not fished oftener than once in two or three years. Certainly this is small, and indeed some ponds return 60, 70 and even 80 francs per hectare.

The most highly esteemed carp establishments are those of Dubisch, in Silesia, which have frequently been mentioned of late years and have given the best results. A hectare has yielded according to official reports as high as 132 francs, a result which has never been exceeded; but this method involves much care and labor. This is a very excellent result, but how insignificant compared with a yield of 700 francs per hectare, which I have mentioned in the beginning. Truth compels me to say that it is not with the carp that this climax is reached, but with another fish.

I have thought from the beginning that it would be possible to replace the carp by another of our fresh-water fish, such as the eel or trout, the prices of which are much higher.

For the culture of the eel special conditions are essential, and the habits of the fish are such as to make its culture in ponds uncertain and undesirable.

On account of its high price the trout has already been made the subject of many experiments, but of all those I have seen undertaken I have not observed a single one which has been a success from a commercial point of view. The reason can be easily stated.

First, the ordinary pond rarely contains water of a temperature during the summer sufficiently low to suit the trout or even to keep it alive, for this fish will not endure a temperature above 18° centigrade; besides, the calm and stagnant water of the pond is not calculated to please it.

It is a fish of rapid streams, of waters incessantly moving and aerated, of the rapid cascades, which it ascends joyfully even when they boil like a cauldron; finally, it is a carnivorous fish, a great feeder, and when at liberty in a watercourse it has the habit of migrating if a sufficient supply of food is not present and establishing itself elsewhere. In a pond the trout is a prisoner and it must submit to the conditions imposed upon it, and these do not agree with its independent spirit. When the small fish available for it are exhausted, and they are rapidly exhausted, the young come to a standstill and the fish are reduced to insect food, scarcely sustaining themselves, and do not grow any more.

Add to this the fact that the breeders who have made these attempts and who have favorable conditions for the fish have made a mistake by attempting to cultivate the trout by methods which they apply to the carp. This is a fundamental error; a carnivorous animal will never accommodate itself to the mode of life or conditions which are suitable for herbivorous ones. For all these reasons the rearing of the trout in ponds, though often attempted, has not become current among fishculturists. Still, I am convinced that under favorable conditions this rearing will be possible, but it will be necessary to follow a totally different method.

I have in my experiments here been greatly aided by the importation of *Salmonidæ*, which have furnished the means necessary to solve this problem by having placed in my hands a fish of superior delicacy of flesh and combining all the qualities desirable for pond culture.

In 1879 the Aquarium of the Trocadéro received, through the courtesy of the U. S. Fish Commission and at the request of the National Society of Acclimatization, the eggs of three species of salmon successfully cultivated in America.

I devoted myself ardently to the rearing of these fish with the object of introducing and acclimatizing them in the waters of France. I have rested my hopes upon two of them, for I have not been mislead as to the difficulties inherent in this experiment. But the way being prepared, I have not lost sight of pond culture, and as I gradually learned more of the habits and characteristics of these new species I have not been slow to remark that one of them combines the qualities which make it suitable for simple and economic culture, and that by modifying the methods one may secure a new pond fish, the cultivation of which will be infinitely more remunerative than that of the carp.

Without entering more into details I will give the names of the three species of fish.

First: California salmon.

Its technical name is *Salmo quinnat*, and it is called the California salmon because it is very abundant in the rivers of California. Its form is elongate, its sides silvery white, the back greenish gray or bluish and spotted with numerous brown spots, the head is large, mouth wide, caudal fin deeply forked and pointed at the extremities. It has no red spots on the sides like the trout. Its size is large, individuals weighing 20 kilograms having been taken. Its flesh is extremely delicate, of a yellowish, apricot color, sometimes deeply pink. It spawns in October.

Second: The rainbow trout, *Salmo irideus*.

This is also from California. In general form it resembles the common trout (*Salmo fario*). Its sides are yellowish white, the back brown marked with elongated spots descending very low on the body, the caudal fin is truncate, but the fish is especially distinguished by a beautiful rose band which extends along the sides from the opercle to the caudal fin. The opercle itself is strongly tinged with pink. The rainbow trout does not reach the proportions of the California salmon, it does not exceed 50 to 60 centimeters (20 to 24in.); its flesh is sometimes white with a tinge of yellow, sometimes pink, according to surroundings, less delicate than that of the California salmon. It spawns in April.

Third: The brook trout or *Salmo fontinalis*.

Its form resembles that of the trout; it is a very pretty fish. Its fins are margined with white, which, with its dark sides, spotted with white, give it a striking resemblance to the *ombre-chevalier*. Like the rainbow trout, it does not reach a great size.

These three kinds of fish have been made the subject of many experiments in the Trocadéro Aquarium. I have studied their habits and characteristics, in order to appreciate their qualities and their advantages, and have endeavored to learn thoroughly their reproduction and rearing.

The qualities which radically distinguish these species from our native *Salmonidæ* are important.

First, their growth is more rapid. It is possible in ten months to bring them to a weight of 300 grams. At three years they may measure 28 to 32in. and weigh from 13 to 15lbs. They do not offer any difficulties on account of purity of the water and accept surroundings to which our trout would not submit. They endure high temperature; they will live in roily water of a temperature of 25° centigrade, while the trout succumbs at 18°. Finally these salmon, in spite of their name of salmon, are not obliged to go to sea to prepare for their reproduction.

---

* *Nouvelle Méthode de Culture des Étangs.* Par le Docteur Jousset de Bellesme, *Pêche et Pisciculture*, Brussels. Nos. 1, 2, 3, Jan.–Mar., 1895; pp. 2–11, 28–40, 50–54.

They can live and reproduce in fresh water. So, although zoölogically they are salmon, from the culinary standpoint they are trout.

It is true that in California *Salmo quinnat* descends the Sacramento, but this journey is not obligatory. In the tanks of the Trocadéro the *quinnat* reproduces wonderfully, and after five generations its spawning is to-day as ample as at the beginning.

In studying their qualities I have observed among these three species certain differences which caused me to become attached especially to the California salmon. Its flesh is very superior in quality, as has been remarked by certain authors, to that of the rainbow trout, and this is an important thing to be taken into consideration in its acclimatization. In order to make the comparison it is necessary to eat fish of the same age, raised under the same conditions and at liberty.

It will be seen then that the rainbow trout is far from having the same delicacy as the California salmon. Its flesh is a little hard and dry, resembling that of the whitefish, while the *quinnat* has fine, tender and creamy flesh like the Scotch trout or very young salmon.

The California salmon has another advantage over its two congeners: its reproductive period is very advanced. It spawns in the second half of October, while the brook trout spawns in December and the rainbow not until April. This peculiarity is of the highest importance; it is that upon which is based my preference for the California salmon in the method of culture which we are to explain.

In the enumeration of these qualities there has been less question about the brook trout than the other two species. This is because the fish has not the same adaptibility to artificial culture; it is more capricious in its habits; it is oftener subject to inexplicable mortality, and on these accounts I have relegated it to the third place, at least for the present. In that which follows I will confine myself to the California salmon.

In the first place, we must ask ourselves the question whether the California salmon is susceptible of culture in ponds. On this subject I have made numerous experiments which have furnished precise and conclusive results, and which prove that it lives very well in ponds, thriving in them remarkably well.

Without fatiguing you with all these experiments I will cite two which were undertaken in a small and a large pond.

Dr. Léon Lefort, vice-president of the Society of Acclimatization of Paris, has raised California salmon and rainbow trout in a pond of a hectare and a half in Sologne. The alevins were furnished by the Trocadéro Aquarium. They were about 8 centimeters long when they were placed in this pond of comparatively high temperature. After two years' sojourn in the pond the fish reached an average size of 24in.

With the assistance of the Fishery Society of Langres (Haute-Marne), I made a rearing experiment in the pond of Leiz, situated near that town. This is a body of water covering 200 hectares, and has no streams flowing into it. We were therefore assured that no predaceous fish would destroy the alevins which we placed there. Under these conditions, before the third year the California salmon reached a weight of 6 to 7 kilograms and a length of 31in., and some of them reproduced.

It is therefore shown by our experiments that the American *Salmonidæ* live very well in a pond and grow rapidly. Let us inquire before leaving this subject how it is possible to rear these fishes as regularly as carp are raised. In taking carp culture as a type we do not expect the same results, and it is partly by having misunderstood this principle that the attempts made with trout have been unsuccessful.

[TO BE CONCLUDED.]

DOG AND PICTURE.

Editor Forest and Stream:

A Posteriori concludes his article in the July 4 issue of FOREST AND STREAM as follows:

"I believe with Mr. Adams that the dog has powers of reason; our divergence of belief is on the degree of it; and while my argument has been in a positive manner against Mr. Adams's data, I simply have endeavored to show that his proposition is not proven, and not that it is impossible. The data up to the present time do not sustain his proposition, nor warrant his conclusion. The matter to gain a belief with the world should be free from any *petitio principii*."

I am not aware of having ever begged the question. Like the man in the good book, "to beg I am ashamed." Before making this charge, A Posteriori should have been sure of what the question was. I have never claimed that a dog or any other lower animal can recognize, or has ever recognized, a portrait. I may have intimated that I see no reason why a dog cannot recognize a portrait. I am perfectly willing to go further and say that, reasoning *a priori*, I believe that the power to recognize a portrait is possessed by intelligences beneath the intelligence of man—which is a very different thing from saying that I know it.

A Posteriori—though it is very evident that he knows the difference between the meanings of the words—confounds cognition and recognition. He has not done this in a spirit of unfairness, but in carelessness, or for the lack of a better word to express the cognition of a portrait as a portrait of a certain person—a possible secondary meaning.

That I may get the thought that I had in mind in my first letter to FOREST AND STREAM to the reader fully, allow me to raise and answer the question, What is cognition? There are two other words which express the same idea, know and perceive, as I have used the word cognition in this discussion.

Knowing, perceiving, cognizing, is a distinct act of the mind. It is not sensation. I pause for a moment for an illustration. Just outside the window by which I write there is a honeysuckle in full bloom. I hear the low, steady buzz of a hummingbird, with that occasional creak of satisfaction which the hummingbird gives when it has struck a particularly rich deposit of sweetness. The humming and the creaking have no doubt been going on for some time. The waves of air put in motion by the wings and the throat of the hummingbird have been striking upon the tympanum of my ear; but I have been engaged, my attention has been taken by the work in hand, and I have not been aware of the waves so striking. Now I am aware of them, now I perceive them, now, my *memory continuum* being awakened by this perceived event in my *sensory continuum*, I cognize the waves and the little energetic bundle of color which causes them.

In using the large words—and one must use large words once in a while, or be accused of *petitio principii*—I have involved the definition of a recognition. When I cognize a thing which I have cognized before, and remember that I have cognized it before, then I have recognized it. When a portrait of a friend is so good that I cognize him in it, then I have in a legitimate use, I take it, of the word recognized my friend's portrait. Any dictionary will give the derivation of the word portrait. It is from the Latin words *pro*, forth, and *trahere*, to draw. He is the most successful portrait painter who draws forth the most of the individuality of his subject and reproduces it on the canvas. Were there an infinitely perfect portrait painter, he would so absolutely reproduce the original that everybody would be so fully deceived that in looking at the canvas he would think that he stood in the presence of that original—as Tiger probably did when he looked upon the crayon portrait of his master. One so deceived might step up and try to slap the portrait on the shoulder, as he would the friend, were the friend one who would enjoy such a procedure, as every friend does not.

In saying "Let us now consider the actions of a man examining the portrait of a friend, or, as the mental scientist would say, observe the mental phenomena which he exhibits. His face may take on a pensive look. He does not reach out to shake hands with it, or slap it on its shoulder, or talk to it. He knows it is only a representation. It is only a semblance—not a reality," he evidences that he has overlooked the necessity of my drawing distinctly the line of definition between a reflection and a likeness, and between a likeness and a portrait. I did not say that Tiger would have cognized a reflection or a likeness of his master. What I did say was that Tiger cognized a portrait of his master. That I still say; and in so doing he solved the problem in psychology which I had in mind when I said it. After saying this I need not spend much time upon A Posteriori's remark: "Now, when the matter of recognizing a likeness is introduced, the instances cited as preparatory to the introduction of the dog's recognition of a portrait have no relevancy to it."

It seems to me that they are quite relevant. A portrait without a likeness would be quite as impossible as an embodied spirit without a body. The likeness is that through which the portrait manifests itself, as the body is that through which the spirit, or the individuality, manifests itself.

To the cognition of a portrait four things are necessary: 1, the faculty of form; 2, the faculty of color; 3, reason; and 4, what may be called the spiritual sense, by which spirit, or the individuality within the personality, is cognized—the two first being necessary to the cognition of reflections. I think that hardly anyone questions that the lower animal has the faculty of form. As I have frequently instanced, my dog Phlip knew the difference between the shape of my beretta, which I wore only on Sundays, and the hat which I wore on the street, as well as I or anybody else did. He would look at my head. When he saw that I had the beretta on, he would go off, curl up on his rug, and show disappointment that he could not go with me; but make no movement in the direction of going. But when I put on my street hat he would take it for granted that he could go, and fall in at my heels; or, if he had not been out for a walk for some time, frisk off in front of me, or circle about me. It is quite evident that the little beggar—gone over to the majority by the assassin's hand a year ago last Trinity Monday—could not have known the difference in the shapes of my head gear had he not had the faculty of form. Sir John Lubbock had a dog so trained that he would bring a piece of cardboard on which was printed the name of the thing that he wanted. The dog had learned to read these words, as you and I learn to read words, by the forms. As to the cognition of colors, A Posteriori says: "Again, in recognizing colors as Mr. Adams mentions, the colors served to show differences plainly perceivable to the eye." In other words, he thinks that the lower animal has not an abstract idea of color. Sir John Lubbock, to refer to him again, has proven—and remember that he is not a psychologist, but a scientist purely in the region of objective—that the sense of color of certain insects stops at one pole of the spectrum, where man's stops, but at the other pole does not stop where man's stops. Where it does stop, man of course does not and cannot know. That the lower animal has the abstract notion of color, as it has other abstract notions, I think very probable. A lady writes me from Indiana that one of her dogs has a distinct preference for a certain color. He shows preference for it in ribbons and in flowers. As to reason, as already quoted, A Posteriori says: "I believe with Mr. Adams that the dog has powers of reason; our divergence is on the degree of it." I do not know that I have ever said to what degree I believe that a dog can reason. In another place A Posteriori says: "He (the dog) seems to have a limited knowledge that certain causes will produce limited results, but his reasoning is always simple and direct. It never takes any mediate forms. He never makes any abstract reasonings. A thing actually exists or it does not. If the dog cannot understand certain things he drops the whole matter. He goes on in his own little world of simple cognitions. He has not even an axiom to guide his intelligence. And here let me say that I believe that the rules of logic have done more to set in the background the dog's just claim to possessing powers of reason than all other causes combined."

Here I take direct issue. Man has sung the sweet song of his essential superiority to the lower animal—sung it to himself too long. The dog's "reasoning never takes any mediate forms." Does it not? My dog finds that some one has taken the coat upon which he loves to sleep out of his chair and hung it on the arm of another chair. What does he do? He goes to the coat, then comes to me and scratches my knee, then goes to the chair where he would have the coat, then wags his tail in request, the while he looks at me, his eyes full of appeal. That dog as clearly used me to a purpose as mechanic ever used lever or screw. I read in the last number of *Our Animal Friends* about how the elephant, cruelly kept in an inclosure where no sheds have been erected and no trees grow, takes hay and deliberately places it on his back to break the power of the sun's rays—preferring new hay to old, and damp to dry, as I remember the account. But we have to do with the dog just now. A gentleman called upon another gentleman. They started on a walk to a depot together. The other gentleman's dog followed. The master told him to go back. He would not do so. The master cruelly beat him—so cruelly that the stranger took his part. As soon as the dog found that he had a friend he went over to him, and then made such an attack upon the master that that friend had to interfere. I do not say that the dog can reason as complexly as man, any more than I would say the Indian can reason as complexly as the Anglo-Saxon, or the average Anglo-Saxon as Bacon. But I do say that it is not true that to the dog "A thing actually exists or it does not." Curiosity is as surely an endowment of the lower animal as it is of man. The attempt has been made to show that there is radical difference between man and the lower animal in that man has what may be called the power of infinite persistency. But that power man has not—even in religion. Did not even The Christ cry out on the cross: "My God, my God! why hast thou forsaken me?" The lower animal's curiosity does not lead it as far as man's leads him, but curiosity leads lower animals. The lower animal may not use as many means to ends as man uses, but it uses means to ends. The confusion, nay the paralysis of psychology is dogma. And there is no dogma so paralyzing as the negative dogma. There is no danger that the lower animal will crowd man out of Wall street, nor from the pulpit, nor bar, nor editorial desk. There is no danger that the lower animal will take man's place in eternity. Then why not be fair to him? Why count him out? Why not count him in? I say in my first letter something about a dog's coming to know that a reflection of himself in a glass is of himself. A Posteriori calls upon me to give an instance to substantiate this statement. A gentleman told me the other day about his cat going around the mirror to find the cat which was a reflection of herself. He said that after that the cat seemed to know that the reflection in that mirror was of herself. I once had a dog who as surely knew the reflection in a mirror in the door of a wardrobe in my study was of himself as I did. How do I know? How would I have known that a child came to know that the reflection which it first took to be another child was a reflection of itself? By its looks and actions, of course! In the same way did I come to know that the dog knew that the reflection was not another dog, but a reflection of himself. Everything outside one's own experiences in psychology is an inference. I may misread the actions and looks of the child or the man, as I may those of the dog; and the adult may not tell me the truth. We may be more certain that Tiger cognized the portrait than we would be that a friend of the artist cognized it. For dogs and children, before a certain age, are not flatterers, and adults may not be, but are almost compelled to be by the laws of courtesy.

That the dog has intuition or what I have called the spiritual sense, by which he reads the changing moods of the individual master through the personal master, A Posteriori has already admitted. So I would claim that there is nothing unreasonable in the *a priori* conclusion which I reached, that a dog may be able to cognize a portrait in or through a likeness. That, and only that, is what I claimed that Tiger did, when his master took him into the room to see the finished portrait on the easel. I have not claimed that Tiger recognized the portrait in the secondary sense in which I used the word at the opening of this paper. But I would not be surprised at all to be told that he had done so. Remember that he went into the room with his master, that his master was in the room when he cognized the portrait, and that when his master spoke to him he left the portrait and went to and fondled his master.

Many other points in A Posteriori's interesting letter I would like to touch upon, but they do not belong to this discussion, which should have been confined to the discus-

The Kennel.

FIXTURES.

BENCH SHOWS.

Sept. 1 to 4.—Kingston Kennel Club's fourth show, Kingston, Ont., Canada. C. H. Corbett, Supt.

Sept. 7 to 11.—Rhode Island State Fair Association's fourth annual show, Providence, R. I.

Sept. 7 to 11.—Toronto Exhibition Association's eighth annual show, Toronto, Can. C. A. Stone, Sec'y of bench show.

Sept. 14 to 17.—Montreal Kennel Association's bench show, Montreal. G. Lanigan, Sec'y.

Sept. 22 to 24.—Milwaukee Kennel and Pet Stock Association's second annual dog show, Milwaukee Louis Steffen, Sec'y.

Oct. 6 to 8.—Danbury Agricultural Society's show, Danbury, Conn. G. M. Rundle, Sec'y.

Dec. 15 to 18.—Central Michigan Poultry and Pet Stock Association's show, Lansing, Mich. C. H. Crane, Sec'y.

FIELD TRIALS.

Sept. 2.—Morris, Man.—Manitoba Field Trials Club. John Wootton, Sec'y.

Sept. 7.—Kennedy, Minn.—Coutinental Field Trial Club's chicken trials, P. T. Madison, Sec'y, Indianapolis, Ind.

Oct. 9.—Brunswick Fur Club's annual meet. Bradford S. Turpin, Sec'y.

Oct. 26.—Hempstead, L. I.—Natioonal Beagle Club's trials. Geo. W. Rogers, Sec'y, 250 W. Twenty-second street, New York.

Oct. 28.—Greene county, Pa.—The Monongahela Valley Game and Fish Protective Association's second annual trials. S. B. Cummings Sec'y, Pittsburg.

Nov. 2.—Bicknell, Ind.—Continental Field Trial Club's quail trials. P. T. Madison, Sec'y.

Nov. 2.—Oxford, Mass.—New England Beagle Club's trials. W. S. Clark, Sec'y, Linden, Mass.

Nov. 10.—Columbus, Wis.—Northwestern Beagle Club's trials. Louis Steffen, Sec'y, Milwaukee.

Nov. 10.—Leamington, Ont.—Peninsular Field Trial Club, Leamington, Ont.

Nov. 10.—Central Beagle Club's trials. L. O. Seidel, Sec'y.

Nov. 16.—Newton, N. C.—E. F. T. Club's trials. S. C. Bradley, Sec'y, Greenfield Hill, Conn.

Nov. 17.—Chatham, Ont.—International Field Trial Club's trials. W. B. Wells, Sec'y, Chatham, Ont.

Nov. 23.—Newton, N. C.—U. S. F. T. Club's fall trials. W. B. Stafford, Sec'y.

Dec. 14.—Athens, Ala.—Dixie Red Fox Club's second annual trials J. H. Wallace, Sec'y.

Never Touched Him.

JULY 8.—How unfortunate it is that in matters pertaining to the A. K. C. men will rush into print and make statements without first obtaining facts from the A. K. C. office. As an instance, Mr. J. Otis Fellows attacks the A. K. C. for disqualifying him. My records do not show any such thing. A. P. VREDENBURGH, Sec'y.

Since the above was put in type, Mr. Fellows informs us that he has been notified by the secretary of the A. K. C. that he is not disqualified, and he adds by way of conclusion, "So, to the boys who wished to know how I felt I will say, very well, thank you; I am not dead yet."

sion of the point at issue—whether a dog can cognize a portrait. That all men can not do so is quite certain, as all men have not the spiritual sense by which the individual is cognized through the personality. A Posteriori draws a picture of a man standing before a painting, posing, trying to make up his mind whether it is a portrait. I have seen some great humbugs do that.

A Posteriori says that one or two things that I have said in my letters are "only verbal." My reply would be that he who does not know how to use words may know how to think, but he does not know how to convey his ideas; and I doubt if his thinking is as clear as it might be. And I must insist that there was no essential difference between Shakespeare and the average man. The difference in Shakespeare's favor was in the strength of faculty and in the relative proportions and delicacy of arrangement of faculties. And I insist just as strongly that there is no essential difference between the average man and the lower animal; the difference in the average man's favor, in its manifoldness, being the same as Shakespeare's.

As to A Posteriori's very courteous attack upon my first letter and reply to his reply to that letter, I submit that he has not shown that my "proposition is not proven." He simply—as one is so apt to do—misapprehended the proposition, which was that the dog can—that one dog has—cognized a portrait, not *re*-cognize a portrait, though, as I said at the opening of this letter, I believe that a dog has the power to recognize a portrait. I do not lay this down as a proposition. I simply express it as a belief, my reasons for holding which belief I have partially mentioned already in this letter, which is certainly long enough.

CHARLES JOSIAH ADAMS.

29 LAFAYETTE PLACE, New York.

PHILADELPHIA.—*Editor Forest and Stream:* I am indebted to Mr. W. Wade, Oakmont, Pa., for a matter of important information conveyed in a personal letter to me and bearing on the dog's powers of cognition. I trust that he will accept this as an acknowledgment of the receipt of the information and my obligation to him for it. He writes:

"One matter allied to the point you discussed with Mr. Adams has been overlooked: A dog recognizes a clay or china figure of a dog (such as are often kept in photographers' shops) and circles around it, but when he touches it with his nose jumps away with evident fear and mystification, keeping very clear of that image as long as he remains in the room with it. I suppose the puzzled condition the dog is in before he noses the image comes from seeing a dog that he does not smell."

This is really an important circumstance, though I am inclined to interpret it as an exhibition of reasoning powers, an association of ideas. The dog has come to associate certain odors with every kind of organic life, and finding what apparently is an odorless animal, one against all his former experiences, tends to startle him. The dog trusts more to the sense of smell than to the sense of sight. When considered for a moment, it is not surprising that he does so. I for one do not believe that the sense of smell is more highly developed in the dog than it is in man. The physical difficulty which the dog labors under in being close to the ground would tend to the use of his nose on all occasions possible. The dog's eyes are but a few inches from the ground, and the closer the eyes are to the ground the more circumscribed is the area of vision. Let a man get down on all fours and he will at once have a practical demonstration of this fact. Again, by constantly using his nose to discern such objects as he cannot see, the act would become habitual, and he would use his nose to supplement his eyesight.

A POSTERIORI.

Handlers and Owners.

OWING to a combination of circumstances which existed when the Handlers' Club was formed, and which could not be properly adjusted to coördinate with the policy of the club in the short time intervening between its organization and the holding of this season's field trials, it may find itself in an embarrassing position if it does not exercise good sense in the management of its affairs. All the purposes of the club are most commendable and tend both to the benefit of the handlers and the benefit of field trials. The possible complication may come from the following rulings:

Rule No. 6 prohibits any member of the Handlers' Club from becoming a member of a field trial club, "and," it continues, "all members of this organization pledge themselves not to enter or handle a dog at any trial held by a field trial club of which a competing handler is a member."

That is all very well so long as a handler owns his own entries, or has so arranged his contracts as to be qualified according to that ruling. But many handlers had made contracts before the club was organized, and therefore the contracts were in existence before the rule was made known to the public or even before the rule existed.

In Art. II. of the constitution the purposes of the club are set forth, and of these the following is one: "To enforce the conscientious performance and full completion of contracts between owners and members, if connected with dogs," etc.

Again, in the by-laws, under Rule 3, is the following mandatory requirement: "Every member shall fully and conscientiously perform contracts connected with dogs."

As it would be a violation of contracts with the owners of dogs if the handlers were to refuse to run their dogs in the trials of a club having members who were also competitors, it is plain that there is a conflict between the rules and the situation. Owners did not have sufficient notice of the working of the Handlers' Club's rules, and as the contracts were not qualified according to such rules, the handlers are in honor bound to abide by their contracts. The other matter of a professional competitor being a club member can rest in abeyance till the club members can act without any embarrassment in the matter of contracts, if they ever intend to take any club action in the matter.

"What," asked the commander, anxiously, "is that brisk firing off to the left?"

"We are not yet definitely informed," replied the aide-de-camp, "whether it is a general engagement or a policeman shooting at a mad dog."

With the fate of nations in the balance the uncertainty was awful.—*Detroit Tribune.*

HYDROPHOBIA AS A SIMULATED DISEASE.

THE following letter has been issued by the American Anti-Vivisection Society, of Philadelphia:

We have observed with regret numerous sensational stories concerning alleged mad dogs and the terrible results to human beings bitten by them, which are published from time to time in the newspapers. Such accounts frighten people into various nervous disorders and cause brutal treatment of animals suspected of madness; and yet there is upon record a great mass of testimony from physicians asserting the extreme rarity of hydrophobia even in the dog, while many medical men of wide experience are of the opinion that if it develops in human beings at all it is only on extremely rare occasions; that the condition of hysterical excitement in man described by newspapers as "hydrophobia" is merely a series of symptoms, due usually to a dread of the disease, such dread being caused by realistic newspaper and other reports acting upon the imaginations of persons scratched or bitten by animals suspected of rabies.

The late Dr. Hiram Corson, whose practice extended over a period of seventy years, during which time he searched diligently for the disease in man or animal, wrote under date of Jan. 18, 1896, "I have never had a real case of hydrophobia."

Dr. Traill Green, a physician like Dr. Corson, accurate in observation, careful in statement, and whose practice also extends over a long period, writes under date of Jan. 28, 1896, "I have never had a case of hydrophobia, nor have I ever seen a case" in the practice of other physicians.

Dr. Matthew Woods, who has been in quest of the disease for twenty years, and who during two summers personally visited every case reported in Philadelphia, asserts that he never saw hydrophobia either in man or animal, and although six years ago, at the conclusion of a paper on the subject read before a large audience, he offered $100 to any person bringing him such a patient, yet so far no one has claimed the reward. Dr. Woods furthermore adds that although he has questioned many physicians on the subject he has not yet found one who has ever seen hydrophobia either in man or animal.

At the Philadelphia Dog Pound, where, on an average, over six thousand vagrant dogs are taken up annually, and where the catchers and keepers are frequently bitten while handling them, not one case of hydrophobia has occurred during its entire history of twenty-five years, in which time about 150,000 dogs were handled.

The well-known specialist, Dr. Edward C. Spitzka, Professor of Medical Jurisprudence and of the Anatomy and Physiology of the Nervous System in the New York Post-Graduate School of Medicine, and President of the New York Neurological Society, writes: "Much of the observation of suspicious dogs is made through optics disturbed by fear, and by persons incompetent to interpret what they see. Notwithstanding every effort," he continues, "made by the writer to secure the observation of rabies in man or dog, not a single opportunity has offered itself during the last eight years" (the period of his observation).

The record of the London Hospital a few years ago showed 2,668 persons bitten by angry dogs. None of them developed hydrophobia. St. George's Hospital, London, records 4,000 patients bitten by dogs supposed to have been mad. No case of hydrophobia.

In the record of all the diseases which have occurred at the Pennsylvania Hospital in 140 years only two cases which were supposed to be hydrophobia have occurred. One of these, however, the only one submitted to bacteriological test, did not confirm the diagnosis "hydrophobia," and the municipal authorities refused to accept the death as one from that disease.

Finally, Dr. Charles W. Dulles, lecturer on the History of Medicine at the University of Pennsylvania, who has had the honor of being repeatedly appointed by the medical societies of the State to investigate rabies, and has read various papers on the subject before the American Medical Association, the College of Physicians of Philadelphia, the Philadelphia County Medical Society, the Medical Society of Pennsylvania, the Medico-Legal Society of New York, and has corresponded on the subject with most of the distinguished medical men of Europe, a physician familiar both with the literature of rabies, the history of Pasteur and the institutions called by his name, and who in addition has performed the almost incredible task of investigating, either personally or by correspondence with the physician or others in attendance, every case reported in the newspapers of the United States for the past sixteen years, shows that hydrophobia is extremely rare, so much so that he inclines to the view that "there is no such specific malady," having "after sixteen years of investigation failed to find a single case on record that can be conclusively proved to have resulted from the bite of a dog or any other cause."

In view, therefore, of the importance to the community of the above statements, may we not appeal to the press for their widest publication, and for the future suppression in its columns of such alarming and misleading reports as we have above indicated? Their prominence and the air of reality they give to what are but erroneous interpretations of phenomena having an entirely different meaning cause much suffering, especially to nervous persons, and also much cruelty to man's faithful companion, the confiding dog.

"I fully concur in the opinions expressed in the above letter. During an experience of forty-four years as a physician I have not seen a case of hydrophobia, and I am of the opinion that if newspapers could be prevailed upon to talk less about it the number of so-called attacks of the disease would be greatly diminished, as they are mainly forms of hysteria more due to the fear of hydrophobia than to the absorption of animal virus."

THEOPHILUS PARVIN, M.D., LL.D.,
Professor of Obstetrics and Diseases of Women and Children, Jefferson Medical College; President of the National Academy of Medicine; Member of the Philadelphia County Medical Society and of the College of Physicians and Surgeons, Philadelphia.

"I entirely coincide with the views expressed in the above communication. During a period of more than thirty years as one of the surgeons of the Pennsylvania Hospital but two cases, so far as I know, have been brought there for the treatment of hydrophobia. One was under the care of the late Dr. John F. Meigs, with whom I saw the patient; death occurred shortly after admission The other case was in October last—a lad of four years of age who had been bitten a month previously; he died a few hours after admission, but the negative results of the bacteriological examination of the secretions, it appears, did not warrant the Board of Health's acceptance of the hospital certificate of death from hydrophobia."

THOMAS G. MORTON, M.D.,
Fellow of the College of Physicians of Philadelphia; President of the Philadelphia Academy of Surgery; Senior Surgeon to Pennsylvania Hospital, Philadelphia.

"I have seen many patients suffering from what was called hydrophobia, both in my own practice and in consultation with other physicians, yet all were examples of diseases of entirely different character with symptoms resembling those supposed to be symptoms of hydrophobia. I do not feel justified in saying that hydrophobia does not exist, but I have never seen a so-called case that could not be explained on some other view than that of the introduction of a specific morbid virus. Although I have taken special pains to find a clear case of hydrophobia in the human subject, I have not yet succeeded."

CHARLES K. MILLS, M.D.,
Professor of Mental Diseases and of Medical Jurisprudence, University of Pennsylvania; Neurologist to the Philadelphia Hospital; Professor of Nervous Diseases, Woman's Medical College, Philadelphia.

"I believe the publication of the above letter will be a benefit to the community already unnecessarily alarmed over the supposed danger of dog bite. I am of the opinion that the bite of a dog is no more dangerous than the scratch of a pin or the puncture of an infectious nail, but because of exaggerated printed and oral accounts the picture of hydrophobia is so stamped upon the public mind that the thought of it, after being bitten by a dog, throws imaginative people into such panics of nervous excitement that they unconsciously reproduce its supposed symptoms.

"Although I have practiced surgery in private and in many of the hospitals of Philadelphia for the past twenty years, I have never seen a case of hydrophobia either in man or dog, nor do I know of any other physician or surgeon who has.

"The late Samuel D. Gross, M.D., D.C.L., the venerable Professor of Surgery in the Jefferson Medical College, with whom I was associated for many years, and whose large practice included every known medical and surgical disorder, never saw a case of hydrophobia."

JOSEPH W. HEARN, M.D,
Fellow of the Philadelphia College of Physicians and Surgeons and of the Philadelphia Academy of Surgeons; Professor of Clinical Surgery, Jefferson Medical College.

"The above letter to the press on the subject of hydrophobia meets with my approval, as I believe that if there is such a disease it is exceedingly rare. I have never seen a case, and I believe that the publication of exaggerated reports of what are sometimes called hydrophobia cause much unnecessary suffering both to human beings and dogs."

SOLOMON SOLIS-COHEN, M.D.,
Professor of Clinical Medicine and Therapeutics in the Philadelphia Polyclinic and College for Graduation in Medicine; Clinical Lecturer on Medicine at Jefferson Medical College, Philadelphia.

"I am glad of the opportunity to express my concurrence in the plan and need of the above letter. During an experience of twenty-five years in the active practice of medicine I have not seen a case of real rabies in man or animal, but I know that people who may have been bitten by dogs are sometimes frightened into hysterical conditions in which they involuntarily reproduce all the supposed symptoms of hydrophobia. Besides, there are many other disorders, as for example angina and cynanche of the fauces, to mention but two, connected with the respiratory apparatus, where the symptoms are similar to those supposed to be symptoms of hydrophobia, such as difficulty and often impossibility of swallowing water, a feeling of horror at the mere idea of having to swallow, convulsive movements, delirium, slavering at the mouth, etc. In such cases the popular picture of hydrophobia seems to be complete, and it is not at all strange that they are sometimes mistaken for the volatile disorder. The publication of the above letter is calculated to do much good, inasmuch as its lucid presentation of contemporary opinion is such as to properly convince the timid that there is no more danger from a dog bite than from any other wound."

THOMAS J. MAYS, M.D.,
Fellow of the College of Physicians and Surgeons of Philadelphia; Member of the American Medical Association; Professor of Diseases of the Chest in the Philadelphia Polyclinic; Visiting Physician to the Rush Hospital for Consumptives, Philadelphia.

"Is Death the End?"

Editor Forest and Stream:

Without any reference whatever to an answer to the question at the head of this note, I desire to set Mr. J. B. Davis right on one point in which he treats this question in FOREST AND STREAM of July 11. He says: "The burden of proof is with those who aver that death marks the end." Mr. Davis here ignores the universal ruling that it devolves on the affirmative to prove its proposition. Otherwise arguments would soon become meaningless and unending. One man might lay down the proposition that the moon was made of green cheese; another man might take the negative side, but the first man might declare that it devolved on the negative to prove that it was not so, and if he could not so prove the proposition stood as proven. As I said before, I have no intention of discussing the question; I desire to point out the fallacious reasoning.

A POSTERIORI.

Under recent date Mr. G. A. Buckstaff, Oshkosh, Wis., writes us as follows: "I have sold to Otto E. Baehr, St. Louis, Mo., my beagle Royal Dick. He is a field trial champion of the 13in. class. He has won one first and one second in the open class for 13in. dogs at the Chicago shows in 1895 and '96. If properly handled he will be heard from on the bench in the next few years. Some of his young stock will be in the field trials this fall.

The Improvement of Field Trials.

MANY men who have the welfare of field trials at heart are giving much thought to the improvement and prosperity of them. There is no doubt that the sport should be made less expensive. That it is too costly, considering the return given in the way of sport, it is easy to demonstrate. The expenses of running a dog in a field trial, on the one hand, may be anywhere from $100 to $200 above the cost of training the dog for private shooting, and in return the owner has the pleasure of attending the trials for a week or less and seeing his dog run two or three hours or less.

Subjoined herewith is an extract of a letter written us by Mr. Thomas Johnson, Winnipeg, Mani., a gentleman who has given the subject much thought, who has had great experience, and who is actuated by the most generous sporting impulses. His words should be seriously considered by the field trial world. He says:

"Any action I may take in the future will only be as to how field trials can be made popular. I have been thinking of one plan, and if only to demonstrate its practicability I may endeavor next year to get the members of the Northwestern Field Trials Club to try the plan. Dog men know—and especially handlers—how some of their entries prove disappointing, and for obvious reasons they are unable to start them. Then again, there are numbers of amateur sportsmen who would, I think, make entries if they were assured of an opportunity of having a starter. My proposition is, charge whatever sum seems most popular for a nomination, and then at a stated time the nominator to declare his nomination say a week, or, to be more liberal, the evening of the draw. Any person to make one or more nominations. Kennel owners could then run the dogs that were in form, and the amateur could borrow or buy a representative if his own should go 'off.' The individual who has a world beater at home, but which he overlooked entering, would have an opportunity of running his phenomenen under a friend's nomination. I could go on *ad lib.* showing the merits of this plan, but a bare outline of the idea—which is somewhat similar to the Waterloo cup—will suffice at present.

"I think, however, it would be a big incentive to all interested, if only that every nominator would have a representative in the race. I may be all wrong, but if no other club tries this plan the Northwestern—which is only dormant, but will resuscitate when necessity requires—will make an effort once more to 'popularize field trials.'"

We would be pleased to receive from our readers any valid argument against Mr. Johnson's plan. We know of none, and believe that there is none.

Kingston Kennel Club.

KINGSTON, Ont., July 4.—*Editor Forest and Stream:* Please find inclosed the dates claimed by our kennel club. I may add that we had a very enthusiastic meeting of the club last evening, when it was decided to once more try and give our friends not only a show, but a show for their money. We trust our old American friends that have shown here before, and always expressed themselves delighted not only with the treatment they received, but also the show, will again send in plenty of entries. As our show precedes Toronto by a few days, it will not only be a pleasant lay off for the boys, but also the dogs as well. I have only to add that Mr. C. H. Corbett, who so successfully managed our past shows, is at the helm.

H. C. BATES, Cor. Sec'y.

POINTS AND FLUSHES.

A German sportsman once said to a well-known Scotch baronet: "Talking about dogs with keen scent, I have one in Germany that will compare favorably with any you have in England." "Very remarkable dog, I suppose," yawned the listener. "I should say so. The day after I left home he broke his chain and, although I had been away for hours, he tracked me and found me merely by scent. What do you think of that?" "I think you ought to take a bath," replied the Caledonian, turning calmly away.

The American Dachshund Club has issued a neat brochure which contains a list of the club's members, the constitution, by laws, a list of the club prizes and the dachshund standard adopted March 12, 1896. Address Mr. Arthur Froembling, Secretary, 715 Farwell avenue, Rogers Park, Chicago, Ill.

Leavitt—"There is a woman who treats her husband like a dog."

Bob—"Abuses him?"

Leavitt—"Oh, no. Pets and fondles him."—*New York World.*

The Derby of the Pacific Coast Field Trials Club closed on July 1 with thirty-two entries: eighteen English setters, twelve pointers and two Irish setters.

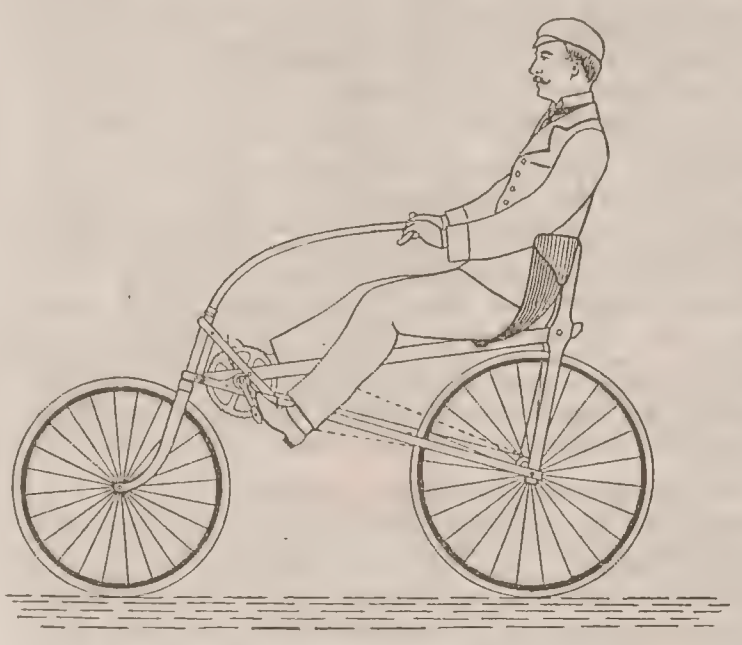
It is rumored that Mr. J. Otis Fellows will judge at Kingston.

Wheeling.

Communications for this department are requested. Anything on the bicycle in its relation to the sportsman is particularly desirable.

TRUING A WHEEL.

THE bicycle is a delicate piece of machinery, and requires constant care and tuning up, lacking which it will sooner or later run hard or develop some dangerous weakness. This applies to the best bicycles, for there is not a wheel made that will stand rough usage and lack of care for any length of time, while a poor bicycle will break down with the best of care and is dear at any price.



One of the common disorders to which a bicycle is liable, and which the average rider is apt to overlook, is the getting out of true of one of the wheels. This can easily be detected by revolving the wheel and at the same time resting some object on the fork in such a position that it will just touch the rim at the nearest point. As the wheel revolves the rim should touch this object at every point. If it does not it is out of true and needs attention.

Frequently the trouble comes from loose spokes, in which case the rider is generally made acquainted with the fact by hearing a clicking sound from the wheel. This difficulty may easily be corrected by tightening the spokes, care being taken to keep the wheel in true while doing so, and not simply tightening the spokes that seem to be at fault. The bottom bracket should be rested on something that will keep the wheel clear of the floor, and it is a good plan to hold a piece of chalk on the fork so that it will mark the rim in the parts out of true as the wheel revolves. Then with a wrench at the nipple the spokes are set up at the points where the chalk marks show.

When the spokes at all these marked places have been tightened, the chalk should be rubbed off and the operation repeated till the rim as it revolves touches the chalk at all points equally. It is better not to tighten the spokes too much the first time, but to correct all inequalities gradually. Sometimes it is impossible to get the rim perfectly true owing to defects in construction or other causes, and it is always best in stubborn cases to consult a good repairer. It is also well to remember that a poor adjustment may be responsible when the wheel appears to be out of true, and one should first be sure it is perfectly centered before attempting any repairs.

A New Swiss Bicycle.

I TRANSMIT herewith the drawing of a bicycle which has been invented in Geneva, and which is to be exhibited at the Swiss National Exposition. It is claimed for this machine that the position which the rider occupies upon it is not only infinitely easier, but that by means of the support for the back his forces are far more effectively utilized and with considerable less fatigue.

"LA BICYCLETTE NORMALE."

His position, as shown by the drawing, is held to be the normal position of a man in a sitting position, and the bicycle is therefore called "La Bicyclette Normale." The inventor says in his prospectus:

The principle of the machine is the utilization of the considerable amount of force, very little known, which is afforded by a point of support. Without this point of support, the only force a man has is his own weight. On the other hand, if the back be well supported, he has in each leg a force more than treble his own weight, and which is, in fact, equal to the weight he is capable of carrying combined with that of his own body. The construction of the "Normal Bicycle" is intended to make use of this considerable amount of wasted force. The point of support is the back of the seat, by means of which the cyclist's body is thrown back and his legs lifted up, owing to the position of the pedals. The body is thus placed in a "normal" posture (hence the name of the machine)—he is upright or leaning slightly backwards. The "Normal Bicycle" presents the advantages of greater safety, perfect comfort, healthy position, a greater power over the machine, greater speed both uphill and on level ground, and less fatigue.

It is also claimed for this bicycle that being much lower than the ordinary so-called "safety" bicycle, it is much easier to mount.

It has been tried in the streets here and made a favorable impression. The ease with which it ascended hills was particularly noticeable.—*Consul Benjamin H. Ridgely in Consular Report.*

Cycling in Hot Weather.

A TEN knot breeze is a pretty good breeze, and this is what the cyclist has at his command on a hot day. While other people are content to lie still and swelter, the cyclist creates his own atmosphere and starts the breeze blowing more than any palm leaf fan, or even the buzzing electric fan that tries to rival nature between brick walls.

On hot days the cyclist should take it easy climbing hills, and should not refuse opportunities to rest under the forest trees or to hold converse with the farmer's daughter over the garden gate. His breeze is best created on a long down grade, where he can put his feet on the coasters and let the wheel fly at its own sweet will through leafy lanes and past cool hollows, where the brooks run or where the wayside spring starts bubbling from its barrel.

Always, however, let the cyclist remember that his end is enjoyment and not work, and that even the bicycle rider is not exempt from sunstroke if he overdoes the thing. These are the days when the scorcher scorches actually as well as figuratively.

Learning to Ride.

IT is a good plan for the beginner, who is learning to ride without assistance, to lower his seat and raise the handle bars. The handle bars should be set three or four inches higher than the seat and securely clamped, for it is an awkward thing to have them turn when riding, and a sure cause for a header; and the seat should be put down as low as the frame will permit, unless the rider happens to be a tall man provided with a low frame wheel, in which case he can set it at the lowest point that does not uncomfortably crook his legs. The advantage of this style of adjustment is that the rider can easily reach the ground in case of an upset, and that he is not n danger of losing his feet when he does go over.

WHY THE BICYCLE HAS THE RIGHT TO EXIST.

THERE are a great many good people in this world who still argue that bicycling is simply a craze—a passing fad as it were, on a par with roller skating—and they say that at some near period in the future there will be a tremendous collapse, the bubble will be pricked, bicycle manufacturing will become a lost art, and bicycle riders will wake to their senses or take to some new form of amusement. It is worth noting that people who take this side of the argument are generally non-riders. When a man of this class learns to ride his preconceived opinion frequently needs revision.

Said such a man: "I always thought bicycling was a craze before a friend of mine persuaded—I was going to say bulldozed—me into getting a wheel. Now I am surprised that I ever held such an opinion, and I am using my influence to get my friends to ride. Bicycling is no more a craze than riding in a railroad train on the one hand, or taking measures to build up one's health on the other.

"When I get on my wheel now I wonder how anybody can be content with the antiquated method of going from one place to another afforded by walking. The people who say bicycling is a craze are of the same class as those who clung to the stage coach long after its days of usefulness had passed and who had nothing but censure for travel by steam. These people do not appreciate the fact that the same muscular effort they use in walking a block carries the bicycle rider three or four, and that he travels the longer distance in the same time it takes them to go the single block. So much for its utility.

"On the side of its healthfulness, one of the chief advantages of the bicycle is the easy means of exercise it affords in a city, or, for that matter, anywhere where people are busy and have their hours of recreation limited. When I come home at night wearied by the exactions of business I get on my wheel and half an hour's ride is sufficient to make a new man of me. The exhilarating effects are beyond description. The cup that cheers but does not intoxicate is at last realized. Bicycle riding has the same effect as champagne, but without its reaction."

This man voices two strong arguments in favor of the bicycle. It has the right to exist because of its utility and because of the healthfulness of the exercise within reasonable limits. The bicycle is too great a health promoter and too great a time saver to be shelved, at least until something vastly better is discovered.

Exercise on the Bike.

JONES, who lives on West Ninety-fourth street, has donned his bicycle costume and mounted his wheel for a little spin up the Boulevard. Smith, who lives on West Ninety-sixth street, has donned his bicycle suit and mounted his wheel for a spin down the Boulevard. They do this for exercise, and this is about what happens every day. Starting at the same time and riding at equal speed, it may easily be calculated that they will meet at Ninety-fifth street.

Jones (as he stops)—Why, hello, Smith!

Smith (as he does likewise)—Hello, Jones!

Jones—Nice day.

Smith—Yes, it's a beautiful day for this kind of work.

Jones—Great! Why, I couldn't live without my daily spin on my wheel.

Smith—Neither could I. Why, it has made a new man of me. By the way, I see you have a new wheel.

Jones—Yes, traded off the America that I bought day before yesterday for this Stumbler. One of the bolts on this machine is nickel-plated and it wasn't on the other. Makes a great improvement, I think.

Smith—Yes, and then you kept the other one as long as you ought. I never keep mine more than two days

Jones—Nor I. But in these days you could readily get a new and improved one every twenty-four hours—there are so many new inventions for wheels.

Smith—Yes, that's so. Why, I don't spend more than an hour at business a day. All my time taken up looking for the latest thing in wheels. It's great for the health.

Jones—I should say so. In fact, I have been contemplating giving up business altogether, and just spending my time looking for new wheels. A fellow ought to, if he wants to keep up with the crowd. I see you have another since yesterday?

Smith—Oh, yes; this is the third I have bought since then. Got an improvement every time. If I keep on for a few years I'll have the best wheel that's made. What are you geared?

Jones—Three hundred and sixty-six—it's leap year, you know. What's yours?

Smith—Oh, 4-11-44; but I think I'll try a new combination the next time I go out.

They converse for an hour or more about sprockets, oil cans, mud guards, pants guards, lanterns, cork handles, double and single tires, weights, bolts, bars and cranks, to say nothing of many other things, after which they mount their respective wheels and go home. They have ridden about two blocks apiece.—*Tom Hall in Munsey's.*

An Incident.

THE other day on the Boulevard in New York a trim-looking cyclist in bloomers coming in from a side street cut across the bows of a cyclist in knickerbockers. Mr. Knickerbockers rang his bell a trifle petulantly, but instead of getting out of the way the girl leaned forward over her handle bars and struck a gait that carried her down the smooth street like the bullet from a rifle. The man in the case interpreted her action as a challenge, and heedless of cops of all varieties he leaned forward too, and scorched for all he was worth.

But though for a short distance he strained every nerve, the girl managed to keep in the lead, and after the first spurt he fell back, realizing that she was more than his match.

Though she never looked around Miss Bloomers was evidently aware of her victory, for without slacking her speed appreciably she suddenly threw her body back, letting go the handle bars at the same moment, and began arranging her hair with all the freedom and grace of a lady before the mirror in her boudoir. And as she sped out of sight down the long straight vista, poor K., who never could learn to ride hands off, regarded her with a feeling of admiration that was akin to awe.

The FOREST AND STREAM is put to press each week on Tuesday Correspondence intended for publication should reach us at latest by Monday, and as much earlier as practicable.

Yachting.

Seawanhaka Corinthian Y. C. International Cup

SECOND CONTEST.

Oyster Bay, July 13, 14, 15.

WITH the present week begins the second series of international races established last year by the Seawanhaka Corinthian Y. C. for the $500 cup bearing its name. As every one now knows, the challenger last year was the English ½-rater Spruce IIII., owned by J. Arthur Brand, representing the Minima Y. C.; while the successful defender was the 15-footer Ethelwynn, of the Indian Harbor Y. C., representing the Seawanhaka C. Y. C. This year the nationality of the challenger is different; the yacht Glencairn being designed by the challenger, G. H. Duggan, of the Royal St. Lawrence Y. C., of Montreal, and being in all respects a representative Canadian craft. She is the result of diligent and intelligent labor throughout the past winter and spring on the part of a number of Canadian yachtsmen, of whom Mr. Duggan is the leader. After the challenge was tendered last fall work was soon begun, designs were made, the questions of construction of hull and fittings, of possible builders and sailmakers, thoroughly canvassed, and every preparation made for the construction of a trial fleet. In all of this the Montreal yachtsmen were at a serious disadvantage, there being few builders capable of turning out the quality of work required, no sailmakers, and no fittings to be obtained short of the States. The task of turning out first-class racing craft of the new type was very much more difficult than in the United States a year earlier, because, while on this side such models of build and rigging as Scarecrow were available, on the other side the only small yachts were of comparatively rough and crude build and rigging, affording no basis for experiment. In spite of these disadvantages a large and very creditable fleet of 15-footers has been launched on the St. Lawrence, and this in good season for very thorough trial races.

From visiting yachtsmen from the St. Lawrence we learn the following particulars of the boats engaged in the trial races on Lake St. Louis: All the recognized types were represented, from fin-keel through slim centerboarders and more powerful ones to the full-blooded scow. The latter was represented by Gyascutis, a flat-sided boat with dished bottom and greatly crowned deck, about 23ft. over all, 6ft. beam for her entire length, 12ft. loadline, and some 300ft. of sail area. While showing considerable ability in reaching, she was decidedly inferior in windward work, and in running off the wind displays a marked catamaran-like tendency to pitch pole or upset endwise. The boat in finish and outfit was probably the poorest of the fleet, and it is an open question how far the rounding off of the overhangs forward and aft and a more perfect outfit would have improved her.

The fin-keel had only one representative—a neat little craft which did some good sailing, but was never seriously in it. Sais probably represented the Ethelwynn type more literally than any of the others. She arrived late on the field, with an amateur outfit of sails and rigging, and kept on persistently, being handicapped or put *hors de combat* by a series of untoward accidents; so that while she showed evidence of considerable speed at times, especially off the wind, on which point she appeared to be quite equal to the leaders, she was never in the racing proper.

Bantam is a boat of the Sorceress type, by far the largest of any on the waterline and of extremely light displacement and low freeboard. As might have been expected, she showed up extremely well in reaching, but as she exceeded the limit of the class on her first measurement and had to reduce her sail spread to come within it, she was somewhat handicapped for want of canvas.

Missie is a flat-floored, fairly hardbilged boat of somewhat heavy construction, with a short mast and gaff rig of very moderate dimensions. On two occasions in a stiff breeze she carried full sail while the others were reefed, and like Question performed wonderfully, coming in several minutes ahead of the second boat, and at one time it looked as if she was to win the series. A moderate craft with a good deal of freeboard and deadrise, comparatively short overhangs and reasonable sail plan of the batswing type, performed fairly, but was more of a cruising than a racing type.

The remainder of the fleet were designed by Mr. Duggan for various members of the club, and, as far as an outsider can judge, would appear to be experiments as to the value of power, presenting under the same general ideas but little different waterline lengths, and, as a corollary, different sail plans. It would appear that the experiments have been satisfactory to Mr. Duggan at any rate, for the latest production of all is that selected as the representative of the club, and it is believed that the latest is also the most powerful of the series. The impression seems to have got abroad, judging from the tone of the daily press, that Glencairn is a light-weather boat pure and simple. Perhaps this impression is partly due to the fact that her home waters are limited in extent and depth. Lake St. Louis, however, while small, is swept by very stiff gales at times; and while there is no room for a really heavy sea, the latter is often short, high and choppy, owing to shoals, currents and eddies, and during the trial series of races there has been a fair proportion of hard weather, and the boats have been fully tried under all conditions. It has been already said that Glencairn's prototype, Sothis, was beaten in a hard blow by a boat specially adapted to these conditions, but there is no need to infer that the Canadian challenger is not a fast all-round boat.

The representatives of the Royal St. Lawrence Y. C., Messrs. G. H. Duggan and F. P. Shearwood, arrived at New York on July 5, their yacht reaching Morris Dock by freight next day and being at once transferred to Oyster Bay by a tug. The challenging yacht, Glencairn by name, is actually the flagship of the Royal St. Lawrence Y. C., being owned by Com. James Ross. When elected to the commodoreship last winter, Mr. Ross, who had last season had under charter the steel schooner Alcæa, had arranged to build a steel schooner on the Clyde, but this plan was given up. Being abroad at present on business, he has no large yacht, but left it to Mr. Duggan to provide a boat for him in the 15ft. class. Mr. Duggan's own boat, Sothis, was not entirely satisfactory, and after trying her an improved design was made and a new boat was built, the work being done by H. F. Hodson, of Toronto, who sent his men to Montreal. The building was done by them at Mr. Duggan's place, the Dominion Bridge Co.'s works, at Lachine. Glencairn, named after a ship built many years ago by Mr. Ross's father, is but 12ft. 9in. on the waterline as officially measured, her designed waterline being 3in. shorter. She is 6ft. 3in. beam at deck, with a full, round sweep to the side, ending in an oval transom. The lines are rounded in very quickly at the bow. She has a wide floor, perfectly flat, a strong bilge and quite a flare to the side. While unquestionably involving the scow principle to a marked extent, all relationship to the square box form is carefully concealed, and her deck and sides are as round as in any ordinary yacht of the class. With this short waterline she carries a sail plan of 292sq. ft., a mainsail of the sliding Gunter type, leg-o'-mutton in shape, but set with a vertical guard instead of a single pole mast. The jib is rigged with a club on the foot. The material of the sails is a heavy muslin. The boat carries a bowsprit about 2ft. long, the balloon jib being set at the outer end, while the working jib is tacked down further inboard. The hull is a single skin, ship-lapped, and in the short time she has been in use the seams have swelled somewhat, making a rather rough bottom. The spars, rudder and fittings are all lighter than in most of the American 15-footers.

During the week the two yachts and their crews were at the club house, busy with trial and preparation. El Heirie received and bent a new suit of Union silk sails, a trifle smaller than her old ones. At the request of the race committee Mr. Olmstead brought over Riverside in case of any mishap to El Heirie.

FIRST DAY—FIRST RACE.

Monday, July 13.

Monday morning found a clear sky and bright sun, with a bright haze on the horizon, but none of the fog that had vexed the Sound for over a week. The wind was almost due west and quite light, but still a sailing breeze. The two yachts and the club steamer left the harbor shortly before noon and were at the buoy by 12 M. Some delay was occasioned by the refusal of two fishing sloops anchored on the line to shift their berths, but finally the owners succumbed to the persuasion of the committee and permitted the launch to tow them away. The launch then ran to the westward preparatory to turning and crossing the line with the speed necessary to the proper working of the patent log, but the log line was fouled, and some time was lost in clearing it. The preliminary signal was given at 12:20, which meant a preparatory at 12:35, but it was 12:40 before the launch crossed the line to log off the three miles to leeward, E. by N. A wait of ten minutes was made to give the launch a safe start, and then at 12:50 the preparatory whistle was blown.

El Heirie was to the northward or near the outer edge of the line, the Center Island Buoy, while Glencairn was near the inshore end, marked by a catboat with the club flag. The two kept well apart, with no attempts at jockeying. El Heirie set her spinaker to port and had it broken out, heading for the line just before the signal, at 12:55. At 12:55:21 Glencairn crossed the line and ran up her balloon jib, at once opening up a lead, her spinaker being set at once. El Heirie, perhaps a dozen yards further to the north, crossed at 12:55:25, with her spinaker already drawing. Glencairn at once drew away and opened out a lead of 100yds. Spinaker booms were eased well forward. The run was made at a slow pace, Glencairn opening out the distance. Her crew were well to leeward and the boat listed down. On El Heirie the helmsman lay aft on the lee deck, the crew to leeward amidships. At 1:30 the balloon jib came in on Glencairn, followed by the spinaker, and then she jibed around the buoy, followed a minute later by El Heirie. The times of the first leg were:

	Elapsed.	Gain.
Glencairn	1 31 04	0 36 04	0 57 00
El Heirie	1 32 01	0 37 01	

Glencairn was a little slow with her main sheet as she rounded to, and El Heirie came on the wind with jib sheet slack. Both trimmed down for the 3-mile beat with a freshening breeze. At first El Heirie appeared to be weathering out on Glencairn's wake, but as they neared Lloyd's Neck it was evident that Glencairn had increased her advantage and was doing quite as well as the other in the fresher breeze. At 1:46:30 Glencairn went on port tack well in by the shore, and just two minutes later El Heirie followed, this representing very nearly the difference.

Glencairn held her tack for only four minutes, and then stood inshore again. She worked the beach in short boards, El Heirie doing the same. Glencairn however was pulling out a lead with every tack, and soon opened a wide stretch of water.

After passing the dock near the sand factory Glencairn held a long starboard tack to the middle of the harbor mouth, going about at 2:18:30 in order to keep El Heirie well under her lee, but soon making another leg inshore. When she tacked again, under the bluffs at Center Island, she was able to lay her course for the mark, passing it at 2:42.

	Turn.	Elapsed.	Gain.	First Round. Elapsed.	Gain.
Glencairn	2 42 50	1 11 46	0 05 58	1 47 50	0 06 55
El Heirie	2 49 45	1 17 44		1 54 45	

While one boat or the other was favored by the wind when close under the shore, most of the windward work was under fair and equal conditions.

Glencairn was rather slow with her spinaker, but there was no need for haste. When El Heirie rounded her spinaker went out very quickly. The run was made with a light breeze and a very strong ebb tide. The times showed a further gain for Glencairn:

	Turn.	Elapsed.	Gain.	Lead.
Glencairn	3 18 54	0 36 04	0 02 11	0 09 06
El Heirie	3 28 00	0 38 15		

It is an odd coincidence that Glencairn's time down wind is the same on both rounds.

Glencairn carried balloon jib and spinaker well up to the mark, her crew consequently having to take them in at the last moment and to snug down after she came on the wind, when he should have been busy with his sheets. Before she was trimmed down and on her course the tide had swept her to leeward. El Heirie took in her sails sooner, and though she barely had her spinaker in when her boom went over, her sheets were soon hardened down and she hardly lost an inch as she luffed close around the buoy.

As a matter of course, Glencairn held the starboard tack in for the shore, though the strong ebb tide swept her to leeward. When El Heirie rounded, nine minutes later, she took chances on a fluke. The sky had been overcast for some time, with a threat of a squall from the west or northwest. Only a minute after rounding El Heirie went on port tack to stem the tide out in the Sound. At 3:35 Glencairn, close under the shore, but further to the eastward than on the first leg, went on port tack and started to work up the shore, as before.

About 3:50 a few drops of rain fell and thunder sounded in the distance, the wind increasing. The skipper and crew of Glencairn slid around outside the boat in their effort to hold her up, and she drove along into the squall. At one time Mr. Duggan was on his feet on the deck, crouching down and steering with a jointed extension on his tiller. At 4:08 she lowered her jib and turned in a reef in the mainsail. After this change, the reefed sail not sitting well, she partly raised her board and began to do better work to windward. El Heirie, far out on the Sound, parted her jib tack and was compelled to reef in order to steer.

The squall amounted to nothing, a few drops of rain, a little stage thunder and a stiff breeze for a few minutes. At 4:17 Glencairn shook out her reef and three minutes later she set her jib. It was easy work now to the finish, the line being covered at 4:44:29. The wind now fell and left El Heirie to buck the ebb out in the Sound, the final times being:

	Last Leg: Finish.	Elapsed.	Gain.	Entire Race: Elapsed.	Gain.
Glencairn	4 44 29	1 25 35	0 38 05	3 49 29	0 47 11
El Heirie	5 31 40	2 03 40	. .. ..	4 36 40	. .. ..

This bad beating of El Heirie must be laid largely to the drop of the wind after the squall, but the showing of the first wind, a gain of 7min. for Glencairn, is perfectly fair, and it may safely be said that she beat El Heirie over the whole course by 15 to 18min., certainly enough to satisfy anyone. After her performance under various conditions in this first race, there seems no good reason why Glencairn should not carry home the cup.

When the racers started Mr. Clapham was at the line with the 15-footer Yola, cruising to leeward of it and setting spinaker as though racing for a record. He chased the racers at a distance for the first round and then withdrew. During the squall Com. Benedict, who was following the race in the Oneida, dropped his alco-vapor launch and started out, himself at the wheel, running near to Glencairn to give aid in case of a capsize.

The performance of Glencairn under the varying conditions of light and strong winds proves her a very fast boat in the usual light weather of the Sound and at the same time a very able craft in a breeze when handled as she is by Messrs. Duggan and Shearwood. That she may carry off the cup is not only possible, but probable.

Naphtha Launches for the Police Department.

THE harbor service of the New York Police Department will be greatly improved by the addition of four serviceable naphtha launches, which will be used instead of the rowboats heretofore employed. Before selecting these launches the department carefully investigated a number of different motors, among them being the Daimler, the Alco, the Globe, the Hirsch and others, and finally decided upon the launches and motors as manufactured by the Gas Engine and Power Co., at Morris Heights on the Harlem, as the best possible results as to speed, safety, economy, durability, cleanliness and comfort were produced.

The launches ordered by the department will be 30ft. long, 6ft. 6in., beam and about 2ft. 6in. draft. The frames will be of selected seasoned white oak, hackmatack stem, sternpost dove-tailed into keel and the counter dove-tailed into the sternpost and thoroughly fastened; planking of selected cedar, copper fastened. A standing roof top of wood will be fitted with glass windows arranged forward, which can be lowered in fine weather and raised in wet weather for protection to the men. Cushions, steering wheel, lamps, boat hooks, anchors, etc., will be furnished; in fact, the launches will be complete in every particular, and built strongly and substantially, and thoroughly adapted for the hard service which they will be subjected to by the harbor police. These launches will be completed and ready for the department's service by the latter part of July.

Larchmont Y. C. Race Week.

IN place of a cruise of the usual unsatisfactory sort common to all clubs but the New York, the Larchmont Y. C. has this year decided, on a change of programme, and will hold what it proposes to call its race week, beginning next Saturday. The race originally set for that day was an open one for all classes, but owing to the disappointment of July 4 the annual regatta will be sailed on July 18, the original race being abandoned. The programme for the week is as follows:

Saturday, July 18.—Open regatta for all classes, second race of series for 34ft. rating class, second race of series for 30ft. special class, special race for schooners in cruising trim.

Monday, July 20.—Special race for schooners in racing trim in one class, special race for schooners in cruising trim in one class, third race of series for 34ft. rating class, third race of series for 30ft special class, special race for 21ft. class, race for ½-raters.

Tuesday, July 21.—Four-oared gig race for Hen and Chickens colors, presented by Com. Gillig; two-oared gig race for Dauntless colors, presented by Mr. H. B. Seeley; dinghy race for Execution colors, presented by Mr. H. B. Seeley; race for naphtha launches exceeding 21ft. l.w.l., race for naphtha launches 21ft. l.w.l. and under, race for the Eastward and Westward challenge cup, tub races, and water sports.

Wednesday, July 22.—Open regatta for all classes, fourth race of series for 34ft. rating class, fourth race of series for 30ft. special class.

Thursday, July 23.—Race for class 5 yachts with cabin trunks, fifth race of series for 34ft. rating class, fifth race of series for 30ft. special class, race for cabin cats sailed in one class, race for special 21ft. class, race for ½-raters.

Friday, July 24.—Schooner race all in one class, race for class 5 yachts with flush decks, race for class 6, sixth race of series for 34ft. rating class, sixth race of series for 30ft. special class, race for special 21ft. class, race for ½-raters.

Saturday, July 25.—Open regatta for all classes, seventh race of series for 34ft. rating class, seventh race of series for 30ft. special class.

The regatta committee has issued the following announcement:

"The seventeenth annual regatta, scheduled to be sailed on July 4, was postponed on account of fog, and will be sailed on Saturday July 18.

"Yachts entered for the annual regatta are requested to retain their numbers and instructions for use on July 18."

The regatta committee also make the announcement that during the "Larchmont Race Week," commencing on the 18th inst. with the regatta above noticed and ending on Saturday, the 25th inst., the ocean-going tug Edward Luckenbach will be used as the judges' steamer. She will leave the club landing every day except Sunday, the 19th inst., and Tuesday, the 21st inst., at 10:30 A. M., and will carry a limited number of members and guests. Tickets can be procured upon application at the office of the regatta committee, in the club house. Those proposing to enter will do well to note that the Larchmont Y. C. is now rigidly enforcing the rule compelling entries within a stated time before the race day. Only yachts originally entered for the annual regatta will be eligible to start on Saturday.

Yachts on the Pacific Coast.

Editor Forest and Stream:

In the issue of June 27 of your paper there is a letter from W. B. C., of Vallejo, who starts off by generally abusing the shipbuilders on the Pacific coast. As to the truth concerning them I am unable to dispute, but the fast warships that have lately been built here speak well for some one's brains in designing. As fast lines mean big bonuses, the man who can originate them will always be in demand, whether English, Irish, American or Greek. If an American shows that he can design a fast craft he may be sure of holding an enviable position.

But it is not concerning these that I wish to speak, but about the yachts of our bay. W. B. C. mentions that "as for designing yachts, a Herreshoff would starve to death on the Pacific coast if he made yacht designing his specialty. The yachts out here are twenty and more years behind the times; the only yachtsmen with enterprise to pay for a design being George and Thomas Davidson, who built the cutter Folly from designs by the late Edward Burgess, and who were rewarded by seeing her beat everything in sight, even yachts in the larger classes. Yachtsmen on San Francisco Bay are perfectly contented with anything that the builder will whittle out for them, and as for paying for a design such a thing is not even dreamed of."

Ah! this is news indeed. W. B. C must have been spending some very useful days of his life high up in the Sierras, *a la* Rip Van Winkle. True, a Herreshoff would starve to death on this coast. But the benefit that yachting derives from the class of craft created by such men is not lasting.

It is true we are not blessed by that Eastern ornament, better known as the moneyed man, who goes into yachting because it is the correct thing, and who buys yachts as he would race horses, so that he may stand by and see them sail.

No, we will plead primitiveness in that we handle, sail and take care of our own yachts and have not as yet arrived at that state of perfection when we employ a whole flock of hirelings to do what is most enjoyable about the sport.

Yes, George and Thomas Davidson did get a set of line from Edward Burgess, and from which they did build the cutter yacht Folly, and she did pass the yachts in her class and larger ones, and in fact the whole fleet. But then the fleet was at anchor or going the other way. To say that Folly is a failure would be drawing it mild, for in none of the records of the years she has been in existence can it be shown that she was even fast compared with the slowest boat, and was indeed well named Folly. This was not the fault of Mr. Burgess, but his lack of knowledge concerning local waters.

As to the yachtsmen being satisfied with what the local builders turn out for them, it only speaks well for the builders, for their work must be pleasing to those who purchase, by the number of new orders.

As for our yachts being twenty years behind the times, this is where W. B. C. has been sleeping. Pray, in what age of the history of yachting would such craft as the Nixie, El Sueno, Speedwell, Harpoon, Thelma, Emma, Truant, Æolus, Mignon, Catherine and others be mentioned? Methinks they come near being boats of the present day.

SAN FRANCISCO, June 30. R. R. L'HOMMEDIEU.

Beverly Y. C. Second Sweepstakes.

WENAUMET—BUZZARD'S BAY.

Saturday, July 4.

THE 234th race of the Beverly Y. C., second Open Sweepstakes, was sailed off the club house on July 4.

The weather was the most trying the club ever met in Buzzard's Bay, and for the first time out of about 160 races one class, the second, failed to make the race in time.

It was almost a flat calm, the faint airs coming N.E., N. and S.E., and very fluky.

Many boats who wished to race were unable to reach the line; in the second class sloops, Falcon was ready on hand and Little Peter was present, but had left her big jib behind and would not start.

Colymbus, in the third class, showed she is fast in light weather, and the old Cayure did well; third prize is doubtful till Alison and Sippican are measured.

In the fourth class the old Daisy won and Elsa took second; and in fourth the famous Grilse saved the race by only 23 seconds from Sally, built this spring by Herreshoff for Mr. W. S. Burgess, a son of the late Edward Burgess.

Hebe got even with Imp and Grilse in the little class. In fourth class Mr. Brewer gets third if his boat measures in the class.

Courses: 8 miles for second class, 7¾ for third and fourth classes, 5¼ for fifth class. Wind: N.E., N. and S.E.; faint airs.

SECOND CLASS CATS.

	Length.	Elapsed.	Corrected.
Surprise, B. Y. C., J. M. Codman	24.01	3 02 28	. .. ..
Mist, B. Y. C., G. H. Lyman	25.01	3 09 27	. .. ..
Anonyma, B. Y. C., L. S. Dabney	24.09	3 21 09	. .. ..
Bernice, B. Y. C., J. G. Young, Jr.	25.03	Did not return.	

Race not made within time limit, and will be resailed on next sweepstakes.

THIRD CLASS CATS.

Colymbus, B. Y. C., Alfred Winsor	21.06	2 55 10	2 42 39
Cayuse, B. Y. C., F. W. Sargent	20.01	3 00 32	2 46 20
Sippican, B. Y. C., W. H. Davis	Not meas.	3 01 35	. .. ..
Alison, Onset, N. Huckins, Jr.	Not meas.	3 04 59	. .. ..
Melro, B. Y. C., D. L. Whittemore	20.04	3 07 04	2 53 19
Nobska, New Bedford, Baylies & Hand.	Not meas.	3 12 44	. .. ..
Doris, B. Y. C., J. Parkinson	21.01	Did not return.	

FOURTH CLASS CATS.

Daisy, B. Y. C., H. Stockton	18.03	3 13 38	2 57 21
Elsa, B. Y. C., H. O. F. Burgess	19.00	3 19 04	3 03 55
Not named, B. Y. C., Chas. Brewer		3 20 13	3 06 28
Cinch, B. Y. C., H. Parker		Not timed.	
Dawdle, B. Y. C., R. S. Hardy		Not timed.	

FOURTH CLASS SLOOPS.

Grilse, B. Y. C., W. E. C. Eustis	19.00	3 02 32	2 57 13
Sally, B. Y. C., W. Starling Burgess	19.00	3 02 55	2 57 36
Silence, B. Y. C., J. Crane, Jr.	19.00	3 27 19	3 12 00
Heiress, B. Y. C., Geo. G. Amory	19.00	Not timed.	
Ghuzz, B. Y. C., Lawrence Brooks	18.09	Not timed.	

FIFTH CLASS CATS.

Hebe, B. Y. C., J. Parkinson, Jr.	15.00	2 39 21	2 29 35
Imp, B. Y. C., Geo. B. Dabney	14.05	2 47 47	2 31 09
Vif, B. Y. C., A. Winsor, Jr.	14.04	2 54 15	2 38 31

Winners: Class 3, cats: first, Colymbus; second, Cayuse; class 4, cats: first, Daisy; second, Elsa; class 4, sloops: first, Grilse; second, Sally; third, Silence; class 5, cats: first, Hebe.

Judges: F. Elliott Cabot, A. H. Hardy, S. G. King.

New York Y. C. Cruise.

THE orders of Com. E. M. Brown are as follows:

"FLAGSHIP SYLVIA.

"GENERAL ORDERS, No. 2.

"Monday, Aug. 3.—The squadron will rendezvous at Glen Cove, L. I., in the morning, leaving that day for Huntington Harbor. At 11 A. M. there will be a meeting of captains on board the flagship.

"On the same day a race will be sailed for cups offered by the Commodore, finishing off Huntington Bay.

"Tuesday, Aug. 4.—Huntington Bay to New London.

"Wednesday, Aug. 5.—New London to Newport.

"Thursday, Aug. 6.—The squadron will remain at anchor.

"Friday, Aug. 7.—Race off Newport for the Goelet cups.

"Saturday, Aug. 8.—Newport to Vineyard Haven.

"Sunday, Aug. 9.—The squadron will remain at anchor.

"Monday, Aug. 10.—Vineyard Haven to Newport.

"Tuesday, Aug. 11.—Off Newport, special cups, to be announced later.

"Should the squadron be prevented from making New London on Tuesday, Aug. 4, it will anchor at Morris Cove for that night, in which case Newport will not be reached until Thursday.

"During the cruise there will be the usual races for the Owl and Gamecock colors, and a race for naphtha launches.

"The regatta committee will furnish details for the runs from port to port, and for all other racing events.

"Should any changes in these events be advisable they can be determined upon at any meeting of the captains.

"Captains are requested to provide themselves with the Coston night signal, N. Y. Y. C., and also to send a list of the names of their guests on board the flagship.

"By order of the Commodore.

"JULY 13, 1896. CHESTER GRISWOLD, Fleet Captain."

Boston Regattas—July 1, 2, 3, 4.

THE yachtsmen of the many local clubs about Boston enjoyed a series of four races on the first four days of July, and three of them in good racing weather, reefs being turned in on the first three days. The racing, which was under the rules of the Massachusetts Y. R. A., brought out a fine fleet of small craft, from 30 down to 15ft.

SOUTH BOSTON Y. C., WEDNESDAY, JULY 1.

The South Boston Y. C., of City Point, opened the racing season with an open regatta, sailed in a strong and puffy S.W. wind. The times were:

	Length.	Elapsed.	Corrected.
FIRST CLASS.			
Ida J., F. E. Beckman	28.11	1 38 48	1 10 38
Harbinger, W. F. Bache	28.04	1 40 05	1 11 22
Emma C., P. A. Coupal	29.05	1 43 38	1 15 54
Beatrice, J. Cavanagh	25.06	1 49 32	1 18 00
SECOND CLASS.			
Tacoma, S. N. Small	22.00	1 46 32	1 10 53
Gleaner, F. O. Wellington	23.00	1 51 12	1 16 49

Myrtle, A. W. Chesterton	21.06	2 05 05	1 28 46
THIRD CLASS.			
Opechee, W. P. Barker	19.09	1 59 20	1 20 33
Arab, W. F. Scott	18.01	2 05 40	1 24 14
Emerell, H. W. Low	18.10	2 12 30	1 32 18
Wawanda, Benner *et al*	19.11	Disabled.	
Mamie, A. E. Justice	18.08	Withdrew.	
KNOCKABOUTS.			
Cock Robin, C. S. Eaton	21.00	1 25 35	. .. ..
Jack Tar, T. E. Jacobs	21.00	1 27 52	. .. ..
Torpedo, J. J. Souther	21.00	Withdrew.	
FOURTH CLASS			
Fantasy, W. Allerton	15.09	1 40 40	1 08 38
Sphinx, A. Keith	17.11	1 38 40	1 09 28
Alpine, C. J. Blethen	17.06	1 40 45	1 11 02
Circe, F. L. Pigeon	16.05	1 42 28	1 11 22
Nachita, Geo. E. Hills	16.09	1 44 46	1 14 06
Jonah, N. B. Stone	16.05	1 50 28	1 19 22
FIFTH CLASS			
Katydid, C. B. Pear	14.00	1 02 00	0 37 13
Penguin, J. E. Robinson	14.06	1 08 03	0 43 51
Transit, A. Nute	13.03	1 10 38	0 44 55
Icurez, James Perry	14.05	1 13 28	0 49 10
15-FOOTERS.			
Anita, S. N. Small	15.00	0 56 40	. .. ..
X-Ray, A. H. McIntyre	15.00	1 06 27	. .. ..
Crab, H. W. Whitmarsh	15.00	1 07 56	. .. ..
Swallow, J. J. Moebs	15.00	Withdrew.	

The yachts were reefed on the windward work, but the wind fell a little toward the latter part of the race. Katydid protested Elsa for fouling before the start, Wawanda broke her steering gear and also capsized.

MUSQUITO FLEET, THURSDAY, JULY 2.

The second day's racing was managed by the South Boston Musquito Fleet, though most of the yachts were too large for the category of musquitoes. The same S.W. wind blew even fresher and reefs were turned in all around. The times, after a spirited race, were:

	Length.	Elapsed.	Corrected.
FIRST CLASS.			
Emma C., P. A. Coupal	29.05	1 45 36	1 15 06
Ida J., F. E Beckman	29.04	1 47 17	1 16 42

Privateer was protested on measurement. Katydid and Elsa protest each other. Anita, the only ½-rater in Boston waters, sailing under the rule which measures the length 3in. above the waterline, easily disposed of the larger and more powerful boats of the fourth class.

COLUMBIA Y. C., FRIDAY, JULY 3.

THE Columbia Y. C., a new organization, sailed its first open regatta on Friday. The westerly wind had shifted to N.E., blowing hard, but before the start at 3 P. M. the breeze had fallen. Though the start was made under single reefs, they were soon shaken out, whole sail being easily carried in the light air that prevailed over most of the course. The times were:

The fourth class yacht Elsa, which has been first of second in these races, is owned by the Messrs. Crane, of New York.

American Y. C. Annual Regatta.

MILTON POINT—LONG ISLAND SOUND.

Monday, July 6.

THE annual sailing regatta of the American Steam Yacht Club was sailed on July 6 over a course from off Milton Point, around a mark off Parsonage Point, a second mark in Hempstead Harbor, and a third off Larchmont, thence home, 10¾ miles. The day was cloudy and rainy, with a fresh easterly breeze and sea. The times were:

15FT. CLASS.			
Hope, A. Iselin	.. ..	2 45 30	2 45 30
Monsoon, J. R. Maxwell	.. ..	Did not finish.	

Raccoon and Monsoon are new boats, the former the last of the 30-footers built by the Herreshoff Co., the latter a very handsome bulb-fin designed by Wintringham and built by the Spalding St. Lawrence Boat Co. At the start Monsoon was delayed for some minutes, and her only competitor, Hope, very chivalrously waited for her to start. The $6,000 gold challenge cup established by the club a dozen years ago as an international prize for steam yachts, and never raced for, will probably be offered anew as a special cup for schooners, a race being scheduled for Sept. 18. Another sailing regatta will also be held on Aug. 15. The magnificent new American steam yacht Anita, the flagship of the club, carried a large party of guests over the course. The regatta committee included Messrs. J. Howard Wainwright, chairman; Thomas Dimond, H. de Barclay Parsons and Stuyvesant Wainwright.

Some confusion exists as to the proper classing of Messrs. Clark's unnamed catboat, sailing with shifting ballast, and Zelica protests her.

Bayswater Y. C. Annual Regatta.

FAR ROCKAWAY.

Saturday, July 4.

THE eighth annual regatta of the Bayswater Y. C. was sailed on July 4 in a S.E. breeze, the times being:

Wissahickon	1 16 45	3 49 30
Thelma	1 17 03	3 55 20

Henrietta is a new boat, built at Sodus from designs by H. C. Wintringham.

Riverside Y. C. Annual Regatta.

RIVERSIDE, CONN.—LONG ISLAND SOUND.

Saturday, July 11.

THE Riverside Y. C. sailed its annual regatta on Saturday under most favorable conditions, a bright, warm summer day with a strong N.W. wind; so strong, in fact, as to test the rigging of more than one yacht. The courses were the regular club triangles on the Sound, from off the end of Little Captain's Island. While there were forty-three starters, they were divided among thirteen classes, making very few starters in a class. A very good start was made at 12:40. Ideal broke her rudder head just at the line and her helmsman, W. I. Zerega, went into the drink, quickly scrambling out. He got out a spinaker boom as a jury rudder and managed to sail clear of the line and the other yachts starting. Argonaut withdrew after a short time and Raccoon lost her peak halyard block and also withdrew. After crossing the finish line in advance of her competitors Paprika capsized, but was righted by her crew on the centerboard. Question also went over, but was righted. Hope had a weak mast, but her skipper managed to nurse her through the race. Norota and Eidolon sailed a very close race. The times were:

Atlantic Y. C. Annual Cruise.

THE principal yachting event of last week was the annual cruise of the Atlantic Y. C.—an expedition which met with less success than it deserved. Special preparations had been made by the officers and officials of the club for a cruise that would be more than usually pleasant to the yacht owners, but unfortunately the latter class did not lend the assistance which might reasonably be expected; and the labor of the regatta committee and many others was expended to small advantage. Com. Gould, in his steam yacht Atalanta, took charge of the fleet in person, aided by Fleet Capt. Watson. The regatta committee had secured the steam yacht Talisman for its use in starting and timing the races of the various runs, for which good prizes were offered. The fleet met at the appointed rendezvous, Larchmont, on the evening of July 3, the flagship being present, though delayed by the loss of her wheel, which dropped off the day before, a new one being shipped at the Erie Basin Drydock at the last moment. The members were most hospitably entertained by the Larchmont Y. C., and made as comfortable as the miserable foggy weather would admit. The Fourth was spent at anchor, few yachts being under way. The 5th being Sunday the fleet lay at anchor until afternoon, when it got under way for an informal sail to Black Rock, anchoring for the night. Monday morning was still foggy, with a fresh easterly breeze, and the start was delayed until the weather had improved a little at 10:30, when the yachts were sent away for Morris Cove by way of the buoy, No. 9, off Oldfield Point. With plenty of wind the run was made in good time, the result being:

Sultan	10 37 35	3 45 12	5 07 37	4 16 49
Tigress	10 40 00	Did not finish.		
Acushla	10 39 09	2 55 38	4 16 29	3 24 09

The class winners are: Colonia, Amorita, Uvira, Penguin and Acushla.

The corrected times are figured to include all schooners racing for the Banks cup, and all others racing for the Hanan cup.

Colonia wins one leg for the Banks cup and Acushla one for the Hanan plate.

Tuesday morning was clear and calm, but when the race was started in a light S.W. breeze the rain began to fall. The day's run was to New London, the course being covered with the light breeze, but the race ending in a fog and calm off Bartlett's Reef. The committee yacht Talisman broke down and the only times at the finish were those taken by Rear-Com. Hanan from his steam yacht Embla, as follows:

	Start.	Finish.	Elapsed.	Corrected.
SCHOONERS—CLASS 2.				
Colonia	10 36 54	2 19 28	3 42 34	3 42 34
Sachem	10 39 24	2 48 40	4 09 21	4 06 32
SCHOONERS—CLASS 4.				
Amorita	10 35 57	2 31 50	3 55 53	
Cavalier	10 37 23	3 12 50	4 35 27	4 35 27
SCHOONERS—CLASS 5.				
Viator	10 38 35	2 55 30	4 16 55	4 16 55
Priscilla	10 39 55	Not timed.		
CUTTERS AND SLOOPS—CLASS 4.				
Gaviota	10 10 00	3 14 00	5 04 00	5 04 00
CUTTERS AND SLOOPS—CLASS 5, FLUSH DECK.				
Uvira	10 06 42	2 54 20	4 47 43	4 32 34
CUTTERS AND SLOOPS—CLASS 5, CABIN TRUNKS.				
Penguin	10 08 23	3 02 35	4 54 12	4 43 29
Choctaw	10 08 33	3 16 50	5 08 17	4 51 28
SLOOPS—CLASS 7.				
Acushla	10 07 12	3 24 45	5 17 33	4 26 25
CAT-RIGGED—CLASS 1.				
Dorothy	10 10 00	Not timed.		

The class winners are Colonia, Amorita, Viator and Penguin.

The winners of the second leg for the Banks and Hanan cups are Colonia and Acushla.

In the evening the following statement was given out by the regatta committee:

ON BOARD STEAMER TALISMAN, NEW LONDON, July 7, 1896.—In the squadron of July 6 the sloop Uvira was improperly placed in class 4 and the sloop Acushla was improperly placed in class 6. The Uvira should have been classified in the flush deck division of class 5, and the Acushla should have been classified in class 7, because this class was fitted by the entry of the Wabasso.

As no notice was given to any of the parties in interest, it is mani-

festly an injustice to place these two sloops in classes above their own. For these reasons the regatta committee award the prize for the run in class 4 to the Eclipse, and in class 6 to the Sultan.

This division does not affect the standing of any competitors for the Hanan cup. REGATTA COMMITTEE.

The yacht referred to is not a sloop, but the cutter Uvira. The time credited to Amorita is incorrect, and Colonia wins a second leg for the Banks cup.

On Wednesday a special race was sailed off New London, to count as a squadron race, the course being from Sarah's Ledge Buoy around Bartlett's Reef Lightship, Cornfield Lightship and back to the start, 27 miles. The day was clear with a light and variable breeze, the times for a very unsatisfactory race being:

	Start.	Finish.	Elapsed.	Corrected.
SCHOONERS—CLASS 4.				
Colonia	11 06 47	8 25 00	9 18 13	9 18 13
Amorita	11 08 58	9 14 15	10 05 17	9 53 31
CUTTERS AND SLOOPS—CLASS 5.				
Penguin	10 38 03	7 40 51	9 02 48	9 02 48
Uvira	10 37 34	Did not finish.		
Choctaw	10 38 47	6 12 37	7 33 50	7 29 33
SLOOPS—CLASS 7.				
Acushla	10 37 28	7 26 41	8 49 13	8 20 44
CATS—CLASS 1.				
Dorothy	10 35 18	Did not finish.		

Colonia thus wins the third leg for the Banks cup, which she will hold permanently. The cup was offered by David Banks, then commodore of the Atlantic Y. C., in 1893, as a prize for a special race of the four cup defenders of that year, but was never raced for. It has now gone to one of the four, but under a different rig. Choctaw won a leg for the Hanan cup.

Thursday morning was rainy, followed by fog. The start for Greenport was made at 10:38. By agreement Eclipse and Gaviota sailed with lower canvas only, the latter having no topmast. The times were:

	Start.	Finish.	Elapsed.	Corrected.
SCHOONERS—CLASS 2.				
Colonia	11 06 07	1 32 32	2 26 25	.. .. ..
SCHOONERS—CLASS 4.

Hydriad	10 38 56	3 11 19	4 32 53	.. .. ..
SLOOPS—CLASS 7.				
Wabasso	10 38 49	4 27 37	5 49 28	.. .. ..
Acushla	10 38 56	1 40 56	3 02 00	2 42 40

Acushla wins the Hanan prize. The winners of the class prizes are: Cavalier, Viator Gaviota, Uvira, Tigress and Acushla. In addition Gaviota wins a private match with Eclipse.

On Friday the fleet lay at anchor in Greenport Harbor and the rowing races were held, and on Saturday morning the fleet disbanded.

Knickerbocker Y. C. Ladies' Day Race.

COLLEGE POINT—LONG ISLAND SOUND.

Saturday, July 11.

THE Knickerbocker Y. C. sailed its second ladies' day race on Saturday over a triangle between the club station, Baretto's Point and Clausen's Point, sailed twice, the start being made late in the afternoon, by which time the fresh westerly wind had fallen to a light breeze. The times were:

	Start.	Finish	Elapsed.
SLOOPS—70FT CLASS			
Arrow	4 10 00	Did not finish.	
SLOOPS—36FT. CLASS.			
Tempus	4 10 00	5 32 40	1 22 40

Waltz	4 15 00	6 04 55	1 49 55
Unorna	4 15 00	Did not finish.	
OPEN CATS—25FT CLASS.			
Violet	4 15 00	5 44 15	1 29 15
Gladys	4 15 00	Did not finish.	

Each yacht carried two or more ladies.

Jamaica Bay Y. C. Annual Regatta.

JAMAICA BAY.

Saturday, July 4.

THE annual regatta of the Jamaica Bay Y. C. was sailed on July 4 in a fresh S.E. breeze, the times being:

	Start.	Finish.
CLASS B.		
Cecilia	2 44 30	4 43 25
Cute	2 44 30	4 42 37
CLASS C.		
Mildred M.	2 46 45	4 55 50
Julia B.	2 46 45	Withdrew.
CLASS D.		
Josie P.	2 50 20	4 56 53
Loyal	2 50 20	4 57 48
Alta	2 50 20	Withdrew.
Lochinvar	2 50 20	Withdrew.
CLASS E.		
Chico	2 50 30	5 06 16
Naiad	2 50 30	Capsized.
Trilby	2 50 30	Withdrew.
Vitesse	2 50 30	Disabled.

The winners were: Class B, Cute; class C, Mildred M.; class D Loyal; class E, Chico.

Lochinvar, sailed single-handed, capsized.

The Steam Yacht Pathfinder.

THE launch of the new steel steam yacht Pathfinder at Racine, Wis., on July 7, is described as follows by the Chicago *Herald:* The steel yacht Pathfinder, built for F. W. Morgan, of Chicago, was launched this afternoon in the presence of 5,000 people, and a calamity was narrowly averted.

There was considerable delay in launching. When the magnificent boat was started on the ways Helen Reynolds, the little daughter of Walter Reynolds, manager of the boat company, cracked a bottle of champagne on the bow of the boat. There were nearly forty persons on board, including Captain Dempstead, of Detroit, who is to command the boat; George Warrington, Frank Tripp and Commodore Berriman, of Chicago; Judge F. M. Fish and Captain Gillen, of Racine. Mr. Morgan and his wife and party of friends stood upon the docks. Whistles were tooted, cannon fired from the yachts Vencedor and Vanenna, and a cheer went up from thousands of throats; but the noise suddenly ceased, for the yacht, as it slid down the ways, suddenly went over on the port side and the forty persons on the deck were thrown down against the rail. The thousands of spectators expected, as did those on board, that the boat was going to turn over, but it came back on an even keel all right.

The difficulty was occasioned by the ways on the port side giving way, the stern of the yacht striking the bottom and sticking in the mud, and a line being hauled tight too soon. The bow struck a post coming out of the shop, tearing it away and tearing 30ft. off the rail of the yacht and jamming in the steel above decks for a considerable distance. Even the builders and owners of the yacht admit that it was a narrow escape from a bad accident.

The boat will be fitted out and taken to Chicago within ten days. She is constructed of steel. The measurements are given at 145ft. over all, 15ft. 3in. beam, 12ft. depth, 6ft. draft; displacement, 105 tons. The main engines are four triple expansions, 14in., 19¼in. and two 20¼in., with 16in. stroke. The boilers will develop 1,000 horse-power, and the speed of the boat is calculated to exceed twenty miles per hour. There will be electric lights and telephone service, and there are watertight bulkheads, making the craft safe in case of collision. The interior of the boat is finished in butternut and mahogany. The cost is given at $75,000 complete.

Manchester Y. C.

MANCHESTER-BY-THE-SEA.

Monday, July 6.

THE first race of the season was held by the Manchester Y. C. on July 6, the times being:

	Length.	Elapsed.	Corrected.

The Ogdensburgh Y. C. Cup.

THE crack prize of the season for the 15-footers is the handsome cup offered by the Ogdensburgh Y. C., of Ogdensburgh, N. Y., for its special race on July 28, open to all yachts of the 15ft. class. The cup, which has cost $300, is about 10in. high, of solid silver, and made by Messrs. Bell & Co., of Ogdensburgh. On one side it has a representa-

THE OGDENSBURGH CUP.

tion of Ethelwynn in the races of last season. The course will be on the St. Lawrence River, between Ogdensburgh and Prescott, in open water and of course with no tides, the winds being fair and true as a rule. We have already published the arrangements for transportation of boats, which can be shipped at a very low figure. A number of entries are promised from Montreal and the States. The Ogdensburgh Y. C. is making preparations to give a hearty welcome to all visitors and to aid them in every way in caring for their boats.

The Burning of the Thelma.

THE large new twin screw naphtha yacht recently built by the Gas Engine and Power Company for J. A. Mollenhauer, of Bayshore, L. I., was burned on July 7, the disaster being described as follows by the New York *Sun:*

Thelma had come from Bayshore, where Mr. and Mrs. Mollenhauer's summer home is, by way of Sandy Hook and Hell Gate on Monday, and had put in at Whitestone on Monday evening. Getting under way early Tuesday morning, she had rounded Matinnecock Point about 8 o'clock, when she was seen by Capt. J. C. Diefenbach, of the steamer Northport, which had left Northport at 6:30 o'clock in the morning for New York.

The Northport had passed Fox Island and was within about a mile of Thelma when Capt. Diefenbach saw a sudden puff of black smoke come from the yacht, and, in the sultry air, hang over her for several moments. He thought at first that the yacht was burning soft coal, but when the smudge cleared away he saw that the yacht was afire, the flames apparently plying from end to end of her, as though they had a good start. He made for her at once, but before he reached her Thelma was alongside the steam canaler Grit, bound eastward, light, to get a cargo of gravel. Thelma headed for the Grit as soon the fire broke out.

The Northport bore down on the Grit and the shipwreckd ones got aboard the steamer, while the Grit's hands made a line fast to the yacht's bows preparatory to towing her away. The line was a long one, as it was feared the naphtha tank might explode, and nobody wanted to remain longer than necessary near the burning boat. The Northport, on her run to the wreck, had got her fire hose in readiness for use, but Capt Diefenbach feared to stay near the fire, as he thought it would be jeopardizing the Northport and her cargo. As Mr. Mollenhauer also wanted to get away, the Northport resumed her voyage, first taking in tow Thelma's two boats. Mr. Mollenhauer told the Grit's captain to beach the yacht wherever it was convenient for him to do so. He towed her into Lloyd's Neck, beaching her in the canal there.

As the boats drew apart, Capt. Diefenbach said, there were several slight explosions or puffs of smoke and flame aboard Thelma. She was afire throughout. As her hull was of wood, he thought that she would be a total wreck.

Mr. Mollenhauer said Thelma was valued at about $15,000 and was partly insured Furnishings and silverware and personal belongings would raise the figures of the loss. Just what the personal property amounted to the captain did not ask, but Mr. Mollenhauer told him that he had lost all his jewelry, as it was below when the fire began and he had no opportunity to go after it. It happened that Mrs. Mollenhauer had her jewels in a small satchel beside her, which she saved. Mr. Mollenhauer told Capt. Diefenbach that he had not seen the use of sporting jewelry on deck, so he was minus what he had taken aboard with him.

The yacht's sailing master, Capt. Hendricksen, saved his dunnage. He was the only one who went below after anything. The steward lost everything he had, and Mr. Mollenhauer told him he would make the loss good. The total savings from the yacht were the personal effects of the captain, the contents of Mrs. Mollenhauer's reticule and the yacht's two small boats.

Mr. and Mrs. Mollenhauer were landed at Hunter's Point in time to take the 11 o'clock train for Bayshore. Thelma's crew and her boats were put off at Wallabout, and the Northport came down to her wharf at Peck slip.

Some of the explosions that occurred on Thelma after the Northport started for the city were of cartridges in the yacht's pilot house. There were thirteen of them. Mr. Mollenhauer had been on a Fourth of July cruise before he started for Newport, with Cord Meyer and several other of his friends among the South Shore summer colony. He had put in at Fire Island and Bayshore with them on Monday, and had then started with Mrs. Mollenhauer for Newport.

Captain Diefenbach said Mr. Mollenhauer told him that the Thelma's engineer had taken out one of the injectors to clean it, and that the explosion and fire followed. Apparently the naphtha blew all over the boat, he told the captain, and flames sprang up all around. Just how it happened he could not tell.

In confirmation of the above report, Mr. Mollenhauer has sent the following letter to the makers of the yacht:

BROOKLYN, N. Y., July 8.—Gas Engine and Power Company, Morris Heights, N. Y.: Gentlemen—As a matter of justice to you, being the builders of my twin screw naphtha yacht Thelma, which was burned last Tuesday, I wish to state that the yacht or its machinery was in no way to blame for the accident. It was entirely owing to the carelessness on the part of the engineer in charge removing the injector valve from the engine while the other engine was running, the escaped naphtha thereby igniting. My confidence in the safety of your naphtha boats is such that I shall place an order with you at an early date for another boat. Regretting this unfortunate affair, believe me, Yours very truly, (Signed)

J. ADOLPH MOLLENHAUER.

Erie Regatta.

A REGATTA will be held at Port Dover on the finest sailing grounds on Lake Erie, Aug. 3. Following this is the Erie regatta, which will be held Aug. 6 and 7, instead of later in the month, as previously stated. Our programmes and entry blanks will soon be sent to all the secretaries of yacht clubs, and a large attendance of yachts is most earnestly desired. ERIE Y. C.

Canoeing.

Back to Grindstone.

IN a very short time it will be in order to get out tent and duffle and pack for the fourth camp at Grindstone, the seventeenth annual meet of the American Canoe Association. The camp will open on Aug. 14, —though members may come at an earlier date—and will formally close on Aug. 28. The racing will begin on Aug. 24, the programme being as follows:

Event No. 1. Paddling and sailing combined, ½ mile alternately; total, 3 miles; time limit, 1½ hours. Start to be made paddling.

Event No. 2. Paddling, ½ mile straightaway.

Event No. 3. Sailing, 4½ miles; time limit, 2 hours.

Note.—Events Nos. 1, 2 and 3 are record races under Rule 5 of sailing regulations.

Event No. 4. Trophy paddling, 1 mile straightaway.

Event No. 5. Unlimited sailing, three classes, 6 miles; time limit, 2½ hours. Starters in trophy sailing race to be selected from this race according to elapsed time.

Event No. 6. Trophy sailing, 9 miles; time limit, 3½ hours. See Rule 5.

Event No. 7. Dolphin sailing trophy, 7½ miles; time limit, 3 hours. The canoe winning first place in event No. 5 will not be allowed to compete in this event.

Event No. 8. Hotel Champlain cup, 4½ miles.

Event No. 9. Orilla cup, 7½ miles. Limited to members of Northern Division.

Event No. 10. Jabberwock trophy, 3 miles. Limited to members of the Central Division.

Note.—Events Nos. 9 and 10 are to be sailed providing a Northern and Central meet is not held. Events Nos. 7 and 8 may be contested for at the same time, in the discretion of the regatta committee.

Event No. 11. Club sailing, three classes, 4½ miles; time limit, 2 hours. First three members of any club to count. A club to be represented must enter at least three men. All men entered must have become members of the club they represent before the first day of the 1896 meet.

Event No. 12. Limited sailing, 3 miles; time limit, 1½ hours. Sail area limited to 100sq. ft. and sliding seat prohibited.

Event No. 13. Novice sailing, 3 miles; time limit, 1½ hours. Open only to members who have not sailed a canoe prior to Sept. 1, 1895.

Event No. 14. Unclassified sailing, 4½ miles; time limit, 2 hours. (The regatta committee reserve the right to handicap in this race.)

Event No. 15. Paddling; open canoes not under 50lbs. weight, ½ mile straightaway; single blades.

Event No. 16. Tandem paddling, ½ mile straightaway; decked canoe, double blade.

Event No. 17. Tandem club paddling, ½ mile straightaway; open canoes, single blade.

Event No. 18. Club four paddling; ½ mile straightaway. (Canoes not to be less than 28in. wide and 16ft. long.)

Event No. 19. Hurry-scurry; swim, paddle, run.

Event No. 20. War canoes, 1 mile; canoes not to be over 25ft. long, nor contain more than nine persons.

Event No. 21. War canoes, 1 mile; canoes not to be over 35ft. long, nor contain to exceed sixteen persons.

Event No. 22. Ladies' paddling, open canoes; ⅛ mile.

Event No 23. Ladies' tandem, open canoes; single blade, ¼ mile.

Event No. 24. Mixed tandem, open canoes; single blade, ¼ mile.

Event No. 25. Novice paddling, open canoes, ½ mile; open to men who have never paddled a race outside of their own club races.

Event No. 26. Open four; tug of war.

Event No. 27. Tail-end race; open canoes, single blade, paddler to kneel in bow and paddle with the wind, bow first, 200yds.

Event No. 28. Hurry-scurry, obstacle or tournament.

Note.—The committee reserve the right to call any, except the more important and older A. C. A. races, at any time during the meet when in their judgment the conditions are right.

Note.—The right is also reserved by the committee of following the system of handicapping that was used at the last meet.

All events in which less than two starters present themselves at the line will be canceled.

The usual arrangements as to mess, tent floors, etc., will be made, the catering being in the hands of Mr. McElveney, who was in charge last year. Grindstone Island and the St. Lawrence are just as young and beautiful as of old, and though the same perhaps cannot be said of all of us who were there in 1884-5-6, it is to be hoped that a great many old A. C. A. men will take this opportunity to renew old friendships beside Eel Bay.

The W. C. A. Meet.

THE annual meet of the Western C. A. began on July 11 and will continue until July 25. The camp this year is on Dodge's Point, Mullet Lake, near Cheboygan, Mich. The energetic secretary-treasurer of the W. C. A. has issued a very tasteful yearbook, containing interesting histories of different clubs represented in the Association.

A. C. A. Membership.

APPLICATIONS for membership may be made to the purser of the division in which the applicant resides on blanks furnished by purser, the applicant becoming a member provided no objection be made within fourteen days after his name has been officially published in the FOREST AND STREAM.

EASTERN DIVISION.

Name.	*Residence.*	*Club.*

Rifle Range and Gallery.

Calumet Heights Gun Club.

AT the club shoot on July 4 some of the members and guests engaged in rifle shooting in addition to the sport at the traps. Event No. 1 was for .22cal. rifles only, and was at a reduced target, possible 50 at 100yds.

The first event was class B and was won by Miss H. Gillespie with a score of 37.

The second event was class A, American standard target, 200yds., off-hand, and caliber rifle. It was won by Mr. C. W. Spalding. Following are the scores:

No. 1.			
Miss H Gillespie	4343444344—37	Mrs Chamberlain	5444333300—29
Booth	2000000000— 2	Mrs Gillespie	5322000000—12
Mrs G Marshall	4433333332—31	Miss Ervin	4433332220—26
Mrs Whitman	4322220000—15	Miss Harlan	4443333332—32
Miss Adams	2220440000—17	Mrs Davis	3333220000—16
No. 2.			
L L Davis	0060080000—14	A C Patterson	6044565000—30
Mr Spalding	0608746847—50	Dr Harlan	0550000605—21
J D Hobbs	4652866065—48		

Rifle Notes.

THE commission appointed by Gov. Morton for the selection of a rifle for the use of the military and naval forces of the State of New York approved of the Savage rifle. The commission was appointed under a law passed by the Legislature last year. There were twelve competitors. On approval of the report by the Governor, the Adjutant-General is authorized to contract for not more than 150,000 rifles of the kind selected by the commission at a price not to exceed $20 per rifle.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

July 15-16.—TALLAPOOSA, Ala.—Georgia-Alabama Interstate tournament; sweepstakes. C. H Edridge, Sec'y.

July 21-22.—HOT SPRINGS, Ark.—Sixth annual meeting and tournament of the Arkansas State Sportsmen's Association; $165 added money. All purses divided on equitable system. John J. Sumpter, Jr., Sec'y, Box 111, Hot Springs, Ark.

July 22-23.—PORTLAND, Me.—Interstate Association's tournament, under the auspices of the Portland Gun Club.

July 23-24.—LEAVENWORTH, Kan.—Third annual tournament Leavenworth Gun Club, 12 15-target events each day, known angles, entrance $1.50. Money divided according to the Rose system. For amateurs only; black powder barred.

July 25.—BOILING SPRINGS GROUNDS, N. J.—Amateur Trap-Shooters' League second contest.

July 29-30.—WORCESTER, Mass.—Tournament of the Worcester Sportsmen's Club. Targets. For programmes address A. W. Walls, Worcester, Mass.

July 30, 31.—GOSHEN, Ind.—Midsummer tournament of the Goshen Gun Club.

Aug. 4-6.—CHICAGO, Ill.—Tournament of the Du Pont Smokeless Powder Company E. S. Rice, Mgr.

Aug. 4, 5.—AUBURN, N. Y.—The Auburn Gun Club will hold a blue-rock tournament, using the "Maugatrap" for the first time in New York State; programs will be out in a few days. Mr. Paul North will have entire charge of the shoot.

Aug. 5.—SANDUSKY, Ohio.—Annual tournament of the Sandusky Gun Club; $100 added money and $100 in merchandise prizes.

Aug. 11.—ALBANY, N. Y.—Tournament of the West End Gun Club. Bluerock traps and targets. Horace B Derby, Sec'y.

Aug. 11-14.—DETROIT, Mich.—Jack Parker's sixth annual international tournament. Fuller details later.

Aug 12-13.—DULUTH, Minn.—Central Gun Club, fourth annual tournament; excellent programme.

Aug. 26-27.—BURLINGTON, Vt.—Tournament of the Interstate Association, under the auspices of the Lake Side Rod and Gun Club.

Sept.—BUFFALO, N. Y.—B. F. Smith's tournament at Audubon Park. Live birds and targets.

Sept. 2-4.—BUFFALO, N. Y.—Tournament at Audubon Park. Targets and live birds. B. F. Smith, Manager.

Sept. 7.—MARION, N. J.—Sixth annual tournament of the Endeavor Gun Club. Targets. J. A. Creveling, Sec'y

Sept. 8-11.—HARRISBURG, Pa.—Annual tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Harrisburg Shooting Association.

Sept. 15-16.—KANSAS CITY, Mo.—Third annual tournament of the Schmelzer Arms Company; $750 added money.

Oct 6-8.—INDIANAPOLIS, Ind.—Autumn tournament of the Limited Gun Club. Open to amateurs only. Two days, targets; one day, pigeons and sparrows. Royal Robinson, Sec'y.

Oct. 7-9.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association; targets and live birds; added money announced later.

1897.

March 23-25.—NEW YORK CITY.—The Interstate Association's fifth annual Grand American Handicap at live birds.

June (third week).—CLEVELAND, O.—Fourth annual tournament of the Chamberlin Cartridge and Target Company.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

At the annual meeting of the Dedham, Mass., Sportsmen's Club, the following list of officers was elected: President, Robert Smith; Secretary, H. P. Cole, Jr.; Treasurer, Amasa Alden. Executive committee: Robert Smith, W. J. Leverett and C. P. Blinn.

The Fort Dodge, Ia., Rod and Gun Club was organized on June 27. The officers are: President, J. F. Drake; Vice-President, Harry Carter; Secretary-Treasurer, C. H. Minton.

The programme for the tournament of the Worcester, Mass., Sportsmen's Club, to be held at Worcester on July 29 30, is as follows: July 29: one 15-target event, $1.00, unknown angles; four 20-target events, known angles, $2; three 20-target events, unknown angles, $2; one 20-target event, reversed order, $1.40. July 30: four 15-target events, known angles, $2; five 15-target and two 20-target events, unknown angles, the entrance to each event being $2. On each day also there will be a 25-target event, known angles, these two events making a 50-target race, $5 entrance.

George Work has done some remarkable shooting during the International Week at the London Gun Club's grounds. Elsewhere will be found a notice clipped from the London *Field* of July 4, which gives some idea of what he did.

Phil Daly, Jr., won the Hollywood Futurity on Saturday last with a clean score of 25 straight from the 27yds. mark.

R. H. Hall, secretary of the River Rouge Gun Club, of Detroit, Mich., writes us that Neaf Apgar, of Plainfield, N. J., and Thomas Graham, of Sault Ste. Marie, Mich., were both elected members of the club at its meeting held on June 22.

The Charlotte, N. C., Gun Club will hold a two-days' shoot July 28-29, and will add $100 a day to the purses. This means that the boys are invited to attend one of those tournaments for which the Charlotte Gun Club is so justly famed. Col. Anthony and John W. Todd (*inter alia*) will see to it that all visitors have a pleasant time.

The Tallapoosa Gun Club announces a Georgia-Alabama Interstate tournament to be held at Tallapoosa, Ga., July 15 and 16. There will be five target and three live-bird events each day. A meeting will be held at club headquarters on the evening of the 15th, for the purpose of organizing an interstate shooting association. It is desired that three delegates from each club in Georgia and Alabama, bearing credentials signed by the president, be present and participate.

There will be a grand sweepstake tournament on the grounds of the Worcester Sportsman's Club, at Worcester, Mass., Wednesday and Thursday, July 29-30, under the direction of A. W. Walls. Take Greendale electrics and stop off at Huntington avenue. The grounds will be open for shooting on Tuesday afternoon, July 28. All ties divided. Four moneys in all but the 50-bird event, which will be divided 30, 20 15, 15, 10, 10 per cent. All New York and Boston trains stop at Worcester.

Forester Gun Club.

THE Forester Gun Club, Newark, N J., held its regular holiday shoot at empire targets on July 4 on its Peddie street grounds. There was a fair attendance of members and several visitors. An occasional shower stopped the sport a few times. Seventeen events in all were shot. Some good scores were made.

Events Nos. 1, 4, 7, 9, 12, 15 and 17 were known angles; Nos. 5, 10 and 14 were reversed angles; Nos. 2, 3, 6, 8, 11, 13 and 16 were expert rules, unknown traps and angles. All events at 10 targets:

H. E. WINANS, Sec'y.

Noris Defeats Hampton at Sparrows.

INDIANAPOLIS, Ind., July 9.—An interesting match at 50 sparrows, for $50 a side, was shot on the grounds of the Limited Gun Club to-day between Ed Noris, of Crawfordsville, and O H. Hampton, of Williamsburg. Noris shot well throughout the match and won by 5 birds. Scores:

The Sherbrooke Shoot.

DOMINION DAY at Sherbrooke, P. Q., was a perfect day for trap-shooting, and the seventy odd shooters who met on the grounds of the Sherbrooke Gun Club enjoyed a fine day's shooting.

This was the first open shoot given by a new club of only eight months' experience at the traps, and as most of the visiting shooters were also beginners high scores were not to be expected. Good sportsmen they all were, who knew how to miss with good grace, and the proverbial kicker was not present—not a sign of him.

Shooting began at 8:30 A. M. with thirty-four guns in the first event, and continued, with the exception of about twenty minutes for lunch, until 7:30 P. M., when one extra was shot. Nothing but darkness closed the shoot.

Following are the scores:

Events:	1	2	3	4	5	6	7	8	9	10	11
Targets:	10	15	15	15	5	10	15	10	20	10	10
J B Goodhue	5	13	9	9	5	..	10	6	12	..	5

N N Walley	..	..	..	..	..	..	8	..	7	6	..
R Milford	..	..	..	..	..	..	..	2	..	..	..

Both the class and all-in-it systems were used, and, as usual, opinions are divided. No one questions the perfect fairness of the latter, but some thought the high gun in a $2 all in-it should get more than $1.25. A mixed programme would be sure to please the greatest number.

The electric system of signaling broken and lost targets was not a perfect success Had it been under the constant control of one man it would probably have been an improvement over the ordinary calling, but when new judges and umpires were chosen for each match a man had hardly time to get used to the buttons. The calling system was resorted to during the greater part of the day.

The traps and trappers worked well, and the bluerocks were good breakers.

The merchandise match was well patronized, having 130 entries.

The cashier's office, under the management of J. W. McNichol, was as near right as could be desired.

A team match, to be the first of a series of challenge events, was won by Montreal, Sherbrooke, Sutton and Sutton Jot, following in order named

In the evening a large representative meeting of trap-shooters was held at the office of Jas. F. Markill, Pres. S. G. C., for the purpose of organizing a Provincial League to control a series of challenge events. E. C Eaton, of Montreal, was appointed chairman, and C. H Foss, Sherbrooke, Sec'y pro tem. Only routine business was accomplished, the meeting adjourning to give a committee time to formulate rules and conditions. The first to accept challenge will be the Montreal Gun Club, probably at an early date, but necessarily within six months, in order to keep the affair alive, the trophy becoming the property of the club holding it without a challenge for that time.

C. H. Foss, Sec'y.

Calumet Heights Gun Club.

THE following scores were made on July 4. Event No. 1 was known traps, unknown angles, 10 targets, handicap, 3 moneys; A Class, scratch; B. 11 targets; C, 12 targets Event No. 2 was the handicap for silver cup. Handicap, A Class at scratch; B Class, 45 birds and add 5 dead; C Class, 40 birds and add 10 dead. R. A Turtle won cup. No 3 was at 15 targets, known traps and unknown angles, handicap, 25 cents entrance, 3 moneys, ties divided. No. 4 was the club medal contest, 25 birds No. 5 was unknown traps and angles, 10 targets, 3 moneys No. 6 was a handicap—as in No. 1—unknown traps and angles, 25 targets, 50 cents entrance, merchandise prize. A Class, 25 targets; B Class, 27, and C Class, 30 to shoot at. Event No 7 was a handicap, unknown traps and angles, 15 targets, 3 moneys. No. 8 was a snipe shoot, 10 singles, 5 pairs, 25 cents entrance, 3 moneys.

In event No 2 Norcom, Houston, Marshall, Whitman and Metcalf had 5 added to what they broke, Harlan and Morgan had 10 added, as per classification already mentioned. There were 80 in attendance, and 3,000 targets were thrown.

Limited Gun Club.

INDIANAPOLIS, Ind., July 8.—The second contest for the Limited Gun Club's class badges was held to-day. A stiff breeze, blowing directly in the shooters' faces, was annoying. Conditions, 25 Empire targets, unknown angles.

Class A—Parry 23, Britton 22, Robinson 22, Tripp 21, Comstock 18, Wildhack 18, Cooper 17.

Class B—Griffith 22, Sielken 22, Holliday 19, Kershner 17, Kimberlin 17, Socwell 15, Lilly 14, Hearsey 13. Tie on 22—Griffith 8, Sielken 5.

Class C—Craft 20.

100 targets, unknown angles—Parry 89, Robinson 88

ROYAL ROBINSON, Sec'y.

Gilbert Defeats Deiter.

MILWAUKEE, July 8.—Fred Gilbert and George Deiter shot a match for the Du Pont trophy, 100 birds each, Gilbert winning by a score of 96 to 88.

Lynchburg and Richmond.

LYNCHBURG, Va., July 8.—On July 4 the Lynchburg Gun Club participated in an all-day shoot with the Richmond West End Gun Club, a report of which I inclose you as taken from the official score book:

The members of the Lynchburg club had a most delightful time, and succeeded in carrying off a large number of the prizes.

Mr. Lightfoot Wormley entertained the club at his superb home on Franklin street with the old-fashioned Virginia hospitality that carried some of the older members back to the good old days of yore.

A feast of the choicest delicacies—including a squirrel Brunswick stew, frogs' legs, etc.—was served on the grounds at 2 P. M. Every conceivable comfort for the Lynchburg club had been provided for by the Richmond shooters, who, in the estimation of the visiting club, are not only royal good fellows, but foes at the trap well worthy of the steel of any visiting club, as the scores below indicate

The team shoot between Richmond and Lynchburg—each club putting up five of its best shots, and each club to shoot at 100 targets, each man therefore having 20 targets from known traps and unknown angles. Scores:

Richmond: Hammond 14, Hewitt 16, Boyd 19, Hallman 16, Wilkes 17; total 82.

Lynchburg: T. F. Nelson 19, R. S. Terry 15, C. W. Scott 16, W. W. Dornin 19, W L. Moorman 13; total 82

This made a tie between the teams, which was shot off at 50 targets, each man shooting at 10 targets, with the following scores:

Richmond: Hammond 6, Hewitt 7, Boyd 7, Hallman 8, Wilkes 8; total 36.

Lynchburg: Nelson 8, Terry 6, Scott 8, Dornin 7, Moorman 9; total 38.

Lynchburg thus won the contest by 2 birds.

The following Lynchburg gentlemen shot in every event during the day, each shooting at 135 targets: T. F. Nelson broke 103, R. S. Terry 91, C. W. Scott 108, W. W. Dornin 104, W. L. Moorman 106.

Following are scores of several gentlemen who did not shoot in every event:

T. F. Stearnes shot at 60, broke 40; Mr. Sommerson shot at 105, broke 80; Dr. Wayman shot at 105, broke 87; W. Tell Mitchell shot at 105, broke 73. In the contest for three medals given by the Field Sports Association, Dr. Wayman won the first, Mr. R. S. Terry the second, and Mr. C. W. Scott the third. This contest was decided by shooting for them in one of the regular events of 25 targets.

In the above report there is mentioned only Richmond's best shots, though many others participated in the shoot and came in very close to the leaders.

Messrs. Dornin, Moorman and Scott also won the first merchandise prizes in several events. In fact, the Lynchburg Gun Club carried off two-thirds of all the prizes.

George Work at the London Gun Club.

IN referring to Mr. George Work's grand showing at the London Gun Club's traps during the International Week which closed on June 27, the London *Field* says as follows:

"Several big performances were accomplished, the most notable being credited to the American wing shot, Mr. George Work, who, in addition to winning the Members' Challenge Cup (for which there were over fifty entries), also shared second and third prizes in the Gun Club International Challenge Cup with his countryman, F. R. Webster, of San Francisco, and incidentally killed 40 out of a possible 43 birds."

In commenting on the shoot for the International Challenge Cup, for which there were sixty-seven entries, and which is referred to in the paragraph above, the *Field* says:

"A tie for the three prizes was then announced, viz., Mr. Anderson, who won the second event on the programme at Hurlingham on Monday; Mr. Work, of the Carteret Club, U. S. A., and Mr. F. R Webster, of the San Francisco Club. Bird for bird was scored until the twenty-second round, when the winner of the Members' Challenge Cup, Mr. Work (whose total score for the day up to this point showed 40 kills out of 41 birds shot at) experienced hard luck. His bird from No. 2 trap, hit with both barrels, struggled on and endeavored to reach the summit of the wall. Amid much excitement it fell inside, only, unfortunately, to raise a false hope, for, as the dog approached it rose again and wriggled out of bounds. Mr. Anderson scored with a capital first-barrel shot. Mr. Webster then faced the traps, and his chance of success was extinguished, for an awkward low flyer from the center trap completely beat him Mr. Anderson was then declared the winner of the cup and £180, and his victory was very popular among both members and visitors. The total score showed 276 kills to 66 misses."

In summarizing the performances of the two Americans the same paper says:

"Mr. Work—Won first prize, £135, and gun, value £60, in 30yds. sweepstakes (50 competitors), at Hurlingham Club on Wednesday; won prize, £175, in Members' Challenge Cup, 30yds. rise (7 competitors), at Gun Club, Saturday; divided second and third prizes, £120, in Gun Club International Cup Handicap, 30½yds. rise (67 competitors), at Gun Club, Saturday.

"Mr. Webster—Divided second and third prizes, £120, in Gun Club International Cup Handicap, 28½ds. rise (67 competitors), at Gun Club, Saturday."

Eureka Gun Club.

THE Eureka Gun Club, of Chicago, held a shoot on its grounds, at Seventy-ninth street and Vincennes avenue, July 4, resulting in the following scores. Nos 1, 2 and 3 were at known traps, unknown angles. No. 4 was at fifteen singles, five pairs. No. 6 was jack rabbit, fifteen singles, five doubles No 5 was for the club trophy:

W. D. KENYON, Sec'y.

147 After a Few Scalps.

WE have received the following communication from the shooter who prefers to conceal his identity under the convict-like title of 147.

"The undersigned expects to be in Chicago during the Du Pont shoot, and will shoot any amateur in the world the following match: 100 empires or blue rocks and 100 live pigeons for $100; unknown traps and one man up; A. S. A. rules to govern. (Consider J. A. R. Elliott, Fred Gilbert, C. W. Budd and Arno amateurs.)

(Signed) "147.

Smith vs. Edwards.

BUFFALO, N. Y., July 1.—At Audubon Park to-day J. Edwards and B. F. Smith shot a series of 50-target matches for the price of the targets and a small sum. The shooting was at unknown angles, A. S. A. rules:

As an outgrowth of this match the two rivals shot a match on July 4 at live birds. The event brought out quite a crowd, and more would have been here had it not been for the threatening weather. The match was called at 10:30 A. M., and shortly after it commenced to rain. A greater part of the match was shot in the rain, but we had a good dry place for the birds (in the target trap house), so that the contestants and their attendants were the only ones to suffer. The rain stopped all other sports, but it can't down trap-shooters. At about the 90th bird it poured so that the birds could hardly be seen, and was as dark as it could well be at noon. The 76th round brought forth a little dispute; Edwards shot a bird on the ground and the referee called "no bird" as soon as he shot first barrel; then he gave it the other barrel to make sure, but the bird got up and flew out of bounds. Then Smith claimed a lost bird, as Edwards had shot the bird without calling "no bird," and his only argument was that the referee had called "no bird," and could not change his decision. Smith shot the match out under protest, and won by 1 bird without protest. Was Smith right? The dice did not give Edwards No. 3 trap once in the first 25. The long runs were: Edwards 31, 26, 10, 9, 7; Smith 31, 25, 23, 10.

We shall have on July 15 an open sweep at 100 targets per man, $5 each, four moneys. We expect from fifteen to twenty entries, as there are almost half that number now. Dash and Nellie, my two pointers, did the retrieving and worked fine. B. T. L.

Wheeling and St. Mary's Tie.

WHEELING, W. Va., July 6.—I inclose score of team race on July 4 at St. Mary's, W. Va., between the gun club of that place and the Wheeling Gun Club, 10 men on a side, 25 blue rocks per man.

As will be seen, the result was a tie, and proves that the St. Mary's boys are possessed of both skill and nerve, as they came near stopping the long line of unbroken team victories that has been the pride of the Wheeling Gun Club for six years past. In justification of the Wheeling Club it may be said that they had only 7 men on the ground and added Messrs. McNaught, Duffy and Wallace, visiting shooters, simply to fill in the 10 men. The tie will be shot off at Sistersville some time next month. The hospitality of the St. Mary's boys and their wives was highly appreciated by all present.

JNO. B. GARDEN, Ass't Sec'y, Wheeling Gun Club.

English Sparrows for Trap-Shooting.

CHICAGO, Ill., July 3.—*Editor Forest and Stream:* Since the humane societies have so successfully discouraged shooting pigeons at the trap in a great many localities, it has practically put a stop to shooting live birds (except by a favored few) in those localities. In Chicago the usual way of proceeding is to have local ordinances in various townships passed making it a misdemeanor, attaching a penalty for each offense. Some time since it occurred to me that a satisfactory substitute for pigeons, and at a very material decrease in expense, would be found in our national pest, the English sparrow. He is undoubtedly a fine bird at the trap, flying promptly and swiftly, requiring quick and accurate shooting. Few men can make over 80 per cent., which proves he is a hard bird to hit. In the local villages in various parts of this city the authorities are perfectly willing to amend the law so sparrows can be trapped by sportsmen, and in the shooting of them see a splendid means of reducing their numbers to a certain extent, because it is a known fact that shooting them has the effect of making the remaining ones shy, and frequently moving to other localities. I wish to inform the many readers and sportsmen of your valuable paper that if they have never attended a real "sparrow shoot" they have missed a great deal of exciting sport at the trap, and suggest they try it. BERT HAMPTON.

Washington Park Gun Club.

KANSAS CITY, Mo., July 8.—The regular monthly shoot of the Washington Park Club was held to-day. The club changed its shooting date from the second to the first Wednesday of the month.

* Guests.

DAVE ELLIOTT, Sec'y.

New Jersey Amateur League.

RUTHERFORD, N. J., July 7.—*Editor Forest and Stream:* The second contest of the New Jersey Amateur Trap-Shooters' League will take place on the Boiling Springs grounds, Saturday, July 25.

WM. H. HUCK.

The Elwood Tournament.

ELWOOD, Ind., July 3.—The weather was anything but pleasant. Thermometer above 90° and the air like a wet sponge, with no breeze. Although the grounds are well shaded there was much suffering from the heat. Even the targets seemed to partake of the general oppressiveness and flew rather lazily. The attendance was small owing to there being so many other attractions at neighboring towns and the shooting clubs of half a dozen nearby towns holding social shoots at their own grounds. Usually about fifty shooters will assemble at the call of the Elwood Gun Club, but to-day there were less than twenty. Those that did attend were a congenial lot of gentlemen and the sport was greatly enjoyed. It was a handicap shoot, winners of first or second money in any event except Nos. 3 and 5 had to shoot at unknown angles in next event, and winners of first in any two events shot at unknown angles in all subsequent events.

The programme called for ten events. All known angles except event No. 3 were straightaway, and No. 5 was unknown traps, one man up. On the first day the average score of the straightaway events was 91.4 and the unknown trap events by same men 75.7; difference, 15.7. The second day's averages in same events were 79.1 for straightaway and 61.2 for unknown traps; difference 7.9, all the events being shot by nearly the same men. It would seem from this that the law of averages and per cents didn't govern this instance very much. A good deal of study and "figgerin'" on shooting scores has convinced the writer that there is a good deal of what is commonly called luck in shooting for purses, especially in class shooting. That's the way it theorizes, but being only an 80 per cent. man himself, experience has shown him that the good luck generally hovers right over 90 per cent. and better; but here are the first day's scores:

Events:	1	2	3	4	5	6	7	8	9	10			
Targets:	*10*	*15*	*15*	*20*	*10*	*15*	*20*	*15*	*10*	*10*	Shot at.	Broke.	Av.

THE SECOND DAY.

The weather was hotter and muggier than yesterday, if such a thing was possible, and in the afternoon it was so hot that the targets got very tough, the traps went on a strike and either broke the targets that were not too tough or failed to throw them far enough to be shot at. However, the men all kept in fairly good humor and shot at every target that popped into sight. Barring the weather and a couple of 10-gauge black powder guns, it was a very pleasant day after all. Programme the same as yesterday.

Events:	1	2	3	4	5	6	7	8	9	10

SNAP SHOTS.

Chamness and his 10-gauge were prominent features. He used black powder and loaded for bear. When he called "pull," the boys all stood on tiptoe.

George Snyder managed the tournament and shot in every event. George is a good one.

The club has beautiful grounds. Club house and shooters' score are shaded by large maples and the traps are set in the edge of a meadow, giving a clear sky background.

The man who makes bother by not cocking his gun did not attend to-day.

A number of merchandise prizes were distributed as prizes for various averages. None of any very great value, but all were substantial and useful. Among the odd ones was a 10lb. whitefish in the center of a big block of crystal ice. A number of the club are glass blowers. They donated a number of paper weights (for the writing shooters) that were highly prized by all who got them. Such fairy creations are not often seen. O. H. HAMPTON.

Branchville vs. Andover.

BRANCHVILLE, N. J., July 4.—A nine-men team race was shot here to-day between the Branchville Gun Club and the Andover Gun Club, which resulted in a victory for the Branchville team, after some good scores had been made. Some sweepstake events were also shot:

Lake Side Rod and Gun Club.

BURLINGTON, Vt., July 11.—The regular shoot of the Lake Side Rod and Gun Club was held to-day. Among the shooters present were three from the Cambridge Gun Club. Scores:

Event No. 1, 25 targets, rapid fire: L. O. Harding 13, Blue Ribbon 12, Ellsworth 13, Hatch 11, Kittle 16, D. du Pont 12, E. C. Lefever 16.

No. 2, 25 targets, unknown angles: Blue Ribbon 7, D. du Pont 10, Ellsworth 11, Little 8, Hatch 9, E. C. Lefever 11, L. O. Harding 10.

No. 3, 25 targets, rapid fire: D. du Pont 10, Ellsworth 13, Kittle 6, E. C. Lefever 15, J. G. Parker 14, Blue Ribbon 11, W. L. Stone 7, L. O. Harding 11.

No. 4, 13 pairs: D. du Pont 17, Blue Ribbon 12, E. C. Lefever 13, J. G. Parker 19, L. O. Harding 13, W. L. Stone 14, Kittle 7.

No. 5, 25 targets, known angles: D. du Pont 15, Blue Ribbon 16, E. C. Lefever 18, J. G. Parker 9, W. L. Stone 10.

No. 6, 10 targets, known angles: J. G. Parker 4, Blue Ribbon 5, E. C. Lefever 9, Blue Rival 4, W. L. Stone 7, D. du Pont 7.

J. S. DEMING, Sec'y.

Meadville Gun Club.

MEADVILLE, Pa., July 4.—The gun club tournament, which was what is called an all-day shoot, was attended by twenty-seven shooters and a fair number of spectators, sixteen of whom were from Cleveland, Warren, Youngstown and other places at a distance. Many of the members of the club were engaged in the celebration events in the city proper and could not attend the tournament. The visitors were well entertained and were highly pleased with what many of them said was the best conducted shoot on the finest grounds they had ever seen, and expressed their intention to come again at the first opportunity. Six of the number, from Cleveland, said they would be here in force at the August contest of the league. The visitors were entertained by Paul North's new blue rock trap called the magautrap, which will throw targets as fast as they can be called for, without limit. It is the second time this kind of a trap has ever been set up at a tournament. Mr. North is a skillful manipulator of the machine and gave the shooters many pointers in his explanations.

The tournament consisted of 11 events, the 6th in the tabular statement being the citizens' merchandise prize shoot. These were won as follows: 1st by Grant, of Cleveland; 2d by H. A. Johnson, Meadville; 3d by J. C. Belton, Greenville; 4th by Dr. E. T. Lashells, Meadville; 5th by R. A. Hayes, Meadville; 6th by Holt, of Cleveland; 7th by S. B. Clark, Meadville; 8th by B. Graff, Pittsburg. Five of the eight were won by members of the Meadville Gun Club.

The following is the score in tabulated form:

	10	*15*	*10*	*15*	*10*	*15*	*10*	*15*	*15*	*15*
Ewalt	9	12	8	13	9	11	7	11	13	15

The following event was shot at 5 pairs of doubles: Ewalt 8, Cleve 7, Elliott 8, Holt 5, Grant 8, Lashells 2, Clarke 4, J. W. Graff 5, Rummel 7, Gundaker 2, B. Graff 1, Stein 4, North 4.

Rhode Island vs. Pawtuxet.

CLAY PIGEON SHOOT TEAM CONTEST.

PROVIDENCE, R. I., July 9.—The first of the series of the team shoots between the Rhode Island Trap-Shooting Association and the Pawtuxet Gun Club took place to-day on the former club's grounds. It resulted in a victory for the Rhode Island club, although not a decisive one in measure, as the result and victory will be determined by the whole number of birds broken in the entire four shoots, which are to take place alternately on each grounds. The shooting as a whole was not up to expectations, due probably to the fact of their being too anxious and nervous. The Pawtuxet men started in very poorly, but wound up with excellent work, and the Rhode Island boys did just the reverse, as will be seen from the following score. The next shoot of the clubs will take place at Pawtuxet July 18, when it is expected the boys will be in better trim. Here are the scores, 25 targets, 5 unknown angles:

J. F. RUSSELL.

Georgia-Alabama Interstate.

TALLAPOOSA, Ga., July 1.—*Editor Forest and Stream:* A Georgia-Alabama Interstate shooting tournament will be held under the auspices of the Tallapoosa Gun Club, at Tallapoosa, Ga., on Wednesday and Thursday, July 15 and 16.

It is proposed to have sweepstakes and team trials, using both inanimate targets and live pigeons. With inanimate targets there will be single and double races of 10, 15, 20 and 25 birds, and with live pigeons 5, 10 and 15 bird races, double and single.

Entries for target shooting will range from $1 to $2.50, and for live bird shooting from $2 to $10. Purses 40, 30, 20 and 10 per cent.

Five per cent. will be withheld each day from each purse for average moneys, to be divided into 50, 30 and 20 per cent., to be paid to the three shooters participating in every shoot during that day showing the highest average scores.

A consolidation purse will be offered as the last event on Thursday for shooters participating in three or more events during the tournament without winning a prize.

Special railway rates have been secured for ten or more fares for club men from any one point, and special hotel rates will be in force at the club headquarters at the Tallapoosa Hotel.

Every provision has been made for the comfort and enjoyment of visitors. The programme of events, entries and details of the tournament can be obtained by addressing C. H. ELDRIDGE, Sec'y.

Boston Gun Club.

BOSTON, July 8.—The Boston Gun Club ended its summer prize series of ten shoots, five best scores constituting prize total, Wednesday afternoon, July 8. Next week opens the shore bird season, which will, for the time being, prove more enticing to the average sportsman than smashing inanimates. September and October are the field shots' own months; so for some time only desultory practice will take place at the Boston Gun Club, a large majority of the usual participants being scattered for vacation purposes. The series just concluded argues well for the actual sport of trap-shooting apart from monetary considerations, the attendance averaging higher than at many clubs where sweep moneys are the attraction. Not a dime, nickel or quarter has played a part in the four last B. G. C. prize series, aggregating forty-four successful shoots, and the best evidence that such have been enjoyed is the fact that we go again and again. While some new faces appear each week, the majority come under the heading of regular attendants. One of these is Mr. Gordon, the winner of series just concluded, and a splendid shot both in the field and at the trap. He was warmly congratulated at the finish. Miskay was a close second, losing first by not improving a 20. First and second were practically even on the wing shoots; Miskay's five best counting 105 with 20 for low score, and Gordon's five top scores counting 103 with 18 for low score. Gordon in making 22 to-day moved up 4, Miskay not changing his total. The previous series was similarly contested, Miskay winning gold medal, with Gordon second, their handicaps suffering an additional yard (a penalty quite likely to be repeated). Following are the winning scores:

Prizes.		Selected.	Rejected.
1	Gordon	22 22 22 21 20—107	18 15 14 14
2	Miskay	24 21 20 20 20—105	19 17 17 16 15
3	Spencer	22 21 20 18 17— 98	16 12 10 10
4	Nichols	21 20 19 19 18— 97	16 15 11
5	Williams	22 20 19 17 15— 93	14 10
6	Brown	20 18 18 17 17— 90	16 12 8 8
7	Sheffield	19 19 18 17 17— 90	13
8	Horace	19 18 18 17 14— 86	13 12 9
9	Sears	19 18 17 16 14— 84	None
10	Pond	17 17 14 13 12— 73	None

Mr. Brown takes sixth position and prize, having attended more shoots than Mr. Sheffield.

Law Committee: R. J. Mott, S. M. Booth, F. A. Johnson.

F. R. BISSELL, Sec'y.

East Side vs. Forester.

NEWARK, N. J., July 11.—The Forester Gun Club held its regular monthly shoot at inanimate targets on its Peddie street grounds to-day. The principal event of the day was a team shoot at 25 targets per man, known angles, with the East Side Gun Club, of Newark. This was the second of a series of shoots with this club, and although the Foresters put up a good score, they were beaten again. As this is only the second match the Foresters have ever shot, they feel encouraged to think that they kept as close as they did to the scores of the older club. Scores:

East Side Gun Club.

New Utrecht Gun Club.

BROOKLYN, N. Y., June 11.—The regular target shoot of the New Utrecht Gun Club was held on the club's target grounds on Dyker Meadow to-day. Event No. 1 was the club shoot, No. 2 was the Hegeman prize shoot, both known traps and angles; other five events were at known traps and unknown angles. The tie for the Class A badge in event No. 1 was won in the shoot-off by Adams, Class B badge by C. Fergueson, Jr., and the Class C badge by Dr. O'Brien. Tie in No. 2 was won by Adams in the shoot-off. Scores:

Bergen County Gun Club.

HACKENSACK, N. J., July 4.—The Bergen County Gun Club held its first shoot here to-day. This is a new organization, but has sixty-two names on its list. Monthly shoots will be held on the second Saturday of each month; a shoot will also be held on the fourth Wednesday of each month. Mr. Noel Money has presented the club with a silver cup, to be shot for by members under conditions yet to be arranged. In the match between Griffiths and Bell the 30 targets of the merchandise event counted as the first 30 birds in the match. Bell has challenged Griffiths to another match under the same conditions as to-day's. Scores:

Arlington Gun Club.

ARLINGTON, N. J., July 7.—Inclosed you will please find a programme and the scores made at our first shooting match held July 4. As you will see by the scores (other than President Herrington's), they are not large; but what we lacked in poor shooting we made up in enthusiasm, and we only had good spring water to imbibe. We expect to get a good club together by the fall and will do some good shooting. Scores:

Loudon	0100000000000000000000000— 1
T Lawrence	0001001000001100000000001— 5

NAP. BRIERE, Sec'y.

Fulford Gun Club.

HUMMELSTOWN, Pa., July 4.—The Fulford Gun Club celebrated its fifth annual shoot to-day; among the visiting shooters was W. S. Canon, of Newark, N. J., who is so well known among the shooting fraternity that further explanation is unnecessary, and was also the guest of J. J. Bolton and family. The match resulted in a friendly shoot between Canon and George and David, the sons of Mr. Bolton, with the following result:

Canon	1101212121120121212112110—22
George	1111111111021121210101112—22—44
David Z.	0100111111112111211011121—21
Mr Bolton	1111211111111111212112212—25—46

Dedham Sportsmen's Club.

BOSTON, July 7.—The regular weekly shoot of the Dedham Sportsmen's Club took place Saturday, July 4. There were but very few members in attendance, owing to the fact that the club sent ten of their members to the shoot of the Hopedale Gun Club, which accounted for the very small attendance at their own grounds. The badge match was won by Mr. Gordon, on a score of 15 out of 20.

ROBERT SMITH.

ANSWERS TO CORRESPONDENTS.

S. R., Washington, D. C.—Bang Bang's pedigree is: By Price's Bang (Bang—Vesta) out of Princess Kate (Ponto—Sappho).

C. E. W., PROVIDENCE, R. I.—I wrote you May 25 relative to "Dick Noble's" eyes and you kindly sent me a prescription which has been applied faithfully. As we can see no difference in any way, I thought I would inform you so. He is such a beautiful fellow it seems a great pity to have him in such a condition. I presume he goes by scent entirely. The blue film which covers his eyes is about the same as before we applied the drops. Ans. Continue the drops and bathing. After bathing the eye morning and evening put a quarter of a grain of calomel in each eye and rub the eye-lids gently over the eye for two minutes (massage).

PUBLISHERS' DEPARTMENT.

The Light-Weight Marlin.

NEW HAVEN, Conn., July 9.—*Editor Forest and Stream:* We desire to thank your correspondent Aztec for his kindly mention of us in his article, but we would say that his statement is a little incorrect. We do not make any advance in price for a light-weight rifle in our Mod. '95 as to bring our rifle down to 8lbs.; all we have to do is to make it 24in. or 26in. half magazine, the same as the other company, and then, as we make no extra charge for rubber butt plates, which is the only other change, you see the rifle still lists at the regulation price, although it is down to what has heretofore been called the extra light-weight.—*Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, **$5.**
Forest and Stream *6 months and any two of the pictures*, **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

Readers accustomed to buying the FOREST AND STREAM *at news stands, and who are going out of town to points where they cannot purchase from newsdealers, may have the paper mailed from this office for any length of time at the rate of forty cents per month.*

SNAP SHOTS.

A correspondent who writes of the opportunities of southeastern Texas says, "The feat of two or three persons going out and killing all the way from 200 to 600 ducks in two or three days is not at all uncommon.' The statistics are somewhat vague, but indicate that the man who goes to Texas for ducks must "hie" with rapidity if he is to get there before these 200 to 600 ducks a day fellows shall have cleaned out the supply.

Rarely if ever have we chronicled a more pathetic instance of the somber side of forest and stream incident than that which is told this week of the death of ex-Gov. William E. Russell in the salmon fishing lodge of Little Pabos in the Canadian wilderness. This is the tragedy of field sports. It might be thought perhaps that the homely ways of camp life on a fishing river were too trivial for account when we come to the final summing up of the character of one who has stood in the light of national prominence; and yet the initiated well know that in the searching conditions of the camp is found a touchstone which proves the real man and reveals him as he is. No slight tribute then is that which Mr. Russell's angling companions bring to his memory when they bear testimony that in the Canadian wilderness, in the lodge on the Little Pabos, he was the same winning personality, considerate companion and high-thinking man known to his fellows and honored in public life.

Mr. Avis, who writes of the delights of a dwelling in the country for the sportsman, may not lure many converts into giving up their town life; but his paper is interesting as a new contribution to the discussion which has been going on for thousands of years. The charms of the country compared with those of the town make up a part of the literature which has come down to us from Greece and Rome; and the writers of those ancient times discoursed for all the world as do those of to-day on the delights of rural life. For all that may be said, however, in behalf of the country, human society is steadily trending toward the town and mankind is gathering into cities; each successive census demonstrates this fact.

The European starling has gained such a foothold in this country that it may reasonably be regarded as one of the birds which ultimately must be reckoned with as affecting agriculture. The place of the starling as a friend or an enemy of the farmer has been the subject of protracted discussion in Great Britain; and very recently an exhaustive series of investigations has been conducted in the county of Fife, Scotland, to determine the food habits of wood pigeons, rooks and starlings. The inquiry extended through one year, a certain number of birds being killed each month and their crops and gizzards examined. The results, it is stated in the report, of the Transactions of the Highland and Agricultural Society of Scotland, showed conclusively that "the wood pigeon is an enemy of the farmer," and that "the rook has almost no claim to agricultural regard." On the other hand, the starling was shown to be a useful ally of the farmer. Three-fourths of its food is insect, and of the insects consumed those which are injurious to agriculture preponderate. "There can be little hesitation regarding the starling," concludes the report. "He is a bird rather to be fostered than destroyed; he is a benefactor rather than a foe to the farmer. Of the pigeon, it may be said that he is an unmitigated scoundrel; of the rook, that he is a cunning rogue; but of the starling we can say with truth that he is our natural friend, by habit and by instinct."

In his angling sketch to-day Mr. Mather exhorts fathers who shoot only legitimate game not to give their sons guns until the boys shall be old enough to discriminate between game shooting and reckless slaughter. The implication is that boys do wanton killing, while the grown-up gunners confine themselves to game. But this is true only in part. There are two distinct classes of gunners: one is of those who shoot game and game alone, and it is in number a very respectable proportion of the great army of shooters; the other class is of those who having a gun in hand kill everything within range. A somewhat extended observation induces a belief that the indiscriminate gunners outnumber those who shoot only at recognized game. The youth or the age of the individual is not always a factor, for of the spirit of wanton destructiveness maturity brings no abatement; with respect to shooting some men never reach the age of discretion, nor would they attain to it though they outlived the Seven Sleepers. They begin wrong, and go wrong all their lives. Their ways are ways of wantonness. They are side-hunts embodied in individual guise. And there is no excuse nor palliation of their offending. Though they call themselves sportsmen, the manly sportsman's spirit is not in them.

THE LESSONS OF THE FIFTEEN-FOOT CLASS.

THE fact is generally recognized among thinking yachtsmen that the vast sums of money expended in modern racing bring back very small returns in the form of useful knowledge; on the other hand, the return is usually in inverse ratio to the size and cost of the boats. The building of new yachts for a class involves two issues: that of mere sport and that of a scientific experiment of the highest order. Opinions may differ as to which of the two is of the greater value, but many will agree with us in the belief that every contest of an international nature should teach some technical lessons.

In this respect the two great contests of 1893 and 1895 were singularly useless; they gave few positive or valuable results, and can be set down only as expensive but incomplete experiments. Accepting the popular verdict that Vigilant was really much faster than Valkyrie II., and Defender than Valkyrie III., who yet knows how either Valkyrie would stand with Britannia if raced in the same form, how one would compare with the other, how much closer to Defender Valkyrie III. could be brought by continued racing, or how much of Defender's speed is due to model and how much to a lighter construction than Vigilant?

Compared with all recent contests in the larger classes, the race of the pigmies stands forth as marked by all that appeals solely to the sportsman, a hard fought battle between the pick of two fleets, victor and vanquished coming out with equal glory; and to the student of yachting the whole contest of the two years is still more deeply interesting. Accepting the fifteen-footers as pure racing machines, and from their very small size and peculiar conditions having little bearing on the advancement of the science of naval architecture, or the production of cruising yachts or ninety-foot racing machines, at the same time it is most gratifying to note the thorough tests of types, models and rigs, and the development of new principles in design. Of the value of these principles in designing at large in all classes it is too soon yet to speak, but there can be no question that the fifteen-foot class in the first year of its existence has come nearer to an exact experiment than any class, large or small, of the past five years. Our earnest hope is that this same general and thorough test of a number of boats may by degrees be come possible in much larger classes.

THE RISE OF THE GAME PRESERVE SYSTEM.

WE Americans are just waking up to the fact that it is possible to exterminate our other game animals as the buffalo has been exterminated, and the extensive growth of game parks which the last decade has seen is one result of this awakening. Experience has demonstrated that even in the wildest portions of the West there is no hope for the big game except by the enactment of the strictest game laws, and to-day a reflex wave has set in, and many of the older sections, on account of their more effective system of protection, furnish better hunting and boast of more game than do the less accessible regions, which till recently were the best game sections of the country.

Never again will sportsmen hunt on free lands, as they did in the days when they could travel for weeks at a time without meeting other hunting parties. To-day hunters everywhere jostle and elbow each other, and there are no regions where the game is free from pursuit; no areas which, on account of their distance from settlement or their inaccessibility, furnish a natural haven for the remnant.

This condition of affairs is perhaps not due so much to the circumscription of the wild areas as to the increase in the number of hunters, and the better facilities afforded them for reaching the game countries. There are still vast areas in the United States which will never be permanently cleared or cultivated or occupied by the forces of civilization. The value of these wild lands in many cases has not increased in recent years, and, stripped of their merchantable timber, they can be bought very cheaply. They are as perfectly adapted for game propagation as ever, and all that is needed to make them good hunting grounds is to restrict the hunting to a point where it will not be in excess of the natural increase. Under such conditions the growth of the preserve system is inevitable, for rich sportsmen take this means of assuring themselves the success they can no longer count upon where the land is free.

More than a year ago we pointed out that the private preserves in the Adirondack section of New York occupied a greater area than the State of Rhode Island. The preserve system in this State is constantly growing, and is being imitated in almost every State in the Union. So much for cause and effect.

Those who have followed our third annual report upon American game parks will have noticed that the game preserves naturally classify themselves into those that are fenced and those that are not. As a general rule, the fenced preserves are found in neighborhoods where the game has been exterminated, and the other class in localities where the causes which lead to extermination have made themselves apparent. The fenced preserves are notable for their experiments in stocking with exotic game, and as a rule their breeding animals are secured from outside sources. Such parks are really only in their infancy, for very little attention has been paid to economic conditions, and few if any have passed the experimental stage.

The unfenced preserves are naturally more numerous, and in most cases occupy a greater extent of territory. In many cases these preserves have conferred a direct benefit upon sportsmen in general, for they have fostered the game supply and protected it from indiscriminate hunting on certain tracts, greatly to the benefit of the supply in the adjoining territory.

As an example, hundreds of sportsmen of the class that cannot afford to go long distances for their game will enjoy deer hunting this fall on Long Island, forty-five miles from New York city, solely as a result of the protection afforded the deer by the preserves of the South Side Sportsmen's Club and others. These deer would have all been killed off years ago were it not for the asylum provided by the preserved lands where hunting has either been limited or prohibited altogether; but as it is, there is a promise of hunting for a long time to come here on the door sill of a community of 3,000,000 people. Similarly the Adirondack preserves have fostered the supply, despite the extremely destructive methods of hunting in force.

If Congress would take the hint afforded by these private preserves and set aside as perpetual asylums for the game, on the plan adopted in the case of the Yellowstone National Park, those wild areas already named as forest reservations, or if the individual States which are in possession of suitable lands would designate a part for this purpose, we venture to say that a long step would be taken in the direction of solving the question of the game supply.

The Sportsman Tourist.

LABRADOR SKETCHES.

V.—A Whale In a Lake—an Indian Fish Story.

[Written for FOREST AND STREAM by Count H. de Puyjalon, and translated by Crawford Lindsay.]

FAR away in Labrador there flows a river called the *Rivière des Rochers*, or Rocky River. Many tributaries nearly as large as itself fall into it, bringing the waters of very large and very deep lakes, stocked with the finest fish.

One of these lakes, which in consequence of its length is called the Thirty-mile Lake, has for thousands of years contained a whale left there by the deluge. I have not seen it, but the Montagnais Indian Saint-Onze and his family have seen it. Why would there not be fresh-water whales? There are fresh-water seals in Lake Baikal near the Caspian sea.

I was camped on the Mossy Portage above the first falls of the *Rivière des Rochers*. I had arrived late at night, and to save the trouble of hunting for a camping place I pitched my tent close to the bark wigwam of my old friend Dominique Saint-Onze, of the Montagnais tribe, who was going up the river to winter on the great lakes of that region. I awoke early on the following morning and while I was smoking a cigarette Saint-Onze appeared and asked me for a pipe of tobacco. I handed him a plug. He cut some with his axe and in a fit of abstraction, no doubt, put the remainder in his pocket, filled and lit his pipe and then began to question me.

"You come from Thirty-mile Lake?"

"No," I replied, "I did not go beyond the first two lakes; the water was too high for fishing, so I came back."

"But you must have got some trout?"

"Yes, a few, but such beauties, from 20 to 25in. long, in fine condition, nearly all of a size, as red as blood and delicious to eat."

"Any chance of trapping?"

"Not bad. There are some mink and I saw a pekan on the river. I prevented my man from shooting it because I knew we were on your hunting grounds and your sons, Pierre and Napis, would not have been pleased if we had killed it."

The Indian smiled, smoked his pipe in silence for a while and then said: "So you did not go to Thirty-mile Lake. You did wrong, for if you had gone there you would perhaps have seen the great fish that my father once saw and that I have since seen myself."

"A big fish? What? A ouananiche, or a touladi?"

"No, much bigger than that, much bigger than your big boat. A fish that spouts water through its nose, black on the back and white under the belly. My father said it was a whale surprised in the lake when the waters of the deluge suddenly fell, and I believe it."

"Hold on, my friend," I said; "are you quite sure you saw it? Were there not a good many empty whisky bottles in the bottom of your bark canoe?"

"I was not drunk," indignantly replied Dominique. "The old Indian, in spite of his years, can see better than any two white hunters, and what he saw he saw well."

I hope I will not greatly surprise you when I say that Dominique is the greatest liar of his tribe, which nevertheless contains some very remarkable ones. His imagination sometimes carried him rapidly beyond the bounds of truth. However, on this occasion he seemed so thoroughly in earnest that I thought his story, improbable as it was, might contain some truth; so I urged him to go on, apologizing for my incredulity at the beginning.

"Well, you know Thirty-mile Lake, and you know that we have given it that name on account of its length and that it is very deep. I have often failed to get bottom with fifty fathoms of line. You know how narrow it is in some places, especially in front of the three ravines which run from the mountain right down to the shore.

"You know that it is stocked with enormous trout, gigantic touladi and ouananiche as big as salmon, with whitefish, and with cod so like the sea cod that the fishermen cannot tell the difference, and with many other kinds of fish, while bears, marten, otter and pekan roam in the woods around it.

"You saw many things on its shores, you picked up many stones and plants that are unknown to me, but you cannot have seen what I saw or learned what I have learned; for you have only been there two or three times, while I have hunted and trapped there for forty-four years."

"That is true, I don't know the lake as well as you do."

"Well, about seven or eight years ago I was camped with my family at the entrance of the third ravine, on the northeast side. Jean Baptiste, from Mingan, was camped with his family quite close to me. One Friday night, after my sons and myself had spent the day getting birch bark to make canoes with, we went to spend the evening in Jean Baptiste's camp. While we were chatting away we heard for the first time—it was then 10 o'clock—a great noise on the lake, like that caused by the splash of an immense rock falling into the water. We paid no attention, thinking it must be that. But a few minutes afterward the noise was repeated, only it was closer, and was preceded by that sound of suppressed roaring caused by the breathing of a whale when it comes to the surface.

"We rushed out. The moon was full, and it was almost as bright as day. We could see nothing but some long waves which furrowed the lake. Several minutes elapsed, then all of a sudden we saw a column of vapor arise a short distance from us. We heard the loud breathing of the animal and distinctly saw an enormous black body which, after slowly emerging, disappeared as slowly under the water.

"We stared at each other. 'A whale,' cried Jean Baptiste. 'A whale,' I repeated. 'A whale,' re-echoed the women and children, for all had rushed out after us and had witnessed the spectacle.

"I don't know how long we waited outside; the moon had already passed to the other side of the north star when I went into my wigwam, but I could not sleep and impatiently waited for the dawn, for I hoped once more to see the animal of which my father had formerly spoken to me, and which had so unexpectedly brought itself to my recollection."

"And you saw it again?"

"No, I never saw it again, but it is still in the lake. I have often heard it at night. If you pass the winter there you observe that throughout the season in front of the ravines the ice is always open, broken and scattered. The whale does that when it comes up to breathe. You will hear it roar, distinctly notice the noise made by the water, which it pushes back and sometimes strikes with its tail, probably to keep it from freezing again."

"Look here, Dominique, it is always difficult to see at night. Perhaps you were mistaken and took the trunk of a tree shaken by the storm for a whale."

"I tell you my eyes are as good as any two white men's. I did not make a mistake. Ask Jean Baptiste."

"Very well, my old friend, don't get angry, I won't ask Jean Baptiste; I would rather take your word; I would rather, in fact, you had seen the whale. So take some more tobacco and let us say good-bye, for I must have my breakfast and be off."

H. DE PUYJALON.

REMINISCENCES OF CAMP HALIFAX.

NEXT to the reality of a hunting trip for enjoyment is the gathering together of the participants for reminiscences of the trip. The stories told of "How I shot that buck" and "How we played poker to determine who should wash the dishes" bring one almost into the hunting grounds again. We can still see that yellow flash as the startled deer fled through the woods, visible only now and then through the shifting foliage; we can still hear the camp-fire crackling, and see the fellows lounging about, smoking and commenting on the result of the day's hunt.

What gladsome days those were! And then the night, when we crept into our bunk of hemlock boughs, weary enough to sleep sweetly on a bed that would be unendurable except in the woods! Prowling porcupines would occasionally break the monotony of the quiet night. Even once, I recall, we were aroused by the crashing of underbrush near by, and on lighting a torch we were surprised by the whistle of a buck. Alas! at that time the season for hunting deer was not at hand, so we sadly crawled back to our rest, reflecting on what might have been.

My little tale, however, seems to be running away with me, and I would best begin where I originally intended. Last year a friend and myself entered the Adirondacks a few days before the law would permit the killing of deer, with the intention of fishing for trout. Leaving the Adirondacks & St. Lawrence Railroad at Beaver River, we immediately took what of our duffle we could conveniently (or otherwise) carry, and struck out for what we are pleased to call "Camp Halifax." This is a deserted lumbermen's camp, located a half mile south of the Ne-ha-sa-ne Park line, and one which we had appropriated as our headquarters during the fall of each of the two previous years. The name we apply is appropriate in that the camp seemed an intolerable distance from the railroad station; distance in so far as time to travel it is concerned, in reality I believe it was not more than one and one-half miles. How we two youths, fresh from school, did groan and grumble under our loads. And our discreet judgment was prominently manifest when we came to the ford of an adjunct of Beaver River. The water rolled over the loosely constructed bridge in such force that the logs plunged and danced beneath our feet at every step; our, to our minds useless, rubber wading boots were far away, stored in the closets at home. So we poor mortals tugged at our loads and grinned and endured. The next day one of the natives jokingly informed us that it had rained every day previously for three weeks.

Arrived at the camp, scarce was the relief we experienced. The atmosphere was damp and warm, and such informal denizens of the forest as mosquitoes and punkies held high revel. Bloodthirsty and desperate, they pounced upon every available spot of our defenseless carcasses. But at last the sky cleared, the stars shone out, the pests diminished, and we unrolled our blankets and lay down to rest.

The morrow found us hungry and cheerful and ready for our duties. Again and again must we hie ourselves to the station to lade ourselves anew and trudge to camp with more duffle. The large part of the second day's abode was spent in cleaning and preparing Camp Halifax for our needs. Toward evening my helpmeet in the misery and pleasure of the trip—we all know him as Brod—bethought himself of hooks and lines and sundry other fishing appurtenances, and set out for the nearby creek to tempt the wary inhabitants thereof. Our feast that night was fit for a king. All heaven looked down on us and rejoiced, for we were happy. Happy? Yes, with but one drawback. Every day gave us views and every night visions of deer. Our fingers itched to press the triggers and our palms ached to grip the stocks of our true and tried rifles, for we had not yet acquired that spirit of ecstacy which fills us with delight to see those majestic creatures of nature rove at will through the glades, unharmed by the hand of man. We were but human.

One of the prettiest sights we witnessed was of a buck and doe feeding on the hillside not far from our camp. We were concealed at a distance not exceeding 40yds. from the deer, and watched them fully ten minutes. Either from their becoming aware of our presence or from being inspired by some sudden desire to seek other feeding grounds, they at last turned into a bog trail and soon passed from view. The buck was handsome, bearing a neat head of four-pronged antlers.

As war is the chief element of history to the boy, so to us youthful, would-be sportsmen the annals of the killing of the deer is the most exciting part of the account of a hunting trip. Therefore I pass by the details of our camp life to relate the wherefore and outcome of the grand climax. One cold morning, when the mists yet obscured the lowlands, Brod and I took our rifles in hand and mounted by different routes the mountain south of the camp. I had proceeded about two miles, and entering marshy ground was creeping stealthily along, noting the numerous deer signs, when something moving in the shadow of the foliage 100yds. ahead drew my attention. I was soon assured that it was the hip and leg of a deer. My rifle was fairly steady as I glanced through the Lyman sights and pressed the trigger. The heavy crashing of the brush at the crack of the gun told me that the .45-70 bullet had struck the deer, yet I dropped to my knees to peer beneath the smoke and waited. For perhaps fifteen minutes I remained there, silently watching, meanwhile hearing the report of Brod's Winchester. Then, as I considered I had sufficiently obeyed old hunters' directions in waiting after I had shot, I sought the deer I had fired at. The ground and leaves were fairly sprinkled with blood, so that I was readily enabled to trail the wounded deer. When I had traveled only about 150yds. the deer leaped into view only a few rods in advance. This time there was no steady aim. Almost instantly my gun came to my shoulder, and at its crack the deer dropped in his tracks, rolling his eyes in agony. Never again do I care to see a deer die. There is much more poetry in watching the living deer than the dying one. My victim proved to be a young three-prong buck. The first ball had broken his hip, passing out just back of the ribs, a few inches to the right of the backbone. The second ball broke his spine and passed out at the breast, both fortunate shots.

While I was dressing my trophy—a very interesting procedure—Brod came up and announced that his shot too had been successful. He had brought down a buck that very much resembled mine in size and color marking. It differed, however, in having four prongs instead of three. The porting of those deer to camp and the "jerking" of the venison was no easy task, though our stomachs fared well during the latter process.

The sterner duties of living at last demanded our attention, and we were compelled to leave the now well-beloved spot, this wilderness of lofty pines and drooping cedars and wide-spreading birches, assured by our brief experiences that

> "To him who in the love of nature holds
> Communion with her visible forms, she speaks
> A various language."

THEO. F. BROOKINS.

SOME CAMPING DEVICES.

Editor Forest and Stream:

As the season of camping is now on, I thought some of my experiments might interest your readers.

First, as to tent, a 7×7 wall suits me. The poles are sawn in two and joined by removable tin tubes, the ridge pole by hinges. I roll the tent and poles into a small bundle with shawl strap and check as baggage.

Second, as to cooking. I took a discarded biscuit can, covered it with wood, punched a hole in the bottom to give entrance to a lamp chimney and above the hole made a small deflector. This bakes meats, potatoes, etc., boils vegetables and fruits. I put dinner in the oven and leave camp for the morning and come back to a well-cooked roast. On a cold, rainy night it gives a cheerful warmth and light. Oven, cooking utensils, etc., go into a light chest, which goes as baggage. Atkinson's "Science of Nutrition" is a book that will help users of this oven. For broiling put your fire on platform 3ft. high of sod or rocks, using two light fire bricks for dogs.

Washing dishes is the camper's bugbear. Have enough dishes so you need to wash but once a day and let each man look after his own. Wash with tepid water with a little kerosene stirred in. Use paper, not rags, and bury all refuse at once.

As to provisions, buy the best. I send to the best purveyor and have him send ahead by freight the best in the market. Jams are good for camp. The best living costs about $3 a week and you can digest and enjoy it in the woods.

As to bed, my plan is a folding wire cot hinged in the middle, with mattress in two pieces, the whole with bedding to be put in canvas case and go as baggage. A tick for straw or leaves answers well. With proper management, tent, chest, bed and grip will come within baggage limits, and you will save money and bother. If you are handy with tools and take bedding from home the whole outfit can be had for $10. For camping ground, along the Great Lakes from Frankfort, Mich., up are many fine spots practically free of mosquitoes at all seasons, and entirely so ofter the middle of July.

H. M. STANLEY.

MY FOURTH OF JULY.

"GOING a-fishing the Fourth, or what? Say, where are you going?"

"Well, I will tell you. I expect to leave on the 4:20 P. M. train on the 3d, take my young setter with me, and after a good night's sleep and breakfast at the farmhouse take a stroll in the woods."

I had it all fixed in my mind just what I would do, but I didn't do it. You ask why not. Well, the cash didn't balance. I might say it didn't materialize; call it anything you choose, but I didn't get away on the afternoon of the 3d, and didn't leave the office until 7 P. M., and when I did I wished figures, books, cash, cash balances and blunders further.

I turned in quite early that night, thinking the dear boys would not begin with their big guns, little guns, big crackers and little crackers until after 12 o'clock, and that I might get some sleep in the early part of the night. But no, no. As soon as it was dark the boys living next door got out their little cannon, and such a noise. And then they have a family of bull pups in the woodshed, and the noise of the guns and crackers woke them up and they had the liveliest Fourth of July time I ever heard. But the dear boys were having a good time, as were the pups, and I was a boy once myself (for the first cannon I ever had I stole the old single-barreled gun that belonged to my grandfather, and sawed off the end with father's buck saw); so I just turned over and said, "Well, I was a boy once myself (that was a long time ago), let the dear boys have a good time; they can be boys but once." I didn't get much sleep.

I took the 7 o'clock train, and at 8:30 was at the old home in the country where the sportsmen are always welcome. The rain of the night before made everything look fresh and bright, and how I did enjoy it. About 11 o'clock my eye struck a fishing rod hanging up on a beam in the kitchen, and I said, "I will just go for trout; no flies with me and nothing but worms for bait; but I'll try it." I struck out for the brook just across the meadow, where I thought I would try under the old mill dam first; and just as I got by the brook up went an old partridge. I dropped the rod, for trout are not in it with me when a partridge gets up, and walked cautiously down the brook, hoping I might get sight of another; but I did not.

About that time it appeared to me that about every bush and daisy in the field was filled with birds having a Fourth of July jubilee. Leading them all was *bob-o-link*,

bob-o-link, bob o-link; spinktum, spanktum, spink; chee, chee, chee. Then the crow blackbird and the catbird, they joined in the Fourth of July hurrah. I came very near forgetting about going a-fishing, but picked up my rod, dropped in a hole, and when the worms struck the water a small trout jumped for it and missed. I think it was my fault. The fish were jumping on all sides and wanted flies; couldn't get down to taking common angle worms. I caught eight trout in half a mile fishing, the smallest 8in. long and the longest 10. I lost the largest one, of course, and would have caught at least twenty more if I had only had flies to fish with—"that's right."

But with all these disappointments I had a glorious time; I didn't once think of cash, or cash differences, of the ratio of 16 to 1, of McKinley, nor of any other man. With me the pleasures of an outing with rod or gun do not depend on the number of fish in the creel or birds brought to bag, but upon the pleasures of tramping across the fields, through the woods or along the streams, and seeing in all of these evidences of the Creator's wisdom and goodness to us. H.

HUDSON, N. Y.

Natural History.

STARLINGS AT HOME AND ABROAD.

BY EDWIN IRVINE HAINES.

[Read before the Linnæan Society of New York at the American Museum of Natural History.]

I.—The Starling Family.

THE starling family *Sturnidæ*, nearly allied to our own blackbird family *Icteridæ*, is found throughout the greater portion of the Eastern Hemisphere. The different continents have birds of this family characteristic of themselves, many of which, on account of their secluded habits, are little known. A starling peculiar to New Zealand is the huiabird (*Heteralocha acutirostris*); a strange property of the huia is that the male has a long straight beak and the female a curved one. A beautiful starling found very plentifully in western Asia (but unfortunately nowhere else) is the rose-colored pastor (*Pastor roseus*), which frequents only sandy deserts and arid plains, and consequently is little known. The starlings found in Africa are very similar to our grackles or crow blackbirds; the most important species of these is the oxpecker or buffalo bird, which follows cattle around for insects as our own cowbird does. A bird found in Sardinia, the species nearest to the common starling, is the Sardinian starling (*Sturnus unicolor*), and there are many others too numerous to mention.

II.—The Starling Abroad (*Sturnus vulgaris*).

This Old World species is found in Russia, Siberia, Sweden, Denmark, Norway, Turkey, Italy, Madeira, the Canary and Azore Islands, India, Asia, the Himalaya Mountains, China, Japan, Africa (even as far south as the Cape of Good Hope), and all the countries bordering on the Mediterranean Sea. In England it is abundant everywhere, from the Orkney and Shetland Islands to Cornwall, and it is even common in the City of London, also in parts of Scotland, and is very abundant in Ireland and Germany. In some of these places it is resident, in others migratory. In the more northern portions of Europe the starlings begin to flock and migrate in thousands and thousands toward the latter end of June, and move slowly southward in huge flocks. In the evenings they collect in reed beds on the shores of rivers and lakes, and there spend the night. The noise these flocks make can be heard for miles, and the rushing of their wings is said to resemble the muttering of a distant thunderstorm. In England, in the winter time, they wander over the country in search of food, but about the middle of February may be heard on the trees, or near the spots where they intend to nest. They begin to build their nests about the middle of April in church steeples, holes in walls and old ruins, or more often in bird houses erected for their use. It is said that every orchard in the neighborhood of towns or cities in Europe has at least two or three starling boxes in it. The Germans are very fond of the birds, and in Saxony not only is it considered a sin to kill one, but a very heavy punishment is inflicted upon the person who does so. As the starling is quick and cunning, the people of Germany often capture the young birds and bring them up, and easily teach them to speak words and sentences. One poor starling is said to have cried when anybody approached his cage, "I can't get out! I can't get out!"

The birds are very gregarious among themselves, but do not often mingle with other birds. They are, however, very peaceful, but they will not let other birds impose on them; and woe to the English sparrow that attempts to bully them or take possession of their home while they are absent.

The starling raises many broods during the summer, though at the same time as the nesting season numerous flocks move about the country and never pay any attention to the birds that are breeding, nor do the nesting birds ever seem to notice them. Possibly some birds do not nest at all. During the fall the young birds change their plumage from a drab to a sooty black, which takes a greenish tinge by Christmas. The older birds also change their plumage from the beautiful bronze and gold to a glossy black; but in the spring "the wanton lapwing gets himself another crest," and their coat again changes back to the iridescent bronze and green, and is covered with little white spots. It is from these spots or stars that the starling gets his name. Starling means in German "a little star."

III.—The Starling at Home.

The starling has been introduced into this country on several occasions, but only the last importation was successful. The birds were released in Central Park under the direction of Mr. Eugene Schieflin, of this city, but they soon left the park and went to various places in the upper part of the city. A pair nested at One Hundred and Twenty-second street and Lenox avenue, and another at One Hundredth street and Riverside drive. A flock of fifty birds were seen at Kingsbridge in the fall of 1893–94, and another flock were seen at Flatbush, L. I., on April 16, 1895.

There is in the northern part of New York city a small, wild piece of land composed of fields and woods (in whose dark recess the "Bob White" of the quail may be often heard or the solemn drum of the partridge) which runs along the Sound for about two miles and is about a mile in breadth, called Pelham Bay Park. Here eight of these starlings settled, as if they knew they would not be disturbed. The woods and fields outside of the park offer just as good ground as the park affords, but they seemed to think it would be dangerous to venture there.

I first came across these birds on Feb. 20, 1895, in the upper part of the park, near Pelham Manor. It was during the cold snap that year, and the snow lay deep upon the ground. There were from thirty to forty birds in the flock. I saw them again and again that winter, and had abundant opportunity to watch them as they scoured over the snow-clad fields for food. They do this in a very businesslike manner; descending in a cloud in one end of a field, they swoop along the ground for a short distance, and suddenly alight as one bird, as you may often have seen a flock of yellow-legs do on the seashore. Then they scatter, and run or walk along the ground, busily looking for food. If they have had good luck they will suddenly fly into the highest tree handy, where they will all join in one grand chorus, as if of thanksgiving. After a few minutes spent in this way the whole flock suddenly cease to sing, and whirl off to the next field with a thunderous rush of wings, where, if everything is safe, they go through the same programme again. They station a sentinel, however, while they are feeding or singing, and if he sees anything suspicious he utters a loud *crake, crake!* when the whole flock (if singing) suddenly cease, and if the danger threatens they fly up into the air, whirl once or twice—with as much grace as pigeons—then fly away out of sight. I have often flushed the starlings, in order to watch their beautiful maneuvers, which are done as neatly as if by a single bird. Their flight is straight, strong, vigorous and rapid, and is performed with regular timed beating of the wings.

The starlings are noted throughout the world as whistlers, and can mock as skillfully as a mockingbird. They

EUROPEAN STARLING. SARDINIAN STARLING.

can imitate to perfection bird cries from the hoarse croak of the heron to the mellow whistle of the meadowlark, also snipe of different varieties and red-winged blackbirds, and they often whistle like a boy. The weather does not affect their whistling in the least, and they will whistle as merrily on the coldest day in winter as a on fine day in spring.

In the winter and early spring they stay in the upper part of the park, but as April advances they retire to the neighborhood of a boathouse owned by a Mr. Castrop, where they begin to build their nests in a big hollow oak tree in front of the house. The nests are rudely built of straw, leaves, feathers and twigs. They lay four to six blue eggs, the incubation of which lasts sixteen days. Mr. Castrop has told me that he has often seen the tree loaded with starlings about 4 o'clock in the morning, and they make such a noise with their whistling and chattering that sleep is impossible for the inmates of the house. There are at present about eighteen nests in this tree, but I think that they also nest somewhere else in the neighborhood. They often come there in the evenings in numbers and probably roost there. Mr. Castrop has seen a flock of them numbering 200, and thinks that some go away in winter. I believe there are about ten different flocks of birds in the park, for I have seen two distinct ones on the same day and in places widely separated. Taking a rough estimate, I should think there are about 2,000 birds in the park. They raise two broods, one in May, the other in July, and are very careful of their young.

IV.—The Starlings' Usefulness to Mankind and their Probable Future.

The starling is a great insect eater, and is probably one of the best of helpers to the agriculturist; he is also fond of fruit, but this may be forgiven him when we think how many harmful bugs he destroys. The young of the starling are fed entirely on insects, generally of the hard shell varieties, and they consume large quantities of the so-called June bug. This suggests that the chances are that if they could be successfully colonized where the locusts abound it would not be very long before these insects would be greatly reduced in numbers or completely destroyed. I also think that the birds could almost clean out the potato and striped squash bugs and generally lessen many other insect pests that are so common in many of the States.

Of the starling's future we are doubtful, but of the rapid increase of birds and their tendency to multiply we may have the best of hopes. We should be careful in the scientific world of to-day how we introduce our new species; naturalists had a severe lesson in this in the introduction of rabbits into Australia and English sparrows into America; but with the starling we have nothing to fear. Favorites as they are in Europe, of quick and sprightly ways, pleasing vocal powers, handsome in aparance and of endearing social ways, what a contrast are they to the English sparrow, and if the time ever comes when the starling is as abundant in America as some of our own native species, let us hope he will prove a better companion than that wretched little specimen, sparrow the tramp.

Sterne's Starling.

It was Lawrence Sterne's starling which could not get out. The bird is one of the famous birds in literature. The story is told as one of the incidents in the "Sentimental Journey." Sterne was in Paris; it was the year 1760 something, and a passport was one of the requirements of an Englishman traveling in France. This Sterne was without, and his predicament suggested the Bastile, whereupon he soliloquized:

And as for the Bastile—the terror is in the word. Make the most of it you can, said I to myself; the Bastile is but another name for a tower, and a tower is but another word for a house you can't get out of. Mercy on the gouty! for they are in it twice a year. But with 9 livres a day, and a pen and ink and paper and patience, albeit a man can't get out, he may do very well within—at least for a month or six weeks, at the end of which, if he is a harmless fellow, his innocence appears, and he comes out a better and wiser man than he went in.

I had some occasion (I forgot what) to step into the courtyard as I settled this account, and I remember I walked downstairs in no small triumph with the conceit of my reasoning.

I was interrupted in the heyday of this soliloquy with a voice which I took to be of a child, which complained "it could not get out." I looked up and down the passage, and seeing neither man, woman nor child, I went out without further attention.

In my return back through the passage I heard the same words repeated twice over, and looking up I saw it was a starling in a little cage. "I can't get out—I can't get out," said the starling.

I stood looking at the bird; and to every person who came through the passage it ran fluttering to the side toward which they approached it, with the same lamentation of its captivity. "I can't get out," said the starling. "God help thee," said I; "but I'll let thee out, cost what it will." So I turned about the cage to get at the door; it was twisted and double twisted so fast with wire that there was no getting it open without pulling the cage to pieces. I took both hands to it.

The bird flew to the place where I was attempting his deliverance, and, thrusting his head through the trellis, pressed his breast against it, as if impatient. "I fear, poor creature," said I, "I cannot set thee at liberty." "No," said the starling, "I can't get out, I can't get out," said the starling.

I vow I never had my affections more tenderly awakened; nor do I remember an incident in my life where the dissipated spirits to which my reason had been a bubble were so suddenly called home. Mechanical as the notes were, yet so true in tune to nature were they chanted that in one moment they overthrew all my systematic reasonings upon the Bastile, and I heavily walked upstairs, unsaying every word I had said in going down them.

* * * * * * *

I got into my remise the hour I proposed. La Fleur got up behind, and I bid the coachman make the best of his way to Versailles.

As there was nothing in this road, or rather nothing which I look for in traveling, I cannot fill up the blank better than with a history of this selfsame bird, which became the subject of the last chapter.

While the Honorable Mr. —— was waiting for a wind at Dover, it had been caught upon the cliffs, before it could well fly, by an English lad who was his groom, who, not caring to destroy it, had taken it in his breast into the packet, and, by course of feeding it and taking it once under his protection, in a day or two grew fond of it, and got it safe along with him to Paris.

At Paris the lad had laid out a livre in a little cage for the starling; and as he had little to do better the five months his master stayed there, he taught it in his mother's tongue the four simple words (and no more) to which I owned myself so much its debtor.

Upon his master's going on for Italy the lad had given it to the master of the hotel. But this little song for liberty being in an unknown language at Paris, the bird had little or no store set by him; so La Fleur bought him and his cage for me for a bottle of Burgundy.

In my return from Italy, I brought him with me to the country in whose language he had learned his notes; and telling the story of him to Lord A., Lord A. begged the bird of me; in a week Lord A. gave him to Lord B.; Lord B. made a present of him to Lord C., and Lord C.'s gentleman sold him to Lord D.'s for a shilling; Lord D. gave him to Lord E., and so on, half around the alphabet. From that rank he passed into the lower house, and passed the hands of as many commoners. But as all these wanted to get in, and my bird wanted to get out, he had almost as little store set by him in London as in Paris.

It is impossible but many of my readers must have heard of him; and if by mere chance have ever seen him, I beg leave to inform them that that bird was my bird, or some vile copy set up to represent him.

I have nothing further to add upon him, but that from that time to this I have borne this poor starling as a crest to my arms. And let the herald's officers twist his neck about if they dare.

Bobolink in Assiniboia.

ESTEVAN ASSA, Canada.—In compliance with the request of a correspondent in a recent issue of your excellent paper permit me to contribute a line or two relative of our feathered songsters, the bobolink. These birds—the Western variety, I presume—appear to be more plentiful in this vicinity the present season than at any time during the four seasons immediately preceding. As many as half a dozen together have frequently been seen flitting about on the prairie and at a date subsequent to which one would have supposed their maternal duties had commenced. The vicinity of clumps of dwarfish but fragrant flowering shrubs, known locally as wolf willow, appears to be their favorite haunt. Here, perched on a swaying twig and oftentimes far out on the open prairie in the midst of almost primeval solitude, the chance passer-by is greeted with their melodious song. W. M.

MAN AND NATURE.

Editor Forest and Stream:

My good and worthy brother, Ransacker, is much perturbed in his mind. Verily, the shaft which Coahoma sent forth on a mission of mercy hath smitten brother Ransacker in a spot where his tender conscience was but thinly armored, and he squirmeth, even as the humble reptile which he so much revileth from his vantage ground of superior intellect, and power for good or evil. Behold, hath he not rent his garment and cast dust upon his head? What shall I say therefore? Is it a small matter that a man array himself against his brother and go up against him in wrath and bitterness of words?

Nay, but a soft answer turneth away wrath, and I will even come bearing gifts and an olive branch in mine hand; for how pleasant a thing it is for brethren to dwell together in unity.

And yet, without these friendly clashing of ideas we would all of us be the poorer; for flint to flint emits the spark, and new ideas are born of intellectual impacts. And thus have I profited by my friend's complainings of my ill usage of him. It is true that man must shape the destinies of all earthly creatures, including his own. But does not that suggest a weighty responsibility, and the necessity for much circumspection in wielding such power over helpless or dependent fellow mortals?

Truly "we grope," as Ransacker wisely says, we are very much in the dark as regards our moral duty in the premises. And yet there are certain general guides which we may seek out and follow; and our discernment of these guides and proper application of them mark our progress in the grand procession to higher planes of mundane development, which we have been treading for countless ages in nature's wonderful drama—an endless procession in an endless drama, at the head of which man, by his superior development, enjoys the high distinction of being placed by nature.

Now what guide shall we follow in wielding such despotic power over the manifold forms of living and sentient beings which we find in such lavish profusion around us—fellow travelers in a voyage, the import of which we may well believe they have no comprehension—a mystery of which we ourselves can form but nebulous conceptions? We now know that we and they all belong to the same great family, all are children of the same prolific mother—good Dame Nature. We know that we were once as they are in mental limitations, and have gradually outstripped them in the march, by what means it boots not here to inquire.

We also know that the natural propensity of the mere animal is to slay, to destroy. We know that the nearer man dates back to the mere animal; the more prone he is to obey this natural instinct, born of "the struggle for life," to slay and destroy. We know that selfishness is the natural attribute of the brute, and the unnatural attribute of the brutish man, the more brutish the more selfish, and whatever shadowings of the divine have been evolved in man's higher nature are accurately measured by the degree of unselfishness implanted therein, a quality which marks our nearer attainment to that ultimate goal toward which man's destiny must lead.

But it may be accepted as axiomatic truth, that man's progress shall not be hindered by too great refinement of our sense of justice toward the lower order of animal existences. We might even go so far as to presume that the very purpose of these existences has reference only to the fulfillment of man's superior destiny; a position, however, which some philosophers disallow, and their view seems strengthened by the consideration that there are so many forms of life between whom and man is no discernible relationship except in conflict of interests. Such a presumption would seem to be the result of a circumscribed conception of nature's great schemes.

We may very properly, however, upon logical grounds, by analogy of reasoning upon nature's fundamental law of the "survival of the fittest," assume the right, or obligation, if you will, to remove from our path whatever obstacles may tend to hinder the grand march of nature's highest creature in this small globe of ours toward the ultimate goal of our development.

But while we are safe in going thus far, let us not use this power wantonly, but with extreme circumspection. It is safest to slay only when we know we are justified in killing an enemy. When we go beyond our own personal or racial interests, by what authority shall we assume to be the arbiters between nature's children? Have we the knowledge to justify ourselves in assuming this high province?

I opine to the contrary.

We know that rabbits were introduced into Australia by man's contrivance, thereby disturbing nature's equilibrium, and with dire results to man's interests. The same observation will apply to the introduction of the English sparrow into America, as well as to the introduction of certain apparently insignificant insects into the vinelands of California.

Verily, brethren, it behooveth us to be cautious and modest in asserting our superiority in nature's domain—even for purely selfish considerations—without invoking more exalted motives, lest peradventure our thoughtless temerity shall be our own undoing.

Now, friend Ransacker may be tempted to say, in the language of "Pinafore,"

> "Though I am by no means clever,
> I could talk like that forever."

And doubtless he could, or even a great deal better. But then, brother Ransacker, perhaps everybody cannot talk as you and I can, and mayhap these observations shall awaken reflections in the minds of some who would not otherwise have given a thought to the subject. There are so many people who would be so good if they were not so thoughtless!

But every moral dissertation should end with a moral, which in the present case I will try to define in condensed form, as follows: (1) Do not inflict needless suffering on any creature. (Apropos, you who are given to driving high-headed horses, release the check rein when your horse is standing. The neglect of this simple demand upon your consideration for the comfort of your beast is a crying evil, and shortens the period of your horse's usefulness.) (2) Do not kill any creature unless you feel well assured that man's higher interests demand such sacrifice of a life which you can easily destroy, but which the wisest man can never restore. COAHOMA.

MISSISSIPPI.

The Weasels of North America.

UNDER the title "North American Fauna" the Biological Survey of the Department of Agriculture has for several years been sending out a number of interesting scientific papers. The last of these, No. 11, was published on June 30, 1896, and has recently reached us. It is a Synopsis of the Weasels of North America, by Dr. C Hart Merriam, Chief of the Division, and includes the one ferret and all of the weasels yet discovered in North America north of Panama. No less than twenty-two species and subspecies of true weasels are here recognized, eleven of which are now described for the first time. The ferret is the well-known black-footed ferret, originally described by Audubon and Bacheman, then lost for a time, and afterward rediscovered. Its habitat is the plains of the West from western North Dakota and northern Montana south to Texas. It is about the size of the mink. All our other weasels are included by Dr. Merriam under the subgenus *Ictis*. They are widely distributed and are a useful group of mammals, for they prey to a very considerable extent on field mice and other small rodents which do great injury to the farmers' crops. Of course in addition to this they kill some useful birds, and in the neighborhood of houses they sometimes destroy poultry, but on the whole it is probable that the good which they do far outweighs the bad.

Besides numerous cuts of skulls found with the text, there are five full-page plates of skulls and jaws of different species of weasels, and in addition there is a frontispiece giving in heliotype illustration heads of the bridled weasel and black-footed ferret.

Some Montana Birds.

Editor Forest and Stream:

On Oct. 2, 1895, while riding through the northern portion of the Little Rocky Mountains in Montana, near the southern border line of the Fort Belknap Indian Reservation, and only two or three miles from the St. Paul Mission, I saw on Peoples Creek two specimens of the dipper (*Cinclus americanus*).

I cannot recall that I ever recognized this species further east than this point in northern Montana, though a good many years ago I reported it from the Black Hills of Wyoming, and it occurs in the Powder River region in Montana as well.

In the autumn of 1890, in the St. Mary's Lake region, while ascending Cataract Creek, the principal branch of the Swift Current River, a tributary of the St. Mary's River from the northeast, I saw a young specimen of the varied thrush (*Turdus nævius*). It was snowing at the time, and the bird was so little shy that it permitted me to ride almost directly under it, so that it was not more than 3 or 4yds. from me when I stopped and looked at it for a considerable space of time. There is no question as to the identification, although, not having a shotgun with me, I did not attempt to secure the bird. During this same trip I frequently saw small flocks of the western form of the Hudsonian titmouse (*Parus hudsonicus columbianus*), which were extremely common among the pine forests of the region. GEORGE BIRD GRINNELL.

The Copperhead.

EAGLE ROCK, Pa.—*Editor Forest and Stream:* The copperhead of Missouri, as described by Aztec in FOREST AND STREAM of July 11, must be a different snake from that of the Allegheny Valley. While the general marking of the snake resembles that of the rattler, the colors are much darker, being a dirty brown marked with spots of a lighter shade of the same color; no yellow color as in the rattler. The triangular-shaped head is a distinctive characteristic of this snake.

They, as well as the rattlesnakes, are quite numerous in this section. One was killed by the section men on the railroad near here last week. A man was bitten in the arm a few years ago near here while cutting weeds along the railroad track. His life was saved by the application of the flesh of freshly killed chickens and the use of whisky as a stimulant, but his arm was badly crippled and broke out in running sores a year after he was bitten. They are found near the stream where it is both wet and rocky, and also on the islands in the river, under slabs and logs on which they can crawl out to sun themselves. They are never found upon the ridges where the rattlers are generally met with. They are more feared than the rattler, principally because they give no warning of their presence, but strike on sight. They are not nearly so quick in their actions as the rattler. MC.

A Lynx Family.

LOWELL, Me., July 13.—Since I was at the Sportsmen's Exposition in New York I have been under cover most of the time, with two months in the hospital, and am under the doctor's hands now. I am improving slowly, and hope to be at my camp by the open season for game.

The prospect of big game never has been better for years. I sent my grandson, N. C. Fogg and M. Stubbs up to my camps some three weeks ago, to make some improvements; they have returned and report moose signs plenty. They saw two feeding between sunset and dark in the water within easy range from the camp door. Wm. Staples, an old trapper, who is stopping at my camp to watch the dams that are full of water, caught three bears. My grandson set a trap and caught a large bear. When he and Mr. Staples came out last week they came down the stream in a canoe to the main road, and on their way, while passing through some wide dead water, they saw a Canada lynx with one young one crossing in front of them. The men paddled up to them and the lynx showed fight. They had nothing to capture them with but bare hands, and let them go ashore. As soon as they landed the little one scrambled up a tree. They saw two more small ones on the opposite side, and the old one was calling to them. The men paddled over to where they were, and the little fellows went up a tree like a squirrel. J. DARLING.

Tornadoes and Cyclones.

THESE phenomena are entirely dissimilar in their manifestations. The terms are now generally used erroneously by the press.

The tornado is a sudden outburst of wind in an otherwise quiet, sultry atmosphere; it is ushered in by a loud, indescribable roar, similar to a continuous roll of thunder; its path is very narrow—seldom more than 500ft. wide at greatest destruction; it moves generally from southwest to northeast, and rarely extends more than twenty miles; it very often rises in the air, to descend again at a point a few miles ahead; it is always accompanied by thunderstorms, with often a bright glow in the cloud; this cloud has usually a funnel shape, which appears to be whirling, though some observers have described its appearance like that of a huge ball rolling forward. A tornado may be considered as the result of an exteme development of conditions which otherwise produce thunderstorms.

A cyclone, on the other hand, is a very broad storm, oftentimes 1,000 miles in diameter, and sometimes can be followed half around the world; the winds circulate about it from right to left, or the way one turns clock hands backward (in the Southern Hemisphere this motion is reversed). The air pressure always falls as one approaches the center, where, at sea, there is a portentous calm, with clear sky visible at times. The cyclone winds often rise to hurricane force, but are not to be compared with the extreme violence of the tornado, before which the most solid structures are razed.

The French term *trombe* or *tourbillon* describes almost exactly the tornado, which term was first applied to severe squalls, with funnel-shaped clouds, experienced on the west coast of Africa, and which to this day inspire the utmost fear in the minds of the natives.

WILLIS L. MOORE, Chief of Weather Bureau.

A Playful Deer.

DR. H. J. FREDERICK saw a pretty sight early one morning a short time ago. He was on his way to Chelsea in his carriage, when he saw ahead a full-grown deer. The deer saw him and ran on ahead a way, then turned and looked back at the doctor. As the latter approached, he jumped a fence and kept on part way up a hill, again stopping, evidently filled with animal curiosity. Again he ran and then for the last time he stopped, his head just showing against the blue sky amid a field of daisies over the brow of the hill. He finally ran as deer usually do, and disappeared into a ravine, where he was lost to sight in the dense verdure.—*Kennebec Journal, Augusta, Me., July 15.*

A Bull Caribou without Antlers.

Editor Forest and Stream:

Seeing in your columns accounts of buck deer minus antlers I am emboldened to mention that a well-grown caribou without antlers was shot by me some ten or twelve years ago in Aroostook county, Me. The bull was well developed and normal except as above mentioned.

The time of killing was in October. The skin on the skull was fully haired and not the least indentation of the bony process which supports antlers was discoverable. I have not before dared to put the fact in print, but the accounts of the hornless bucks lets me in. PINE TREE.

[This note is extremely interesting. Will our correspondent give us a little more detail of the occurrence, What was the animal's age by teeth? Was it alone or with companions? If in company, of what sex were the others? What was the condition of the animal? Did it appear to have taken part in the rut?]

Hornless Bucks.

LOWELL, Me.—I read in FOREST AND STREAM about the hornless buck. Some ten years ago I killed in November an old buck that had no horns, but there were rough nubs that were just through the hair. I also saw another buck, killed at Pistol Lake, which we judged to be four or five years old and which had straight horns 1ft. long and large at the head. JONATHAN DARLING.

Game Bag and Gun.

THE HUNTING RIFLE.

WASHINGTON, D. C., July 9.—*Editor Forest and Stream:* My letter in defense of Tiam, printed in your paper of Feb. 8, set a number of your correspondents to pitching into me; not because of my defense of Tiam—for no one seems to have found fault with that, nor indeed to have mentioned it, I believe, except Dick of Connecticut, who acknowledged that I was right in supposing that when he wrote his criticism of Tiam he had never hunted moose—but because I said I thought if people would learn to hunt and to shoot they would not need the large bored, heavily charged guns when lighter ones would do the work, giving as an example my own experience of some years with a .44-40 Winchester. My idea is that good work is due more to the skill of the workman than to the quality of his tools, that a poor workman cannot do good work no matter what kind of tools he has, and that the man is a much more important factor in hunting than the gun. A majority of those who wrote about my views as to heavy guns disagreed with me, or rather said or thought that they disagreed with me. I put it this way because some of them misunderstood what I said and my position. A minority, composed of hunters some of whom could count their deer, etc., by the hundred, agreed with me that large calibers and heavy charges are not necessary for the kind of hunting I was writing about—moose hunting. I think a man should use a gun suited to the conditions surrounding his hunting and under which it is to be done, the kind of game he expects to kill, and his own ability and qualifications as a hunter and shot. The great bulk of our moose hunting is done in the Provinces of Ontario and Quebec, Nova Scotia, New Brunswick and northern Maine. Very few moose are killed in these localities at over 200yds., probably a large majority at less than 100yds., so that the kind of gun needed differs from that required for open country long range shooting, such as may be had west of the Mississippi. I am not an advocate of small bores; I shoot a .44cal. gun, which is only a hundredth of an inch smaller than the army Springfield, and large enough for any game found in the localities above named.

A rifle is heavy or light according to its powder and lead, not the weight of material in stock and barrel. A .44 40 I call a light gun, a .45 90 or .50-110 a heavy one. When I wrote that "It would not occur to me to carry a .50-110 or even a .45-90 for hunting. I might use such a gun at a 500 or 600yds. target match," I was on the general subject of light and heavy guns, and what I wrote meant that it would not occur to me to carry guns of such large caliber as .50, for instance, or shooting 90 or

110grs. of powder, while I might use such calibers or charges on a rifle range. I did not refer to any particular make of gun, nor did I say what weight ball I would use if going on a rifle range; long range rifle shooting was not under discussion. Range shooting at a target and hunting shooting at game are two very different things, done in different ways, and calling for different qualifications in the shooter. I confess that I have had a great deal of amusement from some of the letters, that of Hersey, of Santa Fé, for instance, who says: "Many hunters, if they make a chance shot with a gun and kill some large game at fairly long range, believe that they can always do it with that gun, and that no other gun could possibly equal it." Then he suggests shooting a sick horse or cow to see what a gun will do.

Burkhard, of Los Angeles, says I am "either a wonderful rifle shot or had a long run of good luck." Why he says this I do not know, for I mentioned no difficult shots, but only two or three which showed that the .44cal. gun would kill moose at the distance for shooting at which Tiam had been blamed. The most amusing are the letters from H. W. Brannock and others, including particularly one by H. B. S. in your paper of April 18—who give me a lot of advice and information about trajectories, perforation and scientific shooting.

Nearly all the writers of these letters make the mistake of assuming that I advocated some particular kind of rifle and a small bore for hunting moose. An examination of my letter will show that I said I had "hunted for years with a '73 model .44-40 Winchester with a 20in. round barrel," and had "killed a good many moose with it," and that I mentioned a few shots made with that gun, ending with this paragraph: "My advice to would-be moose killers is, learn to hunt and learn to shoot; you will soon see that you do not need a heavy gun nor pack load of ammunition. Enjoy the hunting, of which the killing is a small part."

I have never said, nor written, that a .44-40 or any other gun was the best for moose. There is no best gun for any kind of game except in the opinion of the man who uses it, and then it is the one he can use best. A hunter can kill a moose with almost any kind of gun. Old John Cheney, in the Adirondacks, showed me his moose gun in 1858: a piece of rifle barrel 18in. long with a pistol stock. He killed a good many moose with that, shooting a round ball, and thought it just the thing. It was light, easily carried and handy.

After reading what is to me, and those who know me, perhaps the most amusing letter of all, that of Frank H. Risteen in your issue of May 9, I repeat with emphasis the quotation from my January letter: "Learn to hunt and learn to shoot; you will soon see that you do not need a heavy gun nor pack load of ammunition."

I opine, from what Messrs. H. B. S. and Risteen say, that they are not good hunting shots, while perhaps good shots at a mark. H. B. S. seems to think the killing a moose running, at 200yds, so strange a thing as to require scientific explanation and suggests the old woman's way of doing it with closed eyes; while Risteen, who apparently has never tried that sort of shot, intimated that a gale of wind perhaps helped matters. I mentioned the shot only to show that at 220yds. the gun had put a ball clear through a full-grown bull moose; the running was simply part of the description of the incident, which I did not suppose would call for comment. A moose is an animal easier to still-hunt than a deer and certainly much easier to hit running at 200yds. than a Virginia deer is, doing the same thing, at 150yds. Mr. Risteen speaks of one of his friends as a great dispenser of lead and mentions his putting four shots from a .45 85 at 50yds. range in a caribou, which "still stood up and disputed the right of way." Not many years ago I went after caribou, one cold, windy, cloudy day in the last week of October, carrying a common Springfield cavalry carbine. I killed first a very large stag, running, at 250yds. Not being used to the gun, I gave too much law the first shot and struck the brow prong of his left antler; the next shot doubled him up dead. An hour after I killed two standing at 167yds., and later, after letting a number go unshot at, I killed a very fine stag in the open, which "disputed the right of way," but instead of taking four shots, dropped at one as though struck by lightning.

H. B. S. thinks a man to hunt moose should be able to puncture his cap with commendable regularity at 200yds., and Mr. Risteen also lugs in the rifle range and seems to think that "the man who has learned by careful and conscientious practice on the range how to handle a rifle" will make the best hunting shot. I admit that, as he says, such a man "will discount the Indian" shooting at a mark at least, because Indians, as a rule, are poor shots, but he will not discount any sort of a hunting shot shooting at game.

Good range shots are apt to be very indifferent shots on game. I have seen plenty of them tried. The two sorts of shooting are, as I have said, done in different ways and calling for different qualifications in the shooter. No game animal that I have hunted ever posed for me to go through the performances mentioned by Mr. Risteen in your paper of May 9 as those ordinarily to be gone through by the would-be moose killer in getting off a shot. The range shooter fires at a known distance, he can watch the flags and wind clock for the force and direction of the wind, ought to be posted on the effect of light and temperature, and tries to fire all his shots when the conditions are the same. It is all a matter of cold-blooded calculation: the conditions being favorable, wind gauge and sights properly adjusted, the shot ought to be "a bull well in at 6 o'clock," or the like. In hunting shooting there is no time for a series of observations to be collected and digested into a programme of action.

If the man with the gun has, as I suggested, learned to hunt and to shoot, he does not say the distance is 225yds., and stop to adjust an elevating sight, for he will not have one on his gun; nor will he mutter, the wind is a fifteen-mile one at 3 o'clock; the light is so and so; I must assume this or that position; and I must be sure to squeeze my trigger, not pull it; he will simply clap his gun to his shoulder and drop his game in the little opening across which he has noted it must run, before the range shooter has his sight half adjusted. A piano player does not stop to measure distances or to say I am an inch and a half further from the instrument than I was yesterday, I must recalculate the distance to the keys; he looks at the notes, and his trained hands strike keys and chords with unerring certainty. So with the hunting shot, brain, eye and hand have been trained by long practice; he knows just what he can do and what his gun can do, so that when the gun comes to his face it comes there right for whatever the conditions are, without conscious effort on his part—the proper estimate of distance, character of sight, allowance for wind, speed of animal, light, character of ground, etc., have all been made in a flash, and like as not, after he has fired, he cannot tell precisely how much of his front sight he saw or perhaps other details of how he shot. A quick lens and plate will catch an animal on the run, while a Carbutt B, about sensitometer No. 16, will take several seconds exposure and the game run perhaps 100yds. in that time. A good hunting shot soon picks up range shooting, but it takes longer for the range shooter to become a good hunting shot. If H. B. S. were to ask me to shoot a match with my friend Dr. Wilson, of Savannah, Ga., who in the recent matches there made 148 out of 150 at 200yds., off hand, with a three-groove Springfield army gun, I would refuse, because I cannot make that sort of score, but I would not hesitate a moment to shoot against him at game. It is true, I have shot on a range for eight or nine years. In our D. C. National Guard every officer and man is required to fire two scores of five shots each in the gallery, and the same on the range, at each of the four distances, 200, 300, 500 and 600yds., a possible total of 400. I have qualified as sharpshooter with a score of 384, well above the necessary 80 per cent., but that did not help my hunting shooting. I learned the latter years before I ever went on a rifle range. My hunting shooting I found of great service in picking up skirmish running on the range, because there one has to act promptly and quickly to get in a half dozen or more shots in a halt of thirty seconds with a single shot Springfield. Mr. Risteen wants "a weapon that will get there with approximate adjacency." I want a gun to shoot where I hold it. The gun to depend on me, not I on the gun. The "approximate adjacency" means simply what I referred to in my January letter, a gun so large that a ball from it striking anywhere in the vicinity of the game will deal death and destruction, so making up for the lack of learning to hunt and shoot.

H. B. S wants a scientific explanation of the method of killing game running. When I was a youngster at the University of Pennsylvania we were required to construct curves from their equations. A friend and I used to work out our demonstration as we sauntered homeward across the campus, pocket our notebooks, and spend the afternoon trying to solve the mysteries of $y^2=2$ px, incidence and reflection, as applied to a cricket ball. No theoretical demonstration on paper will enable a batsman to keep up his wicket against a good bowler, and if I were to show H. B. S, in a way I thought conclusive, that—M, representing a moose; D, its distance; S, the speed at which it moved; H, a hunter; W, a Winchester; V, the velocity of a ball from the W; $y^2=2$ px, the equation of the parabola described by the ball, etc.—P would necessarily be the point at which he should sight in order to "puncture" the moose in a vital spot, it would not enable him to kill a moose running. It is true, that is not a difficult thing for a fair hunting shot to do; but, like killing a bird on the wing, one must know how.

Risteen thinks I should be impounded because I can kill a moose with a .44-40 Winchester.

I went on my first moose hunt in the winter of 1860–61 on snowshoes. I killed my last moose two years ago, not hunting last year. The moose that have got away from me have been those at which I did not shoot. When I have wanted one and shot at it, I have killed it. I do not infer from Mr. Risteen's letter that his record is of that kind, as he seems, with others, to be still hankering after some sort of weapon that will not let game get away.

It may do no harm to my well-meaning advisers to say that I have been hunting with a rifle, more or less, for some thirty-eight or forty years, for thirty-five of which I have used breechloaders, and have handled, hunted with and tried all sorts of makes, shapes, actions, calibers, charges, lengths, stocks, sights, etc., from the old Halls and Perrys of ante-bellum days down to the latest improved Winchesters, Marlins and the like. I profess to know something about hunting, and can track game as well as I can shoot it. I am not wedded to any particular make of gun. I shoot a Winchester because it is convenient and has never failed me, and use a short barrel because, having only my left arm and the hand of that crippled, I can handle it better than a long one. The .44-40 cartridge has so far done all I wanted, so I have not used a heavier one as my standard. I have killed game with all sorts of guns. On one hunt years ago I shot two Maynards, one .50cal.; shot a bear one day with a .66 model Winchester, and two days after another with a Ballard. I have killed a panther with an old muzzleloader when nothing else was to be had, and deer, etc., with all sorts of guns. Several years ago I thought of using the .45-60 Winchester, but let it go. It would be a much more useful gun than the .45-90, which is overcharged with powder and good only for close range. When I reflect that since September, 1864, I have to do my shooting, hunting or otherwise, with only a crippled left hand, earning a reputation from West Virginia to far northern Canada for never letting game I wanted get away from me, it seems strange to find a lot of two-handed people clamoring for a gun that will do dear knows what, instead of using their superabundance of hands and arms. I sum the whole thing in a nutshell: A man who can shoot can kill a moose with almost any kind of gun, therefore learn to shoot and you need only to use whatever gun happens to be about.

As there is no moose hunting now until Sept. 1, I remark that I have fished for many years with a little 6oz. greenheart and bamboo trout rod with a red cedar handle, and have caught quantities of trout with it as well as bass, and big ones too. Now if any of the rifle caliber correspondents are fishermen, I suppose it will be in order for them to write to you to say that I should be impounded for using such a weapon; that a trout can be killed quicker and with more certainty by yanking it out with a catfish hook, cord and "pole," and dashing its brains out against a tree.

CECIL CLAY.

REPORT YOUR LUCK

With Rod or Gun

To FOREST AND STREAM,

New York City.

30CAL. MILITARY AND SPORTING RIFLES.

Editor Forest and Stream:

"IT is a mistake to suppose that these knitting-needle guns will not shoot straight."

This unqualified statement coming from a man who seems to be somewhat of a rifleman is a surprise to me, and it is also opposed to the experience and observation of other riflemen with whom I am acquainted. The writer has handled and knows the best results obtainable from almost every smokeless powder military rifle used by the different nations and he has yet to see the first gun of this class that can be depended upon to do reliable work at practical game ranges—100 to 250yds. Some of these rifles shoot remarkably well at long ranges, but not one that I know of will do the true and steady work required of a hunting rifle of even the second or third class.

The reason is evident: A quick twist and high velocity gives the long bullet an unsteady initial flight and it does not settle down to sober business until after it has traveled 300 or 400yds. It illustrates in an exaggerated degree the characteristic of the old-time long-range rifle—a vain ambition of the base of the bullet to get ahead of its point. Against military rifles for military uses I have nothing to say; in time they may prove perfectly satisfactory, even for sharpshooting. It is against the misuse of them that I wish to enter an emphatic protest, and also against the questionable action of the manufacturers in pushing upon the sporting fraternity this gun, but slightly modified and disguised under the name of the "latest improved 30cal. smokeless powder hunting rifle."

Too much nonsense is indulged in over these new rifles—both by the manufacturers with their Munchausen tales of the accurate and terrible execution done by these guns in far away lands, and by our inexperienced sportsmen who lose their heads completely over the flat trajectory and 60in. penetration of the steel-jacketed bullet. I have talked with a number of the latter, and they were utterly incapable of realizing that these two features in this arm are of but little practical value for hunting purposes, and that there was really nothing for them to work up any enthusiasm over. This smokeless .30cal. craze reminds one of the "explosive" bullet mania of about twenty years ago. It took many sportsmen several years to learn that the expansive bullet was actually the better killer of the two. For the benefit of the N. B. gentleman I will cite a few extracts from the record of the tests made by Gov. Morton's special commissioners appointed to select for the use of the National Guard the best smokeless powder military rifle made in this country. The tests were concluded but a few weeks ago, and as the ability of the commissioners and the marksmanship of the experts cannot be questioned, the results of the tests ought to be quite interesting to those sportsmen who are contemplating the purchase of the new rhinoceros gun. In order to make a comparison of these military guns with our black powder sporting rifles, I must first classify the latter in the order of their accuracy:

A first-class rifle, .32 40-165, will shoot nearly all of its shots into a 6in. circle at 200yds.

A second class, .45-75 350, will require an 8in. ring to inclose them.

A third class, .38 90-250, needs a 12in. bullseye to hold them.

While a fourth-class rifle, .50-110-300, will not throw its bullets into anything smaller than a 20in. circle at that distance.

What will the .30cal. smokeless powder military rifles do? If we are to credit all that we hear or see in print about these rifles they will simply do wonders; but the truth is, too much vermilion is used in painting the reports of the remarkable accuracy and killing power of these guns. For example, the gentleman in N. B. informs us that "In England last year a battalion team of eight men, shooting at Queen's ranges (200, 500 and 600yds.), averaged 96 points. Another tells us that these rifles will shoot a long series of shots into a 7in. ring at 500yds. Still another claims that they will shoot 5 consecutive shots into a 3in. circle at 200yds. In reply to the statement that 96 points were made by the Englishmen with the Lee-Metford arm, I must first ask the gentleman who gives us such lucid information to be sufficiently definite to name the number of rounds fired by the marksmen while making this score. If it was the 70-round match, the score should be buried, not published, as 96 points out of a possible 280 deserves no better fate. But if the man means that the marksmen made 96 per cent.—oh, shades of Æsculapius and Hippocrates! take him under the sheltering care of your remedial wings at once, and quietly remind the gentleman who wears "rock maple pants" that the best official score made in the English army with this or any other smokeless powder rifle is 208 out of a possible 280—70 rounds, individual firing, bullseye counting 4.

As for any of these guns shooting a string of 5 or 10 shots into a 7in. circle at 500yds., or into a 3in. ring at 200yds., I must place myself on record as a doubting Thomas. I have never seen it done, and as near as I can learn no such score has ever been attempted, much less accomplished. A 3ft. circle at 200yds. strains the capacity of many of these rifles, as you will note by referring to the commissioners' record. Take, for example, the first gun tested. The inventor, an excellent shot, fired from rest two strings of 15 shots each at the regulation 8×10in. ellipse at 200yds. The expert marksman of many medals then took the gun and fired the same number of shots at the same distance. Between them they scored 5 bullseyes; 20 shots struck outside of the 24×30in. ellipse—part of this number missing even the 40×50in. circle—while several of the bullets failed to find the 4×6ft. target. The second rifle was first shot by the manufacturer's expert, then by the commissioner's marksman. The combined score counted 8 bullseyes out of 30 shots, 13 bullets striking outside of the 24×30in. circle and in the 40×50in. ellipse, with two shots off target.

The third gun's accuracy was tested by the private and the official experts, who together scored 4 bullseyes out of 27 shots, 11 bullets striking the 40×50in. ellipse, with 2 off target.

The fourth gun, made by the best rifle makers in this or any other country, was brought out to show the commissioners what it could do, and it did the most regular work of any of the six rifles tested. The two experts fired 60 shots in strings of 15 and scored 16 bullseyes, with 9 shots in the 40×50in. circle and 3 on the outer target—none off the target!

Only once out of the many 15 strings at 200yds. did the

experts succeed in placing 10 consecutive shots into the 24×30in. ellipse. Sights and conditions were sufficiently fine and favorable to call for much better shooting at 100 and 200yds. This claim is strengthened by the fact that when the distances were increased the shooting improved—the best by far was done during the contest at 800yds.—which goes to show that the construction of the rifle and the proportions of the ammunition can be held accountable for the crazy short-range work. It is a long-range gun that is unreliable at short distances. When the experts were cut down to the 100yd. range even the 24×30in. target was missed, and 10 consecutive shots were not placed in the 8×10in. bullseye! This kind of shooting might do on the battlefield, where it made no difference which man was hit, but not so for game shooting, where it often happens that your only target is a small patch of black, brown, gray or white hair that your humane heart tells you must be hit fair or not at all.

From the above record, which is a fair sample of the accuracy of smokeless powder rifles in general, we can arrive at but one conclusion: that is, the smokeless powder rifles do not compare in accuracy with the lowest class black powder sporting rifles at their ranges; and in order to classify these new guns we must use a larger circle, and that is impracticable, as the fourth class rifles strain reliability a trifle too much already. Should these military arms in time develop an accuracy sufficient to admit of their being used on large game, their want of power would still place them at a great disadvantage. The readers of the FOREST AND STREAM have already had their attention called to the fact that when the soft nose bullet is substituted for the regular steel-jacketed projectile it loses over 80 per cent. of its penetration and is of but little service for anything larger than small deer at broadside shots; and when we come to consider the "improved (?) smokeless powder sporting rifles" this defect is increased to an alarming extent, as these hunting humbugs have but a trifle over one-half the penetration of the military guns, or less than one-quarter of the power of the .45-75, and should be thrown entirely out of consideration when a rifle is wanted for moose or big bears. As my friend Brannock knows the killing power of bullets I was not surprised to see him brace himself to keep from falling in a faint when a certain barbarian rifle maker told us that in India his gun repeatedly killed with a single shot the biggest elephants found, and that it was a common trick among sportsmen to bag two rhinoceros with a single bullet, shooting them while standing end to end, the bullet going through both animals and killing them like a stroke of lightning. H. B. S.

NORWICH, Conn.

CHICAGO AND THE WEST.

Forestry Commission.

CHICAGO, Ill., July 16.—Three members of the U. S. Forestry Commission were in Chicago this week on their way West to inspect the new forest reserves in northwest Montana and the forests of the Puget Sound and Oregon regions. The members present here were Prof. W. H. Brewer, of Yola Univ.; Prof. C. H. Sargent, of Harvard, and Gen. H. L. Abbott, U.S.A. There are seven members of the commission, and two more will join the above mentioned later on, only five being on this tour. It is their duty to investigate matters at each national reserve and report any needed legislation for the betterment of the forests and streams thereon.

Uniformed Game Wardens.

Mr. Michael H. Cahill, of Madison, Wis., deserves thanks for an idea entitled to be called new. In a letter just at hand he calls attention to the need of better protection for the big game of the pine woods country, where, he says, the local warden system is useless because no resident dares proceed against another. Mr. Cahill thinks the wardens for the deer country should all be non-residents, appointed from the southern part of the State. He adds:

"All these wardens should be mounted on good horses and armed with a .38cal. revolver and with a .38cal. carbine carrying a sword bayonet. The pistol cartridge should be shorter and carry less powder and lead than that of the carbine. The uniform should be of gray cloth, because that is best and most serviceable, and a badge made out of nickel should be worn with the uniform. Horses are cheap now, and the mounts would not cost the State so much as formerly."

I do not deny that a warden made up as Mr. Cahill suggests would be a very imposing personage, perhaps more so than any game warden of our country has yet been, but I fear Mr. Cahill has not been much in the Wisconsin deer country, or he would realize the difficulty of getting a horse—even if ridden by a man with a badge—more than 10ft. into some of the swamp windfalls where the pack trails go. Mr. Cahill thinks that game protection should be a national matter, and says:

"There should be a plank in the platform of all the political parties pledging them to the protection of the wild game in all our States and Territories. The People's party meets in convention at St. Louis July 22, and the Democrats are in convention now at Chicago. Will you try to get a good plank put in the platform of these parties?"

Unfortunately I was away fishing at the time of the Democratic convention, and I will be away fishing again at the time of the Populist convention, so a great many national affairs will have to go unadjusted for awhile yet; but I will have the planks put in four years from now—unless I should be out fishing again. But I think there ought to be a drum corps go with the brigade of mounted wardens.

Alaska Aztecs.

An item in the daily press states that horses were unknown in the new gold country of Alaska until the present season, when a mining party took some in at the expense of great effort. The natives of the Indian villages were wild with fright at seeing these new creatures, and it is said that even the dogs took howling to the woods in terror at the apparition. It would seem there is some new country left, after all. What will the Alaskan Aztecs say when they see the bicycle?

A Handsome Steal.

Funny things sometimes happen in the newspaper business. Yesterday a reporter came into this office from the Chicago *Tribune*. He bore a clipping from a Chicago evening paper purporting to tell of certain good catches of fish in different parts of the country, especially in Wisconsin. The reporter was instructed to learn whether I could give any information concerning those large catches and the addresses of the anglers named. I looked at the clipping of "news" items, and at once recognized the matter as my own, taken direct from the "Chicago and the West" of the current week of FOREST AND STREAM. Further on came very full news of the salmon, trout and other fishing in Maine and other Eastern States. This I recognized at once as also taken direct from the columns of FOREST AND STREAM. It was a very handsome steal, with no credit of course, and all handled with a lovely air of journalistic confidence only marred in respect of a place or two where the news editor had fallen down in his attempts to be briefer and wiser than the men who paid for the news. So I was able to give the *Tribune* man very good directions about the facts which its less conscientious contemporary had swiped bodily from FOREST AND STREAM. Don't believe everything you see in the papers, unless it's in FOREST AND STREAM.

In Chicago.

Mr. C. E. Willard, of the Colt's Patent Fire Arms Mfg. Co., is in Chicago this week, looking well and doing well. Mr. Willard was instrumental in the recent sale of about 4,000 revolvers to the New York police force, of a new, small caliber model. They will probably try it on a dog, and they do say there are several of the "finest" who can hit a dog these days.

Mr. Harry A. Loughran, of the Iroquois Gun and Rifle Club, of Pittsburg, Pa., is in the city for a time and called on FOREST AND STREAM here, as I hope every sportsman of the country will when he is in chicago. That is what the office is for.

Mr. Eugene H. Lahee, late of Alton, Ill., a sportsman and rifle shot of skill, has engaged in business in Chicago, being now treasurer of the Indiana Steel Casting Co., of 1121 Monadnock Block. I trust we shall now hear more of those once famous rifle competitions in which Mr. Lahee, his friend Mr. H. R. Wills, of Alton; the Chief with-two-Stomachs, of New York, and the writer used formerly to engage. I still have the pewter championship cup I won after many struggles, and I were a poor sort of champion if I did not put up my trophies for a few last final contests before retiring from the field. Will anny of these gentlemen step upon my coat?

Death.

Very shocking were the fatalities this week in the family of Mr. M. R. Bortree, of this city, the president of the National Association and well known in protective matters. Within twenty-four hours two of the brothers, Edward L., aged fifty-four, and Franklin S., aged fifty-seven, were taken away by sudden death. The former died on Saturday of cerebral hemorrhage, and the latter the next day of apoplexy. Both were well-known and respected business men. Mr. M. R. Bortree and Mr. H. W. Bortree remain of the family of four brothers, and are entitled to the sympathy of friends at such a serious and so sudden a loss.

Very Ill.

Mr. Chas. Kern, a prominent sportsman of Chicago, often president of the Audubon Gun Club, and ex-president of the Illinois State Sportsmen's Association, lies seriously ill at this writing. His many friends hope his ultimate recovery. E. HOUGH.

1206 BOYCE BUILDING, Chicago.

DOES HOUNDING MAKE DEER SHY?

Editor Forest and Stream:

Mr. W. W. Mosher, in your paper of July 18, says that "just so sure as hounding is stopped deer will be wiped out. Hounding keeps them wild, and not so easily approached by the still-hunter."

Is this so? I have always understood, from what the woodsmen in the northern part of Herkimer county said, that hounding made no difference in the still-hunters' prospects, but if still-hunters hunt the ground over for a few days the deer get so wild that nothing but the hardest kind of work would bring the hunter in sight and range of his game. Van Dyke, in his "Still-Hunter," I believe, says that only a still-hunter will make deer wild as regards still-hunters.

I have still-hunted in the Moose River region of the Adirondacks the day after the hounding season closed, when the deer had been kept on the jump for weeks, and found them far easier to approach than at the beginning of the hounding season. The trouble with hounding is not that it makes the deer hard to kill, but that it renders them easy victims to anybody.

When a deer is running at full speed, with a bellowing brute of a dog after it, it cannot exercise its faculties; it has no time to think, and so it rushes to the deadly foe on the water's edge, where it would not have gone under any circumstances.

When the still-hunter puts his wits against the deer's he does so at a time when the deer is in a quiet, calculating mood; but the one who kills deer before a dog requires about as many wits to kill a deer as an old cow does to eat grass. RAYMOND S. SPEARS.

NEW YORK.

HOW TO HOLD A REVOLVER ON GAME.

DENVER, Col.—*Editor Forest and Stream:* Among the mountain and plainsmen there seems to be one word of advice to the tenderfoot trying his first six-shooter: "Let her lie loose in your hand." My .45 Colt's, double-action, 3¾in. barrel, jumps halfway to my shoulder, but the tin can has a hole in it all the same. The gun is held as loosely in the hand as possible, and the arm partly bent and as flexible as possible, yet the gun jumps as much as it wants to. No man I have ever seen can hold either the .45 Colt's or the .44 S. & W. to place when it recoils. If the barrel is short enough the bullet is safely out of the barrel before it jumps, on the same principle as a cannon is fired. What our target friends say about the trigger pull is just as true in practical use as at the target.

If you are hungry and want that jack rabbit for supper to help out the bacon, try this way: Sit down (with due regard to cactus), with your knees drawn up, heels together, if comfortable, put an elbow on each knee, hold your six-shooter loosely in both hands, with the ball of your left forefinger resting on the nail of your right forefinger, and blaze away. If you grip your gun good and hard you will probably have bacon straight two times before dinner (beg pardon—luncheon) next day. If you "let her kick" you may have rabbit.

As to shooting from horseback when on the gallop, there is only one way: "Throw your bullet" just as you would a stone—on the same principle as our shotgun friends sometimes shoot—snap shooting. A good shot can gallop along a wire fence and put a bullet into every post for six shots. There is no chance to aim through the sights whatever. Do not look at your six-shooter; look at what you want to hit. Nothing but practice, practice, practice, will give you this art; and on acquiring it, it is as easily lost as it is hard to gain. It takes about as much practice to do this well as it does to play a violin well. It is not for target use at all, remember, and is not as accurate as sighting when standing still; but for a snap shot across a table, from a running horse, or in a tossing boat, where an ordinary sighting shot would be useless, this way of "throwing the bullet" will give you "a fighting chance" to hit your object. SIX-SHOOTER.

Migration of Quail.

MARYLAND shotgun sportsmen anticipate sport near home next fall. For three years disappointment has marked the efforts of sportsmen who have tried to find quail. Harsh winters and the drowning rains of spring have been credited with being the cause of the scarcity of birds.

The absence of birds near home caused gunners to go to distant points, and many who went to Virginia, North Carolina and South Carolina found game equally scarce there.

This scarcity has produced some good results, which are now beginning to show. Stock birds were bought in the far South and turned loose in Maryland, where they have increased and multiplied. The fact of young broods of quail being found several weeks earlier than usual in this State aroused careful attention on part of the sportsmen who are ornithologists, and they have decided that the early hatchings were due to the fact that the parent birds were natives of the South, which hatched early under the influence of the warm weather of last spring.

Mr. Joseph Newkirk, an old and experienced gunner, decided to test the question as to migratory habits of the quail. Two years ago he turned loose 200 birds at Grace's Quarters, Baltimore county. Quail have four toes, and he cut off the back toe of each one liberated. He advertised the fact, and shortly afterward found that one of the old birds had been killed ten miles north of the point at which it was turned out.

The questions which present themselves to persons who are interested in restocking and preserving quail are many, and the scarcity of the gamest of birds should now bring the matter to notice more forcibly than it ever has been. Instinct would naturally cause the birds to migrate to the South when a severe winter comes.

Though it was equally as cold in Maryland as it was in Virginia during the last four winters, the percentage of birds found in the autumn to the number usually found was greater in upper Maryland than in the lower counties of the State and in Virginia and in the Carolinas.—*Baltimore Sun.*

Maine Big Game.

DEAD RIVER, Me.—Thinking that perhaps a few items of the prospects of big game for the coming season would be of interest to some of the FOREST AND STREAM readers, I send the following:

Moose are getting to be very plenty; several large bulls have been seen, besides numerous cows and calves.

Deer are numerous; to see four or six at a time is nothing new this season. A drove of eleven deer were seen at two different times recently.

Partridges, ducks, foxes, rabbits and squirrels are without doubt more plenty than ever recorded.

The trout fishing in our lakes, ponds and streams is very good. Guides J. G. and H. E. Harlow were at Otter Pond last week with a party of four gentlemen, and in three and one-half hours' fishing they got 446 trout; average weight better than ¼lb.

More large game was taken in this section last season than in the rest of the Dead River region.

Do not think that we are away back in some almost inaccessible place, for we have a railroad with two trains per day from Boston within six miles of this great game region.

If any brother sportsmen are interested in this new region or have any intentions of coming back here into Maine, we will gladly and cheerfully send them any information they want of the numerous camps and hotels in this section. J. G. AND H. E. HARLOW.

Camp-Fire Flickerings.

"That reminds me."

Old Juan Gomez.

Editor Forest and Stream:

In a recent issue allusion is made to my old friend Juan Gomez, of Panther, Ky., whom I first brought to the notice of the readers of FOREST AND STREAM some fifteen years ago. Old John Gomez, as he is known on the west coast of Florida, is still a hale, hearty and patriarchal old boy, though nearly 120 years of age. He is currently reputed to have been a buccaneer in his early days. I once questioned him concerning this rumor, when he replied:

"Yes, when I was a young-a man I was a littla wild-a. I s'pose-a w'at you call a pirat'; but when I got-a married my wife-a she no like-a dat pirat' biz, so I reform-a."

"You reformed and quit such a nefarious business, then?"

"Oh, yes; my wife-a no like-a dat, so I reform-a and go into a respect-a biz!"

"What business was that?"

"I refit-a my schooner and go in de slave-a trade!"

J. A. HENSHALL.

TAMPA, July 9.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Sea and River Fishing.

MEN I HAVE FISHED WITH.

III.—John Atwood.

LOOKED at from later years John was not a bad boy, neither was he a good boy, but just one of those ne'er-do-wells that could not be kept in school nor out of the woods. He was long of leg and could tell where most of the bird's nests were within a circle of two miles with the schoolhouse as a center. His acquirements at school dwarfed beside his knowledge of the best "fishin' holes," and some parents I knew did not look upon John as a desirable companion for a younger boy. He was some three years my senior and his knowledge of the country roads, and of the birds, beasts and fishes made him easily a leader of boys who had a taste for such things.

It was long after Reuben Wood had shown me how to fish that I sat on the railroad dock fishing with a pole and float, for the Albany & Boston Railroad had invaded the village, coming down between the present site of the Episcopal Church and the district school to where the lower bridge to Albany now spans the Hudson, and it made a good fishing place for boys. John Atwood came there that Saturday morning and sneered at my tackle. "Yes," said he, "that's the way Reub Wood fishes, but there ain't no fun in it, for you h'ist 'em out too quick with a pole; throw that away and take off yer float, rig yer sinker below the hooks, and when you get a fish haul 'em in hand over hand and feel 'em wiggle all the way in, that's sport!" John's advice was followed and approved, the heavy sinker with two or three hooks pendant above it was swung around two or three times and away it went with a plunk, and a new style of fishing was acquired, much to Reuben's disgust, but the majority of boys about Greenbush seemed to prefer this mode. The fish that we took in the Hudson then were white and yellow perch, bullheads, shiners, eels, spawn-eaters (which were small minnows) and an occasional sucker; but John knew of the mud creek and the dead creek, a couple of miles down the river, where the fish were larger and more plenty.

One Friday morning while on the way to school John was met. Two boys were with him, and they were on the way to the mud creek with all equipments. It was in the spring of the year, and John said:

"Come along and have some good fishin'; I wouldn't go to school when the fish are biting as they are now. We are going to stay till Sunday night, and have three days' fishin' and birds' nestin'. Come along; you're a fool if you don't."

"Where will you sleep?"

"In Rivenburg's barn in the hay; it's good and warm, and we got lots o' grub an' lines."

Here was temptation in very strong shape, but the consequences loomed up. His mother was a widow, mine was not. I could square it with mother, but— After some debate the books were left at the schoolhouse, a hasty note written to mother, saying that I would be home Sunday night, and we went.

Such fun! John cooked fish over coals of fire, we covered ourselves in the hay at night, and the crickets sang weird songs, the bats flapped about, the frogs sung and the owls hooted. Surely this beat Robinson Crusoe all hollow, for he was all alone for a while. This was life of an ideal kind. Sunday night, when a reckoning might be made, seemed too far off for consideration. The present life was perfect!

We made explorations across the bottom lands and up the wooded hills, saw wild pigeons, and John wished for a gun; chipmunks, squirrels, birds of kinds new to most of us, but which John could name, and a rabbit! Here was big game indeed, and when John oracularly said, "School is a fool to this place," there was no dissenting voice, and all regretted when the time came to depart. We had more fish than we could carry and only took the freshest and best, and toiled wearily homeward, one in the party at least dreading the arrival. What mother said over the torn clothes and spoiled shoes we will not repeat, but when father invited me to a conference in the woodshed she said: "Joseph, I have punished him severely, and he has promised never to go off again without permission, and he should not be punished twice for the same offense." A look of disappointment crossed father's face; he evidently missed something that he had mentally promised himself and me, but as I told John Atwood next day: "Mother spanked hard with her slipper, but it was nothing to what she saved me from," and John agreed that it happened just right. "But," said he, "we are going there next Friday for three days more of it; will you go?"

"No, I can't; I must go to school."

"Ask yer mother; she'll let you."

"Not now; father would object; wait a little later and I'll join you there on some Saturday." And I did.

As near as memory serves, I was about eleven years old when John proposed that I join him and another boy in the purchase of a gun, which could be bought for $1.50. It was an old flintlock musket that had been altered to percussion, and we bought it. A grand hunt was arranged and off we went. By drawing lots it was decided that I was the first to carry the gun until game was shot at and then it was to be passed to the next. No knight who, after watching his armor alone all night, girded it on for the first time to engage in tournament or battle, was prouder than I at shouldering the musket after John had loaded it; nor did Natty Bumpo ever scan the distance for sign of mingo keener than my eyes penetrated each bush and thicket for game. At last I saw it! We were in a road between two rail fences and the game was in plain sight a few feet beyond a fence. Slowly I crept up after John had cocked the gun until the fence offered a rest and the game appeared unconscious of my presence, a tribute to my cautious approach. Surely I was destined to be a mighty hunter! Be still, my heart, your beating may destroy my aim! The game was fully 10ft. from the muzzle and deliberation was necessary. A long sighting of the gun and the trigger was pulled. "Hurrah! I killed him! I killed him!" and jumping the fence I picked up what had been a beautiful little summer yellowbird which had been picking the seed from a thistle top, wholly unconscious of danger, but now a stringy mass of flesh, bone and feathers. Reviewing this feat in more mature life it looks this way: If some kind-hearted man had then appeared and taken that gun and broken it on the fence and then whaled me with the ramrod, he might have taught me that the life of that little bird was as valuable to him, and perhaps to the world, as my own, and it had been killed to serve no useful purpose. Oh! ye unthinking fathers who use guns for what we call legitimate sport, do not give your boy a gun. A boy is a savage. I was one, an unthinking savage who would take life without other reason than the pleasure of taking it. Remember this: You can carry a gun all day without shooting it, if no opportunity offers; you have no desire to kill anything except what you consider game; but a boy is bloodthirsty, and his desire to kill is at once intensified when the means are at hand. As a boy I did my share of killing every living thing I saw, whether of use to me or not, and most boys will do the same. Once I wrote: "Don't give a boy a gun until he is ninety years old, and then fit him out and tell him to shoot at every swallow, bat or chipmunk that he may meet." Bless me, how I have preached over that little yellowbird!

John could build bird cages, and in the spring we would wade through the wet grass of the meadows to trap bobolinks, which we sold. He was most successful in rearing robins, thrushes and other young birds taken from the nest, while most boys lost theirs. Later we used to shoot wild pigeons in the spring and fall flights, and with our old musket would bring back from a dozen to a hundred birds in a day, with an occasional snipe, squirrel or rabbit. In winter we set spring poles and box traps for rabbits, and within four years from our first fishing scrape we knew the whole country within a radius of ten miles from Greenbush on the east side of the river. My father was a stern, strict business man, at that time part owner in, and Albany agent of, the Eckford line of towboats, having three steamboats and many barges plying to New York, for then the canal boats came no further than Albany. Thirty years later, when John Atwood was dead, father told me that he once put John in charge of one of his barges; but he would not attend to business, and he had to discharge him and then give him a subordinate place. "Confound him," said father, "he has no sense of responsibility; he is sober and capable, but would just as soon be a deck hand as to be captain." He had John's measure to the fraction of an inch. John worked because he was forced to do it; if by diligently applying himself for a year he could attain a competency, he would have said, "I would rather go a-fishin'."

I have said that John was a long-legged boy. He was also a very quiet fellow—never in any boyish fights or troubles. These qualities commended him to Mr. Charles Crouch, a harness maker and superintendent of the Methodist Sunday school, and John was in demand for the May anniversary to carry the center pole of the banner, while two shorter boys steadied the corners with cord and tassel. "Jine the Sunday-school," said John to me; I'll get you to hold a corner of the banner, and we will get the first whack at the refreshments when we stop in Albany." I "jined," and at the first meeting there was a pathetic appeal for funds for missionaries, and I chipped in the only sixpence I had, and which John and I had figured to spend in this way: six fish-hooks at Coshy Lansing's, 2 cents; ten knots of blue fish line at Tom Simmond's, 2 cents; lead at Pop Huyler's blacksmith shop, 2 cents. "And you went and threw that to the heathen," said John. "Who are the heathen?" he asked. "What do you care about the heathen that you give 'em your last cent? I thought you had some sense! Now we've got to make a raise to get some fishin' tackle in the mornin' just because you are a blamed fool! I only go to Sunday-school just before anniversary so as to get in on the refreshments; they don't get no sixpence out of me. Why, them heathen is all right; they're satisfied to be heathen an' I'm willin'." I had done wrong and felt abashed in the presence of a superior mind, and to-day I regret the donation of that coin, for John's closing argument is good.

The "nut orchard" lay just out of the village and consisted of something like a hundred trees of shell-bark hickory, straight of stem and tall. It belonged to Glen Van Rensselaer, a man of middle age then, who watched it as well as he could in the nut season, but we boys always had a sentinel out when foraging, and his shabby old silk hat in the distance was a signal to gather the plunder and leave, in order to avoid confiscation of the results of our labor. There had not been frost enough to drop the nuts and several of us who were strong and active climbed the trees and shook the limbs while smaller boys gathered the nuts. A sentinel had just called: "Here comes Glen!" when there was a scream and a thud, and a poor little Irish boy, whose name is forgotten, was lying on his back. We were crying around him when Mr. Van Rensselaer arrived on a run to catch us. The boy's head was bleeding and his brain protruding, but he breathed. We gave him water and a passing hand-car on the railroad took him down to John Morris's rope walk, where his people lived. He died next day. Most of the boys were shy of the nut orchard that fall. The place is now filled with cottages, but the name is retained. The "Indian orchard" is also gone, and not an apple tree is left to hold the nest of a flying squirrel or a woodpecker.

West of the nut orchard some acres of pasture were plentifully sprinkled with hawthorn bushes, which, by the way, were called "thorn-apple bushes," and among these were many of the big paper nests of the bald-faced hornet. What fun it was, with John as the leader, to advance in line, a cedar bush in the left elbow and as many stones as the forearm would hold against the body and a big stone in the right hand. "Fire!" cried John, and the stones flew in rapid succession, and when all were gone the enemy was upon us. Then how we retreated, swinging the bushes about our heads, and how an occasional yell would announce the wounded! Fun? It was the very height of fun, with its spice of danger, without which some one has said there is no sport. Those who know the bald-faced hornet know that he is as swift as a hummingbird and carries a poniard that for penetration and venom discounts a bumblebee or any other stinger with wings, and this reminds me: John Atwood and I had been away beyond Bath after berries, when we passed a house that stood only a few feet from the road. In front, just inside the picket fence, stood a tall pear tree, well loaded. "Them's nice pears," said John, disdaining all grammatical rules, "le's have some." A study of the situation showed that I could easily mount the tree, shake it, and drop about 10ft. into the road, and, if the people in the house were aroused, John would be off with what pears he could get outside the fence. I shook. Hard, burning things struck my face and I saw the nest of a colony of bald-faced hornets within a foot of my head. Something dropped, it was I, and I dropped running. Oh, the agony of eleven stings on head, face and neck, and the swollen face of a boy whom his mother did not know an hour later! Days in bed and a doctor seem a trifle now. The pears were not good and John Atwood did not get a sting. To-day, in 1896, it seems as if it was my mission to volunteer if there were hard knocks to be got, while some other fellow got the pears, but this is a most common case, and we see that same sort of fellow every day and in the economy of nature; he is a necessity to the fellow who gets the pears without the stings.

John taught me how to snare the brook suckers with a noose of copper wire on the end of a pole. Brass wire was too stiff, he said, and horsehair was not stiff enough. We would get above the fish and drift the open loop so as to inclose him, and when it was about his middle a smart jerk landed him on the bank. If the current took the snare one side and the fish was not disturbed we would try it over.

"There's trout in a little crick down back of Kinderhook landing," said John one day so far in the past that it may have been half a century ago, or when I was from thirteen to fifteen years old. The name was strange and aroused no more enthusiasm than that of perch, bullhead or other fish, and John explained that they were "nice fish, handsome and good eatin'." Would I go? We could get a ride on a hand-car on the B & A. R. R., then known as the "Western R. R.," and would have only a mile to tramp. We went, and my first trout on a worm is a most distinct memory. The "crick" was a small brook that in places one could jump across and was fringed with alders and alderberries. Here John went back to the system taught me by Reub Wood, for he said that in such small "cricks" you must use a pole, but it must be short. We took home about forty trout and to my great astonishment my father was interested in them and became enthusiastic over some trout fishing in his boyhood. At last we had tastes in common!

Once we walked down the track of the Boston Railroad to Kinderhook Lake to fish for pickerel through the ice, after planning the campaign for weeks, and we carried knapsacks filled with camping goods of more or less utility. We got a fish and took a rabbit and three grouse from the snares of some poacher and had a good time, all of which was written up for FOREST AND STREAM of Jan. 3, 1889, as a "Christmas Reminiscence." The great wonder to me then and now was where John learned all the mysteries which he unfolded to me. He never told this and perhaps his air of mystery helped to magnify his knowledge. He did not consort with Port Tyler, the local Natty Bumpo, who lived by rod, gun and traps, for Port was a solitary man, and later, when I was taken as an occasional companion by Port, he once said: "John Atwood can't stick to one thing nor one place long enough to do anything at hunting, he runs all over, and, durn him, he spoiled some good pa'tridge ground for me once." This remark was a little foggy, but the impression was that John had interfered with some fences and snares that Porter had set; but it was only an impression, for no more was said. Perhaps the snares that we took the grouse from were Port's! Port's remark fitted John in other respects than hunting. A job in John Ruyter's tannery, grinding bark, in Ring's "white mill," or in Herrick's distillery feeding cattle, was not kept long. My father's estimate of him was a just one, but of the boys that I knew in youth few have a warmer spot in memory than John Atwood.

Among the boys of Greenbush was one named Philip Spencer, who came from Hudson, and at one time was a schoolmate of my oldest brother, Harleigh. His father was the Secretary of War in President Tyler's cabinet in 1841. Young Spencer had a copy of "The Pirates' Own Book," and left it with one of the village boys with the remark, "Keep this until you hear that I am a pirate," and through his father he was appointed midshipman in the Navy in November, 1841. He planned a mutiny on the U. S. brig Somers, was discovered and with two others was tried by summary court martial and hanged at the yardarm on Dec. 1, 1842. This book passed around among the boys of the village for years until John Atwood loaned it to me. It had pictures of heroic pirates, with belts well stuffed with pistols, boarding merchantmen and putting the crew to the sword or making them walk the plank, and it had in it Spencer's autograph and newspaper slips of his execution. My mother found it in my trunk, and after making me tell where I got it, took it to Mrs. Atwood with the request that no more books of that character be loaned to her son. John said: "It was a fool book anyway, and there was no fun in sinking ships and killing people," and here again we can agree with John.

An old darky who had been a cook for my father in his young days, when he was a sloop captain on the Hudson, had small-pox, and father fitted up a room for him in the barn, and John Atwood volunteered to attend him, and stayed by him until he was out of danger. As I have said, John may not have been a good boy, but he was not a bad one. Idle, shiftless and lazy? Yes, if you will, but that is a combination to get much out of life, in a way. John may have been "shiftless," but legs that followed him on a day's tramp would deny the charge of laziness. It would be fairer to say that he could only apply himself to things which interested him. That is my latter day summing up of his character. Men who think that the accumulation of money by continuous industry is the main thing in life have always decried those who did not follow their precepts and examples, but there are other standards of life than those of old Ben Franklin, who thought that a boy or man should work like Gehenna and never spend a cent. John Atwood followed the bent of his inclination and was happy when he did not have to work at uncongenial labor, yet who could be more energetic at removing a stone heap and digging out a rabbit? But as he approached manhood the necessity of labor that was more remunerative gradually pressed upon him, and the day came when John had to leave the birds and the fish in their haunts and take a place as fireman on a railroad locomotive. The engine which startled the wood duck from the lilypads had to be fed with great pieces of wood, and the puffing monster drowned the song of the bobolink and the whistle of the quail. John never could have loved such a noisy, obnoxious thing. One winter day about forty years ago his engine stood at a side track at Poughkeepsie, the boiler burst and the mangled body of John Atwood was thrown far out upon the ice of the

river. As I read the account of it in a distant territory the thought came, who will say to the boys, "A flock of geese went north yesterday and the fish ought to bite good now," or "The bluebirds are building in our pear tree and it's time to go in a-swimmin'." Who indeed?

The geese have gone north many times since, and the bluebirds nested in their old homes until the aged tree broke and left the stump, which I saw last year when on a pilgrimage to the place, but the poor torn and shapeless thing that was taken from the ice no longer notes the seasons by the coming of the birds or by their nesting.

FRED MATHER.

SALMON POOLS OF THE GRAND CASCAPEDIA.

SAGINAW, Mich., July 14.—All the anglers seem to be telling their fish stories, and I have read with a good deal of pleasure their various tales as to big fish and numbers of them. Now I will have my say, and will take a few leaves from my pocket memorandum book of this year's outing.

First, we left Saginaw June 1, and arrived at our cottage on the Grand Cascapedia Wednesday, June 3. My friend Robert C. Lowry had preceded me three days and reported plenty of fish, he having taken the 40-pounder that he told the readers of FOREST AND STREAM about a week or so ago.

We were most of the day getting our cottage in order, for it had not been occupied since '94, as I was unable to get away from business last year, but my wife and the two youngsters, respectively three and six years old, were delighted to do the settling, while I got out the rods, oiled the lines and reels and put the leaders to soak. In the afternoon I went into the boat a little while with my friend Mr. Lowry and had the satisfaction of seeing him kill a 20lb. fish. My wife concluded she would not begin her fishing until the following Monday, so with Peter and Wm. Barter in the boat Thursday morning, June 4, I started out, bound to do or die. I tried the Lowry Pool, where the 40lb. fellow was taken a few days before, also the Icehouse Pool, with no success. Peter then said that a new pool seemed to have formed on the back of a piece of land I bought some years ago, where the Northwest Branch puts in, and I concluded to try it. I had not made half a dozen casts before an enormous fish took it with a tremendous rush, and the fun commenced. Never have I seen a better fighting fish. Once when he jumped 5 or 6ft. out of the water an exclamation was brought forth from everyone in the boat: "A 40-pounder, certainly." This branch of the river was new to us, and as the water was high it proved dangerous, for many roots and trees were encountered in dangerous parts. The fish was now running down stream at a tremendous rate, and we were doing what we could to keep pace with him and to lead him out of the snags and pitfalls. Three separate times did he pass under the boat, and three separate times did I pass the rod around one end or the other without mishap. It was tiresome work, and though I had a good leader and put plenty of butt to him—for I usually kill my salmon quickly—it must have been forty minutes before we had him safely in the boat, and he proved to be a prize indeed—43lbs., good and strong. As my oldest boy was with me, we immediately christened the new pool the Little Billy, and said it was the youngster that gave us luck.

Of course there are always two where there is one, and if you get the second one you always think there is a third; and we were soon back, and dropping the fly in the same place soon was fast to a 26lb. fish, as bright as silver could make it. It was a vicious fight, the salmon jumping a number of times, and once made as high a jump as I ever saw a fish make. He cleared the water at least 8ft., but in less than twenty minutes we had it in the boat; and then trying for the third, raised one three times, but somehow or other did not hook it.

This completed the day, and an excellent start it was. The next day I was rather unlucky. I saved two good fish, but lost three more, one by breaking the tip of my rod rather carelessly; the next one the hook came out of his mouth, and the third one I forgot myself and struck too hard, snapping the leader.

June 9 it rained hard all day and we did nothing, and the next day we only fished a little while, as the water was dirty, though Lowry killed a 30lb. bright fish and also was fast to three kelts. As Peter had hurt his hand with the gaff the day before, I had him go to New Richmond to see the doctor about it, and took the two boys in the boat with me—Ellis and David. Neither one of them had ever gaffed a fish, and I gave my wife the pools that were allotted to me for the day and went on a voyage of exploration further down the river, where we had some untried water, with the expectation, however, of finding the river still too high to fish it successfully. The water was high, but I directed the boys where to hold the boat, and gradually creeping down over the ledge of the bar, cast into a deep, swirling pool that certainly looked good. All of a sudden there was a splash and a commotion and a fish darted after the fly, but missed it. Waiting about a minute, I put it back, and he came again with the same result. I concluded that the jig was up, but made one more effort with a faint heart. There was no rise, and as I was taking it out of the water to make another cast Mr. Fish broke water at the same instant and I was doubly disgusted, for I had taken it clean away from him. I was dead certain he would not come again, but sometimes the unexpected happens. I sat down, lit a cigar and waited about five minutes by the watch, and then carefully placed the silver doctor in the right spot; this time Mr. Salmon was not going to be fooled, for he nailed it instantly, and he was a Jim Dandy. How he did rush and tumble, jump, jig and do everything but sulk! For the water was heavy and we would not let him do that. Every time he attempted to rest I instructed my inexperienced boatmen to get the boat below him so that we could haul him down stream, and it was done with good success. I had to kill this fish thoroughly before I dared trust one of the boys to use the gaff; consequently it took nearly three-quarters of an hour and we went down stream a good ways, but at last David struck, and struck well, but the fish weighed more than any of us had calculated, and he nearly threw the gaffer out of the boat. He hung on well and finally tugged him in, and then in his excitement jumped astride of the fish and struck him with his fist. We had a good laugh at the boy, who went home that night fully a head taller, and a bigger man than a delegate to the Populists' Convention. It was a beautiful fish, and weighed 41lbs. It was not so long, but extraordinarily deep and thick. An excellent photograph of it is hanging in my office now.

The banner day was June 15, the day that Mr. Davis killed his thirteen fish. The water was just the right color, the river was full of salmon, and every one of them seemed to try to get the fly quicker than the other one. I took three in the Ice House pool by lunch time, then sent to the house for my wife to come down and try her hand at it. She did, and took three more, while I, dropping below, lost one and put another in the boat. Mr. Lowry that day got four, making eleven fish that we saved.

I cannot help mentioning an incident of the day, viz., the killing by me of the first salmon I ever killed with a trout rod, one of 25lbs. The fish were rising so well I concluded to try it with an 8oz rod that Devine made for me two years ago, 10ft. 6in. long, with lots of backbone. I had, however, my regular trout reel, with about 60yds. of trout line on it, a salmon leader and a moderate-sized dusty-miller. The fish missed the fly the first time he came up, but was well hooked the second time, and made as lively and pretty a fight as one ever saw; he jumped three or four times, and seemed to fight quicker than with the salmon rod. It was exciting, and the little rod stood it beautifully, so that when the fish was in the boat, after about fifteen minutes' work, the rod was as straight as when it was first taken from the case.

After doing this so well I frequently cast with the trout rod, as it was easier than handling the heavy salmon rod, and the result was that I killed four salmon with it all with the same fly. One of the fish weighed 37lbs., and I was just thirty-one minutes bringing him to gaff.

At the end of two weeks Mr. Lowry left for home. We figured up our record, and he had taken twelve fish, average weight 27½lbs.; my wife had taken seven fish, average weight 24½lbs.; I had been lucky with big fellows, and had taken thirteen, averaging 30¾lbs., and it strikes me this is pretty nearly top notch for weight, and I would like to hear who has beaten it.

In the order they were killed, the weights were as follows. If only the last two had been left out how the average would have been helped up: 43, 26, 23, 26, 33, 41, 28, 42, 25, 35, 37, 18 and 21lbs.

Up to this time Mrs. Mershon had been very fortunate, having boated every fish that had taken her fly.

The next week was devoted mostly to taking the big sea trout that were coming in in large numbers. Mrs. M. had the misfortune to hook and lose a very large salmon. She was well below it when it dashed up stream and around a tree that was all roots and branches; and after the line was well wound around it jumped to show its disdain for fishing tackle. My wife's largest trout was 4¾lbs., mine was 4½lbs., but it was not unusual for either one of us to get from fifteen to twenty trout in our day's fishing. The smallest one was 1½lbs. and most of them over 2½lbs.

There was not a fly or mosquito to bother us. We did not even put the screens in the windows at our house. Salmon were to be seen every day and everywhere, and on June 26, in one of the lower pools, we counted twelve salmon. They seemed to be coming in all the time, and were the best fighters I have seen in years. This was the report from nearly everyone we met.

All too soon the time came for going home. The boys must have their Fourth of July firecrackers, so on the morning of June 29 we bade good-bye to the Grand Cascapedia and its beautiful hills, and left the grand old river still shimmering in the morning light, a thing of beauty and a joy forever.

W. B. MERSHON.

IN THE ADIRONDACKS.

Editor Forest and Stream:

Our party, consisting of J. D. Brooks, J. J. Redner and Wm. M. Brownell, of New York, went trout fishing in the Adirondacks the last week of May. Our route was via D. & H. R. R. to Port Henry, on Lake Champlain, thence by stage to Mineville, a distance of about eight miles, where we were fortunate in securing for guide John J. Howe. A drive of thirty-two miles over a fairly good mountain road brought us to the Boreas River, where we secured good accommodations at reasonable rates with a family by the name of Liberty.

Our first fishing was in Sand Pond, where we fished two days, catching 161 trout. The largest, weighing 2½lbs., was caught by Mr. Brownell, and was weighed at the pond by Mr. Brooks; it was then dressed by the guide and taken to the house, where he was again weighed and tipped the scales at 2¼lbs. This trout was caught on a Chub-tail, which seems to be the favorite bait in this particular pond. Mr. Brooks said he had lost one about twice as big as he was drifting along the south shore and humming:

> The hungry and keen to the top are leaping,
> The lazy and fat in the depths are sleeping.
> Fishing is fine when the pool is muddy,
> Broiling is rich when the coals are ruddy.

The honor of losing the largest fish, however, was disputed by Mr. Brownell, who claimed to have lost one over twice as large. This was a surprise to Brooks and the guide, because they had not seen Mr. Brownell visit the bait basket for more than an hour.

Our next fishing was in Dergen Brook, a small stream near Sand Pond; the fish were small and scarce and an hour's fishing was enough for us in that stream.

We fished next day in the Boreas River, where we caught twenty-three beauties, the smallest weighing ½lb.

We then started for Underwood, about twenty miles north by the way of dead waters. Underwood is a little hamlet of but one house and a barn. The house is known as New Pond Inn, and is run as a summer resort by one Mark Sherman, the "King of the Loggers," who knows very little about fishing, but can tell a pretty good bear story.

We stayed at New Pond Inn two days, the first of which we fished in Moss Pond, a small but very deep pond. We had very poor success, not getting a single strike, although the guide told us it was a great pond to fish in a little later in the season.

The next day we tried the Boquet River, which tumbles down the mountain about one mile from the inn. The river is alive with trout, but they are very small. In fact we caught but one large enough to take away. I think it would be greatly to the advantage of the gamekeeper of that district to visit the stream.

We next turned our attention to the Barton Pond stream, near Mineville, from which Mr. Turnbull, ex-paymaster of the mines, said some fine fish had been taken.

We had fished probably a quarter of a mile down the stream when Mr. Brooks, who had just cast a brown dume fly into a deep, dark eddy that came boiling and foaming from under an old half submerged hemlock log, saw a splash in the water and felt a sudden tug at his line that nearly yanked his rod from his hand. He yelled to Mr. Brownell, who was casting near by, "I've got a hoss." Well, he had a "hoss." It lashed the water into a foam in vain efforts to free itself from the hook, until in one of its mad rushes it jumped from the stream and landed high and dry on the bank near Mr. Brooks, who quickly pounced upon it and shouted triumphantly, "That's the way to land heavy fish." It was a speckled trout; Mr. Brownell weighed it with his pocket scales and declared the weight 4lbs. The fish was dressed by the guide and taken to the house, where it was weighed by Mr. Turnbull, and tipped the scales at 3¾lbs.

This ended our fishing trip, and we returned to the city on the sleeper that night with over 50lbs. of speckled beauties. We must acknowledge Mr. Brooks the hero for catching the biggest fish, although we all consider that Mr. Brownell lost the biggest one also, and Mr. Redner, well—he thinks he caught them all. But we have not heard the guide's story yet.

ANGLER.

ANGLING IN CANADA.

Editor Forest and Stream:

The ouananiche season is at its height just now and will continue so for the next month or so in the northern tributaries of Lake St. John. This is particularly true of the Mistassini, where a number of distinguished anglers have been whipping the water from the Fifth Falls down to the First. The two Messrs. McCormick, of Florida, are still fishing above the Fifth Falls some distance. At these falls are now camped the Rev. Dr. Joseph Gamble, of Plattsburg, N. Y., and E. J. Meyers, barrister, of New York city. These gentlemen, as the writer can testify, are the most hospitable of hosts, and nothing is too much for them to do for favored callers at their very complete and prettily situated camps. Both too are old-time campers upon the island that divides the falls and attractive writers upon their favorite fish. Mr. Myers has just returned from a successful salmon fishing trip to the coast of Labrador, where he was accompanied by Mrs. Myers. Though so far only a few days encamped at the Fifth Falls, he has already enjoyed excellent sport. In his fishing Mr. Myers is indefatigable, and 3:30 o'clock in the morning seldom finds him in bed in his camping out season.

Other parties who have recently fished the Fifth Falls are Col. Chevalier Kitchener, of Bermuda, and son, and Lieut.-Col. Andrew C. P. Haggard, D. S. O., the novelist and author of the new Egyptian book "Under Crescent and Star," as well as the writer of the charming introduction to the recently published book "The Ouananiche and its Canadian Environment." Before visiting the Fifth Falls the Colonel fished with good success the Grande Décharge, and has now left with a friend for the headwaters of the Little Peribonca, intending to explore the trout and ouananiche waters of the rivers and lakes Epipham, Des Aigles, etc. The Colonel travels and angles, not only for pleasure, but also in search of incident and setting for his novels and other sketches, and his present trip to Canada is solely for the purpose of visiting the country of the ouananiche.

The Grande Décharge has yielded its full quota of good spring fish this season, but the best return to the angler at present is yielded by the tributaries of the lake.

Among those who have had good success to date in the Discharge may be mentioned Dr. Mundé, of New York, one of the earliest visitors to the land of the ouananiche; Dr. Yates, of Montreal, and Dr. Brush, of New York, the Senator from the Fourth District of New York.

QUEBEC, July 13.

HELL GATE CAMP.

BOSTON, July 18.—*Editor Forest and Stream:* May I trespass upon your space once more to the extent of a brief outline of our '96 outing? Our party consisted of six and we left Boston on the evening of June 26, via Portland boat, our objective point being Hell Gate Camp, Dead Diamond River, northern New Hampshire. We had a good night's rest upon the boat, breakfasted in Portland, and at 8:40 took train via Grand Trunk for Berlin Mills, where we arrived at 11:50. Through previous arrangement Walter Akers, of Errol, met us at Berlin and soon after dinner the entire party was seated behind a sturdy pair of blacks and we went merrily bowling alongside the crooked Androscoggin to Errol and the Umbagog House, where we arrived at 6:30. We took supper there, which gave Walter a chance to change horses, and at 7:30 we were again headed for Fred Flint's, Wilson's Mills, Me. We drove into Flint's yard at 9:45, having made the run from Berlin, of forty-five miles or thereabouts, in about seven hours, and which on the whole proved the most comfortable trip I ever made to that region.

The next morning being Sunday we all snoozed it out, and it was past 9 o'clock when we breakfasted and nearly 10 when, in light marching order, we started on the eight-mile tramp to Hell Gate Camp. The morning was bright and pleasant, the trail good, the woods delightful and six business-ridden individuals never enjoyed tramping more. The hospitable arms of the "dear old camp" seemed outstretched to greet and welcome us, and in the music of the falls and in every balsam-laden breath Old Injun seemed to live again. Dear old Amasa: the place you loved so well and for which you worked so hard shall always be hallowed ground to me. This year the camp is owned and handled by only two, Fred Flint and Win York, who bought out the interests of the other three. Win York is at the camp all the time; and assisted as he is by an A1 cook, the comfort of every guest is assured.

Contrary to expectations, we found the water in the river quite low and large trout rising indifferently, though plenty of them were to be seen in the pools; of trout running from ¼ to ½lb. there were plenty, and they were to be had at all times for the anglihg. Deer signs were abundant and moose tracks frequent, which augurs well for the shooting season.

Thursday, July 2, five of us left Hell Gate Camp to visit Deer Park Lodge, the Narrows, Richardson Lake, o

which one member of our party—Mr. Ambrose—is part owner. I looked to this part of our trip with keenest interest, for up to that time I had never visited the Rangeley region. Thursday night we went from Errol by team over Errol Hill to Lakeside, on Umbagog, so as to get the early steamer across the lake to Sunday Cove, and thus save a day.

That ride from Errol over the mountain and in a very dark night will be remembered by every member of the party for years. But we got there all right, and landlord Chandler, after he was routed up, provided us with good, nice beds. The remainder of the night we slept the sleep of the jolted. We made the middle dam house a few minutes before noon, and at 1:30 steamed across Richardson Lake toward the Narrows and our friend's camp, which was to be our home for the next few days.

Everything was new to me, and as vision after vision of beauty unfolded itself I became entranced and said to myself, "You old muttonhead, how is it that you have kept out of this, God's country, so long?" and echo still keeps repeating, "Why?"

Our friend's camp is beautifully situated. Standing fully 50ft. above the water, it commands views of the entire length of the Narrows, and as it is nearly midway between the Upper and Middle Dams all points are easily accessible. It is paradise without a serpent.

We took a trip to B Pond, with Steve Morse for guide. He told us the trout would not rise freely to the fly, as it was not the season; but we could probably get enough to eat, which was all we cared about. During our stay at the pond we visited many times the island on which is built the Oxford Club house and we often gazed through the windows at the well-appointed interior, and Steve told us of the jolly times and the great catches due there every spring, and he spoke particularly of one member of the club, Gov. Russell. How inexpressibly sad the thought. He has made his last cast, the silken line has parted, the reel is silent forever.

On the afternoon of July 8 my old eyes rested upon that grandest of all trout pools, the Upper Dam Pool. There is poetry and rhyme in every wave and twisting eddy of its foam-crested, limpid waters, and there are trout too—monarchs, battle-scarred and deep-hued, which have resisted the lures of generations of anglers. And—to their shame be it written—there are men who go there and finding themselves unable to capture those fish with the fly, resort to every means known to the poacher's art—with gobs of worms, with live and phantom minnows, with fins, with spoons and spinning bait, until, no matter which way he turns, the harassed fish is confronted with some devilish scheme for his destruction. In the name and interest of every angler who believes in fly-fishing pure and simple, I register my protest against it. Let that pool become the one sacred reservation of the fly-fishermen. It will pay in many ways. It will increase the revenue of the pool, and, greatest and best of all, it will pay in the increased satisfaction a man feels in knowing he has captured his fish by the cleanest and most skillful art known to the angler. Mr. Chadwick, upon you this matter rests. You can stretch over that pool the angler's "bow of promise," and in the end all men will thank you for it.

J. W. B.

ANGLING NOTES.

Red May Fly.

IN a recent issue of FOREST AND STREAM I mentioned Mr. Edward Marston's experiments with an artificial May fly of regular form, but dyed a bright red. It seems that Mr. R B. Marston sent some of the red May flies to Mr. Andrew Lang, who writes of experience with them in *Longman's Magazine* for July. He says: "Trout do not take bloody Marys. This statement may seem enigmatical and needs explaining. Sir Herbert Maxwell has an heretical opinion that trout do not distinguish color. Therefore Mr. R. B. Marston has sent me some scarlet May flies which, on the Itchen, he finds that trout refuse. * * * Accompanied by another philosopher I carefully dropped the bloody Mary or scarlet May fly into a small brook, where trout were taking the natural insect. The flies floated, cocked up and quite dry, over plenty of feeding trout, which rise eagerly at a well-directed and properly colored artificial green Drake, but not a fish would move at a bloody Mary. They liked her no more than John Knox liked his namesake. Moreover, trout will not take the gray Drake when the green alone is on the water." (This is exactly my experience, previously mentioned I think in the note making reference to Mr. Marston's experiment.) "This seems to settle the question; but that salmon make minute distinctions of color, as between a Popham and a Childers, I do not believe. Salmon do not rise in that way (as trout do); they sally up from the deep to a fly which is only a glittering vibratory object." This seems to me to be the best possible test of trout being able to distinguish color; for when the May flies are rising they rise from the water in clouds, and when one fly out of thousands is refused in the general rush because it is off color, although of the same form and general appearance, it must cause those who advocate form as against color to do some deep thinking to explain why it is so. The fact that there are times and places where trout will rise apparently at any fly offered does not convince me that they cannot distinguish color. In dry fly-fishing the imitation floats on the surface of the water as lifelike as the natural fly, and the trout have every opportunity to examine it, and perhaps it is not so strange that under such circumstances trout distinguish the green from the gray Drake, and reject the latter; but in my own experience, when the trout refused the gray Drake and eagerly accepted the green Drake, I was using the wet fly, yet they never made an error; and to the human eye, when the two Drakes are wet, and draggled and moving through the water, they would look very much alike.

May Fly and Caddis.

In Mr. Hough's notes last week he speaks of the "sand fly, May fly, cisco fly, shad fly, caddis fly or whatever local name may be given to the creature." Later he refers to the fly repeatedly as the caddis fly, but when he describes it he describes the May fly. The May fly and the caddis are quite unlike. I believe there are some fifteen or more species of the May fly, and I think Prof. Lintner, the State entomologist, told me there were more than twenty species of caddis flies. The May fly is he Drake, be it green, gray, brown, iron-blue, amber, lack or yellow, and has the upright wings, slender ringed body bending upward and terminating in sometimes two and sometimes three slender stylets which gives them the name of "cocktails," but May fly, day fly or Drake are the more common names. The caddis fly, in England belonging to the class of Duns, has four hairy wings and lacks the stylets and upturned body of the Drake. This is the little beggar that makes a house of bark, stones, etc., in the larval state and is called a caddis case. The wings of the caddis fly when at rest are folded lengthwise of the body and not cocked up like the May fly.

A few days ago my brother told me that during a rise of May flies in the evening at Elmira they were obliged to shut the doors of the street cars when crossing the bridge over the Chemung River, and pedestrians had to turn up their coat collars and pull down their hats, and even then their garments were coated with the flies. When the flies are rising like that is the time to secure them for transplanting into waters where the trout are bottom feeders and it is desired to make them look up for their food, about where an angler would cast his artificial fly. There is little, if anything, done in this country to educate trout to take their food from the surface of the water, but the system of surface feeding is practiced abroad. Mr. Halford, the well-known angler and author, feeds his yearling trout floating food in the rearing ponds before they are turned into the river to shift for themselves. He says: "If anything could make artificially bred and artificially raised trout surface feeders, it should be such treatment as this, and unless the whole education theory is fallacious should produce a new generation of more freely rising fish than even the naturally bred denizens of the river. The major portion of the food of the indigenous fish is undoubtedly in the form of shrimp, snails, caddis and other larvæ, which are invariably found among the weeds in mid-water or at the bottom." If a water is to be stocked with the May fly the flies should be procured from both an early and a late rising river, for they adhere to their seasons when transplanted, and the planted water affords a May fly season nearly twice as long as either of the original waters from which the stock is obtained. Of course in transplanting May flies they furnish fish food in the form of flies for only a brief season at best, but they furnish food in the larval state the balance of the years, so they are most desirable trout food and they can be transplanted so easily that I wonder it is not done more than it is.

Fifty Mascalonge in One Day.

A gentleman was telling me about his fishing experience when I met him on his railroad car yesterday, and as he has fished quite extensively he had much of interest to tell me, but one thing he told me was not pleasant to hear. He said that an acquaintance of his was fishing in one of the remote Canadian lakes last year (and by the way he was the son of one of the Dominion officials), a lake well stocked with mascalonge, and as the fish were feeding ravenously the fisherman caught and killed fifty odd mascalonge in one day. "He had to go ashore and unload his boat before he could continue his fishing, for the mascalonge weighed from 10 to over 30lbs. each." The funny thing about it was the conclusion of the story, for my friend said: "I suppose they have better laws in Canada than we have or he could not have made such a score."

Here is a man who caught say 750lbs. of mascalonge, in a lake far from any place where they could be utilized as food—and there might have been half a ton of the fish for all I know—and because of this inexcusable slaughter or butchery another man thinks such a score is owing to better laws than we have in New York. To me it would appear to have been owing to a lack of law restricting a man within the bounds of decency when the opportunity offers to kill a lot of fish. The desire to make a score has much to answer for in the grand round-up when an accounting must be made for fish and game exterminated. The "pot fisher" or the "abominable netter" is a saint with harp and halo compared with some alleged sportsmen turned loose in the backwoods to make a score to boast about.

Good Boiled Eggs.

In Mr. Cleveland's description of his fight with a foul-hooked tarpon (FOREST AND STREAM, July 11) he mentions that he had a couple of good boiled eggs for his early breakfast, the yolks of which did not break when opened. I neglected to say that a diagram went with that joke, but I was so interested in the pen picture of the struggle with the fish that I forgot all about the explanation of the joke.

Three of us were spending the summer at Schroon Lake. Mr. Cleveland was one, I was another, and the late Maj. B. A. Botts. of Houston, was the third. We fished rather persistently, as that was what we were there for, and for black bass fishing we would get up at dawn, get a cup of coffee and a couple of eggs, go out on the water and return to take breakfast with our families. The major was standard time (although Cleveland thought he was), and was the first one up, and would then send Lewis, his servant, to my cottage to call me and to Cleveland's cottage to call him. Poor Lewis! if all the language hurled at him between dark and daylight had been more material he would not have survived the summer. Cleveland had an insane idea that an egg was not fresh unless the yolk would drop into a glass unbroken, and I have heard him lecture on the subject from Canada to West Virginia at a score or more of fishing resorts. Cleveland could not shave himself, and he would not let Lewis shave him oftener than once a year, as he said that was as often as his face would stand the operation, and therefore was dependent upon a barber that he engaged to come from Schroon village on stated occasions. The major and I knew that we could start the day in lively fashion by coming to the early coffee with clean-shaven faces, and we did it frequently. One morning Lewis called me as usual, and called the second time to say that breakfast was waiting. When I entered the dining-room I got the first chapter of the morning lecture before I reached my chair, and to my surprise I found a couple of eggs opened in a glass at my place. Cleveland said: "As you are late, as usual, I have opened your eggs for you, simply to save time." In a few moments the waiter brought two eggs and put them before Mr. Cleveland, who opened them, pushed the glass containing them toward me with the remark that "Here are two more eggs for you like those you are eating," and then he read the riot act to the waiter. If the hotel had any fresh eggs he wanted them, and at once, but he did not want any more heirlooms in the shape of eggs. The situation dawned on me then. He had opened the first egg for himself, but as the yolks broke in the glass he had passed them to my plate. He admitted it all, and I told him I liked that kind of egg and took the second glass. The third couple of eggs were brought to him, and as he opened them he exclaimed:

"Now, these are fresh eggs!"

"Let me see what you call fresh eggs,"

He pushed his egg glass toward me and I lifted it, looked at the eggs, tilted my nose upward and said, "I am glad to know what you call fresh eggs, but your judgment is not worth a copper cent."

That look of disgust on my face settled the matter, and he would not eat his fresh eggs and I did, although six eggs were about four more than I wanted. From that day to this he has heard more or less about the fruit of the hen, and frequently writes me of his test for fresh eggs.

Trout Fry.

In the mention that I made of trout fry sent to me by Commissioner Thompson (FOREST AND STREAM, June 27) it would appear that the specimens sent to me had been fed on the flesh of minnows peeled from the bones by steam process. Mr. Thompson tells me that the trout fry sent to me never had been fed artificially. At his club the trout are admitted to a spawning race, where they spawn naturally on the gravel, and the parent fish are then driven back into the pond below and the eggs are hatched very nearly as in a wild stream. This is because the club desires to hatch and rear each year only a certain limited number of trout. The fry after hatching are confined in a rearing box, where the tide contributes rich sea food to the young fish, and it is this treatment which causes them to grow to exceed any trout fry or fingerlings that I have ever seen. The yearlings and two-year-olds from the same club would easily pass for much older fish.

Big Trout and Little Trout.

The movement to forbid, by law, trout fishing through the ice, in New York State, originated at Lake George and applied at first only to lake trout. The lake trout season opened, I think, April 1, and usually at that date there was ice on the lake, and the fishermen caught little trout from ¼lb. to 2lbs. in weight through the ice and sold them in large numbers. These little fish came from restocking the lake, and were caught only through the ice. When the ice was gone and trolling commenced, large fish were taken with rarely a small one. The season was changed by law to open on Lake George May 1, and has so remained ever since, and after a time the law was made to apply to fishing through the ice in any waters of the State.

The stocking of Lake George has continued through the efforts of Gen. Robert Lenox Banks, and 500,000 fry are planted annually. Formerly buoy-fishing was a favorite method of fishing for lake trout, but little was heard of it after trolling came in vogue.

Buoy-fishing is now resorted to by many of the summer cottagers and, strange as it may seem, only small trout are taken. One gentleman, who has four buoys near his cottage, told me recently that he had never caught a trout at a buoy that weighed over 2lbs., and that they were generally 1lb. to 1½lbs. fish. The men who troll either at the surface or at the bottom rarely get these small trout.

In one day, July 4, one fisherman caught two trout of 5½lbs. each, and then went to the buoys and caught seven, all under 1½lbs.

A. N. CHENEY.

OUR 1896 OUTING AT STAR LAKE.

CHICAGO, July 10.—*Editor Forest and Stream:* Not being quite "chained to business," though pretty near it, my wife and I have just completed a most enjoyable three weeks' outing at Star Lake, Vilas county, Wis., over 400 miles from here, and most comfortably reached via the Chicago, Milwaukee & St. Paul Railway in about twelve hours. There are no roads out of Star Lake, except from the south, only trails, and hence one is in the old, old forest land, barring the cleared space right at that place necessary for the operation of the extensive saw mills of Messrs. William Salsich & Co., located there.

There was much to contribute to one's enjoyment there besides the excellent fishing to be found in Plum, Ballard and Partridge lakes, reached by making short and easy portages from Star. Plum gives an abundance of black bass, both small and large mouth, plenty of pike, wall-eyes, and an occasional muskellunge, likewise the rest of the waters named. In one day in Ballard we took fully fifty black bass, large and small mouths, returning about twenty, because of under size, to their homes. Except a fish was fatally injured, we kept none less than 14in. in length. The same day Mrs. W. took a 12lb. muskellunge on a No. 19 Natchaug line and a 3 0 Pennell-Limerick hook on double silk gut, bringing the fish to landing net handsomely. The general practice up there is to treat a muskellunge when hooked and within reach of the boat as though in the act of burglarizing the craft, for he is speedily shot through the head. The question arises, is there anything sportsmanlike about such a procedure?

Hotel Waldheim, located immediately on the banks of Star Lake, in a thicket of heavy pines where one gets the pine flavors in the air all the time, besides other sweet woody scents, is well conducted and the table is good, suited to the other surroundings. We had a real good time there and record the few facts relating thereto as above that others may do so too, who like such things and can.

AMMONOOSUC.

British Columbia Trout.

THE *Daily Colonist*, of Victoria, B. C., for June 11 chronicled: "Mr. J. A. L. Waddell, C. E., of Kansas City, chief engineer of the Omaha Bridge and Terminal Railway Co., Omaha, in company with E B. McKay, of the Lands & Works office, has been on a fishing expedition to Cowichan Lake. He states that he had the finest trout fishing there he ever enjoyed. On Sunday, Monday and Tuesday he succeeded in landing 150lbs. of fish, many of them weighing 3lbs. and over."

Mr. Waddell writes us: "I caught in three days 154lbs. of trout, the largest weighing 4lbs., and a good many between 3 and 4lbs. The average weight was, as nearly as may be, 1½lbs. for the whole catch. I did not think that I was doing such extraordinary fishing, but after I got through I was told that I had broken the three days' record for the lake.

CHICAGO AND THE WEST.

Camp "Forest and Stream."

CAMP FOREST AND STREAM, July 10.—Under the inexorable law of change, all things must have their origin and ending, and so it is with the annual sojourning of Camp FOREST AND STREAM. It is our aim, however, always to so regulate our actions as to appear as much as possible independent of the law of fate, setting ourselves as it were outside its action even while we admit its existence as a law. Compulsions are for slaves, not for campers. We evade all idea of compulsion about closing our camp by the way in which we buy our bacon. Any camp must come to a close when the bacon runs out. Last year we had about four yards of bacon, and it took us almost too long to use it up in the natural course of events. This year we bought a little over three yards, and accordingly our camp will come to its close, naturally, decently and independently, about to-morrow or day after; for we are now well down toward the further end of our last piece of prime breakfast. The bags holding the coffee and sugar are also now capable of being tied rather close down toward the bottom, and the canned soups and fruits are getting low, and we are upon our last jar of butter, so it may be seen that the camp is coming to a peaceful, rational and natural end. This fact we accept calmly. There would be mutiny at the thought of any other kind of end to a camp so dear to our hearts. We could not, as men and gentlemen, go home with bacon in our box. I doubt not, if through some error or by design of some evil-minded person we should find ourselves in camp with 40lbs. of bacon instead of less than 20lbs., we should be obliged to stay there more than a month, such is our devotion to principle.

There are men who have worked so long and so much that they cannot enjoy a vacation, and there are other men who never take a vacation except in a halfway fashion, with one eye upon the telegraph office. All these go home with their vacations half baked and underdone. In Camp FOREST AND STREAM we always do everything there is to be done. Every plan we make is carried out. No experiment and no enterprise of pleasure is left unproved. All our side trips are made, all our fish are caught, all our voyagings are completed, so that when the law of bacon tells us to go home we go as happily as we came, knowing that, though the world is full of pleasures for another year, we have found what pleasures are calendared for this. Thus in regard to those trout which I mentioned last week. We went, we saw the trout and we conquered them, eleven of them, and of a most beautiful sort, such as fit admirably in an aluminum frying pan. We could have taken more, but thought that enough to ask of our little stream. On that same day, which we devoted to driving about over some new country, which we deemed it our duty to explore, we found a vast frog pond, filled with great bullfrogs of generous development as to the hindlegs. Here we had fine sport with a .22 rifle, and got us a dozen and a half of frog legs in a little while. There are those who do not eat frog legs, but there are also those who do not believe in churches or the law. All normal human beings love frog legs. If for breakfast they may have, as we did, both fried trout and fried frog legs, they may be content. Fortune will never harm children upon whom she has once smiled so pointedly.

We have found the bass fishing rather poor this year in our lake and the waters near by, owing to the advanced condition of the season, which is a month earlier this year than last. The bass have probably gone into deeper water and are not feeding much. J. B. H. takes all this philosophically, and says that bait-casting tires his wrist anyhow, and that he would as lieve fish for something demanding less labor. This he can afford to say, for never before in his life has he caught so many fish in two weeks as he has this year. The fly-fishing for rock bass has been so easy and abundant that we have stopped doing it. Our great *piece de resistance* has been our newly-discovered croppy bar, a little conical reef about 50ft. across, which runs up out of 100ft. of water in the middle of the lake. Here we have had our main sport of the trip, and have caught the finest croppies I ever saw, most of them averaging over a pound and some nearly reaching 2lbs. These fish, taken from the deep cold water, are very much better for the table than any black bass ever is, and we have enjoyed eating them as well as catching them. Yesterday we made our last fishing trip, this being for the purpose of making up certain little baskets of fish which each year we send down to the city to our friends. We fished for only a couple of hours, and caught as handsome a string of fish as I ever saw. We had a few for our neighbor Mr. Schwartz, who has been so kind to us in many ways, and moreover have in our cold storage spring all that our modest table demands for the rest of our stay. J. B. H. says we have fished enough now, and that he does not want to go to any more new lakes. So we have taken our rods apart, and are now simply living and being happy in camp, waiting for the law of bacon to take us home.

This little bar out in the middle of our clear, deep lake is a secret known only to a few. It was accidentally discovered by Billy Tuohy (the same courteous and obliging sporting landlord who runs the popular Eagle Lake Hotel, a few miles below us, on Eagle Lake). Billy has always done everything in the world he could for us up in this country, on account of J. B. H., for whom all men have regard. He told us about this bar, but we did not find it last year. This year we put out a buoy upon it so that when we wanted a mess of croppies we could go and get them, and stand a chance meantime of picking up an eminently respectable bass or pickerel out of the numbers which use that spot as a sort of club lounging place, the fish elsewhere in the lake being fished down to an inferior size. Yesterday, just before we started out to do our fishing there, we noticed a boat in that part of the lake, containing some young men from a camp near by, and when we rowed out we discovered that these persons had taken away our buoy, probably for the sake of the fish line which made its anchor rope. Little did those young men know that that floating board marked the best fishing in all the lake, and that in cutting it loose they despoiled themselves! J. B. H. and I rowed about for over four hours, but the wind was high and we could not hold our bearings, and we could not find our bar! Here was a pretty kettle of fish uncaught, and we felt considerable chagrin. At length I got out of the boat and walked the intervening miles down to Billy's hotel. Billy couldn't come to show us the bar, but made me a chart, and by means of this, after over an hour of further search, we hit upon the little round shallow place, and our dependent anchor caught and held. It was then 4 o'clock in the afternoon, and by 6 o'clock we had our string, after wasting eight hours of time in locating our bar. In the middle of our sport, while the rods were all bending and the landing net was busy, our young men who had cut loose our buoy came by at a little distance, concluding a doleful day of unsuccessful trolling. It is quite probable that a great light fell upon them then, and that they realized the import of the floating bit of wood they had stolen. After we had ceased our fishing and were pulling home we saw this boat go out again, this time hunting for a buoy. Alas! for their hopes. This time we were the aggressors, and we took our buoy home with us in our own boat. And they were the very young men to whom we had charitably given a mess of fish that very morning. They are very welcome to our buoy. The lake and the bar are there, but I defy them to find the bar, search how they please, unless they come to Billy or to us and make proper application. I am much pleased that these folk are hoist with their own petard. Indeed, if this bar were generally known as a fishing place the result would be a butchery of the fish, which now are evidently very little fished for there. Had we cared to do so, I believe J. B. H. and I could have taken 200lbs. of fish there in a day, should they bite as furiously as they did yesterday. A great many would be quite willing to take that many if they could in a day, and as many more in the next, and so on until they were gone. I counsel Billy to be discreet.

Billy Tuohy thinks the bass fishing will be slack for a while during the hot weather, but believes the waters here have as many bass as ever. Reports from Phantom Lake and the Mukwonago mill pond say fishing was good there last week, and we have invitation to fish a private lake which we know to hold large bass, but we have not gone over in that direction yet this year, and will probably let that remain among the things we are to do next year.

We never had a prettier camp than we have this year, nor do I believe that a prettier was ever pitched. Our little tents are on top of a high hill overlooking the lake, but back of us is a rim of still higher hills, shutting out the world. All around us is a beautiful broken farming and grazing country. The harvest is now in progress, but from our spot, the quietest and most restful one in the world, I think, we cannot see a farm or hear a sound suggestive of civilization. All around us is forest, and the lake is fringed with trees around its circle, and we see nothing but the trees and the lake, and the skies—two skies, one above and one in the lake. We have not yet found any better country, and were it not thus perfect we should not have called this Camp FOREST AND STREAM, and would not have come here for the sixth annual camp.

Meantime, a hundred miles or so above us, there are many parties out in the pine woods country who are having a great deal more of what they call sport. Sometimes a single rod will kill a barrelful of fish in a day. I ask J. B. H. if he would rather go up there and have some of that heavier fishing, but he says he does not think it would be so much fun as we have here. The fishing is more capricious and difficult here, but that only serves to make it interesting when one is out on this sort of a vacation. We could not use more fish than we got here, and indeed dare not go out fishing very often. The scenery is varied and quietly beautiful, the springs of water numerous and cold, and the climate singularly healthy. The nights are cool enough for blankets, and the days are never very warm. The whole region was made for outdoor purposes, and it is no wonder that it yearly comes more and more into vogue as the great resting place for the city of Chicago as well as for many parts of the Southern States, which annually send up many visitors. The wild creatures hold their own remarkably well in Waukesha and Walworth counties. There are bass and pickerel and trout if you know where to find them, and in season there are a few squirrels, and a few rabbits, and a few ruffed grouse, and a few prairie chickens, and a good many jacksnipe, and a few ducks, and a great many bullfrogs. Also there are rock bass for all, and croppies—for those who know the bar!

From all this let it not be supposed that this little paradise will suit all. Indeed, the other day down at Billy Tuohy's hotel I overheard a gentleman (to whom I was later introduced) remarking that "that FOREST AND STREAM man had picked out a mighty poor fishing lake to camp on"—he not knowing that the FOREST AND STREAM man was there present. At least, it may be seen that Camp FOREST AND STREAM has come to be regarded as one of the established institutions of the country. When J. B. H. and I tramp off over the hills now, four or five miles from home, as we often do, for bass, or chubs, or frogs, or just for instance, we meet a great many city people from summer resort hotels who look over our heads, and a great many country people who know us and speak to us pleasantly, in spite of our slightly disreputable look. The residents here are for the most part mildly tolerant of city people, but I fancy they have been more than tolerant of J. B. H. and me, and we have many acquaintances scattered around over a circle six or eight miles about Camp FOREST AND STREAM whom we call our friends. Where, then, should we go another year, when the time has come to pitch again the two small tents and to stretch between them the banner with the name of FOREST AND STREAM? We might go to the Rockies and fare worse. In my boyhood I have often sought to pot ducks which I have seen swimming in the water, and have observed, after firing away both my barrels, many larger and nearer and fatter ducks spring out from under the bank at my feet. Vaulting ambition doth often o'erleap itself, but never in Camp FOREST AND STREAM. There all things come to pass as desired. Each day slips happily by, bearing its own completed pleasures, small and not momentous though they be. The term begins with pleasure and ends with content. The first slice of bacon is cut with zest, and the last one with serenity and satisfaction. Thus, though we near the end, we do not murmur. Who hath found more than this?

E. HOUGH.

Montana Game and Fish.

IN coming into town from camp to-day, I ran on to four fine elk, ten miles south of town. Game is plentiful, both small and large. Fishing in Bennett Creek, Line Creek, Clark's Fork and Rosebud Lake is superb.

WABASH.

COUNTRY VS. TOWN.

Editor Forest and Stream:

I was greatly interested in the editorial in FOREST AND STREAM on June 13 and the comments on a day's trout fishing trip taken by myself in Connecticut. Especially was I interested in your suggestions of the benefits and pleasures that could be enjoyed by thousands of home anglers but for the exceeding barrenness of the streams.

There is no doubt that this barrenness is largely due to the indifference of those who own or control the land through which the streams flow. Few are the farmers who manifest any interest in the pleasures of trout fishing. The trout fishing season is the farmer's busy time, when plowing, planting, hoeing and other important work have to be attended to. Besides, constant contact and intercourse with nature and the free outdoors has to a great degree deadened the taste in him for such pleasures.

It is impossible for him to enjoy as does one from the town the glories of a beautiful sunrise or sunset. He is like the stage driver who was accosted by a fellow driver with "Hey, Bill, what in highgo ails you? Look as if ye hed bin to a funeral."

"Oh," answered Bill, with deepening disgust, "ye'd orter heerd the 'ohs!' and 'ahs!' of them blamed dudes over one of them thar common red and yaller sunsets. It was enough to make a hoss sick."

Being unacquainted with those other extremes that cause such blessings to stand out in their full worth and beauty (of the stuffy office or the greasy confinement of the factory, with its noise and unwholesome air, he knows nothing), his sense of appreciation is naturally dulled to the beauty of his surroundings. For recreation he is attracted to the artificial glitter of the city. Then, again, should he go fishing he is apt to fish for results in weight. He figures that 10lbs. of suckers, bullheads or eels will go further in his large family than 3 or 4lbs. of trout. He fishes for results rather than pastime; a set line, net, club or spear is more to his liking than the slower, more artistic process of taking them with rod and reel.

By far the greater majority of real anglers live in the cities. In many instances their boyhood days have been spent on farms. When they seek recreation they eagerly return to such sights and sounds as they knew in their younger days, and to fish the streams in an artistic manner with rod and reel.

Now it would seem that these are the persons who should individually co-operate to make effective the fish and game laws and personally see to it that many of these barren streams are reclaimed.

Throughout Connecticut and other New England States are to be found a large number of idle, deserted farms many of them in close proximity to large towns and cities. In most cases streams flow through these farms; at one time it was not unusual to take large strings of trout, now, however, there is scarcely a trout to be found, they have literally been fished to death.

Now, knowing that trout flourished there at one time, also that in most of them the conditions for trout are as good to-day as ever, I am sure that, under my plan, many of these streams could be reclaimed and the supply of game improved at the same time.

My plan is this: The idle farms can be leased or bought for a song. Whenever there is one in close proximity to a city, let some sportsman secure it by lease or purchase and live upon it. There would be no need to engage in the farming business; in fact, it would be better not to do so; only hire the brush cut and hay put into the barn.

After having secured a place, then, with the assistance of sportsmen friends, see to it that the stream running through the land is restocked; see to it that no partridge snares are tolerated in the neighborhood; have an eye upon the welfare of any young birds that may be about and give the dogs an occasional run in the woods.

I think I hear some one say, "What an impracticable, foolish idea. Why, what would become of my business or employment in the city if I should move into the country?" Undoubtedly it would be impossible for many to do anything of the kind; but then, on the other hand, there are many who could live in such a manner, and their business in the city need not be neglected one minute.

With the exception of last winter, which was spent in the city, my family and myself have spent the past five years in this manner, and we derive great enjoyment and plenty of health from this way of living. Even as I write a quail is calling within a biscuit's toss of me, and there is a half-grown family of his kind not far off. From the tree under which I am sitting I have but to glance to the southeast over ten miles of verdured hills and plains; then on, over harbor and Sound, the eye sweeps for another twenty-five miles to where the sandy cliffs and shores of Long Island, like a long, low cloud, meet the horizon, just thirty-five miles in a straight line. Think you such privileges would be bartered for a confined city existence after once being indulged in? Yet there are many lovers of rod and gun who could live in this manner and at the same time materially assist in solving the great problem of fish and game protection.

While I am seven miles from the great gun factory in which I gain my livelihood, still I lose but very little time and drive the fourteen miles to and from the city nearly every week day winter and summer, and enjoy it.

The stocking of a stream on a place leased or bought, the attention paid to any stray snares that might be about and the looking to the welfare of young birds would require but little time, and need not interfere with a person's business at all. It would simply be spending the spare moments in brain resting and nerve strengthening recreation. Then there is the perfect transmutation from the close office, or noise of whirring machinery, to pleasant rural sounds and scenes each day. But think of the glorious springtime, with its scented breath and wealth of blossoms, and the well-stocked trout brook flowing near. Then again there would be the cool, quiet summer nights with the cricket chorus to induce delicious sleep. Then the glorious fall, with its wealth of red, purple and golden fruit, and the days and half days afield with dog and gun. Winter, too, is not without its charms, for at that time of the year fox-hunting is in order; besides the music of the tinkling bells can be enjoyed while being whirled swiftly to and from the city in the sleigh. Of course there would be drawbacks, but taken all in all the pleasures to be derived from such an existence far outweigh all the drawbacks, and the assistance to fish and game propagation would prove a real public benefit.

Mr. Charles Stevenson, a Government inspector of am

munition, told me the other day of a string of five trout taken by him from the Woodbridge stream six years ago that weighed over 7lbs. Mr. E. M. Warner, of Hamden, also told me of a string of seven taken by him from a stream near New Canaan about seven years ago that weighed nearly 10lbs. The largest fish weighed over 2lbs. Should fifty streams in Connecticut be given such attention as set forth in this article, it would not be many years before there would be home fishing in abundance, and other strings would be taken as good as Mr. Stevenson's, Mr. Warner's, or my own. I know of two streams in this neighborhood that in the future will receive just such attention if I live. WILLIAM H. AVIS.

HAMDEN COUNTY, Conn.

BOSTON ANGLERS.

BOSTON, July 20.—Mr. Edwin C. Stevens has been spending his vacation at Lake Dunmore, Salisbury, Vt. He writes that the fishing is excellent. He captured 75lbs. of pickerel and bass in two weeks, not a pound of which was wasted, the camps and Lake Dunmore House taking all the fishermen had to spare. In one half day's fishing Mr. Stevens caught eight pickerel, averaging 4½lbs. each, and two fine bass. He writes of the location as a "most lovely spot," the fishing as above, and the boating all that could be asked. The Lake Dunmore House and the cottages have a good many guests, but they are mostly from New York and Brooklyn. His wonder is that not more Boston sportsmen go there. Mr. Stevens and his friends were camped on the shore of the lake about a mile from the hotel.

Mr. C. S. Robertson, with his cousin and camping and fishing companion, John S. Vial, has lately returned from a most successful fishing trip to Big Fish Lake, in the further Aroostook region. Their route was first to Ashland, the end of that branch of the Bangor & Aroostook Railroad; thence they went by team, over an excellent road, ten miles to Portage Lake; thence by canoe eighteen miles to Big Fish Lake. This canoe part of the trip was novel and interesting to both fishermen. Game was plenty, which they did not trouble, having no guns in the party. Occasional fishing was obtained in the rapids. Arrived at Big Fish Lake, the fly-fishing began in great earnest. Mr. Robertson has fished many waters in Maine, but he is willing to pronounce Big Fish Lake among the best. They caught brook trout up to 4lbs., and a great abundance of smaller fish, very many of which they returned to the water. As for a game country, it is a wonderful one. Mr. Robertson gives an account of a big moose that came out and wallowed in the shallows nearly every day, in plain view of them. As for deer, they were seen almost every day. In one afternoon the record was nine deer and one big bull moose. Let it be remembered that neither Mr. Robertson nor Mr. Vial has any interest in booming Big Fish Lake as a hunting and fishing resort. Mr. Robertson, in fact, never shoots; considers it cruel and dangerous sport. They simply give an account of the game and fish they saw. Partridges were also very abundant. Their guides expressed themselves as surprised at the number of birds seen.

Death of ex-Governor Wm. E. Russell.

The saddest death of all the year to the New England sportsman must now be chronicled in the FOREST AND STREAM. Ex-Gov. Wm. E Russell died at Little Pabos, St. Adelaide, P. Q., on Thursday morning, July 16. He was at B. F. Dutton's beautiful camp, on that gentleman's salmon river. He was accompanied by his brother, Col. H. E. Russell, and Francis Peabody. They were intending to spend the rest of July at that river. The Governor retired apparently as well as usual, but was found dead in the morning by his brother. The position of the body showed that death was painless. Worn out by his labors at the Chicago convention and much grieved by the action of his party there, he came back to Boston, and after a day at his office and a night with his family at Magnolia he went to seek rest in the woods. As an angler Gov. Russell was well known and greatly beloved. He made a number of trips to the Rangeleys even while Governor, the guest of the Messrs. Bayard and John Thayer, at the beautiful Birch Lodge, head of Richardson Lake. Later they built the camp at B. Pond, a camp of which Gov. Russell was exceedingly fond. Within a year or two the Governor has taken up salmon fishing, and grasped it only as a true angler can. He had spent a couple of weeks at Mr. Dutton's camps before the Chicago convention, an account of which has already been given in FOREST AND STREAM.

Genial and kindly, with nothing of snobbish aristocracy, Governor Russell took to angling naturally. He always had some anecdote or good joke, and it was all the better to him if he was involved himself, even to the extent of making fun for others. In camp he was generally known as "Billy." At one time, and the very year he was serving his first term as Governor of Massachusetts, he was fishing in Molechunkamunk, the guest of the Thayers. A couple of ladies—guests at a camp below—were trolling at the same time, and frequently passed the Governor. Their guide was also named Billy. Unaware that there was any other Billy within a hundred miles, the ladies called upon their guide to bait their hooks just as the Governor's boat passed them. Unconsciously the Governor doffed his hat when his name was called upon, and was ready to be of any possible service in baiting the hooks in question. Explanations followed, at which the ladies wished they might sink through to bottom of the boat to hide their mortification. But the Governor enjoyed the joke hugely, and in the evening he was instrumental in starting a paper on which several hundred dollars were subscribed, for the good of a charitable society of which one of the ladies was treasurer.

On Monday last he visited the tackle store of Messrs. Appleton & Bassett for the purpose of instructing his brother and Col. Peabody as to what to buy for the salmon trip. There he purchased a beautiful case of flies and ordered them sent to Mr. B. F. Dutton, owner of the camps they were to visit. He was extremely anxious that his brother and Col. Peabody should each take a salmon. Arrived at camp on Wednesday night, he was greatly delighted at the coming of a shower, about 9 o'clock in the evening; the rain would cause the salmon to rise freely the next day. They would "have salmon for dinner," but his noble nature had made him declare that he would not put his rod together till his brother and the Colonel had both taken a salmon.

He went to Chicago with no political ambitions. A call from the Hon. William C. Whitney was in his hand at the very time he was planning the fishing trip with his brother Harry and Col. Peabody. It was his duty to answer the summons and go to Chicago, but the fishing trip was near his heart. Once the ordeal at Chicago was over, he flew back to Boston by a fast train, having already telephoned his brother and Col. Peabody to be ready. Two weeks of seclusion in one of the most inaccessible and one of the most beautiful spots in America was what he most desired.

The end came silently—evidently without a struggle—and on the very spot, doubtless, he would have selected had the choice been vouchsafed to him. Anglers will miss his gentle presence. Even the simple country folk in the province he passed through on his fishing trip previously had learned to love him. They turned out in sorrow as the steamer and the carriages bearing his remains passed. Flags were at half mast on the little churches and Government stations.

Word has been received from Mr. D. H. Blanchard, at his salmon river—the Northeast Branch of the St. Marguerite—and his success is remarkable. Mr. Keeler has returned. He had excellent sport. Up to nearly a week ago there had been taken by Mr. Blanchard seventeen salmon, one of 33lbs. Six of the number weighed over 30lbs. each. The average of the seventeen fish was 24lbs.; none less than 20lbs. Mr. Richard O. Harding expects to start for that river next Thursday, and everybody hopes that the good fishing will hold out till he gets his share.

SPECIAL.

Mr. Russell as Angler.

B. F. Dutton, interviewed by Boston *Journal*.

YOU know that he was down fishing with me in June. There were four of us, the ex-Governor and his wife and Mrs. Dutton. And never have I enjoyed a week's outing as I did that week. The river was very low and the fishing was not extra good, but we had a splendid time. And only the other day, when he left for camp, he promised to telegraph me if there had been any rain to raise the river, and I said I would pack my grip and start at once. Therefore you can understand the shock that I felt this morning when I opened that telegram. I fully expected to hear that the river was high and the prospect for sport fine; instead I read the news of the death of one of my best and dearest friends.

He was such a genuine sportsman! Of all the men I ever fished with I know of none that are his superiors and but one his equal—my boy Harry. He never complained, no matter how hard his luck, no matter what misfortune came to him. Why, the last time I fished with him, I remember one day when he hooked a large salmon that soon made for the rapids. Without waiting to get into his boat, the ex-Governor ran down the rocks into the water. Twice and three times did he fall his length into the water, but he never gave up. He was bound to get that salmon, and he did. And we all had hard work for the next hour hunting for his watch.

Toledo as an Angling Point.

THE waters of the vicinity of Toledo once abounded with all kinds of game fish. They were more abundant here than elsewhere on the American continent. After a careful examination of these waters, including the Maumee River, Maumee Bay, Ten-Mile Creek and the marshes adjacent to the bay, an expert of the fisheries department of the National Government at Washington pronounces the opinion that they are the most superior in the world for the abundant propagation of all manner of food and game fishes.

Toledo may be made one of the most attractive angling resorts in the country, and thanks to the efforts of Commodore Gunckel and other writers, the fame of the waters of this vicinity for that kind of sport is beginning to extend all over the country. A writer in FOREST AND STREAM, who has fished in all the accessible waters of the continent, after a week of variated angling on the Maumee rapids, in Ten-Mile Creek and Maumee Bay, says that for all-round sport; that for the exciting pleasure of always catching something and not knowing just what you are going to catch; for being constantly employed in taking a string of a dozen kinds of fish; for the ever changing scenery of land and water, of green islands, of forest-clad mainlands, of marshes like floating gardens, in which are blooming the most beautiful flowers ever seen; of pure air that gives life and health and the appetite of a horse, the angling waters of the vicinity of Toledo lead the world.

Favored by the ice, which prevented the fishermen from getting in their nets early in the spring, and by the currents of surface water flowing down the streams, as much as the enforcement of the laws in Michigan, the fish of Lake Erie have again come back to their old summer haunts at this end of the lake. They are more numerous in the waters and the catches of the angler larger than they have been before for the past eighteen years. With a reasonable enforcement of the laws that already exist and better ones in the future; with the destructive gill nets driven from Maumee Bay, as they are now and will be in the future; with all inland streams kept clear of nets, the waters of the vicinity of Toledo will become famous angling resorts, drawing to this city thousands of people who spend their money freely.—*Toledo Press.*

"Forest and Stream" Fishing Postals.

Drop us a line about the trout or bass, and where to take them.

DENVER, Colo.—I was up on the Gunnison River a few days ago and had some very good trout fishing. Sport is unusually good in Colorado this year owing to the low water. H. M. J.

FOREST AND STREAM OFFICE
346 Broadway
NEW YORK LIFE BUILDING
Present Entrance on Leonard Street

A STAR ISLAND YARN.

STAR ISLAND, Mich., July 17.—I never see any notes in your paper of the catches of small-mouthed black bass made in the neighborhood. This particular sport seems neglected in that respect. Here are a couple: Mr. W. R. Post, of Detroit, caught 216 in one week, his catch one day being sixty-four, with a total weight of 202½lbs. Mr. C. S. Cross and wife, of Emporia, N. D., caught in ten days 196 black bass and 282 pickerel and pike.

I inclose a brand new and original fish story which was never in print before last Sunday's Detroit *Tribune* (July 12), to whom I gave it. I think it could be used by you.

JAMES SLOCUM.

Mr. Slocum's Brand New and Original Story.

It was a party of ten or twelve on the broad veranda of the Star Island House last Friday evening that heard the following fish story—a party of old habitues of the Flats, a crowd that assemble at this resort about the same time each year, and after the day's sports are over smoke and chat and tell stories. It was the turn of the young man in the light suit, and he crossed one leg over the other and started:

"Izaak Walton was a good fisherman and he was also a philosopher," said the young man thoughtfully, "but his abstruse philosophy isn't to be compared to Will Post's natural philosophy, and the latter is also a very good fisherman. It happened like this: Two weeks ago, while angling for bass near the lighthouse, a 50lb. muscalonge appropriated the top joint of Will's new steel rod, together with about 40yds. of line, and as the rod had been presented to him only a few days previous, he consequently felt rather bad over his loss. Well, here's the strange part of the story. Last Saturday he was fishing near Sni Borro rather early in the morning when he saw a big 'longe pass by his boat in the clear water, and he at once recognized his former finny acquaintance.

"Now, as you all know, Sni Borro is about five miles from the lighthouse, and if you have studied the habits of the muscalonge you will know as Post knew, that when hooked he will always endeavor to escape by going up against the stream. Post, making a rapid mental calculation, arrived at a satisfactory explanation of the changed geographical position of that fish, and also concluded that the missing part of his steel rod was attached to the line and in the immediate vicinity.

"Promptly repairing here, he borrowed half a dozen of the cells used for working the electric bells and the spark coil from an electric cigar lighter. Then he went over to the aquarium and secured a good, large and active pike. The coil he fastened firmly to the pike, after making it water-tight (the coil, not the pike), and then supplying himself with about 40yds. of good insulated wire he returned to the spot where he last saw his fish. After another calculation, rapid and mental as before, he easily located his 'longe, and connecting the coil and the batteries with the wire he threw the pike in the water and turned on the current, thus converting the coil into a powerful traveling electro-magnet, operating in a 15yds. radius.

"Pretty soon there was a continual pull on the wire, and after Post had payed out nearly all of it, the pulling ceased and a smile of satisfaction developed itself on Post's face. The result justified the means, for when he hauled the pike back to the boat there was the missing part of his rod held firmly against the attracting pole of the electro-magnet. It didn't take long to capture the big 'longe and bring him back to the hotel, where he formed part of the menu last Sunday."

THE UNCERTAINTIES OF SURF FISHING

ASBURY PARK, N. J., July 14.—Perhaps nowhere is the uncertainty of angling more powerfully illustrated than in surf fishing. One week the waters fairly teem with fish life, the next will be apparently entirely devoid of everything except the ubiquitous skate and the exasperating spider crab.

The week just closed has been one of extreme discouragement to the fraternity. The extraordinary run of bass that was with us two weeks ago has apparently gone on a vacation, but those who are familiar with their habits know that it only needs a good easterly blow to send them to the front again. Kingfish too are not nearly so plentiful as in the past, but a little stirring up of the surf will speedily produce them in abundance. Even the plaice or fluke, usually so abundant in all the cuts along the beach, are exceedingly scarce, but their absence is easily accounted for. The rapidly increasing number of pound nets along the coast throw out daily many tons of small fish suited to the appetites of the plaice, and as a consequence they stay where food is most abundant and easily secured. While the plaice is in no sense a game fish, and is—and I presume ever will be—classed among the "old boot" variety of fishes, still if taken in a good tideway, with tackle such as is used in taking weakfish and kingfish, it affords really good sport, and I have spent many pleasant hours effecting his capture when other fish were not to be had.

It is really astonishing to those not on the inside how many anglers are dividing their time between salt and fresh water fishing; even those who are the most pronounced salt water adherents can be seen daily on some of our lakes enjoying the quiet and glorious sport of taking the white perch, which is particularly abundant in Deal Lake, and runs of large size, 1¼ and 1½lb. specimens being not uncommon. When one considers the advantages to be had in lake fishing, there is small cause for wonder at the change. There is perhaps no more beautiful body of water in our State than this same Deal Lake; it embraces several hundreds of acres, and extends in an unbroken sheet nearly a mile straightaway from the ocean, where it divides in three arms, whose borders are covered by a heavy growth of timber. It is here the angler can have the restful quiet which dignifies the sport, with boat quietly at anchor beneath the outspreading arms of some patriarch of the forest, whose dense mantle precludes the possibility of sunlight reaching the water. Here goodly strings of white perch and pickerel can be lured from their watery homes. What though occasionally strings be not large or individual weights great, full recompense is had in the sweet, bracing restfulness of the contemplative man's recreation. LEONARD HULIT.

The FOREST AND STREAM is put to press each week on Tuesday Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

The Kingfishers will Wind their Reels.

Editor Forest and Stream:

I am much beholden to Br'er Starbuck for his kindly mention of ye Kingfishers in issue of July 4, but he is a little off on the location of our summer camp for this year. We are not going to camp on Burt Lake. We have taken a new departure.

The boys have "prevailed over me," and we leave on July 31 over the C., H. & D., Monon and Chicago & Northwestern railways for Presque Isle Lake, in Vilas county, Wisconsin, going via Power's Junction, as recommended by Brother McCrea in FOREST AND STREAM of Nov. 2, 1895.

The lake is eighteen or twenty miles southwest of Gogebic Lake, and lies, with a dozen or more other lakes near about, a few miles from the State line dividing the Upper Peninsula of Michigan and Wisconsin.

The lake is said to afford splendid bass fishing, but the chief reason for making the camp there is to give "poor Charley" (Furr) an opportunity to "hive a maskinonje"—the ambition of his (angling) life—in Pappoose Lake, which can be reached by a couple of short portages.

There will be a dozen or more in the party, including Adirondack Murray, who "got lost in the middle of the road" last year; Dr. A. E. Elliott, of Lodi, Ohio, a new recruit of last year and an angler and sportsman after our own hearts; Dick Morris, George Payne and a couple more bluegrassers of the right sort, with another one or two to hear from; the big 4 (old Sam, poor Charley, Col. Culbertson and old Hickory, yer humble sarvent), and last, but not least important, old Mack, the black prince of camp cooks; and if we don't pull a heap o' comfort and sport out of that camp, it will be because ye Kingfishers have "forgot their ways;" and if ye editor of FOREST AND STREAM, Bre'r Hough—may his shadder never grow less nor his pencil wear out—or any other brother of the rod has a doubt about it, let him follow up our trail to Marenisco, get John McLaughlin to "buckboard" him out and drop him in the shadow of Old Glory to share our blankets for a few days, and we'll make it warm for him.

The latest from Bre'r Starbuck is that he is on his way to his favorite waters, the north shore of Lake Superior, and here's a hopin' that he'll get his "satisfy" of luring crimson princelings, scarlet-*headed* and red-*hooded* trout and other varieties of the *fontinalis* that are seemingly indigenous only to those waters, albeit I never before heard of a red-*headed* trout. They must be a new species not classified by naturalists. I'm a trifle loose in my Latin, but how would *fontinalis topknoti, rubri, Starbuck-eye* do? or words to that effect, which being interpreted liberally stands for Starbuck's red-*headed* trout.

KINGFISHER.

Their Pictures in the Papers.

THE Boston *Globe* gave a portrait last week of a Maine boy who had distinguished himself as a rising young angler. The story of his exploit runs:

"John Merrill, the Cobbosseecontee fisherman and guide, is the proudest man in Kennebec county, Maine, just now, because his son and heir, aged three, has caught two strapping great bass, and has won the distinction of being the high-line fisherman of his age in Maine, so far as it is possible to determine. If there is any other child of three years who has landed two 3lb. black bass, one within half an hour of the other, John Merrill has yet to hear of him."

In the mail which brought this to the FOREST AND STREAM came a copy of the San Francisco *Chronicle* with with a portrait of Miss Maud Pryor, who has seen but ten summers and is declared to be "entitled to the palm as champion fisher maiden of California, for she caught seventy large trout in Donner Lake in one day recently. The little girl is the daughter of W. A. Pryor, of Shasta. She left home in May to visit friends in San Francisco, and after a few weeks' stay went to Truckee, where she is at present. Miss Maud is very fond of fishing and other outdoor sports."

Dr. Webb and the Quebec Fish and Game Club.

FISH AND GAME PROTECTION CLUB, Province of Quebec, Montreal, July 12.—*Editor Forest and Stream:* It has been brought to my notice that articles have been published in some American papers claiming that Dr. Webb, the president of the St. Lawrence & Adirondack Railroad, has been arrested and fined by the wardens of this club for alleged infraction of the fishery laws of the Province. As Dr. Webb is *de facto* a resident of this Province and pays taxes as such, I need hardly point out how void of foundation such statements must be, and as they may be productive of mischievous results if allowed to remain uncontradicted, I shall feel much obliged if you will be kind enough to publish this in the next issue of your valuable journal. J. S. LEO, Hon. Sec'y.

Game and Fish Protection.

MINNESOTA ASSOCIATION.

ST. PAUL, Minn., July 17.—*Editor Forest and Stream:* The first annual meeting of the Minnesota Game and Fish Protective Association will be held at the Windsor Hotel, in St. Paul, on Thursday, July 30. A pleasure programme for visiting members has been arranged, and the St. Paul Rod and Gun Club will on Friday, the 31st, give an all-day trap tournament as a compliment to our Association. Several hundred dollars in merchandise prizes will be shot for. A banquet will also be given on one of the evenings named.

While in all probability most of the old officers will be re-elected, the meeting will be of much interest to Minnesota sportsmen in general, for after an existence of a year it has been practically demonstrated that an organization of such a character can do much toward shaping the sentiment of the masses in the interests of game and fish protection.

While in reality this Association has made no startling demonstrations of activity during the year just closed, we have conducted a dignified and worthy campaign and have made friends and recruits in all quarters; yet our attitude has been such as to warn violators that we are in the field for business, and in this connection the State Game and Fish Commission has given us full credit for our work and influence as an auxiliary body. Though we have reason to be satisfied that we started this volunteer movement, we have learned several weaknesses to be guarded against, and have some changes to make in our constitution that will make it thoroughly possible to assimilate with the various local protective bodies and gun clubs throughout the State, extend our line of usefulness and make our work effective in all quarters. Our constitutional provisions for admitting these local bodies to membership have not been satisfactory to the major number of clubs. But with the changes we propose making this result will be accomplished, and this being a legislative year, we will, with united action, be able to voice any alterations in the fish and game laws that may be thought desirable before our legislative tribunal. Our present laws on these subjects are for the most part admirable and have stood the tests of the highest courts, and it is doubtful if more than a few minor alterations will be brought forward. WM. L. TUCKER, Sec'y.

Fishculture.

NEW METHOD OF POND CULTURE.*

BY DR. JOUSSET DE BELLESME.

[Translated by Dr. Tarleton H. Bean, by permission of the author, and read at the twenty-fifth annual meeting of the American Fisheries Society.]

[*Concluded from page 52.*]

FISHCULTURE should be a methodical process, producing returns with certainty and regularity. Carp culture has for its object the bringing of this fish to a size advantageous for market purposes, but the carp is not marketable until it reaches a minimum weight of 1 kilogram, and it finds a better sale when it reaches a weight of 2, 3 or 4 kilograms. If we wish to keep them long enough in a pond to attain this weight and the best perfection possible, we must arrange the ponds in such a way as to secure this as rapidly as possible.

The case is by no means the same either with trout or California salmon. These fish are marketable when they have attained the weight of 200 grams, and it is to be observed that they bring a better return at this weight than those weighing 2, 3, 4 or more kilograms. As a matter of fact in the Paris market the large trout bring 8 francs, while the small ones of 200 grams are sold at 10 francs a kilogram.

But a carp weighing 200 grams is not edible. It is precisely this difference between the California salmon and the carp which serves as a basis for organizing the new method of culture which I have the honor to explain. We seek merely to obtain small *Salmonidæ*, and this permits us to secure an annual return, a thing which the carp rarely furnishes.

Doubtless this difference in the method of culture will incommode not a little the fishculturist who is in the habit of raising carp. But pond culture of the California salmon, as I shall explain it, is very simple.

As in all intensive culture this requires care, frequently greater care than with the carp; but we shall see that it yields nearly ten times as much as carp culture.

We will now for greater clearness inquire successively into the different conditions which may present themselves in pond culture.

Suppose in the first place a property contains many ponds, some with warm water, others with cold water, a condition of frequent occurrence, how shall these ponds be arranged for use in the culture of *Salmonidæ*?

The principal prerequisite for a pond culturist should be to insure abundant nourishment for the fish. In the culture of the carp, which is herbivorous, the ponds must be well supplied with certain species of aquatic plants. I have insisted so strongly upon this point in my recommendations for the last ten years that many proprietors of ponds begin to recognize its value.

At present we seek to raise carnivorous fishes, and all our efforts should lead primarily toward securing an abundant supply of animal food. Certain specialists have believed that they could solve this problem by an unlimited supply of crustaceans; this is the system of Lugrin. I have demonstrated in experiments made at the Trocadéro Aquarium that feeding by Daphnia is simply a dangerous illusion. These little animals possess very small value as food, and fish which are subjected to this regimen do not grow. But it is important to the fishculturist that his products grow as quickly as possible, and to accomplish this we must not forsake food materials of rich quality, like meat, blood, etc.

We employ the two series of ponds, of warm water and cold water, for different purposes. The warm ponds, in which fish reproduce and grow rapidly because plants grow in them, are used to raise herbivorous fish of rapid growth, like the carp, tench and roach.

In this new method of culture the carp and its rearing does not entirely disappear. It is simply relegated to the second place and cultivated, not for the purpose of obtaining fish of marketable size, but for the fry, which are intended for feeding the *Salmonidæ*. Carp, roach and tench, hardy fishes of which the multiplication is unlimited and the growth rapid, will be grown in warm ponds, but produced in such a manner as to remain small, and in order to obtain this result we allow the breeding ponds to be overstocked with eggs, a thing which was avoided carefully under the old methods, but which on the contrary we wish to attain because we desire nothing but to produce fry smaller than the carnivorous fish which are to feed upon them.

Besides, the American *Salmonidæ*, and particularly the California salmon, develop much more rapidly and much earlier than the fry of the *Cyprinidæ*. In August the young carp measure scarcely 4 centimeters, and at the same time the California salmon are 10 centimeters long, at least if they have been properly raised. Thus the new method of culture is based upon the abundant production of minnows with a view to their transformation into flesh of the *Salmonidæ*, and in the two series of ponds we conduct two methods of rearing, each of which is equally important. It is clear that each type of pond will be differently managed. The warm ponds should have the banks sloping, should be shallow and well exposed to the sun. The bottom should be furnished with an abundance of plants of suitable height.

The choice of these plants should not be left to chance, but made with judgment according to the different species of fish which are to inhabit the ponds. As these aquatic plants are not well known to fishculturists, I will mention those which are useful for ponds intended for the cultivation of carp, tench and roach. * * *

At the end of February or the beginning of March the breeding fish are placed in the pond according to custom, but in double the usual number, in order to insure a surplus production of fry, the securing of a very great quantity of eggs here being the sole object of the operation.

Spawning will take place at the end of May and the pond will contain a considerable number of alevins which will be 3 or 4 centimeters long in August. It will be easy to catch them with fine seines and to transport them quickly to the cold ponds devoted to the rearing of *Salmonidæ*.

The fishculturist must proportion the number of young of the *Cyprinidæ* which he will need to the number of *Salmonidæ* which he desires to feed, and experience will quickly teach him this proportion, which will of course vary with the surrounding conditions, and the additional nourishment, more or less, which can be obtained from the worms and insect larvæ in the pond; besides, if there should be a surplus of food for the *Salmonidæ* he can easily sell it to other fishculturists.

As a general rule the young carp and tench will be eaten up before they have reached the length of 8 centimeters. No advantage is to be derived from allowing them to grow larger. Every year the fishculturist will then secure a new production of fry. There is nothing in this which is either complicated or calculated to embarrass the fish breeder.

Let us proceed now to the arrangement of the cold ponds (I repeat that by cold ponds I mean ponds in which the water is not more than 16° centigrade). Nevertheless, since we have to do here with California salmon, we may consider as cold ponds those in which the temperature rises to 24° centigrade during the heat of summer; that is to say, a truly cold pond of the ordinary kind for *Salmonidæ* is not a necessity in this method of culture, which has succeeded marvelously in regions provided almost entirely with warm ponds, as at Sologne.

Since a locality always contains some ponds which are cooler than others, I recommend to the fishculturist to give the cooler ones the preference in rearing the California salmon. There are a number of reasons for this which I will not enter into here.

It will be well to arrange beside these ponds one or two moderately large elongate basins, in which the water can be circulated. These basins are intended for the rearing of the salmon alevins, and in this way time may be saved, because the young increase much more rapidly in them than if they were at liberty in a pond. The rearing basins, dug in the soil, should have a depth of at least half a meter to 1½ meters, and the banks should be sloping. A width of 1½ meters will be very practicable. They need not be fully stocked with aquatic plants; a few clumps may be placed in them, which can be arranged in pots buried in the gravelly bottom. The plants which should have the preference are the large-leafed potamogetons and the nenuphars. At first they will serve to oxygenate the water, and later to furnish shade for the young.

The breeder may have recourse either to eggs or to alevins; the latter are always high-priced and difficult to transport. It is therefore much more practical to procure the eggs, and, from another point of view, it almost always happens that alevins which are purchased have been injured and have not been properly fed. It is well to know that in this case the inevitable result will be an arrest of development. They will not become large, no matter how favorable the conditions in which they are placed.

Preference should be given to eggs, which involves a slight complication, it is true, because it will be necessary to hatch them; but nothing is easier, and we have to-day hatching apparatus so simple and practical that hatching is merely a pleasure.

The price of fertilized eggs of California salmon is about 18 to 20 francs a thousand.

After hatching, the fry are transported to the rearing basin, and at the end of about fifteen days, without waiting for the complete absorption of the yolk sack—I insist especially upon this point—the feeding should be commenced. The food should be suspended daily in the water by means of a zinc vessel placed about 20 centimeters from the bottom. The general principles of rearing fry should be followed rigorously. In feeding them one should not seek for variations or for imaginary improvements. It should be our aim to grow the alevins rapidly, and give them the richest and most easily assimilated food.

For more than ten years I have employed for this purpose the spleen of beef, calf or horse, the price of which is low and its preparation very simple, because it is given raw and its nutritive properties are very great. This substance has been employed for food of the youngest salmon at the Aquarium of the Trocadéro almost exclusively since 1883, and many fishculturists have followed our example. Blood is an excellent and cheap food. It should be slightly cooked in hot water. One may ignore all other forms of nourishment, particularly Daphnia and the prepared foods which are so extensively advertised.

What number of alevins can be reared per hectare? Experience has shown me that if the conditions are favorable one may raise without danger in a hectare of water, with an average depth of 1½ meters, 200 kilograms of *Salmonidæ* at least. If then the fishculturist follows my advice by raising California salmon to the weight of 200 grams he will place 1,000 alevins in a hectare. If he desires to raise fish of a larger size he must use fewer per hectare. Here are in this respect the approximate numbers:

1,000	salmon	of	200	grams	per hectare.
500	"	"	400	"	"
200	"	"	1	kilogram	"
125	"	"	1½	"	"

These numbers are the results of numerous experiments which I have made upon this point, and I have taken pains to give the minimum, which may often be surpassed under favorable conditions.

At what time should we place the alevins in the pond and in what time may we expect them to reach marketable size?

The spawning of the California salmon takes place very early, and on account of this precocity it is chosen as the

* *Nouvelle Méthode de Culture des Étangs.* Par le Docteur Jousset de Bellesme, *Pêche et Pisciculture*, Brussels. Nos. 1, 2, 3, Jan.-Mar., 1895, pp. 2-11, 28-40, 50-54.

basis for pond culture. With it we are able to complete the culture in one year, a very great advantage, which one cannot realize either with the common trout or the rainbow trout, because the former grows very slowly and the latter does not spawn until April. The eggs of the California salmon, deposited at the end of October, hatch in the middle of December. If they are placed at this time in the rearing basin and properly fed they will measure on an average 12 centimeters by the middle of July, and will then be very suitable for liberating in the pond.

If the temperature of the year has been very high and the spawning of the carp takes place early, we may doubtless place the salmon in the pond earlier.

By all means the young salmon should be placed in the pond not later than in August. At this time a great many of the *Cyprinidæ* will be sufficiently developed to answer for their food. The fishculturist then proceeds to seine the alevins with a fine net, and to place the salmon in the pond which has been well furnished with its food.

The breeder from this moment should exercise a continual supervision over the pond, and assure himself that there is constantly an excess of small fish, for it is essential, in order that the salmon may grow rapidly, that they should find a superabundance of nourishment. Besides, one should be careful not to place too many in the pond at a time and thus cause difficulty.

These young *Cyprinidæ* do not find favorable conditions for their existence in the salmon pond, and will become sickly and furnish indifferent food for the young salmon.

Beginning from the commencement of August, in what time may we hope that the salmon will attain the weight of 200 grams? Herein the superiority of the California salmon over other fishes is demonstrated. I do not know any other of which the growth is so rapid when placed under favorable conditions. It does not require more than six months for a young salmon of 12 centimeters, placed in a pond at the end of July, to acquire the weight of ½lb. One may obtain even better results by placing these fish under certain conditions, but this is about the average with current methods. We may therefore, at the end of January, market our salmon.

It will be seen that pond culture by the method which I have indicated can be made to give a very gratifying annual return.

If the breeder desires to obtain larger salmon, instead of catching them at the end of January he should continue the rearing in the same manner, and at the end of the second year he will obtain salmon measuring 45 to 50 centimeters. I need not add that if one cultivates fish of greater weight than 200 grams the number per hectare ought to be reduced in proportion to their size. Upon this subject I refer to a table which I have given above.

As far as my experience permits me to judge, the breeder should limit himself to the average weight of 200 kilograms per hectare under ordinary conditions. I have reference to a hectare of standing water, for if the pond is traversed by a sufficiently rapid current, such as would be furnished by abundant springs, it is evident that this proportion may be increased. I therefore give the amount of 200 kilograms as a good average, rather low, but it may serve as a rule in the majority of cases. If one exceeds this amount very much, he will experience disastrous results, which should be avoided at all cost.

The Kennel.

FIXTURES

BENCH SHOWS.

Sept. 1 to 4.—Kingston Kennel Club's fourth show, Kingston, Ont., Canada. C. H. Corbett, Supt.

Sept. 7 to 11.—Rhode Island State Fair Association's fourth annual show, Providence, R. I.

Sept. 7 to 11.—Toronto Exhibition Association's eighth annual show, Toronto, Can. C. A. Stone, Sec'y of bench show.

Sept 14 to 17.—Montreal Kennel Association's bench show, Montreal. G. Lanigan, Sec'y

Sept. 22 to 24.—Milwaukee Kennel and Pet Stock Association's second annual dog show, Milwaukee Louis Steffen, Sec'y.

Oct. 6 to 8.—Danbury Agricultural Society's show, Danbury, Conn. G. M. Rundle, Sec'y.

Dec. 15 to 18.—Central Michigan Poultry and Pet Stock Association's show, Lansing, Mich. C. H. Crane, Sec'y.

FIELD TRIALS

Sept. 2.—Morris, Man.—Manitoba Field Trials Club. John Wootton, Sec'y.

Sept 7.—Kennedy, Minn.—Continental Field Trial Club's chicken trials. P. T. Madison, Sec'y, Indianapolis, Ind.

Oct. 9.—Brunswick Fur Club's annual meet. Bradford S. Turpin, Sec'y.

Oct. 26.—Hempstead, L. I.—National Beagle Club's trials. Geo. W. Rogers, Sec'y, 250 W. Twenty-second street, New York.

Oct. 28.—Greene county, Pa.—The Monongahela Valley Game and Fish Protective Association's second annual trials. S. B. Cummings Sec'y, Pittsburg.

Nov. 2.—Bicknell, Ind.—Continental Field Trial Club's quail trials. P. T. Madison, Sec'y.

Nov. 2.—Oxford, Mass.—New England Beagle Club's trials. W. S. Clark, Sec'y, Linden, Mass.

Nov. 10.—Columbus, Wis.—Northwestern Beagle Club's trials. Louis Steffen, Sec'y, Milwaukee.

Nov. 23.—Newton, N. C.—U. S. F. T. Club's fall trials. W. B. Stafford, Sec'y.

Dec. 14.—Athens, Ala.—Dixie Red Fox Club's second annual trials J. H. Wallace, Sec'y.

The Bicycle Dog.

As new wants arise with the changes of civilization, enterprising individuals forthwith set their ingenuity at work to devise a means of a supply. By the same token, when there is space to be filled in the news department of the daily press, the bright young men in charge of the news industry see that the supply is equal to the demand.

It was necessary for the complete rounding out of the bicycle habit that there should be a bicycle dog, otherwise the bicycle would be a dogless world, and therefore cheerless. The following has started on its long distance travel through the columns of the daily press. It has that nice precision of language and broad grasp of fact which are ample data for the formation of a standard. Here it is:

"At last a bicycle dog has been developed. It is a well-known fact that any dog of the ordinary breeds will be left behind by the confirmed bicyclist or killed by exhaustion. But an English breeder has discovered that by interbreeding specimens of two particular sorts of dog he can obtain a creature of strong constitution, able to trave fast and to stay almost any distance. For nearly three years he has been experimenting, and during that time some of his creations have been very strong beasts."

It would have added much to the value of "his creation" had he bred the dogs so that large gills were developed, to the end that the dog could readily dispose of a peck of dust each hour without swallowing it; also the dog's legs should be so adjusted as to be about 90 gear. To breed scorching dogs in three years by interbreeding two "particular sorts" is indeed a great stride in breeding. By crossing the produce of two other particular sorts on these, a breed of "strong beasts" should be produced which would be able to follow the limited train from New York to Chicago.

A "long and low" dog would best answer the purpose for many reasons; first, if he should stand in the way, there would be but little obstruction in running over him crosswise, and no eccentric cyclist could run over the narrow body lengthwise, let him try ever so hard. Again, a long and low dog could penetrate the atmosphere and dust with little exertion, and if his nose be sharp, it adds so much the more to his power of penetration. A long dog furthermore harmonizes better with the wheel in the matter of symmetry, though whatever his form it is necessary at all times that he be a "strong beast." On this problem of the bicycle dog, which can reel off a century in a few hours, we know of no better authority than "Uncle Dick" for the promoters of the bicycle dog to turn to in their hour of need, and the longer and lower the dog is, the more ground he will cover, and there is no reason why he should not be "yaller."

The Development of the Pointer.

NEW YORK.—*Editor Forest and Stream:* Mr. C. E. McMurdo's letter on the pointer in a recent issue of the FOREST AND STREAM contains a statement of facts which should make the heart of every pointer admirer rejoice. From obscurity in the public competitions at the start, and from a grade of competition when the pointer did run that excited only ridicule, the pointer has forced his way through the competition to a level with the setter, if it be not even higher. Considering the number of the pointers—they were always inferior and consequently at a disadvantage—their record is for that reason better than that of the setters. They were always conceding odds to their long-haired opponents. Even in the days long ago when the pointers and setters ran separately, when it came to running off the absolute, the pointers were oftenest the victors.

Now that the setters are degenerating, there is little doubt but what the pointer will be the favorite dog of the American sportsman in the near future, and the setter will be relegated to the rear as the inferior dog for work. From what I can gather of the present condition of the English setters, they are not a type at all. We read of Laveracks and Llewellins, and I have great doubts whether at the present day there is a genuine one of either strain in the United States. Even if there were such, the breeding has deviated from the lines of the original Laveracks and Llewellins to such a degree that they now are widely different from the old stock which was first imported, and this for the worst, too, for I think that the dogs shown at the bench shows now are much inferior to those of ten or fifteen years ago. All this, I believe, is the result of inbreeding, and hence bad breeding.

A. D. M.

Providence Bench Show.

PROVIDENCE, R. I., July 16.—*Editor Forest and Stream:* In explanation of Rule 6, p. 99, in our premium list for 1896, covering the receiving of exhibits in our bench show, we would say that the object of the regulation was to enable us to have every department of our fair in full operation at the opening of the gates, Monday, Sept. 7, at 8 A. M. This being Labor Day, with an expected large attendance, it now seems that in some cases the strict enforcement of this regulation would be a hardship to the dogs and it has met with some objection by the owners. We have decided to waive the rule in special cases, more particularly in regard to exhibitors coming from a distance. We will therefore, where circumstances will warrant, receive dogs on Monday morning at the convenience of the owners, but we desire to call special attention to the fact that the judging will commence promptly at 10 A. M. on that day, and dogs not in position at that time will be disqualified. Exhibitors will therefore see the necessity of acting promptly in this regard and make their shipments in proper time.

W. W. DEXTER, Sec'y.

POINTS AND FLUSHES.

The new edition of "Modern Dogs," recently from the press, is devoted to the different breeds of terriers, and is up to date in all particulars. Mr. Rawdon B. Lee, the author, has made a decided improvement on what already seemed a perfect work. Every breed of terrier is given minute attention, and there is a broadness of treatment and a thorough knowledge of the subject which at once win the confidence and interest of the reader. Excellent illustrations by the well-known artist, Arthur Wardle, add materially to the value of the work. In all there are 458 pages of matter presented in a manner both instructive and entertaining.

Mr. F. E. Rogers, Hiawatha, Kans., under date of July 1 writes us as follows: "There was stolen in Kansas City, Mo., an Italian greyhound dog, fawn color; weight, about 7 to 9lbs.; four white feet; white tip on tail; star in face; diamond-shaped white spot on back of neck; name, Diamond." Any information will be thankfully received by Mr. Rogers.

In our advertising columns the Continental Field Trials Club announces two stakes, its All-Aged and Northwestern. The former has a purse of $350, divided into four parts, $125, $100, $75 and $50. Forfeit $10, $10 additional to start. The forfeit of the Northwestern Stake is $5 and $5 additional to start. Mr. W. S Bell, who is an experienced, competent and popular judge, will officiate in that capacity. Besides the pleasure of participating in the field trials, there is an unequaled opportunity for an outing for all those who love to shoot or fish. In this connection it may not be amiss to mention that the open season on chickens in Minnesota is from Sept. 1 to Nov. 1. Quail and ruffed grouse, Sept. 1 to Dec. 1. The killing of moose, elk or caribou, or having in possession, is forbidden before Jan. 1, 1898. Deer may be killed between Nov. 1 and 20. It is illegal to catch trout between Sept. 1 and the following May 1, nor any other food fish between the first day of March and the first day of May following, except that whitefish, lake trout, lake herring, sturgeon, pickerel, and any variety of pike, except wall-eyed pike, may be taken in international waters at any time. Each person is limited to twenty-five birds and fifty fish in one day.

The Collie Club offers for competition at Toronto one club medal for the best collie owned by a member of the club and one club medal for the best collie owned by a Canadian member. If two additional members are secured from Canada before the Toronto show opens, an additional silver medal will be given, competition for which will be restricted to Canadian members Applications with $5 for annual dues should be sent to James Watson, 203 Broadway, New York.

We acknowledge the receipt of a copy of the running rules of the Dixie Red Fox Club, a most interesting brochure, which can be obtained of Mr. J. H. Wallace, Jr., Secretary and Treasurer, Huntsville, Ala. The club has a strong membership, numbering upwards of eighty. The next meet will be at Rowland, near Athens, Ala., commencing on Dec. 14.

We are indebted to Mr. W. B. Converse, Montreal, for a photograph of his imported fox terrier Bellevue Tackler, together with a list of his winnings. Mr. Converse will show him in the Canadian circuit.

Under date of July 20 a telegram to us from the honorable secretary of the Manitoba Field Trials Club, Mr. John Wootton, contains the information that the closing of the Derby entries has been extended to Aug. 1, owing to delay in issuing the customs circular.

Mr. Chas. H. Mason, of New York city, at the close of the bench show season will have been a very active factor in the judging, both in the United States and Canada. He has accepted an invitation to judge at Kingston, Ont., that show commencing on Sept. 1. It is possible that Mr. Kirk may judge sporting spaniels at Kingston. Mr. Mason will also judge at Montreal.

The premium list of the Milwaukee Kennel and Pet Stock Association can now be obtained of the secretary, Mr. Louis Steffen, Milwaukee, Wis. The prizes are liberal, being $15 in challenge classes, $15, $10 and $5 in open classes, and $5 and $3 in puppy classes of the more popular breeds. The other prizes range from $10 in challenge classes; $10, $5 and $3 in open classes, and $5 and $3 in puppies. Other open classes have $10 and $5. Entry fee $3. The special prize list will be published later. John D. Olcott, superintendent. Major J. M. Taylor will judge all classes.

The "late entry nuisance" is disturbing the English bench show interests seriously. The Irish Kennel Association announced a hard and fast condition that late entries would not be accepted. As a consequence, the show was abandoned for lack of entries.

The members of the Ladies' Kennel Association, of which so much was expected for the betterment of canine interests and general elevation of the canine world, are rapidly drifting into what has the appearance of a battle royal squabble, which shows that in life's mission they are the equal of man in many things heretofore denied them.

The fact that a dog is now considered in most States as being property seems to be learned slowly. Too often vindictiveness and malice are considered good enough law by the individual. From an exchange we learn that a Detroit man who shot his neighbor's dog for tearing up his garden has been worsted in the courts by the decision of the judge, the latter deciding that such action is not warranted unless the offense becomes chronic. We do not believe that a repetition of the offense would justify the killing of the dog. If so, why could not the same line of reasoning justify the killing of a horse which repeatedly broke into a garden?

Says the Boonville *Herald:* Dog poisoners will do well to read and profit by the following lines: "A person who unjustifiably administers any poisonous or noxious drug or substance with intent that the same shall be taken by any animal, be it the property of himself or another, is guilty of a misdemeanor. The penalty of such a conviction is a fine of not more than $500, or not more than one year's imprisonment in the penitentiary, or both, in the discretion of the court."

The New England Kennel Club open their new club house and boarding kennels at Braintree on Saturday, July 25. Lunch will be served at 1 o'clock and the afternoon sports will commence at 2 o'clock. A special car will be attached to the 11:30 train from the Old Colony depot, Boston, for the convenience of members and their guests. We acknowledge with thanks the receipt of an invitation from the club, and regret that we are unable to be present at an event so important and enjoyable. Our good wishes go forth for the club's greater success.

Under date of July 17 Mr. G. M. Rundle, secretary of the Danbury Agricultural Society, writes us that the annual bench show will be held in the building for dogs, 60×100ft. in dimensions. Spratts will bench and feed. Mr. E. M. Oldham will superintend. There will be an increased list of prizes and specials.

A Stray Shinplaster

Comes to us once in a while for a copy of "Game Laws in Brief;" but shinplasters nowadays are scarcer than Moose in New York; and 25 cents in postage stamps will do just as well.

Wheeling.

Communications for this department are requested. Anything on the bicycle in its relation to the sportsman is particularly desirable.

SQUIRREL SHOOTING WITH A BICYCLE.

I HAVE never seen much in the sporting press relative to New York city as a game center, yet at times there is pretty good woodcock and shore bird shooting within the limits of the Greater New York, and very occasionally quail and partridges are found within range of the nightly electrical illumination.

Rabbits and squirrels, however, are the game that manages to hold their own best against the encroachments of civilization within a radius of twenty-five miles of City Hall, and within this distance on Long Island, Staten Island and Jersey, as well as Westchester county, N. Y., there are enough to make a pretty fair census report, provided the census taker is a man of experience and not over-exacting in his expectations. For instance, within this distance from City Hall, the enumerator with a shotgun should be satisfied if he records from one to three or four of either variety for a day's work, and he will not go to Mulberry street either to make this record.

Now, the point at which I am aiming is this—twenty-five miles from City Hall is easily within the powers of a bicycle rider living in New York city, and if that man likes shooting, whether he goes by the name of "sportsman" or not, he can get it by the aid of his wheel on off days or half holidays, reserving his longer vacations for more distant shooting trips.

Gray squirrels are my favorite game about New York, and they can be found almost anywhere where there is large timber. On Long Island or in Westchester county, however, they are not found as near the city as on Staten Island or along the Palisades. There are grays on the Palisades where the first large timber begins, but they are very few and far between till one gets above Fort Lee. Above that point, however, they are found in every piece of woodland where there are hollow trees to protect them. Grays so close to the city rarely nest, for they have learned by experience that hollow trees are better protection against the shots of dagos and hoodlums who swarm through the woods on holidays. And here let me give a bit of advice, which is not to go shooting within 100 miles of New York on a public holiday, unless you go very early and return by breakfast time.

Even hollow trees do not always protect the grays, for after a light fall of snow I once saw a party of hoodlums capture a number of squirrels just above Fort Lee by the aid of telegraph linemen's climbers. When they had located a den tree, one of the party was sent up with an axe to chop the squirrel out, while the rest, including some dogs, waited on the ground to give the unlucky squirrel a warm reception.

One can take an early morning boat across the ferry at West One Hundred and Thirty-first street, and within an hour, by the aid of his wheel, be on fair squirrel ground, where if he knows his business he can bag two or three grays before breakfast.

Over on Staten Island there are also some pretty fair squirrel woods. Last Election Day I killed four before 8 o'clock in the morning on Tode Hill, which is in the center of the island, possibly fifteen miles from City Hall in an air line.

To reach this point the bicyclist can leave South Ferry at 3:40 A. M. He will arrive at St. George half an hour later, where he transfers to the Rapid Transit R. R., taking the train which stands at the right as he leaves the ferry house. His bicycle is carried free of charge on both boat and train, and the entire cost of the trip is but 10 cents. At the fourth or fifth station he can leave the train and strike south for the center of the island. The fourth station is West New Brighton, and if one gets off at this point he can follow the street car tracks almost to his destination. After leaving the station he should first go a couple of hundred yards parallel with the railroad, and in the same direction taken by the train, till he comes to the first street leading off to the left. After this, where there is a branch in the street car line he should always take the right hand turn.

The wheeling is all up hill, but the roads are macadam and kept in very good condition. Between two and three miles from the station, at say a little after 5 in the morning and pitch dark still in November, our early riser will pass a large isolated building on the right, which is Eckstein's Brewery. Half a mile beyond he will come to a road to the left climbing the last hill on the island, from the top of which, on a clear day, a magnificent view of ocean, bay and kills may be had.

He should follow this road to a point where at the last rise a path strikes off to the right up a steep bank. He will have to dismount here and push his wheel along the path, as it is not ridable before daylight.

A quarter of a mile from the road he strikes the first big timber. Here the squirrel hunter may leave his wheel, taking good care to hide it thoroughly, or he can take it along with him through the woods if he feels safer to have it by him.

And now, having directed my friend to the hunting grounds, I will give a short description of my Election Day hunt in these same woods. A little to your left as you enter the woods, and 100yds. or so from the boundary fence, is a very large hickory that leans toward the east at an angle of 20 or 30° out of the perpendicular.

This tree springs from the foot of a bluff, so that its top branches are not a great distance from the sportsman as he approaches on the higher ground; and as the tree is a prolific bearer of very sweet nuts, it is a great resort for the grays.

This was my objective point as I entered the woods in the first faint dawn that November morning, and I soon found a good point of vantage commanding the tree where I could wait for the early squirrel.

Aside from my wheel my sole companion was my .22 repeater, fitted with Lyman sights front and rear.

The morning was very still and a trifle misty—just the kind of a day to hunt—and my heart was filled with pleasurable expectation. Before long, however, these were rudely dashed, for, looking over my shoulder to ascertain the cause of some distant noise, I discovered two other hunters approaching.

Without seeing me these men came within twenty paces of the spot where I sat, and there one took up his position to wait till sunrise, while the other moved on and was soon lost to sight.

My neighbor was not a good squirrel hunter, for he lacked patience and fidgeted a great deal. Several times he changed his position a little, but at length he spied me, and after that he kept more quiet.

Though the usual accompaniments of sunrise were not in evidence that morning—owing to the mist—it gradually grew lighter, and presently, far off through the trees, I saw a leafy bough suddenly bend downward under the weight of a squirrel.

I kept my eyes riveted on the tree, which was a small hickory gorgeous with its golden autumn coloring, and a second later I saw a splash of gray moving rapidly down the trunk of a nearer basswood.

I made up my mind that the nimble rodent was coming my way, and I looked out of the corner of my eye to see if the other fellow had caught on. But he was busily engaged with a late mosquito, and I did not wonder that his companion had preferred to hunt alone.

The squirrel came rapidly along its aërial pathway and soon reached a tall, spindly maple, which had no branches worth mentioning short of the top. Here it stopped, having no doubt seen some motion of my neighbor, and as there was no good cover for the squirrel in the immediate neighborhood, I resolved to open the campaign on the offensive. Accordingly I arose and walked over to the tree where I had marked him down, keeping my eyes peeled for a sudden break and the little rifle in position for a snap shot.

But Mr. Gray diagnosed the case wrongly and imagined he hadn't been seen, for instead of attempting to get away, he flattened his body against the opposite side of the tree and tried to hide. I walked very softly directly up to the butt of the tree, and once there caught hold with my left hand and swung my body around till I could look up on the side where the squirrel was hiding. Meanwhile I had raised the rifle to my shoulder and held it with my right hand aimed in a general way toward the top of the tree.

Scarcely 30ft. above me hung the squirrel, head down, and looking for all the world like other knots and protuberances on the tree, and whether from surprise or because he did not think he had been seen, he did not move. Slowly I steadied the rifle, for it was a difficult shot, and when it spat out its leaden missile the squirrel did not immediately fall. Instead it jumped into a neighboring tree and hung for a minute from a branch, evidently badly wounded. It was but the work of a second to step aside and take a second shot, and the squirrel was stone dead when its body struck the ground.

I picked up the bushy-tailed fellow, and noting that the first shot had struck too far back, dropped him in my pocket.

Then having secured my bicycle, I moved further south along a line fence till I came to a nest tree where the claw marks on the trunk were very recent. Here I was out of sight and hearing of my late neighbor, and as it was hardly yet light I was content to rest a while.

J. B. BURNHAM.

[TO BE CONTINUED.]

HOW BICYCLES ARE SOLD.

THE following statement of the part that advertising plays in the sale of bicycles, taken from the columns of *Profitable Advertising*, is worthy of consideration as being the opinion of a man who handles the advertising of one of the best advertised and most widely sold bicycles of the day:

"More money has been spent in this country during the past twelve months in advertising bicycles than any other article of manufacture, and yet out of the several hundred bicycle makers there are less than a score who could properly be classed as 'general advertisers.' Further, notwithstanding the overwhelming demand for bicycles, both this season and last, the 'general advertisers' have done and are doing the bulk of the business, and with one or two exceptions they have not found it necessary to resort to the cutting of prices. This is only natural, for people will not pay $100 for the indifferent product of some unknown manufacturer.

"The hundreds who rush into the bicycle business this season without any experience, and the non-advertisers among the older manufacturers, are the ones who are now disposing of their bicycles at any price they can get regardless of list, and the writer will stake his reputation as a prophet that these same manufacturers will have 'bicycles to burn' before the season is over.

"The above statements are not mere words, but in the main are solid facts. The natural deduction for the unfortunate manufacturer, if he wishes to avoid a repetition of this deplorable state of affairs, is to advertise. By this is not meant the desultory spending of a few hundred dollars during the season, but the laying aside of an appropriation for advertising that is consistent with his standing and condition. Most important of all is the selection of the man who will buy the space and attend to his advertising. An experienced and capable advertising manager will produce better results than will an inferior one with double the appropriation at his disposal. In this instance, as in many others, the best and highest priced talent is the cheapest in the end.

"The competition next year among the bicycle manufacturers will be most keen, as the demand is even now practically supplied, and before the present season is over there will be a surfeit of bicycles stored away for next season's trade. Under these circumstances there must of necessity be more advertising that ever, which will also have to be better and more carefully looked after. Next year a demand will have to be created and many a bicycle manufacturer will find it not so easy sailing as heretofore. Bicycle advertising is only in its infancy, and the coming season will see more of it, and as necessity is the mother of invention, it will naturally be much better."

The World's "Hundred."

ONE hundred miles being a sort of standard distance, cyclists are usually interested in how the records stand. The following are the best authenticated safety, path, paced records, as prepared by Chairman Gideon:

English amateur, 3.54.29⅘, A. E. Walters, at Catford, Sept. 7, 1895.

American amateur, 4.37.56⅘, A. G. Harding, St. Louis, Oct. 24, 1894.

American, Class B, 4.22.15, R. P. Searle, Nov. 13, 1895.

TIRE EXPEDIENTS AND COMMON SENSE.

THE most vulnerable part of a good bicycle is the tire. In a well set up bicycle there is very little danger that the frame will break or come apart, or that the wheels or bearings or cranks or pedals will suddenly play out, and the rider is very rarely put to the inconvenience of walking home except for the single cause of an injured tire. A pneumatic tire at best is a delicate thing, and we Americans have gone to the extreme of making them very light, though it must be acknowledged that weight for weight ours are the toughest in the world.

Owing to the adventurous tendencies of bicycle riders as a class it frequently happens that tires give way in the most out-of-the-way places, and consequently a knowledge of the art of tire repairing is of the utmost importance. Directions are given with all repair outfits, and by studying these the average cyclist can make a pretty good job of the commoner class of punctures; but frequently for one reason or another, either for lack of time or because the cut is not to be treated in the ordinary way, he is at a loss for a remedy, and his wheel instead of being a help is only a hindrance to his movements. It is under such circumstances that quick wits and common sense come into play. There is a way to stand an egg on its end, and a way to accomplish a good many other apparent impossibilities, and the particular exigency of the case will frequently suggest a remedy. Tire tape is perhaps one of the most useful articles in the repair kit of the cyclist, and its use will stop most leaks more expeditiously and certainly in untrained hands than plugs and cement. Lacking this, the old expedient of a bit of chewing gum over the seat of the injury, held in place by a tightly wound cincture made from a pocket handkerchief or necktie, frequently works equally well.

Sometimes one runs over thorns that the hedge trimmer has thrown into the middle of the road by way of tidying up the strip alongside, and in this case it frequently does to break off the thorns in the wound even though they penetrate the inner wall of the tire, as they fit so tightly as not to permit an escape of the imprisoned air. Possibly the man who first thought of this expedient was acquainted with the story of the swordfish which first pierced the ship and then left its blade to caulk the leak.

At other times the tire is so badly damaged that it is a waste of time to try to make it hold air; but even this difficulty has been overcome by fertile minds. We all remember the joke where the cyclist gets himself out of a predicament by replacing his burst tire with a string of sausage, but the principle that governed him was not so ridiculous as the means he adopted.

A piece of rope of large size has been used effectively in place of a tire, care being taken to bring the ends closely together and bind them securely to the rim, and similarly the outer sheath of a double tube tire has been filled with bran, and the rider, as a reward for his ingenuity, gone home on his wheel instead of his feet.

In cycling, as at other times, it is best to think before acting. Most people have the capacity for doing the right thing provided they take the time to reason it out. A certain course is likely to give the man who adopts it plenty to worry about afterward when some simple expedient might have saved him all.

Many riders, for instance, have ruined the easy running qualities of their bicycles by riding home with a broken ball in the bearings to grind the cones and create havoc generally, whereas, having ascertained the cause of the trouble, the simplest of reasoning would have dictated the removal of the broken parts, for even if the rider was not aware of the fact that the full number of balls is not essential to the fine running of the wheel, common sense would tell him that the wheel could not possibly run worse, and that the broken parts were certainly of no advantage.

COULDN'T MOUNT.

THE other day an absent-minded man walked down the middle of a street in a large city pushing a bicycle ahead of him and gazing abstractedly at the cobblestones. A friend spied him from the sidewalk, and after some difficulty succeeded in attracting his attention.

"Hello, Jones," he said, "why aren't you riding your wheel?"

"Can't get on the blame thing," replied the absent-minded man. "I took it to the repair shop, and the man there put on the step on the right side, which is the wrong side, and though I've tried it half a dozen times I can't mount from the side where it is, and I can't make a pedal mount or a mount from the curbstone."

The man on the sidewalk looked at his friend quizzically and then said:

"Give me your wrench."

The other obeyed in a hang dog way, for the point was beginning to dawn upon him.

The man with his wits about him stooped over and in a jiffy he had removed the nut and step and put them on again in their proper places.

"Now," he said, "you can get on your wheel and ride home; but I would advise you in future either to learn some new mounts or else get a new set of brains," and the absent-minded man took his medicine meekly.

"WHEN a wabbler meets a scorcher," says the *Wheel*, "the safest course for him to pursue is to head for the approaching flyer with a grim determination to collide with him. Such is the perversity of all bicycles, when mounted by novices, that only those things the rider attempts to avoid are ridden into, and those he seeks to reach are always avoided. By remembering this in the moment of danger the wabbler will emerge triumphant from the ordeal."

M 17-18. American, open, Newburyport.

THE criticism has been very generally made, both this year and last, that such yachts as Ethelwynn, Ideal and Two Step would be much faster if rigged with the ancient and conventional gaff to fan them out to windward in some unexplained way than with the leg-o'-mutton sail devoid of a peak. Last year, however, Ethelwynn was speedy enough to defeat six of her class under boom and gaff rig; and this year Glencairn has scored a decisive victory under the leg-o'-mutton rig. As the picture shows, her rig is identical in principle with the "Scarecrow" rig, differing only in mechanical details. When under full sail the single pole mast of the "Scarecrow" rig is in every way better; when reefed the shorter mast and separate yard are advantageous in lowering the weight and lessening the windage. As far as the argument between the gaff sail and the leg-o'-mutton is concerned, the weight of evidence is now on the side of the latter.

Guesswork Criticism.

As a racing class, the 15-footers are probably quite able to take care of themselves; they have furnished good sport in international racing for two years; they have increased in numbers to an exceptionally large fleet; they have attracted the interest of the yachting public, and have enlisted in their service many skillful designers and sailors, both amateur and professional. While they need no defender or apologist—especially at this time, when they represent with the new thirties the two live racing classes of the year—we are nevertheless not inclined to let pass unchallenged the malicious and untruthful attacks upon them from a certain quarter.

For some unknown cause the class from its first establishment awakened the enmity of the expert known to fame as the "Boston *Herald* Man," and he has persistently attacked it throughout the present season. Even were the class so bad and so useless as to call for condemnation in the interests of yachting, it is hardly probable that it would be entirely devoid of good, and that nothing could be learned by a technical study of the individual boats and a comparison of their qualities and performances; far from being extreme, expensive or in any way detrimental to the advancement of yachting, the class is in many respects an excellent one, and beyond this again its history up to to-day is replete with instructive data that no progressive yachtsman can afford to ignore. The character and animus of this attack upon it is shown by the wholesale and indiscriminate condemnation of it and the yachtsmen connected with it, as well as by the absence of all attempts to understand and explain the important lessons of the races. We quote the following extracts from various articles by the same writer in both the Boston and New York *Heralds:*

"So far as science of yacht naval architecture goes, the result of races between any boats built under guesswork rules amounts to nothing. The difference in the dimensions and the area of the sails shows this, and the result of the guesswork of those getting up the craft indicates that the Glencairn people had hit it the better.

"The boats were built under a guesswork rule—that is, a specified rating was named, and, in order to get this, you may cut off sail if you wanted waterline length, and add sail if you took off waterline length The result shows that, under the guess rule, the Canadian boat has 60ft. more sail area to make up for her shorter length, and it is history repeating itself, for the Boston 21-footers, with their larger sail spreads, could beat the Herreshoff 25-footers Wenonah and El Chico, with their longer waterline lengths and smaller sail plans. Many will claim, and with justice, that there is considerable guesswork in yacht naval architecture. There is, but not to so great an extent as the boats which raced yesterday. On limited waterline lengths, the same as the Defender, the designer is not fenced in in his driving, and there is no limit on sail area. Consequently, he does not cut down the sail area to gain on the waterline. It is quite evident that the Glencairn's designer thought more sail and less length would be better than the dimensions of El Heirie, both on length on waterline and canvas area."

"Perhaps now that the promoters of this 'inland pond' type of yacht have lost the international yacht race, they will be willing to come back again to sensible, comfortable boats, where 'hit and go' does not have so much to do with the result as that of the guesswork designed boats which raced to-day. They are hardly the boats grown-up men should sail an international race in."

"The above table shows clearly the guesswork business indulged in by the different designers. The In It, with 10ft. on the waterline, has 360sq. ft. of sail, while the Answer, with 16ft. waterline, has 194sq. ft. Here are a dozen and more boats built under a rule which is restrictive, and they show that the boats with the lesser waterline length have a greater sail area than those with longer waterlines. It is come and go on the guess business.

"The designer of the Ethelwynn does not relish the work of showing up these boats, which offer no information whatever so far as giving any ideas about actual racing. He does not like the great 21-footers, built wholly for racing on the widest differences in type ever constructed in this country, a class which furnished more information for Cup defending purposes than any class yet built on either side. If the wide-beamed 21-footer had a ton of pig lead below and a jug of lemonade in a race off Marblehead, the Ethelwynn offered no such comfort, for she capsized, was deserted by her owner in a race, and such a thing as the comforts of a jug of lemonade were not to be thought of. Besides, the owner of the big, wide 21-footer has the comfort of taking his family out for a sail How about Ethelwynn in this regard?

"The Herreshoff boats Gnome and Olita were built for the class, but the racing list shows that the Olita did not start. The Gnome started in three races, finished ninth in the first and was 27 minutes astern of the Ideal on a wild fluke. She was not placed in the second and third races, although she started; neither was she selected to start in the supplementary race. What better evidence could there be that chance and opportunity have a great deal to do with results in yacht racing? Here is the case of Mr. C. H. Crane, with one boat for his chance, beating Stephens and Herreshoff, each with two chances, and this in a match where Mr. Stephens had the Ethelwynn to work on and Mr. Herreshoff twenty-five years' experience. The *Rudder* truly says: 'There is not one boat in the lot in which a man of sense would venture to take out his best girl for a sail.'

"The result of the races will prove nothing—it is hit or miss, as between the respective designers, and yachtsmen will not be at all benefited by the races; indeed, they are not greatly interested. It is an Anglo-American fad, this class of boats, and when any writer says they 'go like torpedo boats' he is telling 'banshee' stories."

In order to understand the true nature of the above attack, it must be remembered that the author of it is not a mere general reporter sent off for a day to try his hand at a yacht race, but an expert, a man to whom the inner working of the minds of such designers as Herreshoff and Watson is as plain as the palm of his own hand, who can detect a difference of a hundredth part of a foot in the location of the centers of two such yachts as Defender and Valkyrie, and who, by his own admission, can look down on the deck of two 15-footers and discern that one has a half inch more draft than the other. He comes from Boston to see for the first time the objects that he has been deriding for a year; he looks on with contempt while many ignorant and deluded yachtsmen watch with keen interest the series of races, and turns homeward in disgust because "thousands of dollars have been put into the 15-footers and knockabouts, yet no intelligent yachtsman can claim that they help in knowledge for future Cup defenders. No man knows, nor can he know, what the best elements of a 90-footer are."

The talk about guesswork in this class is not only absurd and untrue, but is an insult to the dozen or more designers who have worked out so carefully and conscientiously the problem of the fastest 15-footer. They at least have understood what the Boston *Herald* man professes to be ignorant of—that a yacht of half a ton displacement, sailed by two men, the ratio of crew to displacement being about 33 per cent., can necessarily have little connection with a yacht of 150 tons displacement and sailed by fifty, or a ratio of say 3 per cent.; and also that no man to-day would build a yacht for international racing in any class and at the same time try to make a safe family cruiser of her. Apropos of the guesswork in this class, it is interesting to note that the four gentlemen associated with the winning boats of the trial and cup races—El Heirie and Glencairn—are all engineers by profession, men educated in technical schools and engaged in exact scientific pursuits other than yacht designing. In the case of El Heirie, her designer was impressed by a chance suggestion thrown out in the course of last season's races; he took up the idea, studied and elaborated it, and produced a craft whose originality and excellence has attracted the well-deserved attention of experts.

In the case of Glencairn her designer and his associate worked in another direction, starting with the winner of last year's races as a basis. A number of yachts were designed, built and tried under conditions far more severe than those prevailing about the Sound, one change after another was made, both in dimensions and model, and as a result the championship in yachting has been won by a foreign nation for the first time. The winning yacht herself cannot be disposed of by mere platitudes about guesswork, best girls and Anglo-American fads; but she is likely to cause some very serious thinking among those who are desirous of regaining the cup.

As for last year's champion, she was no more the result of guesswork than of elaborate calculations involving the higher mathematics; far from these two wild extremes of designing, she was the result of a careful comparison of results in many small craft, none exactly like her, for the same class and purpose, as none such then existed. The qualities and performances of various small bulb-fins were carefully weighed, and much attention was given to the 16×30 racing canoe, with its large sail area and sliding seat, as in a measure connected with the problem of the 15ft. class.

The designer of Ethelwynn does not relish the task of ascertaining, if possible, and of explaining to the readers of the FOREST AND STREAM why, in this class at least, El Heirie possesses certain elements of advantage over anything of the general type of Ethelwynn, Sorceress or Riverside; nor of unlearning and learning others; but at the same time he does not propose to shirk the responsibilities of his editorial position by venting his disappointment in mere abuse.

As to the safe family side of the question, here is an extract from the Boston *Herald* concerning one of the type to which its yachting editor is so devoted as to see no good in any other:

"The Eureka carried a big racing jib, which was torn badly. Just after starting she was struck by a heavy puff, took in barrels of water and, after quite a hard struggle, regained her feet."

The statement that Ethelwynn capsized and was deserted by her owner is simply a bald untruth with no foundation of fact; that her owner was frightened for no reason at all, and abandoned a race that he might have easily won, proved no more against the seaworthiness of the yacht than did Lord Dunraven's withdrawal on the last day against Valkyrie's speed.

Perhaps the most extraordinary part of this attack upon what is in one sense a New York class, though it is now really a national one, is the action of the New York *Herald*, a paper presumably devoted to the interests of yachting and of New York. This journal has on its staff an old and experienced writer, who has for years conducted its yachting department. On this occasion it set aside its own man and imported from Boston this expert to report the Seawanhaka races; his chief qualifications being a violent dislike of the 15ft. class, of the Seawanhaka rule, and a strong jealousy of New York.

Yacht Racing on the Miramichi River.

THE Miramichi Y. C.'s annual race for the championship pennant presented to the club by Vice-Com. Stewart was sailed between Murdoch's Point and Oak Point, four miles and return, on July 1, in a howling nor'wester. It was a run to Napan buoy, a reach from there to Oak Point, a reach back to Napan buoy, and a dead beat to the finish. Maude, Learig and Oriana were the entries. The two latter were rapid, while the more powerful Maude had only one reef turned in. Learig led to Oak Point, closely pursued by Maude, when Com. Miller captured the lead by making a shorter turn. Oriana was close astern, and in the windward work on the homestretch she split tacks with the leaders, crossed their bows soon after, and kept the weather gauge to the finish, winning the race by 1½m. She has been classed as a light wind boat and her owner, Vice-Com J. L. Stewart, was warmly congratulated on having won in a two-reef breeze.

Quincy Y. C. Open Regatta.

QUINCY—BOSTON HARBOR.

Saturday, July 18.

THE Quincy Y. C. had but a light easterly wind for its open race, the times being:

	Length.	Finish.	Corrected.

The judges were: Com Chas. F. Pettengill, James S. Whiting, John W. Sanborn, William P. Barker, George E. Pfaffman, George E. Saville, Eben W. Shepard and Harrison A. Keith.

Larchmont Race Week.

THE present season witnesses a new event in New York local racing the attempt to establish a week of regular racing every year under the auspices of the Larchmont Y. C. The full programme for the week is as follows:

Saturday, July 18.—Seventeenth annual regatta, open for all classes. First race of series for 34ft. rating class. First race of series for 30ft. special class. Special race for schooners in cruising trim. Evening, musical frolic.

Sunday, July 19.—Evening, sacred concert.

Monday, July 20.—Special race for schooners in racing trim in one class. Special race for schooners in cruising trim in one class. Second race of series for 34ft. rating class. Second race of series for 30ft. special class. Special race for 21ft. class. Race for ½-raters. Evening, local talent.

Tuesday, July 21.—Four-oared gig race for "Hen and Chickens colors," presented by Com. Gillig. Two-oared gig race for "Dauntless colors," presented by Mr. H. B. Seeley. Dinghy race for "Execution colors," presented by Mr. H. B. Seeley. Race for naphtha launches exceeding 21ft. load waterline. Race for naphtha launches 21ft. load waterline and under. Race for the "Eastward and Westward challenge cup." Tub races and water sports. Afternoon, ladies' reception and band concert. Evening, ball and illumination of club house and ground.

Wednesday, July 22.—Open regatta for all classes. Third race of series for 34ft. rating class. Third race of series for 30ft. special class. Evening, musical symposium.

Thursday, July 23.—Race for Class 5 yachts with cabin trunks. Fourth race of series for 34ft. rating class. Fourth race of series for 30ft. special class. Race for cabin cats all in one class. Race for special 21ft. class. Race for ½-raters. Evening: amateur minstrels.

Friday, July 24.—Schooner race, all in one class. Race for Class 5 yachts with flush decks. Race for Class 6 Fifth race of series for 34ft. rating class. Fifth race of series of 30ft. special class. Race for special 21ft. class. Race for ½-raters. Evening: legerdemain, magic and other tricks.

Saturday, July 25.—Open regatta for all classes. Sixth race of series for 34ft. rating class. Sixth race of series for 30ft. special class. Evening: music and a pyrotechnic display.

Saturday's race was that postponed from July 4 on account of the fog, the open regatta originally set for July 18 being abandoned. This time the weather was more favorable, there was a clear sky and a light N.E. breeze. After the start a calm set in, but in time it gave way to a moderate S.W. wind, with which the course was sailed out in good time. Special handicaps were made between Ramona and Atlantic, and Liris and Uvira, the other classes sailing under the club rules. The usual triangular courses were sailed, the times being:

	Start.	Finish.	Elapsed.	Corrected.
SCHOONERS—CLASS A (HANDICAP).				
Ramona	11 36 04	2 50 14	3 14 10	3 14 10

Seawanhaka Corinthian Y. C. International Cup.

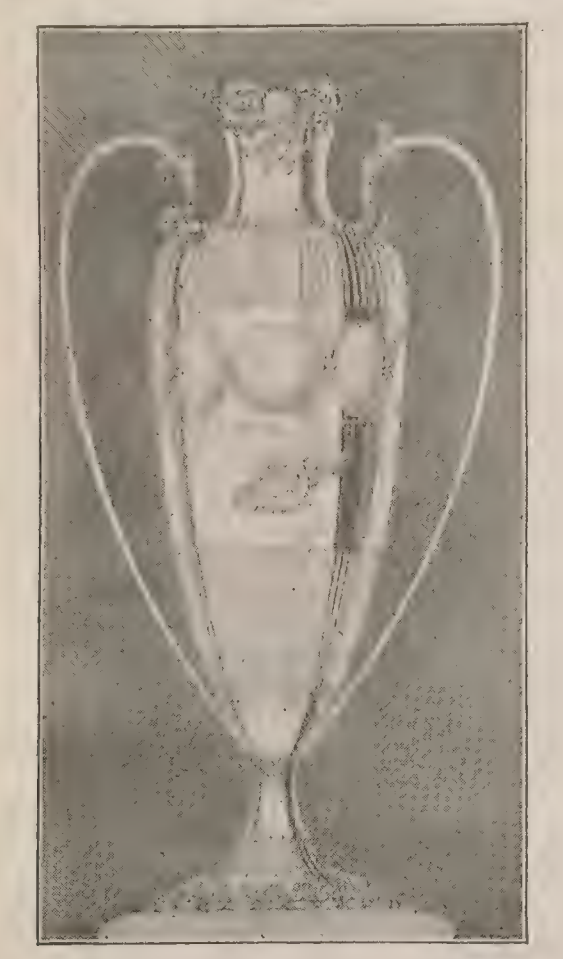
SECOND CONTEST.

Oyster Bay, July 13, 14, 15, 1896.

THE international contest which occupied the first three days of last week at Oyster Bay was a remarkable one in many ways; in the first place, the American defender was for the first time in the history of international yacht and canoe racing defeated by the foreign challenger, and this in three straight races, the defending yacht being practically outsailed from the start. Beside this, the contestants represented in both quantity and quality extremes never before seen in international yacht racing. So far as mere size and cost are concerned, the competitors were most insignificant, the smallest class by far that has ever taken part; the total cost of both would not buy a boom for Defender or Valkyrie III. In actual quality, however, they represented a distinct advance on their larger fellows. It cannot be said of Glencairn, as it was said of Genesta, Galatea and the last Valkyrie, that they were not the fastest of their class, and that other yachts were better entitled to be classed as the representatives of their nation in a foreign challenge. Both defender and challenger in the present case were admittedly the best of two large fleets specially constructed for the cup racing, and each was good enough to stand forth as the representative of a great nation. Another important point is that this year the professional has given place to the amateur, the two yachts representing in both design and handling the highest class of Corinthian skill; each being sailed by her designer, an amateur, and manned by other amateurs who have also done their part toward the construction and working up of the boats. It is particularly interesting to know that each of the four men is an engineer by profession.

Another point that is most gratifying after the protests and pamphlets that followed the races of Valkyrie III. and Spruce IIII. last year is the general good feeling that attended the whole competition. Before the races it was informally agreed among the two crews that protest flags should be left ashore, and that every effort should be made to avoid a necessity for them on the part of either. This agreement was fully lived up to by both. While the millennium is hardly yet at hand in yachting, and we doubt whether the time has yet come when even the fairest and most generous of competitors can abandon entirely the red flag, especially in international contests, when excitement runs unusally high, we hope that this race marks a new era in international yachting, in which the wholesale protestant and the disappointed pamphleteer will give place once more to such generous losers as the late Sir Richard Sutton and Lieut. Henn.

As regards the nature of the racing, it was most conclusive, a perfectly fair test being made in both very light and moderately strong winds, covering quite completely the average range of racing conditions.



It may be said that the result of the three races was as gratifying to all interested parties as it could possibly be. While the Seawanhaka Corinthian Y. C. has lost the possession of its cup after but one season, it still has the satisfaction of having introduced a new and useful class in American yachting; of having stimulated a new interest among the younger element of Corinthian sailors and designers that must bear good fruit in time; of having carried out two series of contests in a manner that was not only fair, but most generous to the challengers, and of having shown a most commendable spirit in instantly tendering a return challenge.

That the result is most gratifying to the challenging club and its two representatives is a matter of course—this would be the case even under different circumstances; but they have additional cause for self-congratulation in that their yacht represents not the mere money of the club, paid out for the brains of some noted designer and builder, but a purely home production, the result of skill, labor and perseverance on the part of many individual members.

That their defeat was a serious disappointment to the crew of the defending yacht goes without saying; but they have this to console them, that their skill and pluck and their demeanor throughout the races has won them the respect of the club which they so ably represented, of the competitors whom they labored so hard to defeat, both in the trial and final races, and of all who have watched the races as spectators.

If there is any one cause for regret over the result, it is in its technical moral, that extreme power pays in this class, a conclusion reluctantly reached by the designer of Glencairn, and that will be quite as reluctantly accepted by many designers and yachtsmen. Whether this is indeed the true and only moral of the victory of Glencairn, and if so, just what deductions are to be drawn from it, is entirely too broad a question to be discussed off hand.

The trophy, which was on exhibition at the club house during the

SEAWANHAKA CORINTHIAN Y. C. INTERNATIONAL CUP FOR SMALL YACHTS.

races, is a handsome urn of solid silver 30in. high, made by Dominick & Haff, Union square, New York.

First Day—First Race.

Monday, July 13.

LEEWARD AND WINDWARD COURSE.

The story of the first race was told in detail last week; for the sake of the complete record we merely recapitulate the result:

FIRST ROUND—LEEWARD LEG.

		Elapsed.	Gain.
Glencairn	1 31 04	0 36 04	0 57 00
El Heirie	1 32 01	0 37 01	

WINDWARD LEG.

				First Round.	
	Turn.	Elapsed.	Gain.	Elapsed.	Gain.
Glencairn	2 42 50	1 11 46	0 05 58	1 47 50	0 06 55
El Heirie	2 49 45	1 17 44		1 54 45	

SECOND ROUND—LEEWARD LEG.

	Turn.	Elapsed.	Gain.	Lead.
Glencairn	3 18 54	0 26 04	0 02 11	0 09 06
El Heirie	3 28 00	0 38 15		

WINDWARD LEG.

		Last Leg.		Entire Race.	
	Finish.	Elapsed.	Gain.	Elapsed.	Gain.
Glencairn	4 44 29	1 25 35	0 38 05	3 49 29	0 47 11
El Heirie	5 31 40	2 03 40		4 36 40	

Second Day—Second Race.

Tuesday, July 14.

TRIANGULAR COURSE.

Several light showers fell on Monday evening, and one came up

GLENCAIRN. DESIGNED BY G. H. DUGGAN.

From a photo, copyright, 1896, by J. S. Johnston, N. Y.

about 8 A. M. Tuesday, but the sun soon dispersed the clouds and gave promise of a very hot day in spite of a light N.W. breeze. The two yachts lay afloat all night, but were brought up to the float about 9 o'clock and put in readiness for the race. They started out a little after 11 o'clock in tow of naphtha launches. Hope and Riverside also started out, the latter with a new cotton mainsail and jib. Since the trial races her hull has received some extra plank fastenings and has been smoothed down and repainted, and her fin of $^{7}/_{32}$in. Tobin bronze has been stiffened by plates of $^{1}/_{8}$in. bronze, one on each side, and riveted through.

The fleet did not reach the mark until noon, and the preparatory was given at 12:33, with the start at 12:40. The two kept well apart in working between the guns. El Heirie, with balloon jib in stops, broke it out and set her spinaker well above the line, but Glencairn, leading over the line by 7s. and crossing promptly after the gun at 12:35, set her balloon jib flying and at once drew ahead. She set her spinaker about 8m. after the start and carried it for a time, but finished the leg under balloon jib only. El Heirie, after trying her spinaker well forward, finally capsized it over to leeward and used it in addition to the balloon jib as a balloon jibtopsail. Glencairn gained very fast, though the wind was light. The times at the first mark were:

FIRST MARK.

	Turn.	Elapsed.	Gain.
Glencairn	1 07 51	0 32 51	5 09 00
El Heirie	1 13 00	0 38 00	

After sheeting down at the mark and standing for a short distance on port tack, Glencairn found the wind ahead and went about and stood to the westward for a short distance, then tacked for the second mark. El Heirie, after rounding, was able to hold the port tack for the whole leg and fetched easily, while Glencairn came for the mark with eased sheets. The times were:

SECOND MARK.

	Turn.	Elapsed.	Gain.
Glencairn	1 36 12	0 28 21	
El Heirie	1 38 48	0 25 48	2 33 00

This decided gain of El Heirie was largely due to the short tack made by Glencairn on the start of the leg. With a light, streaky air they stood across slowly. Both made a short hitch or two to the westward to pick up a breeze, but fetched the line easily.

	Third Leg.			First Round.	
	Turn.	Elapsed.	Gain.	Elapsed.	Gain.
Glencairn	2 19 48	0 43 36		1 44 48	2 28 00
El Heirie	2 22 16	0 43 28	0 08 00	1 47 16	

Coming for the mark on starboard tack, Glencairn bore away, eased sheets with boom to port and set spinaker to starboard; El Heirie, however, jibed at the mark and set spinaker to port. This was the proper thing to do, and Glencairn soon jibed mainsail and spinaker. Both set balloon jibs and headed for the first mark with a very light air astern. El Heirie appeared to gain on Glencairn, but, as the times show, it was more apparent than real. Glencairn took in kites as she neared the mark and jibed when some little distance away; El Heirie jibed just before rounding. The times were:

FIRST MARK.

	Turn.	Elapsed.	Gain.
Glencairn	2 54 23	2 19 48	
El Heirie	2 56 40	2 22 16	0 00 11

The second leg was a close reach in a moderately strong breeze, the best of the day. The two were very even, with a small gain for the leader.

SECOND MARK.

	Turn.	Elapsed.	Gain.
Glencairn	3 15 30	0 21 07	0 00 13
El Heirie	3 18 00	0 21 20	

Glencairn stood on for a minute and a half before coming on starboard tack, but El Heirie went about at the mark.

There was now a moderate breeze, the boats driving along in a lively manner, the sun lighting up the white sails of Glencairn and the yellow ones of El Heirie. The leader continued to gain and also managed to fetch the line on the one long leg across by the aid of her short hitch out at the mark. El Heirie was in hard luck, not only being obliged to tack for the line in the strong tide, but failing to weather the buoy and having to make a second tack to cross. The times were:

	Last Leg.			Entire Course.	
	Finish.	Elapsed.	Gain.	Elapsed.	Gain.
Glencairn	3 53 16	0 37 46	0 03 52	3 18 16	0 06 22
El Heirie	3 59 38	0 41 38		3 24 38	

Third Day—Third Race.

Wednesday, July 15.

After the race the two yachts were carried up on the beach in front of the boat house and carefully placed on trestles. The plan of turning on the bilge, adopted by Ethelwynn last year, was not followed by either. At midnight on Tuesday a merry S.W. wind was rattling the halyards on the big pole in front of the club house, and it was still blowing at sunrise, though with diminished force. Later on, however, it freshened up, and after the two yachts were put in order and launched Glencairn turned in a reef and went out to try its force in Oyster Bay. El Heirie bent her cotton mainsail instead of the silk one and took a turn about off the club float, after which she ran in and hauled down her first reef. The change of weather was warmly welcomed by the friends of the American boat, as it was generally felt that her only chance lay in a breeze so strong that Glencairn must either reef or lug sail, while the smaller sail plan and increased length of El Heirie were pushing her ahead.

At noon, when the Dunderberg reached the Center Island buoy, the sky was overcast, with a haze on the horizon and a fresh breeze blowing from W. by S., with a little sea. The launch was sent away at 12:15 to lay off a course E. by N. 3 miles, to leeward, and at 12:20 the preliminary signal was given. The two yachts were working about the line under single reefs and whole jibs. The preparatory was given at 12:30, with the start at 12:35. The two kept far apart working for the line, Glencairn being the nearer. El Heirie ran away some little distance and set her spinaker to port in stops, while Glencairn kept close to the line. With the gun she filled away and crossed 15s. late, but El Heirie, her crew busy with spinaker, was half a minute astern of her. Glencairn started with boom to port, and when over the line Mr. Shearwood at once got the spinaker on her. Both boats set balloon jibs as soon as possible. On board of Glencairn Messrs. Duggan and Shearwood sat on deck with feet in the cockpit and bodies upright. On El Heirie Mr. C. M. Crane, at the stick, laid out flat on his chest on the starboard quarter, while his brother sat up on the weather deck with his back against the spinaker boom. El Heirie gained slowly but steadily from the start, and at 12:50 passed by Glencairn, to windward of the latter.

Glencairn at once jibed her boom to starboard and spinaker to port, but in some way the sheet of the balloon jib went adrift, and the sail flapped for a minute or two before it was sheeted home. Meanwhile El Heirie had run some 50yds. ahead, but when Glencairn settled down to work after the jibe she began to lessen the distance and was dangerously close when both passed to the north of the bell buoy. As they neared the mark and began to shift sails El Heirie ran away a little, carrying spinaker a few minutes longer. She was the better handled at the turn, sails being shifted and sheets trimmed very handily. The times were:

FIRST MARK.

	Turn.	Elapsed.	Gain.
El Heirie	1 06 10	0 31 10	0 00 12
Glencairn	1 06 22	0 31 22	

The real gain of El Heirie on the 3-mile run is greater by the difference at the start, 30s., or 42s. in all.

So far as it went, this was very encouraging. The American yacht was ahead for the first time in three days, and many looked to see her stay there. While conceding, as they could not well help doing, the speed of the Canadian yacht when she could carry to advantage her large sail plan, nearly 25 per cent. in excess of that of El Heirie, the friends of the latter looked for a point, in some considerable strength of wind, where she could still carry her 240ft. without heeling beyond an effective angle, and this by no means a small one, her true length as well as the marked increase of length at this angle giving her a long, easy list line. When this point was reached it was also expected that Glencairn, if carrying full sail, would be so overcanvased as to lose in speed and be in danger of capsizing; or, if reefed, would lack the power to force her hard, short list line at a high speed.

The windward work began with the sky cloudy and overcast, and a lively breeze sweeping over the water, the tide still running to windward. As soon as sheets were well aft and made fast, the crews began to slide around outside the yachts as they heeled, El Heirie taking a harder angle than Glencairn. The latter started a dozen yards or so in El Heirie's wake, the two pointing high. Slowly but steadily Glencairn crept up to the other's weather quarter; she hung there obstinately for a few moments, the two lying over and only a couple of yards apart, then she started, inch by inch, to overlap El Heirie. The sight was a fine one, the two yachts perfectly matched, each jammed on the wind with all the breeze she wanted, the helmsman lying out to windward with hand on tiller, the crews sliding out around the bottoms in the effort to keep the two from capsizing. Barring the vast difference in size, which one forgot in the intense interest of the battle, the sight was reminiscent of the few moments shortly before the end of the last race for the America's Cup in 1885, when Genesta ran up on Puritan's weather quarter only to drop back and lose the race. This time the result was different, the challenger was soon on the defender's weather beam, then she passed to the weather bow and soon was clear ahead, having her rival completely at her mercy. All this happened with the first six minutes on the wind; at 1:13 El Heirie came about, on port tack, Glencairn at once following. They were so close to the bell buoy that Glencairn barely squeezed to windward, while El Heirie passed to leeward.

As they went on Glencairn drew rapidly ahead and soon had a safe lead. The wind still held and she had much more than she wanted, but she was making very good weather of the seas, even better than El Heirie. After four minutes Glencairn tacked in for the beach, El Heirie at once following, but Glencairn immediately swung back to port tack. She held this but a minute and then once more headed inshore. Something parted about El Heirie's main sheet and it was slack for a minute. The sky had been gradually clearing and the wind falling a little, and at 1:27 El Heirie shook out her reef, showing the whole mainsail. Glencairn held her reef, but set her working jib in place of the No. 2. At 1:33 Glencairn also shook out her reef and essayed her full mainsail, the wind being lighter. At the same time she had more sail than she wanted, and her helmsman jilled her along with the utmost care, with both sails lifting. With it all she was going fast and easily and steadily leaving El Heirie.

They now stood along, well out from the Lloyd's Neck beach, Glencairn tacking whenever necessary to keep her rival between her and the mark, and gaining all the time. The turn was timed:

	Second Leg.			Entire Round.		
	Turn.	Elapsed.	Gain.	Elapsed.	Gain.	Lead.
Glencairn	2 04 59	0 58 57	0 06 35	2 29 59	0 06 23	0 06 23
El Heirie	2 11 22	1 05 12		2 36 22		

The run was made with a strong ebb tide and a lighter breeze, the sky being now clear and bright, the sun shining and quite a large fleet of yachts, mostly sloops and catboats, attending the racers. They ran down with booms to starboard and spinakers to port, but as on the first run both fetched to the north of the mark and had to run down on it. Glencairn jibed easily before she reached the mark, but El Heirie carried her spinaker well up to it. The times were:

SECOND MARK.

	Turn.	Elapsed.	Gain.
Glencairn	2 38 52	0 33 53	
El Heirie	2 42 52	0 31 32	0 02 21

El Heirie made a part of her gain by bringing up with her a better breeze that sent them off at a good gait to windward, but this time

with an ebb tide to buck. While on the previous tack Glencairn had weathered the bell buoy, she now fetched far to the eastward of it, and held her course in to the shore well down on Lloyd's Neck. There were some hard spots in the breeze, and she had her mainsail shaking much of the time, while both boats rolled their sides out. It was 2:51 when Glencairn went on port tack close inshore. She began to work the beach in short tacks, and went along well enough for some few minutes, then she stopped as though she had struck a wall and El Heirie began to overhaul her. However pleasing this prospect was, it meant nothing and was highly deceptive. Glencairn had struck the ebb tide and was barely breasting it, while the other was still in the slack; when her turn came she also stopped.

They worked the beach for nearly half an hour in short tacks, many of them not more than a minute each. When off the sand dock Glencairn was through with her troubles and stood up the harbor on a longer leg El Heirie was a little bothered by a tug and canalboat off the dock, but went clear of them. The flagship Iroquois was knocking about the course with Com. Rouse and a party aboard to see the race, and when Glencairn was through the worst of the tide and speeding rapidly for the finish Mr. Kerr, of the committee, left the Dunderberg in a launch and boarded the flagship, returning to the steamer just prior to Glencairn's finish. She made several tacks in the harbor mouth in order to keep El Heirie well outside of her, and finally crossed the line after quite a long leg on port tack, with El Heirie a long distance astern in her wake. When the latter came up she just failed to weather the lee end of the line, the Center Island Buoy, and had to tack twice to cross. The finish was timed:

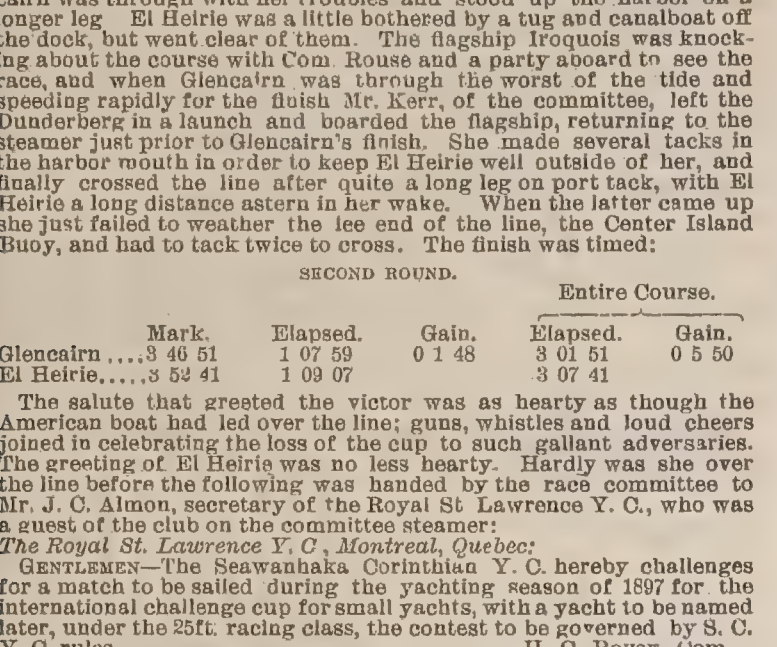
SECOND ROUND.

	Mark.	Elapsed.	Gain.	Entire Course. Elapsed.	Gain.
Glencairn	3 46 51	1 07 59	0 1 48	3 01 51	0 5 50
El Heirie	3 52 41	1 09 07		3 07 41	

The salute that greeted the victor was as hearty as though the American boat had led over the line; guns, whistles and loud cheers joined in celebrating the loss of the cup to such gallant adversaries. The greeting of El Heirie was no less hearty. Hardly was she over the line before the following was handed by the race committee to Mr. J. C. Almon, secretary of the Royal St Lawrence Y. C., who was a guest of the club on the committee steamer:

The Royal St. Lawrence Y. C., Montreal, Quebec:

GENTLEMEN—The Seawanhaka Corinthian Y. C. hereby challenges for a match to be sailed during the yachting season of 1897 for the international challenge cup for small yachts, with a yacht to be named later, under the 25ft. racing class, the contest to be governed by S. C. Y. C. rules. H. C. ROUSE, Com.



It is understood that the nomination in the challenge of the 25ft. class is made only to cover all possible classes, and that the final selection of the class of the challenger will be arranged by mutual agreement between the clubs

On Saturday night a reception to the challengers was held at the club house. Mr. and Mrs. Duggan returned to Montreal on Monday.

The accompanying sketch represents roughly the outline of Glencairn.

The following description was written by our old correspondent, D. A. Poe (Retaw), whose able comments on canoeing were familiar to our readers some eight years since:

Glencairn is the last of nine boats designed this year by Mr. Duggan, seven of which boats were built. Of these seven three were built by H. F. Hodgson, of Toronto, in his shops; three were built by workmen

under Mr. Duggan's supervision at Lachine; and Glencairn, the last built, was constructed by Mr. Hodgson's foreman, Mr. Herbert Hall, at the Dominion Bridge Works, at Lachine. Glencairn is a thoroughly Canadian boat. The raw material used for the centerboard and fittings were the only things about her which were imported. The hull is made of Canadian white pine, with a few planks of white cedar to turn the bilge. Her deck is made of British Columbian cedar. Every nail in her is of Canadian make. Her wire cordage was made by the Dominion Wire works at Lachine; her standing rigging and her cordage manilla are of Canadian manufacture. Her sails were made by Mr. Thomas Sonne, of Montreal. Her fittings were made in the establishment of the Linotype Co. on Bleury street, and her castings were made by Messrs. Rubenstein Bros., of Montreal. Her fittings are all aluminum and phosphor bronze. The Canadian Paint Co. covered her bottom with their new graphite ship bottom composition, and also attended to her painting and varnishing. So, although it is said that the American boat is the most expensive boat, there is not a better boat built—as far as the essentials and good workmanship and finish are concerned—than Glencairn. Her bottom surface is a beautiful specimen of its kind, the graphite paint giving a very smooth, frictionless surface; the planking is absolutely true; and it is hardly necessary to say that the design was absolutely fair, and her lines true throughout.

The tremendous advantage Glencairn had over El Heirie is, however, not to be found in any detail of her construction, but in the basic principles on which her design is based. In yachting it is the rule under which yachts are measured for time allowance and classification which determines the type, and this rule is absolutely necessary, as is the law governing the relations of one man to another. The Seawanhaka rule provides for the measurement of yachts by taxing the two principal elements that make for speed, the length on the load waterline and the sail area. Now, in England, in order to check the growth of disturbing excrescences in the larger classes, limiting the general uselessness, a new rule has been adopted, taxing several other elements.

Leaving aside this rather dangerous experiment, the simple Seawanhaka rule is the most scientific and most satisfactory method of dealing with this vexed question which has ever been made use of. Under this rule, what is taken in sail area must be given in waterline length. The problem which, therefore, faced Mr. Duggan when he began his 15ft. rating designs was the selection of the elements which make for the greatest speed under the rule. He had, fortunately, an opportunity to design seven boats, and he was therefore able to experiment largely, taking almost every proportion of waterline, from 14ft. 4in. to the Glencairn's 12ft. 9in. It is evident, however, that during the progress of the design of these seven boats there was a great development of one main idea in Mr. Duggan's mind. Sothis, the boat which he designed for himself, was in every essential particular a new departure in naval architecture. As the experts in New York have failed to realize just how great Mr. Duggan's advance on the normal type is, and ascribe to guesswork what was actually the result of long-continued and absolutely scientific calculation, it would be unfair to make public exactly what the governing principle of both Sothis and Glencairn is. But it may be safely said that no boat of the normal type, with the waterline length of Glencairn, and her sail area, would be successful.

One of Mr. Duggan's boats, the second of his designs, with about the same waterline length and sail area as his successful boat, cannot be driven at a high speed, and boats of a greater waterline, greater length and smaller sail have been more successful. The success of Glencairn is to be ascribed to the essential elements of her design, and this essential element is as much Mr. Duggan's invention as the essential element in the design of Dora was that of Watson, or that of Gloriana was the invention of Herreshoff.

Had Mr. Poe been present at Oyster Bay and heard some of the comments freely made he would not have fallen into the error he has made in crediting to yachtsmen in general the splenetic utterances of one prejudiced writer. Neither would he have failed to recognize the presence in El Heirie of the same principle as that underlying Glencairn's design, though associated with different dimensions. We note one important omission in the above account. Mr. Poe neglects to state that the many metal fittings of Glencairn, blocks, leaders, etc., were designed and made by him for Mr. Duggan and others of the club at the Linotype works, of which he is the manager. A part of the success of Glencairn must fairly be ascribed to the excellence of all these small mechanical details.

Canada in International Yachting.

BELLEVILLE, Ont., July 17.—We Canadians are very much pleased with the success of our 15-footer Glencairn in capturing the international trophy, and none the less so since we scarcely dared to do more than hope for Mr. Duggan's success in his plucky venture. The feeling current among yachtsmen in and about this old center of the sport is thus expressed by the *Intelligencer* in its issue of to-day, under the heading, "Canada First:"

"Canada has succeeded where the mother country failed. A yacht of 15ft. corrected length, designed by Mr. George H. Duggan, of Montreal, a Canadian; built by a Canadian builder from Canadian wood and iron; fitted with Canadian-made sails, and sailed by a Canadian crew of two amateur yachtsmen, namely, her designer and Mr. F. P. Shearwood, of Montreal, has been taken across the line to Oyster Bay, near New York, and has there won, in a series of three races, the Seawanhaka Corinthian Y. C.'s international challenge cup for '15-footers,' which the English craft Spruce IV., sailed by an English crew, failed last year to win from a probably slower boat than that which defended it this year.

"The achievement of Mr. Duggan was a very notable one—so much so as, although we are averse to boasting and puffery, to reflect the highest credit upon Mr. Duggan as a designer of small yachts, taking into consideration all the facts. Arrayed against him—a mere amateur—were several of the most famous professional designers of the United States, including the Herreshoffs and a host of others, professional and amateur.

"In all twenty-seven yachts of various types—some of them as finely finished and as highly polished as a piano; with double skins to make them strong, stiff and light, and with an entire disregard of expense—were offered for the club's selection from among them of a defender. After several trial races, El Heirie, designed by C. H. Crane, a Boston amateur, made the most satisfactory showing. Against her the Royal St. Lawrence Y. C., of Montreal, pitted the Glencairn of Mr. Duggan's design. A slightly faster boat in light weather, namely, the Sothis, also of Mr. Duggan's design, was left at home. The challenger's selection proved, however, fully equal to the task set for her, and beat our clever neighbors' best on every point of sailing and in all kinds of weather. Mr. Duggan may now sing, with all Canadians joining in the chorus:

> But I'll remember thee, Glencairn,
> And all that thou hast done for me."

While such is the feeling among yachtsmen, I am sorry to note that a vainglorious idea has found expression among those who either are absolutely ignorant concerning the sport or, worse yet, have that little knowledge which is dangerous with regard to it. That idea is voiced as follows in a Montreal newspaper:

"A general impression has gained ground that Canada will have a challenger for the America Cup next year as the result of the late international ½-rater races. It is rumored that Mr. James Ross, the Commodore, will build her, and naturally the rumor has created a great deal of interest, and there are a great many people who believe it. Some gentlemen who know Mr. Ross well say that he stated, before leaving for England, that if the Glencairn won he would seriously think of building a cup challenger. The inference naturally is that Mr. Duggan will design the boat."

Had those who make such a proposal the slightest knowledge of the differences between the problems which present themselves in the designing of a 15-footer and 90-footer, it is certain that they would restrain their exuberance, in which it is quite certain that Mr. Duggan will not concur.

The yacht Canada, which is to compete with Vencedor for the international trophy at Toledo, O., did not do as well at first as was expected against her older sister Zelma, but after an overhauling she last Saturday did all that could reasonably be expected of her, in giving Zelma a decisive beating.

Meantime I have but to say that the Canadian yacht is in charge of our ablest yachtsmen, at the head of whom is Mr. Æmilius Jarvis, of Toronto, who combines theory with practice in an eminent degree, and is excelled by few as a helmsman. It does not look like an easy victory for either yacht, but Canada has the best trial horse in Zelma, a thorough seasoned craft of proved speed and ability in all weathers and worked by a crew who know her to perfection and handle her accordingly. PORT TACK.

Beverly Y. C. Second Championship.

WING'S NECK—BUZZARD'S BAY.

Saturday, July 11.

THE 235th race, second championship, was sailed off the club house July 11 in an old-fashioned three-reef southwester.

Little Peter in second class sloops was on hand, but had no competitor; Surprise broke her mast; Colymbus broke her boom and the little John '99, a fifth class boat about to sail with fourth class, capsized just after the preliminary gun.

May King probably wins in second class, but is not measured and may be out of class. Prizes are held in abeyance.

Melro wins easily in third class and takes a second leg for the pennant. Sippican gets second if she measures into the class.

Heiress sailed very well, as did Sally. Grilse for the first time was last; the new rule restricting crews to three is very rough on her, the new boats being built for it and some 20 per cent. broader. Grilse ran the fleet, but could not carry sail to windward.

Dawdle sailed a superb race, and with a breeze Imp was in her element.

Club station, Wing's Neck; water, rough; courses, 11¼ for second class, 8½ for third, 5½ for fourth and fifth; weather, clear; sea, heavy; wind, strong three-reef southwester.

SECOND CLASS CATS.

	Length.	Elapsed.	Corrected.
May King, D. L. Whittemore	...	2 14 22	. .. ..
Anonyma, F. L Dabney	24.9	2 16 55	2 03 18
Mist, Geo. H. Lyman	25.1	2 20 22	2 07 05
Bernice, T. G. Young, Jr	25.8	Withdrew.	
THIRD CLASS CATS.

Fox Lake Y. C.

FOX LAKE, ILL.

Saturday, July 11.

THE Fox Lake Y. C. sailed two races on July 11, the first, in the morning, a postponed race from July 4; the second, in the afternoon, the regular race as scheduled for the day. The wind was light from N.W. The times in the first race were:

FIRST CLASS.

	Start.	Finish.	Elapsed.	Corrected.
Satan	10 59 49	12 27 46	1 27 51	1 27 51
Hornet	10 56 55	12 43 34	1 46 39	1 44 51
Sleepy Tom	10 58 29	12 31 48	1 33 19	1 23 31
Joker	10 56 14	12 33 05	1 36 51	1 32 18
Marcella	10 58 40	12 46 15	1 47 35	1 40 41
Canvasback	10 59 01	12 43 59	1 54 58	1 54 58
Annie	10 58 11	12 36 28	1 38 17	1 31 18
Clematis	11 00 03	Withdrew.		

Question broke rudder and did not start.

Sleepy Tom was first, Satan second, and Annie third.

The afternoon race resulted:

FIRST CLASS.

	Start.	Finish.	Elapsed	Corrected.
Satan	3 37 47	5 09 44	1 31 47	1 31 47
Hornet	3 37 00	5 10 40	1 33 40	1 31 52

Valkyrie III.

THERE is an odd coincidence in the sailing of Valkyrie III. after the ninth unsuccessful attempt to capture the America's Cup, for her birthplace on the Clyde. Just as she passed out by Sandy Hook on July 15, the challenger in another international contest was starting over the line in what proved to be her third successful race, giving her the trophy. Valkyrie's new skipper, Capt. Dixon, who is merely in her for the ocean passage, arrived in New York on July 11 with his crew on the steamer St. Louis. After some delay in securing the admission of the crew by the authorities, they reached the yacht at the Erie Basin Drydocks. She was very soon put in sea trim and stores shipped, the latter being taken down from the White Star Line pier, where they have laid all winter. At 8:30 on Wednesday morning she was taken in tow by a couple of tugs and towed down the bay, passing Sandy Hook at 12:30. She is yawl rigged for the passage. While Lord Dunraven's intentions are not known, it is not probable that she will be raced; the attempt to sell her here has been unsuccessful, and as she would have to recross at one time or another, she has probably been sent for now in order to avoid possible bad weather in the fall.

Right of Way on a Lee Shore.

BOSTON, July 9.—To settle a dispute will you kindly give your opinion as to which boat has the right of way in the following case? Two boats, A and B, are both close hauled on the starboard tack, heading for an island. A is about two lengths ahead of B, but to leeward, so far to leeward that her skipper thinks he cannot cross B's bow by tacking. Both boats continue on until they approach very close to

the shore ahead. If they continued long both boats would ground. A called to B to come about. B refused to do so, and told A to keep off and jibe around. A acknowledges that he was not on a lee shore, and that he could have cleared the obstruction by keeping off, but claims he had a right to force B to tack. B claims that A did not have the right of way, and bases his claim on the following rule of the road: "When a yacht is in danger of running aground or of touching a pier, rock or other obstruction, and cannot go clear by altering her course without fouling another yacht, then the latter shall, on being hailed by the former, at once give her room," etc. Now, A allows that he could have cleared the obstruction by keeping off, but claims that keeping off is not changing the course, and that he had a right, by the rule quoted, to force B to tack. B claims that keeping off is changing the course, and as A admits that he could have kept off, he (A) had no right to force B to tack. Will you kindly state which boat, in your opinion, is correct? Inclosed is a diagram showing the positions of the boats, etc. J. J. SOUTHER.

[We are unable to understand from our correspondent's description just what sort of an "island" is involved. Certainly if it was of any considerable size A should not be compelled to go far out of his course to round it. We cannot attempt to give a final decision without a fuller knowledge of all the circumstances; but as far as we can see, A was entitled to room to clear the obstruction. As we understand the intent of the rule, a yacht is not compelled to bear away or jibe, taking a new course opposed to her true course to the next mark. The alteration of course referred to is, in our opinion, that which she would naturally make to clear.]

Hempstead Y. C. Ladies' Day.

HEMPSTEAD—GREAT SOUTH BAY.

Saturday, July 11.

THE Hempstead Bay Y. C. sailed its annual ladies' day regatta on July 11 in a strong breeze, the yachts carrying two reefs. The times were:

Dorothy, Frank Brewster	2 50 00	5 39 19	2 49 19	2 47 19
Maid, Everett Paine	2 50 00	5 50 28	3 00 28	2 55 18
Ruth, R. M. Wiggin	Withdrew.			
Comet, A. Lawrence	Withdrew.			

The winners were Exit, Egeria, Rowena, Sally, Edith, Susie, Magpie Anagua, Dorothy, Comet.

The judges were G. W. Mansfield, H. D. Benson and A. G. Wood.

Lincoln Park Y. C.

CHICAGO—LAKE MICHIGAN.

Saturday, July 11.

THE Lincoln Park Y. C. sailed an open race on July 11 in a light and variable wind. The chief event of the day was the meeting of the two new bulb-fins Vencedor and Siren, the former being the representative of the club in the coming races with the Royal Canadian Y. C. The race was by no means conclusive, owing to the paltry winds. The times were:

	Start.	Finish.	Elapsed.
CLASS A.			
Siren	2 41 45	6 11 10	3 29 25
Vencedor	2 38 52	6 10 12	3 31 20
CLASS B.			
Valiant	2 40 35	6 26 29	3 45 53
Sadie	2 42 00	6 27 45	3 45 45
CLASS D.			
Trix	2 41 00	6 11 30	3 30 30
Marion	2 42 00	Not timed.	
Arrow	2 42 00	6 00 50	3 18 50
Bowery	2 42 00	6 26 10	3 44 10
SCHOONERS.			
Toxteth	2 42 00	6 37 15	3 45 15
Hawthorne	2 42 00	Not timed.	

The prizes are: Class A Sloops—First, cannon; second, pennant. Class B Sloops—Marine glass. Class D Sloops—First, barometer; second, ensign. Schooners—First, cannon; second, log.

The judges were G. M. Pynchon, Edward Varian and Edward Wood. The timekeeper was Joseph Ruff, and M. W. Berriam represented the regatta committee.

Duxbury Y. C.

DUXBURY, MASS.

Saturday, July 11.

THE second club race of the Duxbury Y. C. was sailed on July 11 in a strong N.W. wind, the times being:

YACHTING NEWS NOTES.

Unquowa, steam yacht, has been sold by John H. Hall to W. R. Hearst, Vice-Com. American Y. C., former owner of Vamoose.

Quisetta, schooner, designed by Gardner & Cox and built by Thos. Marvel for H. W. Harris, was launched at Newburgh on July 13. She is of steel, 96ft. over all, 67ft. l.w.l., 18ft. beam and 10ft. 9in. draft, though a centerboard boat. She is of handsome model, of the semi-fin type.

Varuna, steam yacht, designed by G. L. Watson for Eugene Higgins, was launched at Inglis's yard, Glasgow, on July 14.

Red Dragon Canoe Club.

ON Saturday, July 11, the Red Dragons held an invitation race for 15-footers of the Atlantic City Mosquito and Cricket fleets.

The following boats started over the regular club course to Plum Point Buoy and return, sailed twice; total distance, 12 miles: Isabella, A. C. C. F., Judge Jos. Thompson, sailed by Geo. Gaskell; Truant, A. C. C. F., Warren Somers; Feather, R. D. C. C., F. W. Noyes; Imp, R. D. C. C., J. M. Hamilton; Dragon, R. D. C. C., W. J. Scott; E-Cho, A. S. Fenimore and J. E. Murray; Tadpole, R. D. C. C., R. G. Fleischmann. The Red Dragon boats counted their places for the club record cup, and of the canoe yawls only Olie, E. W. Crittenden, started and sailed over the course once for the record points.

All were sent off to a very even start at 3:37 P. M., with Feather, E-Cho and Isabella first over. With a strong breeze from the southwest almost all immediately broke out spinakers; Feather's seeming to do the best work, as she drew away right from the start. Isabella and Truant soon took the lead and were first at the upper mark. Isabella continued to widen the gap, and finished the first round about 15 minutes ahead of the next boat. E-Cho fouled the club house buoy as she rounded the first time and was out of it. Dragon also gave up at the end of the first round. On the second round Tadpole and Feather closed up considerably on Truant, but none could get anywhere near Isabella and she continued to widen her lead. They finished in the following order:

	Start.	Finish.	Elapsed.
Isabella	3 37 00	5 55 30	2 17 30
Truant	3 37 00	6 15 45	2 37 45
Tadpole	3 37 00	6 18 30	2 40 30
Feather	3 37 00	6 26 36	2 48 36
Imp	3 37 00	6 28 45	2 50 45
E-Cho	Fouled buoy.		
Dragon	Withdrew end of first round.		

Isabella wins the special cup, with Truant second

Tadpole counts 5 points for club record cup, Feather 3 points, Imp 1 point.

Tadpole has in the last two weeks been changed from a canoe yawl to a single stick rig, and her speed is much improved. She is especially good before the wind. Dragon, which was originally a bulb-fin Scarecrow, seems, without any ballast and with only a Linton Hope board, to be very tender in anything but a light wind.

Isabella and Truant are pronounced scows of about 25ft. over all length on a waterline of 13ft. 6in., and with sail area in proportion. They both carry mosquito boat mainsails with sprit and club, but set on a yard at the top. The sails set very flat and are corresponding good to windward.

Next Saturday the Riverton Yacht Club gives a race for 15-footers of the Atlantic City fleets, Red Dragon Canoe Club and Riverton, Torresdale and Corinthian Yacht Clubs.

W. H. WHEELER, Sec'y.

[There is no national association.]

The New York Militia Arm.

IN selecting the Savage rifle for the arm of the New York National Guard the Commission appointed by Gov. Morton made a departure from previously recognized military standards and chose a lever gun in preference to the bolt actions so universally in use by the armies of the civilized world.

Of course the Savage won on its general merits, but in giving one reason for its selection the Commissioners make the following explanation, which strikes us as being very reasonable and very much to the point:

"Only a very small minority of American sportsmen use a bolt-action gun for sporting purposes, while an overwhelming majority favor the lever system. There can be no question as to the general soundness of the view that for American soldiers to use in time of war a military rifle as nearly as possible like the one used by civilians in time of peace, if equally effective, will adapt itself far more satisfactorily in actual war service to the manipulation by men who, from youth up, have been familiar with the action of the military gun placed in their hands."

We congratulate the Board on its decision in favor of an American gun and an American system, and we hasten to assure it that it has acted wisely, and will have no cause to regret its action, in having thus acceded to the judgment of our hunters and sportsmen.

Presque Isle Rifle Club.

THE following scores were made on the club's range on the Berkenkemp farm in a strong west wind, which interfered with good shooting:

Shell Mound Range.

SAN FRANCISCO, July 13.—*Editor Forest and Stream:* A very favorable day greeted the marksmen at Shell Mound Range yesterday.

The Columbia Pistol and Rifle Club shot as usual on the "Columbia" target and some good work was done. Probably the most interesting contest was the one between Messrs. McLaughlin, Rodgers, Young and Utschig in the 10-shot record match. Utschig made a 1in. center on his last shot, thus gaining the highest score. Columbia Club's scores for the day were:

Pistol, champion class, ten shots: A. H. Pape 3, 4, 7, 4, 2, 2, 4, 2, 5, 10—43; F. O. Young 49, C. M. Daiss 50, J. E. Gorman 47.

First class, ten shots: Dr. L. O. Rodgers 3, 7, 3, 2, 9, 5, 4, 8, 7, 7—51; F. Baumgartner 53, A. B. Dorrell 68, D. W. McLaughlin 78, F. Poulter 96

Second class, ten shots: F. E. Mason 3, 12, 6, 7, 4, 4, 12, 9, 2, 3—62; E. Jacobson 92, O M. Barley 97, O. A. Bremer 109, F. H Bushnell 116.

Pistol, Blanding medal, open to all comers, three shots: A. H. Pape 8, C. M. Daiss 9, J. E. Gorman 9, T. O. Young 12.

.22cal. rifle, 50yds., medal, 5-shot scores—E. Jacobson, 10, 10, 13; Ed Hovey, 11, 12, 12; Mrs. L. J. Crane, 21, 24; P. Bohr, 24; Mrs. M. J. White, 32.

Rifle, target rifle, Unfred diamond medal, 3 shots—F. O. Young 8, W. Glindemann 9, Dr. Rodgers 16.

Military rifle, Glindemann medal, 10 shots—F. Poulter 45.

Best shot, rifle record, 10 shots—J Utschig 47, Dr. Rodgers 50, McLaughlin 52, Young 56, F. E. Mason 69.

Champion class, 10 shots—W Glindemann, 11, 6, 3, 6, 3, 4, 10, 6, 3, 3—55; Dr. L. R. Rodgers 64, F. O. Young 72, D. W. McLaughlin 72, A. H. Pape 100.

First class, 10 shots—F. Baumgartner, 9, 4, 5, 11, 10, 5, 8, 7, 12, 9—80; H. R Crane 83, A. Gehret 83, A. B. Dorrell 85, J. E. Klein 91, F. E. Mason 96, O. A. Bremer 114, G. Schultz 132.

Second class, 10 shots—E. Jacobson 12, 14, 8, 12, 9, 7, 8, 7, 10, 19—106; J. E. Gorman 117, G. Barley 120, F. H Bushnell 130, L Pingle 148.

The regular monthly shoot of the San Francisco Schuetzen Verein resulted in two of the members becoming the permanent owners of two beautiful medals. W. Glindemann for the fourth time carried off the championship trophy, and three top scores gave the first class medal to D. B. Faktor. Following are the scores, 20 shots, German ring target:

Champion class, W. Glindemann—21, 23, 20, 21, 22, 24, 22, 23, 22, 24, 24, 18, 23, 23, 22, 22, 20, 19, 22, 25. Total, 440 rings. First class, D. B. Faktor—16, 21, 22, 18, 23, 23, 24, 24, 23, 20, 23, 21, 23, 22, 22, 17, 24, 23, 24, 22. Total, 435. Second class not filled.

Third class, John Gefken—20, 23, 22, 22, 24, 20, 22, 22, 17, 19, 13, 15, 22, 19, 20, 12, 23, 23, 22, 20. Total, 399.

Fourth class, C. F. Rust—21, 14, 13, 23, 18, 3, 5, 18, 19, 18, 23, 20, 22, 21, 23, 14, 17, 21, 22, 24. Total, 359.

Best first shot, F. P. Schuster, 25; best last shot, W. Glindemann, 25.

The German Schuetzen Club is now giving a second prize to each class and the annexed are the scores and winners, 20 shots, German ring target:

Champion class, first prize, A. Mocker—19, 23, 21, 18, 23, 13, 22, 17, 20, 20, 24, 23, 21, 23, 21, 23, 21, 25, 22, 24—423 rings.

Second prize, D. B. Faktor—22, 23, 20, 21, 23, 21, 19, 25, 16, 23, 22, 20, 21, 20, 19, 20, 20, 20, 20, 21—416 rings.

First class, first prize, G. Alpers—22, 17, 24, 23, 13, 25, 18, 22, 22, 19, 14, 21, 19, 20, 12, 18, 22, 20, 24—393.

Second prize, J. E. Klein—17, 18, 20, 20, 10, 17, 13, 19, 17, 18, 22, 19, 22, 18, 17, 23, 20, 13, 24, 24—371.

Second class not filled.

Third class, first prize, H. Hellberg—22, 11, 12, 15, 21, 23, 22, 19, 25, 19, 20, 23, 24, 16, 18, 23, 21, 17, 15, 24—390.

Second prize, F. Bushnell—21, 20, 13, 17, 16, 15, 19, 13, 17, 21, 23, 11, 23, 23, 17, 19, 23, 19, 21, 22—373.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

July 25.—BOILING SPRINGS GROUNDS, N. J.—Amateur Trap-Shooters' League second contest.

July 29-30.—WORCESTER, Mass.—Tournament of the Worcester Sportsmen's Club. Targets. For programmes address A. W. Walls, Worcester, Mass.

July 30, 31.—GOSHEN, Ind.—Midsummer tournament of the Goshen Gun Club.

Aug. 4-6.—CHICAGO, Ill.—Tournament of the Du Pont Smokeless Powder Company. E. S. Rice, Mgr.

Aug. 4, 5.—AUBURN, N. Y.—The Auburn Gun Club will hold a bluerock tournament, using the "Maugatrap" for the first time in New York State; programs will be out in a few days. Mr. Paul North will have entire charge of the shoot.

Aug. 5.—SANDUSKY, Ohio.—Annual tournament of the Sandusky Gun Club; $100 added money and $100 in merchandise prizes.

Aug. 5-6.—GREENVILLE, Texas.—North Texas Gun Club League. Two days. Targets. Will L. Sargent, Sec'y.

Aug. 11.—ALBANY, N. Y.—Tournament of the West End Gun Club. Bluerock traps and targets. Horace B. Derby, Sec'y.

Aug. 11-14.—DETROIT, Mich.—Jack Parker's sixth annual international tournament. Fuller details later.

Aug 12-13.—DULUTH, Minn.—Central Gun Club, fourth annual tournament; excellent programme.

Aug. 26-27.—BURLINGTON, Vt.—Tournament of the Interstate Association, under the auspices of the Lake Side Rod and Gun Club.

Aug. 31-Sept. 2.—ST. PAUL, Minn.—Annual tournament of the St. Paul Gun Club, at State Fair Grounds. B. F. Schurmeier, Sec'y.

Sept.—BUFFALO, N. Y.—B. F. Smith's tournament at Audubon Park. Live birds and targets.

Sept. 2-4.—BUFFALO, N. Y.—Tournament at Audubon Park. Targets and live birds. B. F. Smith, Manager.

Sept. 7.—MARION, N. J.—Sixth annual tournament of the Endeavor Gun Club. Targets. J. A. Creveling, Sec'y.

Sept. 15-16.—KANSAS CITY, Mo.—Third annual tournament of the Schmelzer Arms Company; $750 added money.

Sept. 29.-Oct. 2.—HARRISBURG, Pa.—Tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Harrisburg Shooting Association. First three days, targets; fourth day, live birds.

Oct. 6-8.—INDIANAPOLIS, Ind.—Autumn tournament of the Limited Gun Club. Open to amateurs only. Two days, targets; one day, pigeons and sparrows. Royal Robinson, Sec'y.

Oct. 7-9.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association; targets and live birds added money announced later

DRIVERS AND TWISTERS.

The August monthly shoot of the North Texas Gun Club League will be held on the 5th and 6th of that month at Greenville, Texas. There will be nine events on the first day and eight on the second, the number of targets running from 10 up to 15 blue rocks. The ninth event of the first day, which is at 10 blue rocks, is a consolation shoot open to those only who have not won a prize during the day. The last event of the second day is the same. The most important contest of the meeting is the fifth event, on August 6, for the League Shoot by teams of five men, 20 blue rocks to the man. Clubs can enter one or more teams. The prizes for all these events are chiefly merchandise contributed by local firms. All communications should be addressed to Mr. Will L. Sargeant, Secretary, Greenville, Texas. Clubs not now members of the league can become so by sending $5 to the secretary.

The Caledonian Club, of Philadelphia, has issued a neatly arranged programme of its tournament, in connection with its thirty-eighth annual field sports, to be held at "The Grove," Washington Park, on the Delaware, on Saturday, Aug. 1. The shoot consists of seven events, including a team race for the championship of the Philadelphia district. The conditions of this event are: 25 targets per man, six men to a team, open to all properly organized gun clubs in Philadelphia, Montgomery, Delaware, Camden and Gloucester counties; targets thrown free, no entrance fee, A. S. A. rules. All teams intending to compete in the event must notify A. B. Cartledge, Secretary, Florists' Gun Club, 1514 Chestnut street, Philadelphia, before Aug. 1. The prize is a handsome silver cup donated by the Caledonian Club.

We have received from the secretary of the Harrisburg, Pa., Shooting Association the following communication in regard to the annual convention and tournament of the Pennsylvania State Sportsmen's Association: "The programme committee of the Harrisburg Shooting Association has recommended an abrupt change in the programme for the annual tournament which it was at first thought advisable to present to the shooters of the State. The change of dates for holding the State shoot which appears in the column of Fixtures in FOREST AND STREAM has been found necessary. The committee trusts that the change will prove acceptable to the members of the State association."

B. Leroy, of Campello, Mass., and Jay Snell, of Worcester, are booked to shoot a 100-bird match on July 28, at the Worcester Sportsmen's Club's grounds. Leroy's shooting ability is well known, but Snell's reputation is largely local; still his friends are counting on a close race, and some of them will be surprised if he does not finish in the lead.

The Binghamton, N. Y., Gun Club will hold an invitation tournament early in September. The shoot will probably last two or three days (two days targets, one day live birds) and all purses will be divided on the Rose system. The club proposes to invite those whom it wishes to take part in the sport with the special idea of making the shoot a social affair.

The postponed club shoot and ladies' day of the New York German Gun Club was set down for July 22 at Dexter Park.

See the notice of the Minnesota Association's day of trap-shooting, page 72, to be given by the St. Paul Rod and Gun Club, July 31.

Pawtuxets at the Traps.

PAWTUXET, R. I., July 11.—The regular club shoot of the Pawtuxet Gun Club was held to-day. Sheldon won in Class A for the seventh and Gardner for the first time; Money, Class B, sixth time; Hawkins, Class C, third time. Scores:

Class A.

North Texas Gun Club League.

GREENVILLE, Tex., July 13.—In June last at Farmersville several gun clubs met to have a friendly shoot for merchandise prizes and to organize the shooters of north Texas. Seven clubs were in attendance, and an elegant shoot was enjoyed, as well as the hospitality of the members and their good ladies of the Farmersville Gun Club, who had provided every comfort man could desire.

After the shooting contest was over, Mr. K. M. Moore called the shooters to order and stated the object of the meeting. It was decided to organize the shooters of north Texas. The following officers were then elected for one year: K. M. Moore, President, Farmersville, Tex.; J. W. Russell, Vice-President, Bonham, Tex.; Will E. Sargent, Secretary, Greenville, Tex.; John A. Pierce, Treasurer, Honey Grove, Tex.

The organization was christened the North Texas Gun Club League. The Association is formed for the promotion of friendly intercourse and generous emulation among sportsmen, to aid in securing proper legislation for the protection of wild birds, fish and animals throughout the State of Texas during the season in which it is improper to pursue them, and for the rigorous enforcement of such laws. The initiation fee is $5 for clubs and $2 for an individual. The boundary line agreed upon as north Texas includes all territory north of the Texas & Pacific Railway from Texarkana to Longview; thence on and north of the International & Great Northern Railway to Palestine; thence on and north of the Cotton Belt from Tyler to Hillsboro; thence on a parallel with Hillsboro out west to the Rio Grande.

The constitution and by-laws provide for monthly and annual shoots. The Dallas Club, through Will Allen and F. M. Faurote, offered as inducement to secure the July shoot $500 in merchandise and cash prizes, besides a $40 gold medal to the team of 5 men, which was accepted, and July 3 and 4 were the days set for the shoot, at which time over 200 shooters assembled at the grounds near the fair ground, where the Dallas Club, through Messrs. Allen and Glenn, had made every preparation for the entertainment of their guests. A large tent with chairs was provided with ice water, refreshments and lunch.

Too much cannot be said in praise of Will Allen, the Dallas Club and the citizens of that city for the manner in which they entertained and so smoothly conducted the shoot. Professional shooters were barred. Mr. Wallace Miller, of Austin, was present, but was barred as being an expert. He is one of the finest shots in the Union, and gave an exhibition of some clever shooting with a Winchester repeating shotgun. Six bluerocks were thrown into the air at one time and he broke all before they reached the ground, hitting each one with a separate load.

The following was the programme for the first day and the scores made:

No. 1, 10 targets: M. F. Hope 8, Sargeant 9, Henry 6, Adams 6, Smith 6, Neathery 2, Chatham 5, George 3, Horn 8, T. Hope 4, Windham 6, Jones 9, Williams 8, Mann 4, Kerr 8, Nalop 3, J. B. Russell 7, J. W. Russell 9, Cook 8, Critcher 7, Bickly 7, Honnington 7, Monden 5, Feanu 7, Mayronne 8, Maledon 7, Honless 8, Faurate 8, Houself 8, Beckhom 10, Holl 8, Merideth 8, Mehster 9, Norman 8, Rickett 5, Moore 8.

THE "E. C." CHALLENGE CUP.

No. 2, 15 bluerocks, entrance $1, 4 moneys: Coulisk 13, Mann 9, Adams 13, T. Hope 7, Feanu 11, Windham 13, Hann 11, Norman 14, M. F. Hope 12, Warden 7, Bickley 6, Mayronne 11. Faurate 15, Cook 11, Hamilton 13, Nalle 10, Robinson 8, Williams 9, J. B. Russell 14, J. W. Russell 12, George 12, Chatham 12, Kerr 8, Wynn 11, Beckham 12, Nalop 4, Houself 13, Maledon 13, Jones 11.

No. 3, 10 bluerocks: Butler 8, Shanks 7, Kerr 9, Sargent 7, Beckham 8. Norman 9, Wynn 8, Mann 9, Mayronne 10, Maledon 8, Midham 10, Horn 7, Jones 9, J. B. Russell 7, J. W. Russell 8, Merideth 8, Cook 9, T. Hope 4, Adams 7, Doran 2, Simms 5, Rickett 8 Allcot 9, Hamilton 7, Horless 7. Holer 7, Coulisk 10, Smith 6, Bickley 6, Moone 9, Feanu 8, Webster 5, Bridges 5, Critcher 5, Nalop 2, Frank 10, M. F. Hope 9.

No. 4, 10 bluerocks, 75 cents entry, 4 moneys: Mayronne 8, M. F. Hope 8, Adams 7, Faurate 9, Bickley 5, Coulisk 10, J. B. Russell 8. J. W. Russell 7, Beckham 9, Feanu 8, Norman 9, Wynn 7, Moone 8, Chatham 8, George 7, Maledon 8, Shanks 6, E. J. Russell 5, Hamilton 8, Sargeant 7, T. Hope 9, Cook 9, Mann 10. No. 7, consolation shoot, 10 bluerocks, any one having won a prize not eligible, all to receive prizes: Ryan 9, Munzesheimer 7, Miller 7, Allen 8, Horn 7, H. Smith 7, Trenathan 4. Mingo 7, Allcott 8, Pierce 7, E. J. Russell 6, Hansels 7, Haggard 1, Wolf 2, Johnson 9, Harles 7, Malone 6, G. Mathews 7, W. G. Smith 5, Oates 10.

The next shoot will be held at Greenville, at which time it is expected we will have some 250 or 300 shooters on hand.

WILL L. SARGENT, Sec'y.

John Parker's Shoot.

THE tournament to be held at Detroit, Mich., under the management of John Parker, Aug. 11 to 14, presents an attractive programme, and if carried through as proposed will be an interesting shoot.

There are eight events on the first three days and seven on the last, and the entrance fees range from $1.50 to $3, except on the last day. In order to complete the programme for each day, the shooting will begin at 8:30 A. M. In the first four and eight events of the first two days $5 is added, and this is done also in the first and fourth events of the third day.

The fifth event on Tuesday, Aug. 11. is a team shoot for the 2-men team championship of the United States and Canada. The entrance fee is $3; the first prize, two gold watches; the second, $20, and the third, 500 loaded shells. Ten dollars cash to all those who shoot below 80 per cent. on Aug. 11 in all programme events, handicap allowance included. This is true also of Aug. 12 and 13. On the second day the chief event is the fifth, at 50 blue rocks, with an entrance fee of $1 50. It is for the Gillman & Barnes gold medal, value $150, for the individual expert championship of the United States and Canada. The rise is 21yds., and both barrels may be used. The first prize is the medal, emblematic of the championship; the second, a Winchester repeating shotgun; the third, $10, and the fourth, $5. The fifth event for the third day is for scratch men at 50 blue rocks, and is for the E. C. Powder Co.'s handicap championship cup, emblematic of handicap championship of United States and Canada. The second prize is one of Mullen's safety copper duck boats; the third, a Marlin safety take down rifle; the fourth, a Devine fishing rod; the fifth, an expert blue rock trap. The fifth event of the fourth day of the shoot, Aug. 15, is a 3-men State team championship of the United States for the Hiawatha diamond badges. The shooting will be at 100 blue rocks per man, and the entrance fee $9 per team. The first prize is the three diamond badges; the second, $50 cash; the third, $20, and the fourth, $10. The last event of this day is a consolation race for those shooting below 80 per cent.; $10 to the highest score. This will be shot at 25 blue rocks, 75 cents entry.

The Rose system of dividing purses will be used, dividing them into five moneys in the following parts: 8, 5, 3, 2, 1. All shooters whose general average is below 85 per cent. will be allowed 1 extra bird in 20 and 2 in 25. It is said that the railroads will furnish reduced rates to Detroit. John Parker will no doubt be glad to answer any questions that may be asked him.

Dedham Gun Club.

BOSTON, July 16.—The Dedham Sportsmen's Club had their weekly shoot July 11, and had a very good attendance. The day was excellent, and there were some very good scores made. Clean scores were made as follows: Two by B. Smith, two by Wood, one by Gordon, three by Parsons.

The badge match was shot on events 7 and 8, Parsons winning with a score of 18 out of 20.

The Hingham Gun Club, Hingham, Mass., will visit the Dedham Sportsmen's Club grounds Saturday, July 18, and will shoot an eight-man team race. The club will also hold an all-day tournament, first annual handicap, Saturday, Aug. 8, and a large attendance is expected, the handicap to be 100 birds thrown at unknown angles, conditions of handicap to be as follows: Limit of handicap 20 birds, handicap committee to fix a highest possible, said highest possible to be a certain percentage below 100—say 93-94—unless a scratch man shall break more than 93-94, in such cases that scratch man's score to be the highest possible. All moneys divided in 40, 30, 20 and 10 per cent. Below find scores for July 11, Nos. 1, 3, 5, 7, 8 and 10, regular; Nos. 2, 4, 6, 11 and 12, unknown; No 9, reverse:

Mr. Heikes Challenges Mr. Gilbert for the E. C. Cup.

OAKLAND, N. J., July 15.—*Editor Forest and Stream:* We have received the inclosed letter and check for $50 from Mr. Heikes challenging Mr. Gilbert for the E. C. cup and the championship of the world at inanimate targets. We would state that this championship is absolutely open and free from restriction, and that the contestants may use any powder or guns they may see fit.

THE AMERICAN E. C. POWDER CO., LTD.
NOEL E. MONEY, Sec'y.

DAYTON, O., July 14.—American E. C. Powder Co., Ltd., Oakland, N. J.—Gentlemen: In accordance with terms under which the E. C. championship cup was given, I hereby challenge Mr. Gilbert, the holder, and inclose my check for $50, $25 of which is for a forfeit. Yours faithfully, ROLLA O. HEIKES.

Marietta Gun Club.

MARIETTA, Ga., July 9.—The regular shoot of the Marietta Gun Club, held to-day, resulted as follows: Stephens 11, Reynolds 11, Mosher 8, Black 20, Setz 21, Meinert 16, Muray 19, Love 17, Legg 15, Austin 8.

W. J. BLACK, Sec'y.

Endeavor Defeats Dunellen.

JERSEY CITY, N. J., July 18.—To-day was shot the first of a series of three team shoots between the Dunellen Gun Club and the Endeavor Gun Club, and the Endeavors won by the small margin of 4 birds. After the team race the members and friends of both clubs indulged in sweepstake shooting until dark. The day was a very pleasant one and there were forty shooters on the grounds. The Endeavors draw large crowds of shooters whenever there is a contest on their grounds. The Dunellens were delighted with their first visit to our grounds, and pronounced them the finest they ever shot on. The scores:

Sparrows at Hazelwood.

PITTSBURG, Pa., July 18.—I notice in your issue of July 18 Bert Hampton's letter on English sparrows for trap-shooting. Our club has been using sparrows for several months past, holding weekly shoots, and we consider them far ahead of pigeons. We have yet to get hold of the man who can kill 100 straight under the conditions we shoot them: 25yds. rise, 5 unknown traps, traps placed 4yds. apart, boundary 50yds from shooter. It requires very quick work to get them. Sparrows are entirely different from pigeons in starting from the trap. Like a rat, they are always hunting for a hole to get out, and the moment the trap is pulled they are gone.

Shooting sparrows from the trap requires a very hard, close-shooting gun; No. 11 shot in right barrel and No. 10 in left, and it is surprising what hard hitting it requires to get them down inside the boundary line. Comparatively sparrows are much harder to kill than pigeons.

And now a word of thanks to you for the honest, fearless paper you are giving the American sportsmen. You deserve special credit for the clean, moral tone of your paper. For fifteen years the FOREST AND STREAM has been a regular visitor to me, and to day I look upon those fifteen years' files as a library of sportsmen's literature not equaled by anything else that I know of. Success to the FOREST AND STREAM.

I inclose scores made by the Hazelwood Gun Club, all at sparrows:

No. 3, 15 singles and 5 pairs, known angles, unknown traps: Stannard 14, H. Carson 16, Adams 17, Steck 17, Morgan 9, Deering 12, Buck 8, Bingham 21, Gilbert 17, Goodrich 18, Jones 11, Pattison 12.

Lake Placid, Adirondacks.

LAKE PLACID, N. Y., July 15.—A meeting of sportsmen was held at the Stevens House on Friday, July 10, and a gun club was organized for the better enforcement of the game laws and for mutual enjoyment of guests visiting the Adirondacks. Geo. A. Stevens was elected President, A. H. Kallies Secretary and Treasurer. The club grounds are within three minutes' walk of the big Stevens House; a fine set of bluerock traps and bluerocks are on the grounds. All sportsmen are invited to participate. Shoots will be held on Tuesdays and Fridays of each week. Shells can be had on the grounds.

A. H. KALLIES, Sec'y.

Bergen County Gun Club.

HACKENSACK, N. J., July 11.—This was a very hot day, nevertheless fifteen members of the Bergen County Gun Club turned out for some practice shooting. The conditions under which the handsome silver cup, donated by Mr. Noel Money, will be shot for have not yet been arranged, but will be announced later. Scores:

The Rose System.

GALT, Canada.—*Editor Forest and Stream:* I was much pleased with your explanation of the Rose system, as given in your issue of July 11. This division of sweeps I shall at once try to introduce in our club, and make it one of the rules of the ground governing all shoots that take place thereon. Any one can, if he will, see at a glance the merits of this system and the utter unfairness to honest shooters of the prevalent method of class shooting.

Dropping for place is in my opinion but a short remove from downright theft, and this has here reached such a pitch that I know one instance of these good shots combining beforehand to divide profits and arguing that any of the three should drop for place whenever such a procedure would increase the profits of this trio of pot-hunters.

Any sportsman who is worthy of the name makes the money part of his venture a secondary consideration, but at the same time he will justly feel that he should have some chance of a dividend instead of contributing to fill the greedy maw of a combination. ALONG.

Georgia-Alabama Inter-state Tournament.

TALLAPOOSA, Ga., July 16.—The first tournament of the Georgia-Alabama Interstate Shooting Association was held on Wednesday and Thursday, July 15 and 16, at Tallapoosa, Georgia, under the auspices of the newly organized Tallapoosa Gun Club, which was instrumental in bringing off the tournament. The grounds were conveniently arranged, and the comfort of the visiting shooters was looked after by the reception committee: President A. I. Head, Hon. G. R. Hutchens, N. C. Matthews, W. J. Redington and Sec'y C. H. Eldridge. The fact that there were no hitches and that everybody had a good time was due to the committee of arrangements, consisting of Capt. R. T. Clayton, U. G Brock, C. N. Williams, T. M. Kimball, J. H. Rinard, George Grunik and M J. Head. The weather was disappointing by reason of two severe showers each day.

Those participating from other cities were: A. W. du Bray, New York; L. J. Alston, W. C. Rawson, Clarence Everett, B. W. Bizzell, A. L. Day, F. G. Byrd and E Crabb, Atlanta; H. B. Troutman and F. C. Etheridge, Macon; T. L. Robinson, Talbot Foard, J. J. Willett, Archibald Henderson, George E. Eagle and J. B. Goodwin, Anniston. Of the Tallapoosa Club the shooters were: R. T. Clayton, T. H. Clayton, C. N. Williams, G. R. Hutchens, W. J. Redington, J. H. Rinard and W. C. Barton.

The events included from 10 to 25 targets, known and unknown, 10 and 15 pairs targets, club team contest of 20 targets, 5 single and 5 pairs live pigeons, and a consolation race, the events being arranged to cover two days. In the team shoot Anniston won out over Atlanta by a score of 90 to 84. The Atlanta team immediately challenged Anniston for a go at the next tournament. The highest average in regular programme events scored either day was that of Etheridge, of Macon, 90⅔ per cent. on the second day. The total averages for participants in all regular programme events both days were: Etheridge, Macon, 88 per cent.; R. T. Clayton, Tallapoosa, 87 per cent.; Troutman, Macon, 79 per cent.; Everett, Atlanta, 71 per cent. In the live-bird events the first day Crabb scored 5 straight on single birds and Du Bray 10 straight on pairs. Targets thrown numbered 3,500 and 350 pigeons released.

The Anniston Club has bid for the next tournament, to be held at Oxford Lake near Anniston some time in August, on which occasion the supremacy of the Anniston team over the Atlantas will be tested.

C. H. ELDRIDGE, Sec'y.

Marlin Gun Club.

MARLIN, Tex., July 9.—The Marlin Gun Club shot a few practice events to-day. The shooting was at 10 targets, known traps and angles. The scores:

No. 1: W. T. Lenoir 8, Wat Hunnicutt 8, R. Louis 4, H. Stammbach 7, W. W. Turner 9, E. K. Herring 8.

No. 2: W. T. Lenoir 6, Wat Hunnicutt 10, H. Stammbach 8, R. Louis 10, E K. Herring 8, W. W. Turner 8.

July 16.—Some of the members of the Marlin Gun Club got together this evening and had a shoot as follows:

No 1, 10 targets, known traps and angles:

L P Robertson	1010111000— 5	E K Herring	1101110111— 8
H Stammbach	0111001110— 6	L C Smith	0100001011— 4
W W Turner	1111101111— 9		

No. 2, same as No. 1:

L P Robertson	1100000011— 4	E K Herring	1111111111—10
H Stammbach	1011111111— 9	L C Smith	0110011111— 7
W W Turner	1111101011— 8		

No. 3, 5 targets, known traps and angles:

L P Robertson	11111—5	E K Herring	11101—4
H Stammbach	10111—4	L C Smith	01011—3
W W Turner	10111—4		

THE NEWSMAN.

Heikes Challenges Gilbert.

ONE of the most interesting pieces of news that appears in our trap columns this week is contained in the letter in which Rolla Heikes, of Dayton, O., challenges Fred. Gilbert, of Spirit Lake, Ia., for the E. C. cup, which is emblematic of the world's championship at targets.

This cup was won by Gilbert at the E. C. tournament at Guttenburg race track during the first week of May, after a close and most exciting contest. Since that time he has been rightly termed the champion target shot of the world, and his work at the different tournaments on the circuit showed that he had not won the honor and title through any fluke. For two full months he has held the cup and title without a challenge, but now Heikes puts in his claim to both, and the result will be a decidedly interesting match.

The conditions, as we remember them, are: 50 targets, unknown angles; 50 targets, expert rules, one man up, the five traps down, and 25 pairs; any powder and any gun, 10-gauges of course being barred, the shooter making the highest aggregate for the 150 targets becoming the holder of the cup and championship. The policy of the E. C. Powder Co. in presenting this cup without any restrictions as to the use of any powder did so with the sole desire of seeing a *bona fide* champion at targets, realizing that, as claimed by FOREST AND STREAM, if we were to have a champion of the world at targets, there must be no restrictions as to powders, etc.

Lynchburg Gun Club.

LYNCHBURG, Va., July 14.—Regular weekly shoot held to-day. Fourth event was for the Silverthorn badge. Won by Mr. Terry:

Events:	1	2	3	4	5	Events:	1	2	3	4	5

San Antonio Tournament.

SAN ANTONIO, Tex., July 8.—*Editor Forest and Stream:* Kindly announce the second grand midwinter tournament for January, 1897. We have not yet settled on the amount of added money, but we will try to make it more than the last. The dates will be somewhere in the middle of the month. The management will be the "big three," J. M. George, Albert Steves, O. C. Guessaz. Prospects for game this winter are better than ever before. O. C. GUESSAZ.

PUBLISHERS' DEPARTMENT.

They Consult "Forest and Stream."

RAILWAY LEATHER WORKS, Rochdale, England, July 8.—*Editor Forest and Stream:* Dear Sir—The writer is inquiring for a collapsible canvas boat made somewhere in America, but the name of which, given to him abroad some years ago, he is unable to perfectly recollect. He thinks the name was Battle Creek or something like it, and the editor of the *Field* suggests that we might inquire from you. We are unable to inclose stamped envelope and can only apologize for giving you this trouble, but perhaps if you happen to recognize the maker of what we are inquiring for you would be kind enough to forward this letter to him and ask him to forward particulars direct.

Again apologizing for the liberty we are taking, we are, dear sir,

Yours faithfully, O. & W. ORMEROD.

FOREST AND STREAM receives many such letters as that given above, not only from individuals, but from the trade as well.

No other journal carries such a varied and at the same time complete line of sporting goods advertising, and this fact is recognized at home and abroad. When a journal is thus consulted as a directory, its value to the advertiser is naturally increased, for it puts him in communication not only with those who see his advertisement, but also in many cases with those who do not see it. It is something after all to be with the band wagon.

A Summer Experience.

NOW IS the time when the ocean trip over Long Island Sound, between New York and Newport or Fall River via the Fall River Line boats, is a positive boon—a summer experience devoutly to be wished for. To pass the early morning or evening hours upon the upper decks of one of the great steamboats of this line, the Priscilla, Puritan, Plymouth or Pilgrim, at this season of the year, is to reverse all conditions of discomfort or annoyances attendant upon summer in this latitude, and to obtain in their places the fullest enjoyment of nature's most beneficent provision. And then the restful sleep that precedes or follows these delightful experiences—where else, or under what other circumstances, can this sweet restorer be so thoroughly insured and secured? All the influences of cooling breezes, quiet surroundings, glorious outlooks over natural scenery attractive beyond the telling, and creature comforts in bountiful provision, are on the side of the complete satisfaction and gratifications of the traveler, who will sleep the sleep of the just, no matter what may be the summer conditions on land.—*Adv.*

ANSWERS TO CORRESPONDENTS.

F. A. M., Eagle Point, Ill.—There is not an Iowa law forbidding killing prairie chickens for two years.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, AUGUST 1, 1896.

VOL. XLVII.—No. 5. No. 346 BROADWAY, NEW YORK.

For Prospectus and Advertising Rates see Page x.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, **$5.**
Forest and Stream *6 months and any two of the pictures*, **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

Readers accustomed to buying the FOREST AND STREAM *at news stands, and who are going out of town to points where they cannot purchase from newsdealers, may have the paper mailed from this office for any length of time at the rate of forty cents per month.*

CITIES AND VAGRANT DOGS.

DOGS and cats experience the unfortunate vicissitudes of city life to a pitiful degree. The permanent vagrant class constantly receives accessions to its numbers from the semi-vagrant and from the better class of dogs, or those accustomed to good homes, which from misfortune have become homeless and masterless. Man, if homeless from any cause, has powers of prompt readjustment; the dog, once he loses his home and master, perforce drifts into vagrancy and outlawry, for in law the vagrant dog is an outlaw, and, except that he be claimed, is doomed to destruction under certain legal restrictions as to the manner in which he shall be destroyed.

At the best, the dog's claim to a home is precarious, as it depends on the caprice, affection or tolerance of his master. Not infrequently his master's financial resources may directly result in the loss of home to the dog, for in the life of laboring men, whose earnings of to-day buy the food and pay the rent of to-morrow, a very slight break in financial returns may seriously disrupt the home life; and the wage-earners are by far the most numerous class of people and owners of countless thousands of dogs, mostly curs of low degree. Thus it comes that in the great cities, where there are so many dogs and cats associated all their lives with poverty, many trivial circumstances will detach them from all claims to home and owner, and launch them into vagrancy.

There is an incessant overflow of such vagrant animal life in the great cities, ever silently coming to the surface, and imperatively requiring constant and organized effort to keep it in check both by the destruction of vagrant dogs and the placing of such restrictions on ownership as shall largely check the source of the vagrant supply and discourage the perpetuation of worthless curs. The necessity of destroying so much animal life on the score of public policy, from a sentimental point may be a deplorable feature of civilization, but the health, peace and well being of the public being of paramount importance and consideration, no argument is necessary to justify the measures founded on necessity.

The destruction of dogs and cats being a necessity, it should be as painlessly and decently done as the best available means at hand will permit. Nothing can be said to justify the infliction of unnecessary suffering on the poor animals; first, because such suffering would be an act of inhumanity in itself; and second, because inhumanity tends to debase the minds of a certain part of the community and disturbs profoundly the larger and sympathetic part of it. Any spectacular method or such as suggests intense suffering should never be adopted.

Baltimore is now seriously considering, though not entirely of her own volition, the adoption of the more improved method of disposing of vagrant dogs—that is, by the use of gas, as practiced in New York, Philadelphia, etc. The old system of drowning a lot of dogs at once in an iron cage, still adhered to in Baltimore, is actively opposed by the Maryland Society for the Prevention of Cruely to Animals. The Society's Secretary, Mr. John R. Duval, has recently proposed taking legal action against the keeper of the dog pound, Mr. Philip Kimmel, on the charge of cruelty to animals. This would in effect be an arraignment of the methods in use by the city and a test of their legality. As there is no doubt that fright and suffering are inflicted by immersion in water, and that neither is inflicted by the use of gas, the Maryland Society should win its case easily. It should have the support and approval of all who are for the progress of greater humanity.

The Maryland Society is endeavoring to widen its mission on the lines of the American Society for the Prevention of Cruelty to Animals, of New York; that is, to have charge of the licensing of dogs and the capturing of stray and vagrant dogs and cats, and the destruction in the most humane manner of such as are worthless or unclaimed. For the greater progress of the humanities, their success is heartily to be desired if they will be as efficient as their admirable fellow Society in New York.

SNAP SHOTS.

Many years ago there was printed in the FOREST AND STREAM a story of a Danish fisherman who had tamed a herring and made a pet of it, the fish following its master about on dry land like a dog, until one unlucky day it fell from a bridge into the water and was drowned. The story was extensively copied, and soon thereafter it began to appear in our exchanges as localized in various places in America. Now it was told of a Maine guide, with a trout in place of a herring; again of a Michigan farmer, with a whitefish in place of the trout, and again of a Missouri man and a sucker; and so it has traveled over the land with a vitality as remarkable as that of the original herring. It is still passing along. The Cleveland *Plain Dealer* gave a new version the other day in a letter from Marietta, dated July 20, 1896. This report comes from one Henry Wilson, from up near the head of Middle Island Creek, in West Virginia, where Squire Spencer some months ago caught a large catfish, which he incarcerated in a water hole in the back yard; then by abstracting some of the water from time to time he reduced the supply until in the end the catfish learned to worry along with nothing but air. The creature did very well until on one occasion it attempted to cross a creek on a log, fell into the water, and having forgotten how to swim was drowned. Herring, trout, whitefish, sucker, catfish, they always drown, but the story never dies. There is always found for it a new fish tamer and a new fish. It is one of those tales which, if told impersonally in a crowd, always evokes from some one of the hearers the indorsement of "Yes, I knew the man."

Sportsmen of the United States, hardly less than those of Canada, are to be congratulated upon the action of the Legislature of Quebec in setting aside for a forest, fish and game preserve the magnificent domain of the Laurentides National Park. It is a territory generous in extent and offering rare attractions to the hunter and the fisherman, while the conditions prescribed for enjoyment of its privileges are by no means burdensome. In the great Laurentides reservation Quebec has made permanent provision of an abundant game and fish supply; it is to the Province what the Adirondack Park is to New York, and to the Dominion what the Yellowstone is to the United States.

While we in North America are thus making provision by the establishment of parks for the preservation of our game animals, similar projects are engaging attention in other parts of the world, notably in countries where game has in the past been so abundant that the stories now told of its dimunition are received with incredulity. Even in Southern Africa, where the first British hunters found such a game supply that their true accounts of it were not accepted as possible, the provision of a game park is now proposed as the only expedient for saving the remainder of the herds. A correspondent of the London *Times* makes a plea for the African elephant, which is declared to be in peril of extermination; and the way in which it is proposed that this shall be done is to constitute a portion of Somaliland a game preserve in which the elephant shall find safe refuge from pursuit. The necessity of a more rigid conservation of the game supply of the world is now recognized in the most remote quarters. With our own buffalo extinct, we may well be humbled by noting the greater wisdom of far-off Ceylon whose stock of buffalo is preserved by rigid laws. The game may be taken only by special permission of the Government, and no one person is licensed to take more than two buffalo. Under these restrictions the supply promises to be maintained indefinitely.

Experience teaches the sportsman to keep to himself knowledge of a favored fishing stream or shooting ground, and yet one of the most pronounced satisfactions of field sports is to share with another one's own opportunities. He was made of the true material who said to the FOREST AND STREAM the other day, "I'd like to know of some fellow who loves shooting, and who has only two or three days or a week to get away, and cannot afford to buy a dog or to go far. I'd spend the time seeing to it that he should have just the best chance in the world, if he could shoot a bird when it was within range." Such a wish as that is an index of character; when you happen on a man whose ambition is to help some less favored individual to a day's shooting you may safely trust him with your all. Even one's conduct in the field is a searching test of character, for a man is true to his nature in small things as well as in large.

Men waste precious hours talking politics and then complain that they have no time to go fishing. The talk amounts to nothing after all, but the fishing might be worth while. The outlook is for political talk from now until November, steady, incessant and strident. To escape it one must take to the woods. It is always understood, or should be, that politics are barred in camp. We question whether even the Kingfishers could get through without disruption if they permitted political discussion around the camp-fire. If a man in camp will persist in talking politics, there are only two courses open to the rest of the company, either to put him out or to go home and leave him.

Has not the time come for prohibiting altogether the taking of the Florida manatees? There are extremely few of those interesting creatures left; and while killing them is forbidden, they may be captured for supply to showmen as curiosities. We should think that seaside resorts like Asbury Park might better do without manatees in tanks than that the species should be exterminated, as it will be if the showmen hunters continue to enjoy their present license. Here is one harmless wild creature which should be permitted to survive the extinction which is overtaking everything that can be shot at in Florida, even to the alligator.

It is a curious manifestation under existing conditions, but there are some fishermen who affect to look on angling as they usually do on poker playing for high stakes, something to keep mum about. And so we encounter business and professional men who have been off fishing, but are mortally afraid lest the public shall find them out in it. They reason perhaps that to associates and clients who do not know the charm of angling their fishing trips may be accounted as lapses of virtue, unworthy and unbusinesslike, and calculated to hurt them in their standing.

Our observation is that there is more of this feeling in New York than in Boston, and perhaps more than in Chicago. Certainly we hear less of the fishing experiences of New York business men than of those of Boston, and this is altogether because of greater reticence on the part of the New York anglers. Is it perhaps true that New Yorkers are mistaken in their apprehension that it is prudent to cover up their angling proclivities? Would they be any the less esteemed were they to publish on the exchanges and in business circles their fishing luck? We believe that the time has long gone by when anything of discredit was likely to be attached to a business man who went fishing. For twenty years and more this journal has been preaching the gospel of rational outdoor recreation and woods life, and during that period there has been a decided change in the popular feeling toward angling. If it be true, as has been suggested, that fishing vacations are more favorably regarded in Boston than in some other cities, that fact must be accepted as one of the manifestations of Boston culture,

The Sportsman Tourist.

ON THE SAN GABRIEL.

It was an imposing cavalcade, I am told, that rattled through the quiet streets of Azusa, Cal., soon after the arrival of the train from Pasadena, early in the morning of May 5, bound for a two weeks' trip to the West Fork of the San Gabriel River.

Five men had racked their brains for a month in order that no article of necessity, comfort or luxury might be overlooked, and the result of the combined memoranda made loads for eleven burros, which were started ahead in charge of a driver loaded with eleven kinds of oaths for each burro for every half mile of the eighteen miles between Azusa and the upper cabin of the Pasadena Bait Club.

Following this outfit came Judge Rose mounted upon a young horse never before in a mountain cañon, that made a point of stumbling over every boulder in the trail and making tremendous plunges when he struck those under water at the frequent fords *en route*.

From the back of a large rock-scarred roan L. C. Torrance watched the gyrations of the Judge with an equanimity only obtained after years of buffeting at the head of Pasadena's electric light system.

H. L. Storey, the youngest man of the party (although we accidentally discovered later, when speaking of the discovery of America, or perhaps it was some other event of long ago in which he had participated, that his age was sixty-five), followed upon a snow-white charger which did not make a false step upon the trip.

But don't for a moment think because I mention A. H. Conger, cashier of the First National, at the tail end of the expedition, that he occupied that position permanently or more than in body, for his masterly mind ever came to the front with suggestions that swept away difficulties which hung over us like a cloud, leaving us standing under a clear sky. It was he who nerved the Judge to re-establish the prestige of our camp: a camp that prided itself upon the belief that no wandering philistine could lay over us in any line.

If a party passed our way and felt inclined to sing during the festivities that followed such occasions, we immediately called upon our home talent and gave them a soul-lifter.

If they thought for a moment that a respectable-sized fish had ever become attached to their lines, and dared mention it in our presence, we immediately showed evidence of one that could swallow their fish, fish line and sinker.

If they advanced some particular method of camp cookery, we simply looked benignly upon our specialist in that line, who immediately proceeded to paralyze the embryonic *chef;* all this until we had begun to think our camp well nigh invincible. This particular evening of which I write, however, was one of gloom. Great oak logs in the mammoth fireplace sent out a genial warmth and cheerful glow, but it had no effect upon our spirits, for at sundown our camp had been invaded by one who excelled in a line far beyond the tried powers of any member of our party. Perhaps you have never heard a genuine burro-train driver confidentially discourse upon the events of the day. He had led a string of five saddled horses and ridden a sixth over the rocky trail eighteen miles, forded the stream fifty-four times, and after making nose bags of the gunny sacks, which contained rolled barley rations sufficient to last each animal for the trip, he was seated at the table outside, crowding down the food and relating the incidents of the trip to our camp-keeper; at least a word of such incidents sandwiched between numerous oaths. Our attention was called to it at a point in the narrative wherein a couple of the steeds had turned on the trail, necessitating a run over the boulders for several miles before being overtaken. Such a string of oaths came flying through the chinks of the cabin that the logs seemed to fairly smoke (although we afterward discovered that it came from the fireplace). For half an hour we sat in silence; a feeling of dejection coming over us, which gradually gave place to one of indignation. Should we sit passively by our own fireside and endure this complete overthrow of our supremacy? We looked from one to another, and finally with one accord all eyes rested upon the Judge. Here the masterly mind of our retiring friend came into play. There was no hesitation, no "we ought to do this" or "we ought to do that," but a direct "Judge, go out and give that fellow a whirl." A moment's hesitation gave us all a chance to repeat, "Yes, give him a twister," and that man was already squelched. The Judge disappeared through the door and entered the circle of light from the table. No guilty wretch ever fixed a more helpless gaze upon a judge at the bar than did our veteran burro driver after the first outburst of five minutes, followed by three other distinct utterances of equal length which exhausted all the Judge's knowledge of Scriptural quotations, ending up with the query, "What are you swearing about?" Then he retired with dignity within the cabin, where the seat of honor awaited him. Five minutes later we heard coming through the chinks of the cabin the simple, forcible "Gee!" as the driver came back to earth and resumed his meal. That ended swearing about camp, and our party resumed their cheerful feeling of supremacy. No, Conger was no tail-ender; that position rather fell to the writer. Being detained by unexpected illness in the family, and compelled to follow alone three days later—perhaps not alone, for one is rarely alone in these cañons, especially if he has a burro to direct and admire. This ill-shaped and ill-smelling animal, from the most abused and despised creature about the settlements, gradually rises in one's estimation until you feel like sharing your rations with him after a day's hard work. Then other things come up which interest as they develop, for I remember I rode half a day before it occurred to me that the freshly fallen boulders and fragments of rocks along both sides of the cañon must have been started by some recent earthquake which had not been felt in the valley beyond the mountains. Then another pleasant occupation was noting the different varieties of birds recognized, which in this case was sixty-seven. Then after following a trail whenever there was one to follow, and keeping along in the general direction when there was not, fording the stream until just as you record the fifty-fourth time a ringing shout is heard ahead, and four hearty handshakes greet you at the top of the bank, and one forgets his sore and stiff joints in the welcome of tried friends.

The second day we had two callers from below, one sporting a fish pole and the other a shotgun. The latter fired twice at a fox in the brush not 30ft. back of the cabin and missed both times. Then excitement reigned in camp, and before dark we were boys again eager to try conclusions with the wariest of animals; but how about traps? Of course eleven burro loads of outfit included two traps, which we carefully concealed under leaves, hanging fragments of fish to the bush directly over the pan. Hardly had we gathered about the evening fire when a snarl and rattle of chain brought us all out of doors with a rush, where we soon found ourselves wound up in the brush. One of us hunted up a candle which wouldn't shed light, and right here Conger came to the rescue again with a brand new dishpan, which held behind the candle not only sheltered it from the wind, but sent a flash of light ahead like a small locomotive headlight. We quickly formed in line and soon worked our way to where the shining eyes located the fox. While dispatching this one another snarl and rattle from the hillside beyond indicated another catch, which proved to be fox number two, which soon joined its mate, hanging to the limb of a tree. The two traps were reset, and about 10 o'clock when every one was asleep we were awakened by a snarl. The candle was quickly lighted, the dishpan procured, and five bare-footed men in all stages of dress, or rather undress, felt their way through the brush to victim number three; and what a flashing of limbs and scattering when the chain was suddenly drawn forward toward the light by the wag of the party. Skins obtained under such circumstances will always be valuable souvenirs.

After midnight the fourth and last fox met with on the trip sprang one of the traps, but we were all too drowsy to venture out after our experience with the last one, and when the Judge appeared before him at the first streak of dawn he loosened his toes from the trap by a powerful spring and escaped.

In order to get good fishing one must travel at least a day's journey into the mountains from any of the southern California towns, and the Pasadena Bait Club, with its twenty-five members (all of whom are not active), have located their upper cabin as far up as the journey can be comfortably made in one day. From this point the fishing is always good, and a catch of 125 trout per rod during the morning's fishing can be easily made; but it is rarely done, except, for instance, when our mail was brought in at the end of a week. That day we all fished steadily, and sent out by our courier about 100 each to our friends at home. Then a week later we spent the last day fishing, taking out as many more with us on horseback.

Mr. Torrance showed up on that day with the largest, some 16in. long, which he avers was caught like a sucker by tying a stone to the line and sinking the hook to the bottom of the deep pool. However, the sucker simile went no further, for the fish when hooked acted like any other trout, only decidedly more so. It was agreed that the unkind hint that he fell asleep and allowed his line to sink should not be made a matter of record, so I won't mention it.

During the stay the camp easily consumed forty fish per day, requiring but little fishing by those so disposed each morning and evening. It will be readily seen that the total catch amounted to over 1,500, not one of which was wasted. I give these statistics freely, in spite of the fact that the securing of that number by a Northern party of fishermen recently brought out some unfavorable comments, and if such an one bobs up after perusing this article I have reserved for his especial benefit statistics showing how many pounds of fish are required per day to keep the brain of half a ton of enthusiastic humanity in normal condition; for the supremacy of the camp must be maintained even on this question.

Frank S. Daggett.

Pasadena, Cal.

LABRADOR SKETCHES.

VI.—A Caribou Hunt.

[Written for Forest and Stream by Count H. de Puyjalon, and translated by Crawford Lindsay.]

I was provided with a tent, stove and cooking apparatus, likewise a *traine* or toboggan and a strong dog rejoicing in the dissipated name of Brandy. I then looked for a guide and companion, for to go out hunting alone is most imprudent, as an accident, which would not entail serious consequences where one is near the settlements, might result in death when one is alone and helpless in the bush.

I was fortunate enough to secure the services of a half-breed hunter named Paul, who owned a dog which, unlike mine, bore the temperance name of Coffee; a muzzle-loading gun, No. 10 caliber, of wonderful length and weight, concerning which he told the most astonishing yarns.

The night before our departure there had been a heavy fall of snow and our progress was slow, as we had to beat a road for our dogs and frequently help them in hauling the sleighs which bore our tent, provisions and camp equipage.

We walked in Indian file, the better to harden the snow and make the work easier for our four-footed companions. Late in the afternoon we reached a hunter's log camp on the bank of a river, where we found two whites and three Indians who had been fishing in the lakes in the vicinity. We hung our moccasins on a spruce branch, stuck our guns and snowshoes in the nearest snowdrift and entered the hut, which was so full of tobacco smoke and so crowded that we had hard work to find room for our dogs and ourselves.

We smoked in self-defense, and while inquiring as to our chances for hunting we boiled our tea and fried some slices of pork, which we ate with a good appetite. We then picked out a soft plank, and with our dogs for pillows soon dropped asleep.

The following morning we set out an hour before daylight, at about 6 o'clock, and the weather being cold and bright, we walked briskly on the frozen surface of the river. The sun made its appearance over the tops of the trees as we got on the discharge of a lake, and at noon, a few miles from the first falls we had seen, we struck the fresh tracks of three caribou; they were going in a westerly direction and could not be very far off. We thought of following them, but were compelled to give up the idea. We had the wind in our backs and it would have been impossible to get close enough to them, so we resumed our journey, grumbling at our luck.

A little further on we came across more tracks, not so fresh as the others, but much more numerous. Caribou seemed to be plentiful about there, so we decided to camp on the spot, as the animals seemed to be migrating toward some large barrens, called *déserts* or *jardins* by the French-Canadians and half-breeds, and which we knew to be some distance away.

After having cleared out the snow down to the ground, with our snowshoes as shovels, holding the lower end in the right hand and the thong in the left, we set up our tent in a clump of spruce and sapins or balsam fir, which sheltered us from the cold winds, and in which we were safe from falling trees, a danger ever to be avoided in the woods.

We spread a thick layer of sapin boughs on the frozen ground, and while Paul was putting up the stove and arranging our things in the tent I went down to the river, cut some holes in the ice and soon returned with a pail of delicious water and seventeen splendid trout. I also set up about a dozen snares for hares.

Paul was delighted to see the trout, which he soon had in the pan with some slices of pork, and we made an excellent meal.

The sun set as we finished our dinner and it was time to turn in. We filled our stove with pieces of half-dried birch, lit our pipes and stretched ourselves on our bed of fir boughs with our feet to the fire, enjoying a feeling of blissful rest.

The reader is of course aware that on an expedition such as that which I am describing one does not burden himself with many candles, so that, as a rule, his active life begins with the day and ends at dark. If one returns late he must be satisfied with the light from the stove or with a torch of birch bark, and a candle is lighted only when a valuable skin has to be put on a stretcher.

When we awoke next day the sky was overcast and the weather much milder. This meant snow, perhaps rain. This was a bad prospect for us and prevented our moving away. We therefore resolved to take advantage of this to catch more trout, set new snares, kill some partridges if possible and lay in a sufficient stock of fuel to last us while there.

I undertook the first part of the programme, leaving Paul to cut the wood and pile it near the tent, and went to the snares I had set the previous evening, where I found three hares. The Labrador hare is the same as that found elsewhere in Canada, the *Lepus americanus* or *hudsonicus*, brown in summer, white in winter. In some years it is found in great numbers, at other times it disappears entirely without any apparent reason. Finally, the hunters here say that it can change its sex. This of course is absurd, but it is nevertheless a fact that at certain seasons you catch only males and at other seasons only females.

Leaving my lines and snares, I went into the woods to look for partridges. After walking about three-quarters of an hour I flushed a covey of spruce partridges on the shore of a small lake and treed them not very far off. I had left my gun behind me for fear of frightening the caribou, so I determined to noose them. I cut a long pole of white birch, fastened a piece of wire with a slip-knot at the end of it, and carefully approaching the partridges, which were looking at me with curiosity, I slipped the noose over the neck of the lowest one. I then took the nearest and so on until I got seven out of the eleven on the tree, the others being too high for me to reach them without alarming them. These stupid birds are shot in the same manner; the report of the gun does not alarm them, but they are frightened by anything falling from above.

I got some more trout on my way back, so that, adding the trout, hares and partridges to the pork and butter we had brought with us, we had a supply of excellent provisions for several days, and were at liberty to look after the caribou.

Just as we finished cleaning our guns the snow began to fall in heavy flakes, and we knew we were in for a three days' storm. We were not mistaken, and for two days and three nights we did nothing but turn out to remove the weight of snow from the tent and to get water. After the storm there was a light thaw, and then it froze hard, which was just what we wanted. We began to get ready at 3 in the morning, and two hours before day we were on our way, followed by our dogs, which ran easily on the crust, over which we skimmed with our snowshoes.

We went in a westerly direction, and, as we expected, we soon came upon a *ravage* of caribou; that is, a place of several acres in extent where these animals had pawed the snow, crossed and recrossed each other, browsing on the lower twigs of the birch trees and on the spruce and older sapins.

The gang or herd must have consisted of at least thirty individuals, among which were several fawns. They evidently had quitted the spot quite recently, and by circling around it we found fresh tracks where they had left it.

We followed, keeping our dogs behind us and taking advantage of the wind. An hour's march brought us to the edge of a small and narrow lake, in the middle of which were our caribou, about twenty-seven in all, some lying in the snow, while the young fawns played about. They were 200yds. away, just the range for my Marlin, but a great deal too far for my companion's heavy, slug-loaded gun. This was too bad. I had brought my rifle, relying upon my man for shots at close range. With my rifle I could not expect to hit more than one, while with his he could hit three or four. It was impossible to get closer without being discovered. I therefore fired and hit one, which, although mortally wounded, ran away with the others, while we started in pursuit. Near the wood we came upon the one I had shot, we gralloched it, stuck a small fir tree near it to mark the spot, and continued on, the hard crust giving us an advantage over the caribou. About 3 in the afternoon we saw seven in a glade and got two, a large buck and a doe. It was then getting late and we had to give up the pursuit, as we had to gralloch the dead animals to reduce their weight, which we could not have done had they become frozen, and to make arrangements for camping before it got quite dark. We shoveled out the snow with our snowshows, piling it up to windward, made a lean-to with poles covered with fir and spruce boughs, strewed a thick layer of the same for a floor, and crawled under shelter.

Although we kept up the fire, we could not sleep for the cold. We smoked, dozed, chatted, drank lots of tea,

and took an occasional sip of whisky; then at daybreak we ate a bite, harnessed the dogs and ourselves to the caribou and hauled them with great difficulty to the tent, which we reached two hours after sunset.

As the weather continued fine and we were in good trim, we decided to remain. I am never so happy as when in the solitude of the forest, and then I had no home attractions. We accordingly buried our caribou under the snow and set out in different directions to look for tracks of other herds, as the one we had fired at must have fled to a great distance. I walked all morning without being able to find anything besides hare and partridge tracks, when I came to the edge of a small lake. There was nothing on its surface except a small track, which I took to be that of a lynx; so I went on to the stream which fed the lake, looking for open water to wash down my homely meal of bread and frozen pork. In a few minutes I reached the foot of a small cascade, where I got some water and began my lunch. While I was so engaged I heard a noise, caused by the fall of a large lump of snow, which started from the top of the falls and rolled down near my feet. One of the edges of the lump showed the marks of a caribou's foot, while the excitement displayed by my dog Brandy indicated the presence of something. I checked him, got my rifle ready and carefully crawled up the slope. When I reached the top I saw a large buck with magnificent antlers browsing and unconscious of danger. Brandy gave a growl, the caribou turned suddenly, giving me a splendid opportunity, and I got in a shot behind the shoulder which laid him low. Of course, my taking the body to the tent alone was out of the question, so I gralloched him, to the great delight of Brandy, who feasted to his heart's content. Then I covered up the carcass with snow and made my way back to the camp, as this caribou seemed to be a bachelor and without any following.

It was almost dark when I reached the camp and Paul had not returned, so I lit the stove and set my kettle to boil, while in a tin plate I put some slices of caribou tongue on a layer of onions and butter, making a delicious dish, and lay down awaiting the arrival of my companion. I waited patiently for several hours, and had fallen into a deep sleep when I awoke on hearing him coming with his dog. I jumped up and asked him what made him so late. "Don't ask me," he replied, "I think I have walked a hundred miles. I have seen plenty of caribou tracks, but they are far away and not very fresh; the animals seem to expect a heavy storm and are moving away. There are plenty of hares and partridges. I have a dozen at the door. For goodness sake, give me a cup of tea and something to eat."

While he was eating I told him of my luck, and we decided to return to the same spot on the morrow to get the buck I had killed and try our luck again. We did so, following my snowshoe tracks, which showed clearly; I had also taken the precaution to blaze my path through the woods.

We looked around carefully, but could find no fresh tracks, so we set to work to bring our quarry home. We harnessed the dogs in tandem fashion to the antlers and then fastened our own pack straps to them, and in this way we made good time over the crust.

Two days afterward we struck our tent and moved a day's march from the spot. When we had settled down we started off, found a *ravage*, and in a short time came upon two caribou standing on a slight eminence which sloped down to the river. I climbed up the slope to stalk them in that direction, while Paul went toward the river, which was covered with an accumulation of snow and ice 10ft. deep. When we got within range the caribou were facing in my direction, while exposing their flanks to Paul. I made a sign to him to fire and saw him raise his gun to his shoulder and press the trigger. The report was so loud that it made me jump on my snowshoes. I ran in, found one animal dead and the other badly wounded. I put an end to its sufferings and then looked toward the river. Paul had disappeared; I could only see his dog Coffee stretching his head over a considerable excavation and howling piteously. I ran to the river, and lying down near the dog I saw at the bottom of a deep hole, in which the water of the torrent rushed past, my man hanging on to his long gun, which, luckily for him, had fallen across the excavation and was retained in position by two pieces of ice jutting out from the sides. His head and shoulders alone were above water, while his legs and body were carried under the ice by the current. There was not a moment to lose. Calling out to him to hold on, I tied our pack straps together, and descending very carefully into the hole I tied the straps under his arms. Then I climbed up and hauled with all my might, but in vain.

"Help yourself!" I yelled. "You are heavier than two caribou."

"I can't, sir; my clothes are frozen and stuck underneath the ice. You will have hard work to get me out of here."

"Don't be afraid," I replied, "I have a good hold of you. Here is my axe. Cut away the ice and free yourself."

While doing so I harnessed the dogs to the rope, and when he was free we hauled away and pulled him out of the hole.

He did not look like a man, but like an icicle. His clothes were frozen solid and we had to drag him to the bank to thaw him out by means of a huge fire, which I started at once.

After he had taken a good drink of whisky and had thawed a little he began swearing at the ice, but I told him it was due to his own stupidity.

"You heard the reports of the trees cracking last night with the frost, and you might have known that ice does the same and cracks from one bank to the other. You might also have known that the heavy detonation of your gun would break the ice under you, and you should have waited till you were ashore. If I had not been with you it would have been all up with you. You would have turned into an icicle, and in the spring you would have gone over the falls.

"Ah, sir, one gets so excited at the sight of game that one does not always stop to reflect."

This was the last of our adventures worth relating on this trip. We hunted for some time longer with varying success, and I returned to the settlements well pleased with my outing.

H. DE PUYJALON.

The FOREST AND STREAM *is put to press each week on Tuesday Correspondence intended for publication should reach us at the est by Monday and as much earlier as practicable.*

THE FROGS OF WINDHAM.

Editor Forest and Stream:

The following recountal of the great historical battle of the bullfrogs is taken from the histories of Windham, Windham county, Conn. Miss Larned's history does not agree as to the destruction being the result of the great fight, as there were no marks of violence on the frogs, but this is not necessarily a proof of the absence of violence, as death could have resulted from strangulation. If it had been a plague among the frogs, it is strange that there never was one before nor since, and it is stranger still that all the mortality took place in one night. This is the story as told in Larned's "History of Windham County, Conn."

This memorable incident occurred in June, 1754. Though war was not formally declared, hostilities had begun. A Virginia regiment, led by Col. George Washington, was already in the field laboring to repel the French from possessions claimed by the Ohio Company. Delegates from many of the Colonies were in session at Albany, endeavoring to concert a scheme of common defense.

The public mind was disturbed and apprehensive. Windham's prominence in the recently formed Susquehanna Company gave her especial cause for anxiety. This attempt to rescue from the Indians a large tract of land bordering on the disputed territory might have aroused suspicion and hostility, and exposed them to the vengeance of the enemy. The feverish enthusiasm with which they had hailed that attractive scheme gave place to doubts and misgivings, and premonitory croakings were heard on every side. Thus troubled and perturbed, the residents of Windham Green were aroused from their slumbers one sultry summer night by sounds wholly unlike anything ever before heard or reported—even by the oldest inhabitant. Mr. White's negro man, returning from some nocturnal rendezvous, was the first to hear these sounds and give the alarm to his master and the neighbors. Rushing out from their beds, they listened with horror and amazement. A din, a roar, an indescribable hubbub and tumult seemed to fill the heavens and shake the earth beneath their feet.

The night was still, cloudy and intensely dark. Sky, village and surrounding country were shrouded in thickest blackness, and thus the terrified listeners were thrown wholly upon conjecture and imagination. Some feared that the day of judgment was at hand and that these unearthly sounds were but the prelude to the Trump of Doom. Others seized upon the more natural, but scarcely less appalling, explanation that an army of French and Indians were marching upon the devoted village. Distinct articulations, detected amid the general Babel, made this conjecture more probable, and ere long the name of Windham's most honored citizen, most prominently connected with the Susquehanna Purchase, was clearly eliminated. "We'll have Colonel Dyer! we'll have Colonel Dyer!" was vociferated in deep guttural tones.

"Elderkin too! Elderkin too!" responded a shrill tenor.

Yes, both these noble young men were demanded by the insatiate savages. The words "tete, tete," next detected, inspired some hope. It was possible that even then a treaty might be effected. Thus in fear, terror and conjecture passed the night, the astounding clamor continuing till the breaking of day. That any terrified Windhite was so demented as to sally out with gun and pitchfork to meet an army of famished frogs *en route* for the Willimantic is extremely doubtful.

The morning brought a solution of the mystery from the families near the mill pond. Windham's own amphibious population had broken her peace and made all the disturbance. The family of Mr. Follet, who owned the mill privilege and lived adjacent, were awakened by a most extraordinary clamor among the frogs. They filled the air with cries of distress, described by the hearers as continuous and thunderlike, making their beds shake under them.

Those who went to the pond found the frogs in great apparent agitation and commotion, but from the extreme darkness of the night could see nothing of what was passing. In the morning many dead frogs were found about the pond, yet without any visible wounds or marks of violence. There was no evidence that they had been engaged in battle.

Some mysterious malarial malady, some deadly epizootic, had probably broken out among them and caused the outcries and havoc. The report of their attempted migration in search of water is positively denied by trustworthy witnesses. There had been no drought, and the pond was abundantly supplied with water, being fed by a never-failing stream. The mortification of the Windham people upon this unexpected and humiliating revelation is quite beyond the power of description—

"Some were pleased and some were mad,
Some turned it off with laughter,
And some would never hear a word
About the thing thereafter;
Some vowed that if the devil himself
Should come, they would not flee him,
And if a frog they ever met,
Pretended not to see him."

Even without the aid of newspapers and pictorial illustrations, the account of it was borne to every part of the land. It was sung in song and ballad; it was related in histories; it served as a standing joke in all circles and seasons. Few incidents occurring in America have been so widely circulated. Let a son of Windham penetrate to the uttermost parts of the earth, he would find that the story of the frog fright had preceded him.

The Windham bullfrogs have achieved a world-wide reputation, and with Rome's goose, Putnam's wolf and a few other favored animals, will ever hold a place in popular memory and favor.

"The direst fray in all that war,
To shake King George's crown,
Was when the bullfrogs marched at night
Against old Windham town."

A few years since, while traveling in the Northwest, I met a party of English tourists at the falls of St. Anthony. Among them was our honored historian, George Bancroft. After a pleasant introduction he exclaimed, "From Windham, Connecticut! A bullfrog!" "Yes," I said, "I acknowledge the frog! Here is one perched on one of our bank notes. It is the Windham coat-of-arms;" and the note was handed around with much merriment.

The simplest and probably most truthful account is this: A mile away to the east of the town was a marshy pond, the home of thousands of batrachians: large greenbackers and mottled little peepers, such as often make night hideous. A drought had reduced their pond to a narrow rill, and for this the poor thirsty creatures had fought and died like Greeks at the pass of Thermopylæ. Tradition says thousands of the dead frogs were found the next morning on the sides of the rill, and terror-stricken Windhamites turned their prayers to praises for so gracious a deliverance.

Of all the exaggerated accounts of the above, the most marvelous and untruthful is that of the Rev. Samuel Peters in his "General History of Connecticut." He stated: "One night in July the frogs of an artificial pond three miles square and five miles from Windham, finding the water dried up, left in a body and marched or hopped for the Willimantic River. Taking the road through the town, which they entered at midnight, bullfrogs leading, pipers following without number, they filled a road 40yds. wide for four miles in length, and were several hours in passing through the place."

I think he could tell a fish story nearly as well as Mr. Hough.

P.

THE LAURENTIDES NATIONAL PARK.

QUEBEC, Canada, July 20.—*Editor Forest and Stream:* I send you description of our Canadian public reservation, the Laurentides National Park. As an old sportsman I should think that many of your readers would be glad to know that they can get fishing and shooting here at such reasonable rates (and without imposition, it being under Government supervision), without having to belong to a club. Several gentlemen from the United States are members of the club to which I belong, Les Laurentides, and of various others; but it may not suit every one to belong to a club, especially if he gets an outing only at long intervals, and does not care to incur the expense of membership in a club.

CRAWFORD LINDSAY.

The description sent by Mr. Lindsay is embodied in the act of establishment: "*Whereas*, it is in the public interest that a forest reservation and national park be established in this Province so as to preserve its forests, fish and game, to maintain an even water supply, and to encourage the study and culture of forest trees; therefore, Her Majesty, by and with the advice and consent of the Legislature of Quebec, enacts as follows:

"The territory lying near and inclosing the headwaters of the rivers Montmorenci, Jacques Cartier, Ste. Anne de la Pérade, Batiscan, Metabetchouan, Upikauba, Upica, Chicoutimi, Boisvert, à Mars, Ha! Ha!, Murray and Ste. Anne's, described as follows: All that part of the vacant Crown Lands of the Province of Quebec situate in the counties of Montmorenci, Quebec and Charlevoix."

"Doubtless a large number of the sportsmen from abroad who annually visit Quebec, as well as Canadians, will avail themselves of the privilege of fishing and shooting in the park, which the reader will observe is permitted on the unleased portions, the basin of the River Jacques Cartier being especially reserved for this purpose together with the northeastern part of the park. As regards river fishing, there is no finer brook trout stream than the Jacques Cartier, the fish running up to 5lbs. in weight on the main river and tributaries, such as the Sautoriski. Respecting lake fishing, we may say that Lake Jacques Cartier is fully equal, if not superior, to any other sheet of water in the Province, brook trout considerably over 5lbs. in weight taking the fly readily. As regards deer hunting (caribou), the famous hunting ground known as Les Jardins is altogether within the park boundaries, and here the deer stalker can pursue his favorite pastime with certainty of success. For those who prefer smaller game, the southern part of the park offers exceptional facilities for first-class ruffed grouse (partridge) shooting in the hardwood groves of Tewkesbury township.

"It being out of the question to enter into details as regards the many and various rivers, lakes, etc., and general sport obtainable in the park, the most salient features are merely touched upon. Intending tourists, sportsmen and fishermen can obtain particulars on application to the Department of Crown Lands at any time."

We quote from Mr. G. M. Fairchild, Jr.'s, "Rod and Canoe, Rifle and Snowshoe in Quebec's Adirondacks," this spirited description of the park and its attractions:

"And through its midst there ran a crystal flood
With many a murmuring song and elfin shout,
In whose clear pools the crimson spotted trout
Would turn his tawny side to sun and sky,
Or sparkling upward catch the summer fly."

The Laurentides National Park in the Province of Quebec is the largest forest and game preserve in the world. By the act of the Provincial Legislature creating it, some 2,500 square miles of the public domain was set aside for this purpose, and proper laws for its government were adopted. A committee of the executive council recommended that the general management of the park should be vested in the Hon. Commissioner of Crown Lands and the Superintendent and such other officers as the Hon. Commissioner may appoint to carry out the intention of the legislative act.

The park is the result of the direct and unceasing efforts of the present Minister of Crown Lands, the Hon. E. J. Flynn. His name is now forever linked with one of the wisest and most beneficent measures ever passed by a legislative body. It means the preservation of the great forests on the water sheds of some of the most important rivers in the Province. The bearing of this upon the future water supply to these rivers, and upon the rainfall, is now too well understood to require further explanation. The protection to fish and game, which is incidental to the main object, is of sufficient importance, however, to receive the careful attention that it deserves, and to futurity is conserved a vast breeding ground for the fish that now swarm its waters, the game that haunts its forests.

The southerly boundary of the park reaches down to within twenty-five miles of the city of Quebec at some points; that to the north is the Chicoutimi Grande Ligne; to the west the River Batiscan and the Lake St. John R.

R., to which I have before alluded; to the east the River Saguenay and the St. Urbain Road.

The more important rivers taking their source within the park, and flowing through it, are the Jacques Cartier, St. Anne, Tourilli, Metabetchouan, Upikauba, Boisvert, Mars, Murray, Montmorenci, and their tributaries, also some of the larger tributaries of the Batiscan.

The great divide, from which flow waters to the four cardinal points of the compass, is literally peppered with lakes, big and little. In one expedition to this country, on snowshoes many years ago, in eleven days' journeying we were never off a lake more than twenty minutes. This will give the reader some idea of the immense number which dot the surface of this plateau. Great Lake Jacques Cartier, the source of the river which bears its name, has a shore line of some twenty-five miles, and is justly celebrated for the abundance and size of its trout. I shall have occasion further on to say more of this lake, as well as of Snow Lake, the head of the Montmorenci River, another famous sheet of water. To the west a few miles from Lake Jacques Cartier is Lake Noah.

Lakes des Roches, Vert, Long, à Noël, à la Coupe Fraser, à Regis, à l'Epaule, all discharge into the Jacques Cartier River, and are easily accessible by the colonization road.

Why attempt to further name the lakes in this section, it would only confuse the reader, and the subject is far too vast for the scope of a chapter. I would refer those who seek for more detailed information in this direction to a little pamphlet recently published in Quebec under the auspices of the Department of Crown Lands, entitled "Our Rivers and Lakes." The southwest, west, northwest and north edges of the park have been leased to angling clubs, and this is a wise measure for the greater protection of the fish and game within the park limits. These organizations are all directly interested in the increase of fish and game, and jealous guardians of their own leaseholds. It has drawn a cordon of keen watchfulness around the park, and poaching or killing game out of season is rendered almost impossible without instant detection.

The whole of the unleased territory within the park, some 1,500 or 1,600 square miles, is to be thrown open to the American and Canadian angler-sportsman upon conditions that every true lover of sport will be only too ready to subscribe to. At present only one section is readily accessible, but as this is to be the highway into the greater domain, and as it embraces some of the best fishing waters and caribou country, I shall describe it more fully, with suggestions to intending visitors.

The last house on the Jacques Cartier River is Bayard's, a famous little resort for those of the angling fraternity who have been initiated into the comfort and good fare provided by mine hostess, Madame Bayard, and the exceptionally fine fishing in the river hard by. Both are destined to become more widely known in the near future. The Bayards are already adding a wing to their house to provide more ample accommodations. It is twenty-seven miles from Quebec over a fairly good road, and may be reached in a four and a half hours' drive.

Mr. George Colvin, the guardian of that section of the park known as the Jacques Cartier Basin, resides here, and under his superintendence parties going into the park can be supplied with guides, canoes and tents. I know the guides on this upper section of the river, and they are all capital river men and thoroughly familiar with the country, trails and lakes.

The Jacques Cartier is canoeable to the Grand Portage, after which it becomes too turbulent, broken by falls and heavy rapids. To this point, however, there are numbers of famous pools from which trout of 7lbs. and over are not infrequently taken. At the mouth of the Sautoriski River, and for some distance up that stream, trout are particularly abundant and of good size, and this statement applies as well to the River à l'Epaule, both tributaries of the Jacques Cartier. The scenery is magnificently wild, the mountains broken into every conceivable form, a great chaotic upheaval, through which the river winds its noisy, fretful course. With Bayard's as headquarters, trips may be made either up or down the river, with as much or as little camping as the angler cares for.

To him who seeks the wilderness "far from the madding crowd," and prefers the shelter of his little tent or bark lean-to, with the bush and the waters as his foraging ground, a trip to Grand Lake Jacques Cartier will afford a variety of experiences and adventure, and the record breaking big brook trout may be lured by his fly and fall a victim to his skill. Monstrous fish lurk in these waters. A 9-pounder has already been placed in the scales, but better than this may be expected.

The long disused colonization road from Quebec to Lake St. John passes close to Lake Jacques Cartier, which is distant about thirty miles from Bayard's. An effort will be made to have this road reopened for the passage of buckboards this season, and canoes and boats placed permanently upon the lake, besides a substantial log camp at the discharge.

The Department of Crown Lands charges a small fee to sportsmen fishing or hunting within the park limits, and a permit must be taken out either in person at the Department in Quebec, or by letter to Mr. W. C. J. Hall, the superintendent, Parliament House, Quebec, who will supply all necessary information and secure guides and canoes if wanted.

This schedule is in force of charges for visitors to the park: For angling, $1 per day; hunting, $1 per day; angling and hunting, $1.50 per day. A nominal charge of $1 per diem will be made to parties for the use of canoes and camp equipment.

Tourists merely desirous of making a visit to the park (and not intending to fish or hunt) may, at the discretion of the Commissioner, be granted a permit for that purpose without charge; if camp equipment be used the usual charge for same will, of course, be made.

Natural History.

SOME TENNESSEE MAMMALS.

In Part I. of the Proceedings of the Philadelphia Academy of Natural Sciences, which covers the months of January, February and March, 1896, Mr. Samuel N. Rhoads has an interesting paper on the Mammals of Tennessee. The material on which this list is based was collected during the months of May and June, 1895, and the present paper is the third of "Contributions to the Zoölogy of Tennessee," by the same author. Mr. Rhoads's list comprehends all the species known to belong to the Tennessee fauna, including not only the wild mammals which are found in the State at present, but also those which have been exterminated since the advent of the white man.

Mr. Rhoads calls attention to the infrequency of references to the mammals of Tennessee in scientific literature and adds that in popular literature the hunting stories of David Crockett form the most voluminous "source of early information on this topic, and these have been supplemented in later times by occasional papers and notes published in Forest and Stream."

Mr. Rhoads expresses especial thanks for and appreciation of the close observation and generous assistance of Mr. B. C. Miles, of Brownsville, Tenn., whose assistance in ornithological matters he has acknowledged in an earlier paper.

The opossum (*Didelphis marsupialis virginiana*) is common all over the State below the elevation of 2,000ft. Some of the negroes believe that there are two species here, one with black, the other with white feet, and the author suggests a possible tendency in the opossums of southwestern Tennessee toward the Texas form.

As shown by Dr. Allen in his "Monograph of the American Bisons," the buffalo (*Bison bison*) was once abundant in Tennessee, but it is believed that this species was for the most part confined to the Cumberland Valley and its tributaries, in middle Tennessee. The point of their greatest abundance was probably in the Blue Grass region near Nashville, and about the salt and sulphur springs in Davidson county. Buffalo River, and towns called Buffalo in the southern portion of the State, would seem to point to the former existence of the species in that locality, and there are other geographical names in Putnam, Washington and Cocke counties. There are many historical accounts which go to show that the central basin of Tennessee and the Blue Grass region of Kentucky were a sort of neutral hunting ground or debatable land, to which the hostile tribes of Chickasaws, Natchez, Creeks, Cherokees and Shawnees resorted at certain seasons to hunt the buffalo and, if they met, to fight one another. In the forests and canebrakes which covered much of this land the buffalo had a home where food was abundant and they were infrequently disturbed. Nor were buffalo the only or perhaps even the most numerous game found here, since an account of a hunting excursion by twenty men in 1780 says that they killed "105 bears, 75 buffalo and more than 80 deer." Mr. Rhoads is told that the last buffalo in Fentress county was killed by an old resident, now dead, named John Young, but the date of the capture is not known.

The Virginia deer (*Dorcelaphus virginianus*) is still found in Tennessee, but in surprisingly small numbers. Mr. Rhoads believes this to be due to the large number of negroes and poor whites who spend their lives in hunting instead of working. Mr. Miles, who made careful inquiry in Heywood county, says: "As far as I can gather there are about twenty now alive—one buck was killed in February and a doe in August." Efforts are being made to protect, and so to restore, this species; and recently the Tennessee Legislature passed a law forbidding the killing of deer in certain counties in the State for a period of five years.

At the beginning of the present century the elk (*Cervus canadensis*) was probably found at times in every county in the State. It was abundant in the mountains, it frequented the licks near the present site of Nashville, and was more or less abundant in the glades and canebrakes of the Mississippi bottom. Mr. Miles, who made careful inquiry about the elk in this section of the State, wrote to Mr. Rhoads, saying: "The last elk killed in west Tennessee that I can learn of was at Reelfoot Lake in 1849. The late David Merriwether, of Madison county, Tenn., killed it. In 1865 I heard that an elk was killed in Obion county." Putnam's history of middle Tennessee speaks of a park on the famous Belle Meade Farm, south of Nashville, where Gen. Wm. G. Harding had "200 deer, twenty buffalo and half a dozen elk in captivity." This reference is to a period anterior to 1859. It is not known whether any of these animals are still kept there.

Mr. Rhoads's notes on the swamp hare (*Lepus aquaticus*) will prove so interesting to Northern readers that we quote them entire:

"On the borders of Reelfoot Lake, in the closest proximity to the water, I found this large hare. It preferred hiding among the half-submerged vegetation and piles of driftwood, and when it broke cover would run with bold high leaps from log to log for so great a distance that it was difficult to find it again.

"The following, relating to its habits in the vicinity of Brownsville, is from the pen of Mr. Miles: 'Though resembling the cottontail closely in color and in diet, as well as in movements, there the similarity of the swamp rabbit, as we term him, ends. Never seen on the hills and seldom in the open, he is at home in canebrakes and deep woods, far from the homes of man. The more desolate the situation the more certain he is to be found, ever wide awake and ready to test his speed and cunning with that of any enemy; and he has no friends. In the overflow (spring freshets) I have seen him for hours seated on a floating log, as much at home as a raccoon, and when disturbed take the water for a 300yds. swim as readily as any land animal that I know. When hotly pursued he always takes the water, and once there I have never seen him caught. Twice only, while hunting at night, have I seen him take a hollow tree, seeming generally not to resort to such a refuge in the day. The young are born with eyes closed and without hair, and fewer in number than the cottontail. I have only seen one nest, that in an old root. The swamp rabbit has fully held his own in numbers in my day, though nothing more, and I see about one specimen a day when hunting in our deepest bottoms. The largest specimen I ever weighed was 13lbs., and would say 13in. at the shoulders. Negroes think him good eating, and, if properly prepared, I agree with them.'

"In another letter Mr. Miles refers to this hare as follows: 'As to the aquatic habits of the swamp rabbit, they are very pronounced, and he will take to water as readily as the raccoon. I have seen him when not pursued swim a slough 30yds. wide and shake himself when on the other side, hopping off as though it was all right. * * * I saw one swim several hundred yards down and across current when pursued by my pointer, and the dog did not gain on him, but was the most exhausted of the two when he gave up the chase. The rabbit makes the 'dog lick' when in the water, the rump rising and falling as in the swimming horse.'"

The contrast in the condition of the young of the swamp hare with those of the cottontail rabbit at birth is interesting, the young of the last-named species being born with their eyes open and fully haired, according to Mr. Miles.

At Reelfoot Lake Mr. Rhoads visited a beaver house situated in a cypress swamp west of Sanburg. It was not then tenanted, but there were signs of fresh beaver work near at hand. There are a few beaver (*Castor fiber canadensis*) left in this neighborhood, and a resident of Sanburg contracted with Mr. Rhoads to furnish the gardens of the Zoölogical Society of Philadelphia with some young during the coming winter. Mr. Miles is quoted as saying that the beaver is more numerous now than forty years ago, because less hunted. Within nine miles of Brownsville he knows a house which is inhabited now and has been for twenty-five years. Beaver were formerly abundant all over the State.

Squirrels of several species are abundant in Tennessee, as is also the raccoon. The otter is a rare but constant inhabitant of all the larger streams. The fisher is probably long ago exterminated.

The black bear is now very scarce even in the wildest parts of the State, though formerly so abundant. In many sections they have all been killed off. Mr. Miles writes: "A bear was killed in the west border of Haywood county in 1865—the last one, I think—though in Lauderdale county one is occasionally killed now.

But the gray fox and the red fox are abundant in the State.

In middle Tennessee the wolf seems to be extinct, but a few may exist in the southern Alleghany Mountains. About the year 1883 one was seen near Cloudland Hotel, and in 1887 Dr. Merriam found the wolf still existing in the Smoky Mountains.

Mr. Rhoads says: "Their status in the lowlands of west Tennessee may be gathered from the following quotations from letters sent me by Mr. Miles, the first of which was the result of a publication as to the specific identity of black and gray wolves made in Forest and Stream for Aug. 31, 1895. 'Since the article for Forest and Stream was written Major Shaw, an old hunter of this county, tells me that many years since he captured a litter of seven wolf whelps, three of which were gray and four black. * * * Our present wolf is larger and very much fiercer than those of my childhood, at least those specimens were which came under my observation. I suppose our present big gray wolf has always been here and some favorable circumstance must have developed his numbers.' In a more recent note Mr. Miles announces the killing of two wolves by poison about Dec. 10, 1895, within seven miles of Brownsville by a man who had killed hogs and heard the wolves howling near, when he put out poison with the above result.'"

The wild cat (*Lynx rufus*) is abundant in all the wilder parts of the country, and Mr. Rhoads, with a query, includes the Canada lynx in his list, on the authority of Prof. E. D. Cope, but especially states that he has found no evidence of the existence there of this species.

The panther (*Felis concolor*) seems to have been exterminated in all parts of the State except in the impassable brakes of the bottoms of Lauderdale county, where Mr. Miles feels confident that a few still exist.

Range of the Blackfooted Ferret.

Editor Forest and Stream:

In Dr. Merriam's interesting Synopsis of the Weasels of North America the geographical range of the blackfooted ferret (*Putorius nigripes*) is given as "Great plains, from western North Dakota and northern Montana to Texas; not known west of eastern base of Rocky Mountains."

As the blackfooted ferret is usually regarded as rather a rare animal, and, owing to its nocturnal and secretive habits, is seldom viewed by the non-scientific observer, I venture a word or two on what I have seen of its range. I have found it as far north as Milk River in Montana, quite close to the foothills of the Rocky Mountains, and have a specimen given me by an Indian from that region. The man who secured it did not appear to be familiar with it, and from the fact that he called it a spotted mink I concluded either that the animal was rare there or else that it was seldom seen by the Indians. Further south, on the great plains, the animal is well known by the Pawnee Indians, who give it the name of "ground dog." They recognize its secretive habits, and in one of their mythical stories, in which the animals talk and generally act like human beings, the ground dog is made to speak of itself as "staying hid all the time." The Pawnees have some quite curious beliefs with regard to this species, many of which I have noted in my book "Pawnee Hero Stories and Folk Tales" (p. 113), as well as in my later book, "The Story of the Indian" (p. 175).

I do not clearly know what Dr. Merriam means by the statement that the blackfooted ferret is not found west of the eastern base of the Rocky Mountains. I do not know of its ever being found on waters flowing into the Pacific, but it is not uncommon in some parts of the great central plateau, for example in the Shirley Basin on streams forming the head of Muddy Creek, which is the tributary of the Medicine Bow River from the north. The Shirley Basin is about thirty miles east of north of the town of Carbon on the Union Pacific Railroad in Wyoming, and is about 7,500ft. above the sea level.

At least one family of blackfooted ferrets had their home one year in some deserted sheep sheds near a ranch in this basin, and on more than one occasion they were routed out from their hiding place by men who were pulling down the walls of the shed, and two or three of them were killed, and were afterward seen by me. The man who destroyed them spoke of them as ferocious little creatures, ready to turn and fight if too closely pursued, and as not especially swift of foot.

George Bird Grinnell.

The Copperhead.

OAKLAND, Cal., July 16.—*Editor Forest and Stream:* The results of my inquiries through the FOREST AND STREAM in regard to the habits, habitat and appearance of the copperhead demonstrated the profound sagacity of the move. The snake editor came promptly to my aid with a more minute and lucid description of the reptile than I had obtained from any other source. Then Coahoma, whose special field I am aware I was exploiting and from whom I hoped to hear, followed a close second with a lot of interesting information. Antler a little later added his mite, and lastly our old friend Aztec gives us some very important personal experience, which in some particulars is more satisfactory than anything I have yet received.

That the first two and the last describe the serpent whose identity I sought to establish, there is, I think, but little doubt; but for this reason and from my own experience I am inclined to think that Antler is barking up the wrong tree and has mistaken some other, probably harmless snake, for the deadly copperhead.

I was born in New England and spent the first twenty years of my life before the war in Rhode Island and Massachusetts. I have caught trout and all or nearly all the other fresh-water fish indigenous to that section, and believe I am familiar with most of its reptile productions, but I never saw any copperheads there.

I know that many people are apt to consider every snake with which they are not perfectly familiar as venomous and I have even heard the common garter snake called a copperhead because of its yellow stripes. If there is any venomous snake in New England except the rattlesnake, which I believe is not quite extinct there, it will be news to me to learn it. We used to think that the horribly ugly flat-headed adder was as deadly as the rattlesnake, but like the horned toad its appearance was what created the impression, as all authorities now declare both to be perfectly harmless.

The FOREST AND STREAM describes the copperhead as an upland snake with a bright, copper-colored head. Antler's article speaks of its having a "horseshoe-shaped spot on its head which takes on a metallic coppery color" when he is mad, an entirely new feature, and leads us to infer that he lives in or about the trout streams.

That the copperhead "does exist" I can no longer doubt, but I am not yet prepared to believe that it is found in New England, or to any extent west of the Mississippi, and it fortunately must be very rare in all but a few localities, or there would not be so many who, although born and reared in the States where it is said to exist, still know so little about it save from hearsay.

FORKED DEER.

[The copperhead is rare in Connecticut, but becomes more abundant further South.]

Game Bag and Gun.

HOW SPORTSMEN ORIGINATED?

Editor Forest and Stream:

It has occurred to me that, notwithstanding the pride which we feel in our sportsmanship of to-day, we are not the sportsmen that our ancestors were in the early days of our Republic. It is true that we claim we are better, and that we truly believe we are so is also true; but I greatly fear that if one were called upon to give the evidence in support of that belief, he would encounter no little difficulty in producing any worthy of credence. We are disposed to magnify the men of our own day because they are of our day. Men whom we know seem better than men who are far away, as do the affairs of our own people seem more important than the affairs of a distant people.

The sportsman of the early American days had no effeminacy, nor was there any lamentable inefficiency in his efforts. He plunged into the forests with that calm assurance which came from a knowledge of woodcraft, and a heedlessness of consequences which came from a spirit inured to dangers. Travel he ever so far, he was never lost. He could return on a true course at any time by his knowledge of the lore of the woods, for he could tell the points of the compass by the moss on the trees and rocks, the direction that the grass pointed and occasionally by the moon and stars. He felt neither pain nor hardship. Were he chased by Indians, he ran on and on, day after day and night after night, without any nervous perturbation or timorous apprehension of danger that might befall him were he captured. He quaffed a draught out of the crystal springs and rivulets, tarrying for a moment only as he ran onward in his tireless flight. A week or more, night and day, he ran on till the Indians were left far in the rear and safety was reached. Were he hungry, he killed a deer with one shot from his unerring rifle and gave the steak an added relish from his own cooking of it, if he bothered cooking it all. In chasing the Indian he was relentless and sagacious. A few pieces of bark served for an ample shelter, and a few branches or old leaves served for a couch. One suit of clothing served for a lifetime, and history fails to chronicle his discovery of any laundries.

Observe the modern sportsman. He carries with him to his week's or month's camping ground nearly a duplicate of everything which he has in his every-day life. A cot which would do well enough to sleep in the year round at home, blankets of the warmest make, rugs to keep his feet off the ground, camp chairs designed for the greatest enjoyment of indolence, and a cooking outfit on which anything can be cooked which can be duplicated by the greatest *chef* in Paris in his exclusive kitchen. He has a tent which is as large and comfortable as a house, and the commissary would be a revelation to an epicure. But the camper himself—a dream of beauty in a creation of the tailor's art—is the crowning glory of the many glories of the venture into the wilderness from two to ten miles from town. Compare this specimen of woodsman and woodsmanship with the hardy man who, with rifle on his shoulder, plunged into the trackless wilderness where dwelt the tiger, the wild bear, the wolf, and the dreadful Indian. He was ever restless, and if he found another man of his kind within a thousand miles of him, forthwith he denounced the place as being too thickly settled, and he sped on to the true wilderness; that is, where there was no white man other than himself. Even when his home surroundings became too familiar to him—that is, the wilderness for a few thousand miles about—the spirit of unrest and the spell of the forest impelled him to seek diversion and adventure a few thousand miles further; and when he felt the need of a real vacation he just started out and never came back at all. There were true woodsmen in those days. Alas! either the days are different or the men have changed more than the passage of the years doth warrant. Our poor attempts at woodsmanship, when set up side by side with the sterling stuff of our daddies, would in a way resemble a comparison between an Indian war canoe and a modern battle ship. And this brings me to think that perhaps if we have lost in some things we have gained in others, though of course that does not in the least affect the question as it is herein raised.

DICK OF CONNECTICUT.

A WEEK AT COBB'S ISLAND.

TWO WEEKS ago I was showing the series of beautiful and interesting "Shooting Pictures" by A. B. Frost to a friend of mine. When we came to the "Bay Snipe Shooting" Dave had a "point"; his eyes bulged out; he seemed to be living in the past or having a gunner's dream. He was; but a slap on his back awoke him. "Jay," he said, "that reminds me of Cobb's Island; that was my blind on Curlew Bar fifteen years ago." He told me of his trip there and how often he had wanted to go back. We were not inoculated against the shooting fever, and besides, "it was a long time between hunts" for both of us. In a few minutes our plans were made to spend a week at Cobb's Island.

We met in Philadelphia, and at 11 P. M. got aboard the Cape Charles sleeper. After cautioning "Old Virginia" to get us up at 5, as we were going to get off at Cobb's Station, we turned in. It was raining hard when we found ourselves and our *impedimenta* in the midst of a sweet potato patch; but after the train had pulled out we saw on the other side of the track a cube 10ft. on a side labeled "Cobb's Station." We were just about enough awake to have sense to "come in out of the rain" and hold a consultation to find out where we were "at."

When Davy had been there before he had come around the cape, but now an oyster shell ballasted railroad (quite a curiosity to us, accustomed to the Pennsylvania) puts you off at Cobb's. In a few minutes a young jehu appeared with a carryall and informed us that if we were the young gentlemen who were going over to the island we were to go to "ma's" for breakfast and the launch would come over for us at 11. You may be very sure that after our two-mile drive in the rain we were glad to see "ma," but gladder to see the breakfast Auntie prepared for us. After breakfast we walked down to the shore to look around and see what the prospects were. We were delighted to see quite a number of curlew and graybacks out on the mud bars. Finally the naphtha launch appeared, and we were soon winding our way in and out of "creeks," as they call them there, but in reality channels between the mud bars, as it was ebb tide. In about an hour we were approaching this little island, ten miles out at sea, containing only fifty-four acres, one acre more in number than the handful of men with whom Sir Francis Drake "picked the lock of the new world."

We were welcomed at Cobb's and soon found ourselves quartered in the Baltimore House, our bodily wants to be attended to by Preston, a genuine Virginia darky than whom there could be none better. We were a little crestfallen when we asked Arthur, our guide, what the prospects for shooting were. He said: "You are just between seasons; May and August are the best months for birds." But we were not easily discouraged and made up our minds that we would keep everlastingly at it and get all there was out of it.

It is always cool there, with only ocean breezes and, better still, no mosquitoes. You shoot on either the rising or falling tide, not between tides, and it depends on the tide what time you have to get up in the morning to shoot. Between Cobb's and the mainland is Broadwater Bay, nine miles wide and fifty miles long, which at high tide is a beautiful sheet of water, while at low tide thousands of acres of mud and marshy flats, bars, creeks and channels are exposed.

Our first morning's shoot was to be at Cove Creek and Preston had us up and our breakfast ready at 4. It was nearing low tide when we sailed away in our 20ft. English-rigged boat. An hour's sail brought us near our blind, to which we waded with our guns and shells. Our guide, after anchoring his boat, set out the decoys, snipe and curlew, thirty-six in all, some in a little pond in front of the blind and others on the shore in the mud. He then took up his place back of us and we were ready for the first incomer. The blind is about 6ft. in diameter, made by sticking branches of trees in the mud and covering them with dried grass. While waiting for the birds to come in we ask our guide innumerable questions. We find out that he is not married, that he made the decoys in winter, that he had never been off the island except for two years' schooling on the mainland, that the shooting is not so good as it used to be, that the island is gradually being washed away, and while we were talking the selfsame tide had been rising and must have covered some bar where the snipe had been roosting, driving them off to seek higher ground and their breakfast, for our guide said: "Mark—front; get down." When Arthur said "Mark" there was never a doubt in our minds but that the birds were coming in; it was like seeing a dog point. He began to whistle and soon we saw two birds flying low, turn and come toward our decoys. They came in, circled above the false lights, and would have lit among them, but Dave said: "You take the one on your side and I'll take the other." Dave got his bird with the first barrel, while I went "bang! bang!" and saw my bird just get out of range for Dave's second shot. Thus it was the birds came in and for an hour we had plenty of chances and picked up twenty-three graybacks. We could have had half a dozen shots at willet, but they were protected by law until Aug. 1. Hungry and tired, we returned to the island perfectly satisfied with our first shoot.

Thirty yards from our house was the ocean and a great surprise was in store for me, who had only bathed on the Long Island and Jersey coasts, to find absolutely no undertow and yet a magnificent surf. You can go out as far as you please on either the rising or falling tide and yet encounter no undertow. It was the grandest bathing we ever had, and daily, sometimes twice, we enjoyed the Atlantic main.

Our next shoot was on a falling tide on Curlew Bar. In addition to our sailboat we took along an 8ft. shooting boat. Anchoring the sailboat, we paddled about a quarter of a mile and ran the boat into the blind. When the water got down to about a foot from the bar we put out the decoys and waited and watched the receding waters. In half an hour one bare spot appeared in front of us and in ten more minutes probably an acre of ground was bare. The birds flew thick and fast and, as around our blind was their only feeding ground at present, we had some very nice shooting. It was over only too soon—a few minutes more and there were miles of mud bars exposed teeming with small crabs, food for the snipe. After a few shots at an occasional bird flying past us on the way to some feeding place our guide pulled our little boat, now high and dry on the mud bar, into a small creek and then a paddle back to our large boat. Eleven curlew was our bag, more than enough to satisfy two city chaps who had traveled 600 miles to get them. Curlew are nice birds to shoot at; I say "at" because you don't always get them. While they do not decoy so well as graybacks, they are much larger and make a better target.

In one week we shot five tides, never getting over two dozen birds at one shoot and never an empty bag. Fishing is very good there, but the way they do it does not offer the sport or attraction to one whose good fortune it has been to have spent a month on the Nipigon River—the finest trout stream in the world. A hook, a line, a bait, a bite, a fish, a surfeit; they don't fish with rods and reel and never play the fish, and yet they call it sport.

November and December are the best months for shooting ducks and geese at Cobb's. The guides leave their blinds stay in the water and mud from season to season, as they say and believe that the birds get accustomed to seeing them there and are not so shy as they would be if the blinds were set up new each season.

The guides are courteous, good-natured fellows, their services expert, their compensation moderate. In shooting without a guide one would be very apt to find one's self high and dry on a mud bank with the pleasant prospect of waiting twelve hours for the tide to float him off. In fact, you must know how, or you can't do it. Shooting without a guide reminds me of the story of a man who shot over a dog for the first time. He was a Westerner and a great hunter, but he had never used a dog, and had only a faint sort of an idea that in some way a dog was of some assistance to a hunter. The dog was sent to him from the East, and the next day he took the pointer out quail shooting. That night he came home without a bird, and so disgusted was he that he gave him away to a friend of his, telling him that he was the worst dog he ever saw. His friend asked him what was the matter with the dog, and he replied: "He has fits. He was trotting along ahead of me all right when he got his first fit and stopped right in his tracks. He stuck his tail straight out behind as stiff as a poker, drew up one foot and stretched his neck out till his eyes nearly popped out of his head. There he stood like a stone dog, and I couldn't make him move. I whistled at him and called him, and then I walked around in front of him to see if he had gone mad. Just then a whole flock of quail flew up under my feet. If that dog hadn't got that fit right there I'd have got about half a dozen birds out of that flock. If you want him, you take him; I wouldn't have such a cur to hunt with."

Our week passed altogether too quickly, but we promised ourselves to go back soon again to this "sportsmen's paradise."

JAY EIGHTY-SIX.

PITTSBURG, July, 1896.

CARIBOU AND CALIBERS.

Editor Forest and Stream:

The article in your issue of July 4 by Mr. J. W. Davis, "On Newfoundland Marshes," brought up pleasant memories; for I spent three weeks last season at the same camp with L. Buffe and Martin Williams, and hunted over the same marshes and hills. And it was the kindness and courtesy of Dr. S. T. Davis that enabled me to make arrangements for the trip.

On our way in from West Pond and just at the edge of the Barrens we met a party of Micmacs coming out. Old Harriet, she of the long gun, reported "Plenty deer—thousands." The next morning, Oct. 19, I secured a good stag and a barren doe out of a herd of sixteen at Hannah's Lookout. This doe's head is here by me at present writing. The antlers are the finest of all I have seen, having seventeen points. In my three weeks' stay in camp I counted 120 caribou. Perhaps half a dozen of these were so far off that we could not make out the head clearly. All the others, both male and female, except fawns, had horns. Fawns were very scarce.

It was a disappointment not to see the large heads of caribou, such as were seen by Mr. Davis and his party the year before, but we were too late. Martin Williams was in on Wolf Hill and Grandfather's Lookout about two weeks before I reached camp. Deer were plentiful enough then. From Oct. 19 to 23, inclusive, we counted sixty, but after that fewer were seen, and when we broke camp, Nov. 9, they were about gone. While waiting at Pilley's Island for the steamer, John Paul came down from the White Hills and said there were no deer at all. The so-called migration through that country seems to have been about two weeks earlier in '95 than it was in '94.

Let me say here to A. H. that I have watched the caliber controversy with much interest, and that his conclusions are about correct. Only it doesn't need a herculean hunter to handle a .45, because the gun need not weigh over 7¾lbs. I used a Winchester extra light .45-70, and found it an admirable gun. Any other make of same weight would no doubt shoot as well. As my tramping weight is about 130lbs., heavy ordnance is avoided as much as possible. In getting a light .45 you do not necessarily dispense with accuracy. While testing this gun on the range at German ring target, 200yds., thirty-nine shots in all were fired one afternoon, and it placed all but four of them in the black. The shooting was from a rest, of course. Lyman hunting sights; charge, 75grs. Hazard F. G. powder, and the Gould 330 hollow point bullet and 350gr. solid bullet, about an equal number of each. That afternoon there was one run of eight shots scoring each 21 or better. The charges mentioned are what I used on caribou, but the Gould bullets were soon given up on account of their lack of penetration. They did not mushroom, but the sides broke off and you would find nothing except the butt piece. The first stag shot was hit in the shoulder with one, but he did not go down. After receiving the next shot, a solid 350gr., he ran some distance

before going down. The Gould 330 passed through shoulder, ribs, a little point of the lung, and stopped against the windpipe. The piece left in is in the form of a crescent and weighs about 104grs. The other bullet broke the bone below the shoulder blade, passed through ribs, heart case, ribs on the left side, and lodged under the skin. This butt has only 174 of the original 350grs. left. From the battered up condition of these bullets one would think that the projectiles had all the propelling power behind them they could stand. The .45-70 seems preferable to the .45-90. There was a Lee-Metford sporting rifle, using the English service cartridge, owned by a gentleman who camped near us. I fired a shot from it through the shoulder of a caribou doe that had been dressed out. It was hard to find the holes in the skin, but where it entered and left the chest cavity it smashed the ribs about as much as a .45 would. Most of the guns used, however, are sealing guns or old muskets loaded with slugs. I am now flirting with a .50-100-450, and if it can be persuaded to shoot straight enough shall use it on caribou or other equally large game the next opportunity. It is of same pattern as the .45-70 and weighs less than 8lbs.

STEWART.

AN INCIDENT OF OLD BALDY.

IN Dr. J. A. Beebe's communication from Portland, Ore., in the issue of July 11, is a sorrowful story regarding the destruction of deer in a certain section of the Cascade range of mountains, which recalled to mind an incident connected with one of my own trips into the mountains northeast of Spokane, Wash., in days long gone.

Deer were then fairly plentiful on the foothills of Old Baldy, some twenty miles from the bustling little village of Spokane, but it was already growing apparent that we were to have trouble with hounds, and much indignation was expressed among the still-hunters concerning certain parties who had introduced a number of the slab-sided, howling brutes to assist the two-legged brutes in their butchery of the graceful creatures which they seemed powerless to kill by legitimate still-hunting.

We were a jolly party of four—rifle cranks, enthusiasts and devoted lovers of the great primeval woods—housed for a time in the little circular tepee which in the years agone was long famous in the mountains, and which has overshadowed cheerier camp-fires and more square fun to the given surface than has any similar amount of canvas ever stitched together; and as just the right depth of snow lay on the ground, all were jubilant.

A single shadow drifted across our trail. Away to the north, on the hills which rose beyond the creek on which we were camped, was heard on several occasions the baying of hounds; and threatenings dire began to be heard around the camp-fire.

All my own prejudices in the matter were aroused, and I recollect dooming to sudden death the first hound that came in sight. However, the days passed and they troubled us not.

The sport was grand, and the day at length arrived when we began dragging into camp our slaughtered game, preparatory to an early start for home on the morrow.

We had finished an excellent dinner, in the preparation of which the hunter, detailed as cook, had fairly broken the record, and as I rose up from the bountiful repast, at peace with all the world and void of malice toward any of God's creatures, just as I turned to the fire for an ember with which to light my pipe, my eye fell upon a large black hound bitch, starved to emaciation—the very picture of famine on its last legs—crouching and turning, in a deprecatory, sidewise fashion, as she slowly advanced toward our camp-fire.

Here at last stood one of the culprits against which we had for days breathed out only threatenings and slaughter. Now for the vengeance long promised to this disturber of our peace! A single thing had not been reckoned on in our previous calculations—the appealing look with which the famished brute first met my astonished gaze.

"What did I do?"

My dear sir, what would any member of the great FOREST AND STREAM family have done other than just as did I, when, turning to the dinner table, I took a large kettle which, thanks to the generous preparations of the cook, was still half full of bouillon, well thickened with bits of venison, potatoes and crusts of bread, and set out the whole bountiful repast for the pitiable skeleton instanter?

"Ain't you afraid you will kill her giving her all that mess at once?" asked one of the hunters.

"She shall have one square meal if she dies for it," I replied.

The plentiful ration quickly disappeared, and licking her sunken chops she looked round in search of more worlds to conquer.

We really dared not give her more, and a few minutes later, in the bustle of preparation for another trip after our game still left in the woods, she disappeared. I took my pony and started up a long hill to the eastward of camp, on the crest of which I had cached in a thicket as fine a doe as had been secured in the hunt. I had not hung her up, for there was no convenient sapling, and as she was so completely hidden by the bushes, I had chanced leaving her on the ground.

Nearing the top of the hill, I was hailed by one of the boys, who had left camp a few minutes before me, and who, gaining the summit of the hill 100yds. south of me, called out, asking if I didn't have a deer hidden near by.

"Certainly," I replied, "why?"

"That black hound has just run away from those bushes in front of you and gone over the hill," he answered.

I hurried on, my wrath rising. There lay my deer—that is, some of it. I am morally certain that that hound had not preceded me twenty minutes. Nearly every bit of one whole ham (save the bone) was gone completely.

I stood and stared stupidly. Slowly my scattered wits returned, and I stepped forward to see if some other brute had not assisted in the wreck. Only her tracks and my own showed a print on the otherwise unbroken surface of white. Neither bird nor beast had shared the guilt of this gastronomic prodigy.

In a somewhat varied hunting career, a few things have been encountered which have proved fairly paralyzing. When on the old buffalo range I saw where those ungainly-looking creatures had clambered up the almost perpendicular walls of deep ravines, I concluded there were probably some few facts which I had not yet acquired. And now, as I stood over the mangled carcass of my beautiful doe, I tried to figure out where in all her varied anatomy this dropsical bass drum of a hound had stowed away something less than 87lbs. of good, nutritious food in one short half hour. Another fact dawned at length upon my mental horizon: that here at length stood a hunter with his "dander riz!" And didn't the boys enjoy their smile at my expense?

Fourteen years have vanished since that day, but nothing at all resembling a black hound bitch has ever again appeared.

And now, when once again the subject of deer-dogging is reviewed by the good doctor near the shore of the far Pacific, I rise to make my confession to the sportsmen of America, that among my other mental possessions I have for fourteen years carried a very deep-seated article of the kind which my old friend, Jim Ralph, used to style a "prejudy!" A single soothing reflection mitigates its pang: the fancy, which at times rises almost to conviction, that the utterly unconscionable gorge of venison must have, in the very nature of things, long since proved a Nemesis.

ORIN BELKNAP.

THE HUNTING RIFLE.

A Rifle to Fit the Ability to Use It.

Editor Forest and Stream:

Mr. Cecil Clay's opinion, as an expert shot and hunter, cannot help but influence a good many tenderfeet who intend to hunt big game this fall to get a rifle that would be efficient in the hands of a man like Clay, but which in the hands of an excitable tenderfoot will maim a good deal of game which will escape, but which would have died quickly had the rifle been of a caliber according to the user's skill.

Now, Mr. Clay is a man who can shoot a deer or moose with no more buck fever than I would have shooting a woodchuck; but how many of the tenderfeet will coolly draw down on a moose at even 40yds. and plunk it in the heart? If the tenderfoot hits it at all, where will the bullet land? Say it hits in the paunch or in the hips. Will Mr. Clay say that his .44-40-200 rifle will be as deadly as a .45-90-300 or .45 70-405 under such circumstances?

I never saw a moose nor a caribou in the woods, but I have killed deer with .32, .38 and .45cal. rifles. I started in with the .32, but when I found that expert guides, men who killed many deer, advocated a .38-40, I used one of those for a while. I have followed a number of deer that had been wounded with .38-40 and .44-40 rifles, but I never had to follow one hurt by a .45-90 a hundred yards, and that only when the .45 bullet hit the deer through the paunch.

As for Mr. Clay's .44-40, when used on Virginia deer it is a sad weapon save in the hands of a Cecil Clay. A well-known woodsman, Will Light, whom a number of New Yorkers know to be a fine shot, having seen him up in the Adirondacks at the Bisby lakes, used a .44-40 for years. He killed lots of deer with it, but he tells about emptying the magazine full of bullets into the shoulders of a big deer and then the deer got up on the bank and went back in the woods some distance before it died.

Fred Jones and Will Miller, of Northwood, followed a big buck five miles, then didn't get it, one fall that I went into the woods with them. They had knocked the buck to its knees with their .38 and .44-cal. rifles, and both admitted that if either had had my .45-90 the big buck's horns would have gone over a mantelpiece.

It is all right for Mr. Clay to talk about practice and knowing how to shoot a head of game in those parts where the bullet will cause the quickest death, and about "Mr. Risteen and others hankering after a weapon that will not let game get away," but there are a whole lot of tenderfeet—as compared with Mr. Clay—who, when they hit their game, want something besides bloody leaves to show for it.

RAYMOND S. SPEARS.

NEW YORK.

A New Club Ground in Illinois.

JERSEYVILLE, Ill., July 20.—*Editor Forest and Stream:* A party of gentlemen, comprising G. R. Smith, Al Tack, Hugh Snell, Robert and James Kirkpatrick and James Wedding, have leased a tract of land along the Illinois River in Rosedale township, Jersey county, comprising about 800 acres and including several small lakes and the slashes locally known as the Glades.

This territory comprises some of the most noted mallard country in this vicinity, and the intention is to fence the ground and plant rice, etc., in the lakes to entice the fowl to remain as long as possible.

At present, owing to the wet spring, there is so much water on the ground that the mosquitoes and bullfrogs have complete control. The lakes, of which there are several, generally afford good bass and croppie fishing if one can stand the mosquitoes and the mud, regular Illinois River mud. I have an idea that this mud would afford an opportunity for the culture of clams, and think I shall call the attention of the gentlemen to the clam correspondence of Messrs. Hough, Cheney, etc.

Quail wintered well with us and indications point to a good supply for this fall, although many coveys will be late hatched. This will give the fellows who like to shoot half-grown birds a chance, as our excellent (?) game law makes the season begin Oct. 1.

L. S. HAUSELL.

About Summer Woodcock Shooters.

UPPER MONTCLAIR, N. J., July 24.—*Editor Forest and Stream:* I have always been a summer woodcock shooter. I have always thought, and still do think, that the birds are all well grown by July 1, and that if the New Jersey boys didn't get them in July some fool legislative act would put off the fall shooting till after the fall flight.

This past season I have been able to get out a good deal more than usual, and have observed the people who shoot and what they shoot a good deal more than ever before; and I am of the opinion that the Jersey woodcock law should not open before Oct. 1, and this is the reason: Everybody who shoots is not a gentleman. Now a gentleman may be a man with $100,000 or 10 cents; but the real man, the real sportsman, when he goes out in July kills woodcock and nothing else. But there are a lot of men who shoot in July who kill everything that gets up; and I know of several broods of young partridges that would have made good shooting in the fall that have been killed as summer woodcock. Of course this is all wrong, but unless you stop all July shooting or have the game inspectors examine the bags of such sportsmen as they may find in the woods, how are we to tell? With friends I put out three dozen quail in our vicinity. I have heard them calling all through the summer, but I presume that a great many of them will be killed, cooked and eaten as summer woodcock.

I say stop summer shooting. Make the law on everything in these States, New York, New Jersey, Pennsylvania, Connecticut and Rhode Island, to Oct. 1, and I am sure fewer small birds will be killed, less damage done and we who obey the laws and shoot as we live—decently and in order—will find more game when we come to get a day or so in the fall.

Another thing we want is a 20-gauge repeater for small game and light work. The game is so scarce in or around the big cities and in the East that it's a good deal of work and a great deal of nonsense to carry a 7lb. 12-gauge around. Let the Winchester Co. get out a 4½lb. 20-gauge at the same price as their 12-gauge, lots of them, 26in. barrels, shotgun stock, and see if they don't sell.

COCKER.

Woodcock near Washington.

THE bird is as peculiar in his habits as an ortolan almost. He is as nomadic as a gypsy. A swamp or a marshy place in the wooded thicket may show from a dozen to twenty woodcock one day, when the next would not discover a single bird if the cover was cut down and raked over. Some sportsmen believe that woodcock travel in a circle, visiting the same places over and over again at intervals during the season, but there are numerous localities in the vicinity of Washington where they may be found with reasonable certainty during all the summer and autumn. One of the best grounds for woodcock is Whistle Wing Cove, on the Potomac River, below Marshall Hall. The property is owned by Mr. J. E. Jones, and is posted, but many good shots are given the shooting privileges over it, and always with excellent results. Maj. L. L. Blake is one of the most devoted sportsmen when woodcock are in question, and has made some excellent bags at Whistle Wing Cove.

On the Virginia side of the river, nearly opposite Whistle Wing Cove, and below Gunston Hall, is Pohick Creek, and a short ways up this stream woodcock can be found in plentiful numbers. Down on the Patuxent River in Maryland, and in the Magnolia swamps of Prince George's county, the birds can usually be found in numbers to assure good shots plentiful remuneration for the trouble they may take in getting there. Last week Mr. John Sydney Webb and a friend bagged twelve fine birds in one afternoon down on the Patuxent. Those who desire to hunt nearer at home can feel nearly certain of finding woodcock along Paint Branch, on the main line of the B. & O. Road. It is a good idea to leave the train at Branchville and hunt the stream up to Beltsville, a distance of about five miles. Out on the eastern branch, below Bladensburg, there are a number of places where springheads abound under thick undergrowth, and the sport has been successfully prosecuted there.

Up the Potomac one can always be certain of finding plenty of woodcock in the vicinity of old George Pennefield's place. It is a somewhat difficult place to get to, and the shooting there is difficult also, but woodcock hunters are not supposed to allow obstacles to deter them, and in the vicinity of Pennefield's, in the slashes that skirt the canal, woodcock are continually found in plentiful numbers.—*Washington Star, July 25.*

Hounds and the Deer Supply.

BOSTON, Mass., July 21.—*Editor Forest and Stream:* I noticed Mr. W. W. Mosher's article in your July 18 number, in which he makes a statement to which I must take exceptions. He says, "But just so sure as hounding is stopped deer will be entirely wiped out. Hounding keeps them wild and not so easily approached by the still-hunter."

Either Mr. Mosher has given the subject very little attention or he has made up his mind that he is right and will not change his opinion.

Hounding certainly tends to exterminate deer wherever it is allowed, and if it was not for the protection that deer are getting on private preserves in the Adirondacks they would be practically exterminated before this time. I know that on my own property before I protected it (although it is situated in St. Lawrence county, where there is no hounding allowed) parties went in with their dogs and stayed there all summer and killed deer constantly, and the deer were practically exterminated from the property, but now they are becoming very plenty indeed. My man saw eighteen deer in the space of three days.

In the State of Maine no hounding is allowed in any part of the State at any time of the year, and since hounding has been done away with, notwithstanding the fact that more hunters are going to Maine every year, the deer are increasing right along and there are more deer now than there have been in years past. If doing away with hounding exterminates deer, why are they not exterminated in Maine instead of increasing?

Would a man who was trying to raise cattle and sheep put dogs in his pastures to worry and kill them? A man would be looked upon as crazy who did such a thing.

I believe that deer should be protected and no hounding allowed at any time of the year. They will not get so tame that anybody can kill them who likes. When the deer flies have ceased to worry the deer and the weather has become cool and the law is off, no matter how tame they may be, they are perfectly able to take care of themselves, and it takes a good, smart still-hunter to hunt a deer to its death.

I hope to see the time when we will go one step further and not even allow hounding for fifteen days, but prohibit hounding in all parts of New York State at all times.

FRANK A. CUTTING.

Maine Moose and Deer.

KIBBY (VIA EUSTIS), Me., July 24.—This morning I started from Kibby Camp at 8 o'clock to look after my boat at Hurricane Pond, four miles away. When I got to the pond I counted four large moose and twenty deer. Three of the moose were bulls with nice sets of horns. Going and returning I saw four large flocks of birds.

OTIS R. WITHAM.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Sea and River Fishing.

MEN I HAVE FISHED WITH.

IV.—Porter Tyler.

At first Old Port Tyler was a far-off and almost mythical person. He appeared vaguely in the stories of older boys who had really seen him, always in connection with fish and game. Garry Van O'Linda had seen him cross the ferry to Albany with a lot of rabbits and partridges, and Charley Melius saw him with a great load of wild pigeons, but to me he was a mysterious person who lived by fishing, shooting and trapping. A man rowed a light boat around Dow's Point and John Atwood said, "That's Old Port, he's been down the dead crick after snipe," and here was the real live man at last, but his mysterious and poetical life seemed as far off as ever. A most ideal life to me, and he was at once enthroned among my collection of idols, which then included Davy Crockett, Daniel Boone, Baron Trenck, Natty Bumpo and Charles XII., of Sweden. These men I had not seen, but Port Tyler had passed Dow's Point before my eyes, and his boat may have contained untold numbers of snipe and countless fish.

Gradually it was learned that he was a bachelor and lived alone near the red mill, "Mechanic street" they call it now; then it was "up by Fred Aiken's woods," and they said that he had huts and caves all over the country and lived in them when he pleased. These stories, and the fact that a lunatic named Asher Cone had a hut back of Harrongate Spring and chased the boys with a club when he saw them, added mystery and perhaps a bit of awe to the personality of Old Port. In my own case this was true, and at the age of twelve I never even hoped for personal acquaintance with a man whom I placed higher than the rulers of kingdoms, for he was my ideal of the highest form of manhood. I may as well say right here that this was my ideal fifteen years later, and was lived up to as closely as possible; personal freedom from dictation by others, a love of nature, and above all a sense of perfect independence caused me to cast civilization aside, and—whisper it—after six years return, not a prodigal, but like him with a flag of truce, which the small boy terms "a letter in the post office." If this is an unpardonable digression charge it to Old Port; he caused it.

The pigeons were flying well one October day and I had about twenty. They were in scattered flocks seeking mast and my neck was stiff from looking upward for them. Often a dozen would start from a tree where none were seen and a wing shot was not possible, if I had been capable of it. Resting on a log and watching the open for a flight to come, and, like Irving's skipper who guided his craft up the Hudson, "thinking of nothing in the past, the present or the future," I suddenly became aware that a man stood beside me. The leaves were damp from a two days' rain, a high-hole was drumming away on an old stub near by and a couple of bluejays were scolding about something, perhaps about men, and being intent on watching for pigeons to come my way the whole combination favored a silent approach that a falling shadow was the first intimation of. The stranger said:

"There's a big flock feedin' on beechnuts over there in Teller's woods an' they may come this way; there's somebody just south of 'em 'cause the crows all left there a hollerin'."

He was a small man, rather thin, but wiry, clothing not noticeable except a little faded, a keen gray eye and a light double gun were the first impressions made by the speaker. For young men it might be well to say that all guns in those days were muzzleloaders and that the use of single-barreled guns was so common that the exception was a matter of remark, therefore the fact that he carried a "double-barreled gun" was duly noted. I told him that I had been through Teller's woods an hour before, but only found a few pigeons there and got but three of them.

"The big flock was down to the crick for water then," said he, "and I saw 'em rise and go into the woods, about three or four hundred of 'em in the flock, and they haven't left yet. You can stay here and get a few shots if they come this way, as they will be likely to if that man over south of 'em gets among 'em. I'll work off to the east'ard and get beyond 'em if that man don't start 'em first," and he moved off and was soon lost in the underbrush. He was a man I had never seen before, and the incident was only called to mind when, out after rabbits in the winter, on Crehan's farm above the mill pond, in jumping a little stream I landed near a man who was skinning a mink. It was the stranger of the pigeon hunt, and instinctively came the knowledge that this was the mysterious woodsman of whom so much had been heard. To my surprise he knew who I was, and said: "O, yes, I've often seen you down the crick and in the woods, and when I saw the gun you carried I knew it belonged to your brother Harleigh, for he told me that you had it most ev'ry day when you were out of school."

This was the first mink I had ever seen, and I watched the skinning, which went very well until the tail was reached, and this could not be skinned far because the skin was so tight. We talked until he had finished, set his steel trap, and gathered his skins and went on with the hides of two minks and six muskrats, a very good morning's work. Truly he was not now "mysterious," he was no longer a half mythical person, but a real live man, and to me a most interesting one, whom I hoped to know much better.

In the spring, perhaps of 1848 or '49, just after the ice had left the river and the creeks, a party of us boys went down the island creek, as we called it, Popskinny, or Popsquinea, as it appears on maps, to fish. It was merely an arm of the river which crooked out and in again, making an island some four or five miles long, beginning a couple of miles below Greenbush. The water was cold yet, but the hardy yellow perch were astir and the creek was full of them. A railroad has filled the creek in where it crosses and the water is shallow to-day and but few fish go in it now. There had been a few perch and bullheads taken when Old Port came rowing a light scow down the creek. Some one said that he had gill nets for herring set further down and this was a way of taking fish that I wanted to see, so when he stopped to ask "what luck" I got permission to get in his boat and go with him. Two nets, each about 100ft. long and 4ft. deep, were stretched across the creek and had been there all night. I helped aise them and it was such fun! To-day it would not be fun; we take such different views of a thing at different times of life. He took perhaps a bushel of perch, half as many suckers and some 200 "herrin'," as the alewife is called up the Hudson. "The perch an' herrin' ain't worth much," said he, "about 10 cents a string of a dozen or fifteen, accordin' to size, but the herrin' fetches $2 per 100 as early as this; when they begin to catch them in the river they drop to half that price, and by May 1 they are so plenty and cheap that I don't bother with 'em. At this time, you see, the people want to eat them fresh and they're fine, but later they are spawning and are only fit for saltin' down." This was the financial part of Port's herring fishing. I went in his boat with him to the nets many times, even as late as 1868, when he was a man of fifty-eight and I of thirty-five, for he asked me to his house and I became intimate with him from that first trip to the nets.

"It's a cur'us thing," he said on one of these trips, "to know how the herrin' get past these gill nets that reach from shore to shore and from top to bottom, but they do; last night I set my two about 100yds. above two of Cutty Carson's, and when I got through settin' them there was Lou Crandell settin' his above mine; but I'll get about as many herrin' as they will, yet I can't see how the fish get past the first net. They don't jump 'em, for I have watched all night to see if they jump the cork-line. As far as that is concerned, I'd just as soon have my nets in the middle as anywhere else." This is a puzzle, a greater one even than how the shad got up the Hudson past drifting gill nets and staked ones, to be caught by the seiners of the upper river; but these do not reach from bank to bank and from surface to bottom, as the nets in the Popsquinea did.

He it was who first attracted my attention to the breeding habits of fish. We were trolling minnows for pike down this creek, the water had fallen and left strings of perch eggs hanging to the bushes above water. "Porter," said I, for the days were getting long and permitted the occasional use of his proper name, "there must be millions of perch eggs left to die that way every year; I should suppose instinct would teach the fish not to spawn high up during a freshet."

"Well, a yellow perch is a dull kind of a fish, and don't know as much as a herrin'. When a flood comes and covers all these bottom lands the herrin' go all over them, but the minute the water begins to fall they scoot for the creek and seem to find the ditches leading to it, and they don't spawn on the flats, but among drift stuff; their eggs are separate, and stick fast to what they touch. These strings of perch eggs are not fast to the limbs, but are just hung over 'em with both ends down. I have put lots of 'em back in the water. Maybe it's of no use, for there's plenty of 'em and they ain't o' much account. It's cur'us, though, to watch 'em spawn. I've seen 'em spawn in my nets when I've been watching at night with a lantern. When they are first laid they come out small and there's nothin' in 'em until the he one goes over 'em, and then they swell up as big a mass as the fish that laid 'em."

When we came to his net he showed me perch nearly ripe, and stripped a ripe male. I took perch eggs that day—in 1867—and hatched them in the State Geological rooms on State street, Albany, by permission of Dr. Hall, the curator, and through my intimacy with this observant field naturalist I became a fishculturist and made it a life work.

There was a gap of some nine years in my intercourse with Porter, as I spent the years 1854–60 in the West and parts of 1862–65 in the army, but the old man gave me a warm welcome, "For," said he, "I liked you because you took so much interest in all the live things, even if they were no-account things." I never saw him after 1868. He died at his home, which he owned, in 1882, aged seventy-two years. Some of the Albany shooting men thought him an old poacher because he sold much of his game and they said that he snared partridges (ruffed grouse) and it may be that he did, I can't say, but to me he was a kind friend and instructor of my boyhood in things of interest, if not of usefulness. He was one of those real outdoor observers and the kind of naturalist with whom the modes of feeding and habits of birds, beasts and fishes take the first place, while of their structure he knew little more than an outside view of fur, fin and feather gave him, yet his knowledge of many things was far beyond what a scientific education could have given him. Not that I wish to underrate such an education, or to speak slightingly of it, for it is of very great value, but it is a fact that with most of our biologists structure and comparative anatomy are the beginning and end of their knowledge of animal life, and a day spent with Port Tyler would have opened up a new chapter to them. Such a day might also have been of use to that class of sportsmen who are mere butchers and measure the pleasures of an outing by the amount of slaughter they have done, and whose only knowledge of nature is where certain kinds of game could be found at certain seasons.

A man who when out shooting would stop, lean his gun against a tree and spend half an hour watching a little chipmunk dig his hole, has higher tastes than a mere game butcher, and Port Tyler did that one day when I ran across him in the Indian Orchard. "It's cur'us how he does it," he remarked, "and because you don't find the dirt piled up about the hole they say he begins to dig at the bottom; your brother Harleigh told me that, but I think he was joking." This last by way of apology, for his sense of humor was not keen, and he did not always realize the fact that some people would trifle with such questions, and that innocent and unsuspecting nature invited just such remarks as the above. "That little cuss is cute," he said, "he leaves a clean hole between two roots, with no sign that he has been diggin', but Harleigh is wrong; he begins at the top and carries the dirt away in his cheeks and drops it when he gets far enough, so that it will not attract attention. Maybe when he gets down he can pack it one side into some hollow and save labor. He ran off when you came, and there he is on that fence there by Cassin's house, jerkin' his tail, because he is mad at you for coming here to stop his work." He knew that the little ground squirrel was a "chipmunk" and stored its food under the protecting roots of trees, and by observation had learned how it dug a hole without leaving outside evidence of it, even though he knew nothing of its anatomy.

Port's great fur harvest sometimes came in midwinter, but always in early spring, by a "January thaw," and surely in April. The ice never melts in the Hudson about Albany, but is broken up by floods when the snow melts in the upper country or in the Mohawk Valley, and often goes out in great fields, nearly 2ft. thick, which crown on top of each other and break by the overhanging weight. Grounding on shallows just above Castleton, which bar in the river the Dutch knew as the "Overslaugh," the water is dammed and floods the lower parts of Albany so that boats can often float up Broadway as far as State street, and all the flats and bottom lands on both sides of the river are several feet under water, often for weeks or until the ice dam breaks. The muskrats of that region have been so accustomed to this state of things that they rarely build houses, as in other parts of the country, although I have seen an occasional house there; but houses being of no use in such events, the instinct to build has been nearly lost. When the freshet comes the musquash is drowned out of the holes in the bank and seeks the piles of flotsam to hide among. Every gun in Greenbush and on the hills below is brought out and everything in the shape of a boat that can be had is put into commission for the slaughter, and the roar of successive guns reminds a veteran of a skirmish line. Many men are shooting for profit, Old Port among them, but a larger number are out for fun and pile the rodents in their boat to give to some one who will want them. In the early 50s there would be found a number who were shooting for fun and saving the animals for Porter. Among these were Col. David A. Teller, James Miller, Reuben and Ira Wood, Harleigh Mather, Godfrey Rhodes, Bill Fairchild, myself and about a dozen others. The result was that Port had to hire help to skin the animals, while he would stretch the hides.

At this late day, with a memory hardly worth a hill of beans, it is not safe to make an estimate of the slaughter of muskrats during a freshet on the eastern shore of the Hudson River, between Dow's Point, which is less than two miles below Albany, and Castleton, which is nearly ten miles from the city. I had to go to school, sure, for my father well knew that only an iron hand could keep me there, and he had it; but two days in the week I claimed for rest and recreation. The latter I had, while the former was not needed. With this explanation, I will say that it was poor shooting when I did not pick up thirty muskrats in a day during a freshet, and men have killed as high as 200 in a day. Perhaps with about fifty gunners there was an average of thirty musquash each, which would count up to over 10,000 in a week! It seems too big a figure for eight miles on one side of a river, but the flats, or bottoms, were from a half to three-quarters of a mile wide, rich with alluvial deposit from each overflow and rank with vegatation along the river, the island creek and the ditches which drained the bottoms into the creek; also our sociable little mammal is largely a vegetable feeder. With donations from his friends in addition to his own gun Port Tyler one year marketed over 2,000 muskrat skins, a few obtained by winter trapping, but mainly shot during the freshets. Just what these were worth at that time is forgotten; all were not "prime" because of the shot holes, but they brought enough to keep this man of simple tastes until the fall season, even if the spring run of "herring" were not considered, and in addition to the winter's fur there was always a few mink and other skins, for he was not above taking in a prowling cat, as he said: "A common cat skin is not worth much, but when I've killed her the skin might as well be saved, and I kill 'em on principle, for they kill nesting partridges, rabbits and every young song bird they can get hold of."

Port once said to me that a game dealer, hotel keeper, or some other man, wanted him to shoot reedbirds in the fall. "Now, what do you suppose he called reedbirds?" he asked, "they're bobolinks in their fall gray coat—and that's goin' too far. I've shot blackbirds and snowbirds for market, and while I was a-shootin' 'em I thought it was small business compared to shootin' quail, pa'tridge an' rabbits; but when it comes to shootin' bobolinks, which makes the medders ring with song in the spring, I'll be durned ef I'll do it! You've offen seen a he bobolink fly toward his mate an' then set his wings all a-tremble as he told her that she was the best she bobolink he ever see—and the music! I've offen sot and listened to him when I ought to be goin' on to my herrin' nets in the spring. Of course the bobolink gets gray in the fall, an' he looks just like a she one, but that's his natur', an' I ain't a-goin' to shoot him for market. I'd rather hear him sing, an' besides he's too small to eat." I have always held this opinion, that it is a sin to kill this songster for the morsel of meat it has, and have consistently refused to touch "reedbirds" when they have been served at dinners. The bird is nearly extinct in the meadows which it once enlivened, and during a life of thirteen years on Long Island I have not seen a bobolink. Guns, guns, guns! I sometimes think it would be well if gunpowder had never been made. The true game birds hold their own in many places fairly well—only men of intelligence can find them—but in the older settled regions the redheaded woodpecker has gone and the brown thrasher and bobolink have almost disappeared. The reason is a combination of gun and boy.

Game that Port didn't sell he cooked for small parties at his house. He was a good cook, and when it was known that he had a few ruffed grouse on hand a supper party would be organized at once, and he would furnish everything but the liquors. He was a very temperate man and seldom used either wines or stronger stuff, and said that he did not care to sell it even if he had license to do so, but the jolly old cocks who were fond of his game suppers did not allow themselves to suffer on this account. I attended only one of these affairs, as I was rather young for that sort of thing, but I had been out after grouse and had three, which I gave to Porter, whom I met when near home. The cause of this generosity was because I did not dare to take them home, having surreptitiously borrowed a fine double gun from my father which I was forbidden to take or handle, but as he never used it he often loaned it to me without his knowledge. Under these conditions Porter got the birds and I was invited to the feast. General Martin Miller, of the State militia, presided; in times when Greenbush was at peace with all foreign countries he kept a grocery store and was commonly known as Mat. Miller; Tobias Teller, Bill Fairchild, Godfrey Rhodes, Port and I; fourteen of us in all, six men and eight grouse. After the last bone had been polished Bill Fairchild was thoughtful, and as he was sucking away on the backbone of a grouse, trying to extract the very last of the bitter that is so dear to the lover of all kinds of grouse, he asked:

"Porter, did you ever eat a muskrat?"

"Yes, I've eat 'em many times, an' they're right good too, if you know how to dress an' cook 'em, an' I'll tell you what else is good, but you may not believe it; that's young quawks; the old ones are fisby, but the young ones are not, though they are fed on fish, an' I'll get you up a——'

"But about the muskrat, Porter; I've eaten him, and I don't want any more."

"Wa'n't it good?"

"I'll tell you," said Bill; "you know old Dandaraw, the Canuck Frenchman who keeps the little drunkery just north of the B. & A. passenger houses, of course you do. Well, after the spring freshet I dropped into Dandaraw's, and we were talking about shooting muskrats. Dandaraw said: 'You shoot-a da mus'rat, hey, Bill?' 'Oh, yes,' said I, 'sometimes just for fun, and I give 'em to Port Tyler, and he skins 'em for market.'

"'You doan' eat-a da mus'rat, hey, Bill?'

"'No, I don't eat 'em; they smell a little too musky for me.'

"'Oh, Bill, you mus' eat-a heem; you doan' know how good-a he ees.'

"I asked him how he cooked 'em, just for curiosity, for I had no idea that the things were eatable, and I only wanted to hear him chirp. He said:

"'First you skeen da mus'rat an' clean him fine; den you bile him a leetle; den you fry him an' you eat him, an' [smack] o-o-o!'

"Well," said Bill, "I skeen-a da mus'rat an' I clean him fine; den I bile him a leetle; den I fry him an' I eat him. I could do the whole trick except the [smack] an' the o-o-o. I could eat a muskrat on a pinch, but for choice would prefer one of these partridges that Port serves up so good."

Port thought that he could serve up some nice fat young muskrats, so they would fill Dandaraw's description, and even Bill Fairchild would smack his lips loudly and say "O-o-o," and it was agreed to try it a few weeks later, but I missed the feast.

Tyler was the only man I ever knew who could successfully hunt woodcock without a dog. He seemed to know just where to look for them and how to find them, and said that he did not want to be bothered with a dog. An English gunner and dog fancier lived in that lower end of Albany called Bethlehem, perhaps the same district now known as Kenwood. They called him Ken King, his front name being Kenneth, and I bought a bitch puppy from him, the mother being a pointer of famous stock and the father the then celebrated setter Dash, owned by Mr. James Bleecker, the crack setter of the time. By the way, this Nell of mine never showed the slightest trace of setter blood, and she went to Michigan afterward, and was the mother of many good pointers with never a sign of setter blood.

This was in 1853, and my people having moved to Albany there was no place for Nell, and Port agreed to take care of her. I wanted him to work her on snipe and woodcock, but he said: "A dog is all right for men who can't find birds without one, but they are little use to me; I like to find 'em myself; and on the old grounds that I've hunted for years I know the best feedin' spots in every marsh or cornfield, and if the birds are there they'll not be far from these spots." This is a strange statement, but the fact that this man lived up to it and shot both snipe and woodcock for market without a dog can be attested by men now living in Albany and Greenbush. Surely a most strange and interesting character was Old Port Tyler.

FRED MATHER.

FLY-FISHING

On the North Shore of Lake Superior.

[*Continued from page 50.*]

THE next morning we broke camp about 6 o'clock and sailed away to Jackson's Cove, which place we reached in less than three hours.

As we anticipated, we found that a large party of anglers had but recently left here. Kenosh said that the fresh balsam beds which were here and on the mainland opposite showed at least a party of twelve. A table 12ft. long, and very permanently made of sound boards, was left behind, while strewn around were divers odds and ends that attach to an angler's paraphernalia.

"Here," says Ned, picking up a tabulated card, "is the number of fish they have taken, and here again is their ice box where they kept their trout."

"Nonsense. That card simply gives the score of Pedro games and there are others lying around; there again are some small pieces of boards upon which their tally was also kept daily, indicative of a famine in paper."

"But what of the box, it certainly smells fishy?"

"That doubtless, as you say, was their storehouse for the trout."

"I don't believe they left a trout behind."

"I'll soon ascertain." And in a short time I had my rod ready, and, on going to the outside of the granite mass where we had always caught some fine trout, I cast and cast until my arm wearied, and then returned to Ned with a dejected air and a dismal report. He then insisted upon my going down to a point some distance below the camp and there try. I did so, but not a break in the water took place, and again disappointed I returned with report number two. This was demoralizing to the entire camp, but the shore above and below was still left for trial, and if they failed to develop the quarry it would simply be evidence that the early birds had gathered in all the spoils.

While the boys were putting up the tents Kenosh found a lady's garter, and a fine one too, and holding it aloft for our eager scrutiny, smilingly said:

"Women here too."

"Then," said Ned, "two parties have been here.

"How so?"

"No ladies went with the Detroit party and here is the card I've just found of H. V. Whittaker."

"Yes, but two of the Grand Rapids party had their wives with them."

"That accounts for it, and that makes fully twenty trout fishermen that have invaded and impoverished these trouting grounds."

"Nothing left for us."

"Nothing?"

"You wait," says Kenosh, "we git some, bet you."

We caught at the hopeful straw the half-breed held out and concluded to first give the place a thorough trial before losing all heart. We were anxious to learn whether the advance anglers here had bagged all the trout, and just as soon as the camp was in order we started for the bay immediately below the camp. Being determined to thoroughly investigate, we commenced delivering our flies as soon as we were about 100yds. beyond the camp. The lake was evidently higher this year than last, and the shore line in consequence in fine condition, there being just the proper depth of water for fishing.

I had selected a red-ibis for my stretcher and a professor for my dropper, while Ned clung to his "dusting brush" as leader and a spider for dropper. These selections by Ned were not in accord with high art or in consonance with what Charles Dudley Warner has said, for he declares: "The trout fly is a 'conventionalized' creation, as we say of ornamentation." The theory is that fly-fishing being a high art, the fly must not be a tame imitation of nature, but an artistic suggestion of it.

I reminded Ned of this when I saw him break the surface with his outre flies, but he declared there was no originality among high art anglers, for they would sooner have a delicately and handsomely made fly than anything else. "If one of these professionals were seen using a fly like that red-headed terror of mine he would undoubtedly imagine a blackballing by the select coterie of the brotherhood. I am an innovator—originator, you might say—for I don't believe any trout was ever attracted by the beauty of any fly.

"I have given you evidence after evidence of it, and though I may have occasionally failed, I more frequently succeed. This new fancy of mine is a perfect decoy, as you see. Ah, there!" and then the delighted angler was in a paroxysm of joy on striking and finding a gamy trout battling with him. Ned had a glorious fight on hand, and when his reel was not singing his rod was bending, and when the trout was pausing for breath the little windlass was drawing him to his fate. Once he broke water, and then his loveliness shone out in the bright sun, with every spot flashing, every hue gleaming and every curving line a picture of grace and beauty. As Ned brought him to net he remarked:

"That's one the anglers left."

"And here," I cried, "is another," as I sent the cruel hook into the tough jaw of the beautiful fish that had endeavored to cultivate friendship with the professor. It was a fair battle in a fair field, and won simply on its merits by the upper foeman with the willowy wand and the tempting deceit. He was a 2½-pounder, and as rich in rosy tints as if from the fount of beauty.

This was the last trout we could deceive here, and then it was on to the big rock where we had slain many a royal beauty of the tinted dots. We reach it in a few minutes, mount its smooth and rounded top and flog its waters from end to end, and not a response is received.

"They have got the last trout here," says Ned, and so I thought. It is again aboard and on to other shores. A ragged crag with its watery base one vast field of broken stone shows up, and then like cobwebs our flies drop and dance around and about the seductive lairs, but no tenant of the deep springs forth for the counterfeited morsel. We at last tire of delivering the feathers, and as the brilliant sunshine falls o'er us and the placid air fans us we steal along like midnight plunderers looking for the spangled booty. Once more we strike a bulwark of savage aspect that is riven and defaced, hacked and shattered, where a fanciful network of sunbeams crosses its distorted front as if to hide the sad havoc the elements had created.

Here we are again on the cruel war path reaching out for the finny spoils, and the earnest work we did should have met merited reward, but not a nurseling or matured one of the scarlet and silver draped and dotted family made recognition of either our fiery or fanciful flies.

"What the matter with trout?" says Kenosh in a despairing tone.

"The recent visitation of twenty anglers," says Ned.

"A stern reality of the early bird theory," I remarked.

"Exactly."

Such failure in such magnificent and tempting waters was quite disappointing, but we had two trout the late piscators had failed in securing, and the wonder was that we had them after such a thorough and constant thrashing that had evidently taken place here.

"We git 'em yet," said the half-breed consolingly, but nevertheless we had deep misgivings about it, and concluding to seek other parts of the coast line ordered the boat on the return. We continued beating the balmy air and lightly disturbing the water with our dropping lures till we reached the crumbling spurs and low battlements at the old point where we had captured our first two, and where again fortune smiled on us by adding two more to the sum total. This put us all in good humor, for it presaged much pleasure in store for us.

It was for camp and dinner and then more trouting late in the afternoon. The morning was an ideal one, and just to the fancy of a poetic dreamer. The sky was ravishingly charming in a roseate glow and warm and fair as the roses of an early May. The ripples rose and fell with the rhythmic modulation of silver bells, while the gentle breeze stirred the foliage into a grand whispering gallery. The white pinions of a solitary gull coursing along the shore shone out like glittering silver, and in strong contrast to the idling butterfly warming his velvet wings in the bright rays of a meridian sun that so lovingly added beauty to a few stray violets struggling for life in a pinched crevice. Mr. French, the English poet and theologian, tells us of the ample dower of nature when he declares:

"Morn has been—and lo! how soon
Has arrived the middle noon,
And the broad sun's rays do rest
On some naked mountain's breast,
Where alone relieves the eye
Massive shadows as they lie
In the hollows motionless;
Still our boat doth onward press,
Now a peaceful current wide
Bears it on an ample tide;
Now the hills retire, and then
Their broad fronts advance again
Till the rocks have closed us round,
And would seem our course to bound;
But anon a path appears
And our vessel onward steers,
Darting rapidly between
Narrow walls of a ravine."

The shade of the camp we found very agreeable, for the morn had been quite warm, though the waters gave up their coolness, which in a measure tempered the scorching rays of the sun. We therefore determined to do our angling after supper, when the deep shadows were on the water and the trout looking for their evening meal. The idle hours in the meantime we could spend in some diversion or some exploration where we could find the gold and red and purple of the rare wild flowers that spring from slender crevice or run riot among the wild grasses and delicate ferns. The golden notes of some woodland warbler may perchance fall upon our ears, or the antics of the little ground squirrels delight the eye. There is much here to interest a lover of nature, but of all the "sweet things there is none so sweet as fresh air; one great flower it is, drawn round about, over, and inclosing you, like Aphrodite's arms, as if the dome of the sky were a bell-flower drooping down over us, and the magical essence of it filling all the room of the earth."

The noon so full of agreeable diversions soon passed, and then on supper being served we at once paid our attentions to the trout family, going over the same course we had fished in the morning, and by the same walls of granite, boulders, and rain-scooped, tempest-worn crags and pinnacles. As we glided along over the haunts of the spangled beauties, not a murmur came from the spell-bound trees. The vast boughs hung motionless in the silent air. Sometimes the upper branches stirred, but while the shadow-haunted plumes ruffled as with a passing breath it was a slow, solemn, soundless rhythm.

"Two quiet for the angle," says Ned.

"The deep shade and cooling air removes that objection," I replied.

"I hope so."

"It does, and here is proof of it," for just then some purloining beauty made off with my fresh Parmacheneebelle which I had attached as my stretcher before leaving camp. You all know how the trout battles, what vaulting, dashing and subtlety he brings to his aid to escape captivity. This one showed the same tactics, gave the same delight, and with his sad fate the same reward to the patient angler. He was fully above the 2lb. notch on the scale and of course gleaming in the matchless colors of a dying sunset. Nothing more coming to our lures, we hasten along and ere we had gone a few rods another came at Ned's fiery "dusting brush" like a barnyard hawk pouncing on a young chicken. He was a terrible fighter, and for a few minutes gave the venerable angler a world of trouble in answering his demands for a little more line. Reel and line sang and hummed quite lively and the rod looked several times as if it would snap in twain as butt and tip were showing a desire to kiss each other. The originator of the scarlet flambeau held him with a master hand, and when he at last saw him duly boated drew a long breath and exclaimed:

"That trout came within an ace of getting the best of it."

"It was that red-headed devil of yours that made him caper so lively."

"How so?"

"He thought it one of old Lucifer's imps."

"Even so. He is first a tempter and then a destroyer, and that's why he is a dead terror."

"Abandon hope all ye that toy with me, should be the imprint on that fiery and feathery dead fall of yours."

"It's a killer every time."

"Also a monstrosity."

"Also an originality."

"A shameful tribute to the profession."

"An unparalleled deceit."

And thus the badinage continued. I would deny it, he would praise it, and, like the contest between two disciples of Buckstone, neither would retreat an inch in support of his case. The practical illustration of that famous fly was chiefly in favor of its originator, but it was so directly antagonistic to all known rules governing fly making that I began to lose faith in the artistic beauties as they come from a master in the art. It is common sense to think that with such wonderful vision as a trout possesses he would rather take a small fly than a large one, but Ned even set that theory aside and used a No. 1 and 2 sprout, and with such bushment of feathers and wool as to make the appellation "dusting brush" the correct one.

His faith in Sir Izaak, I regret to state, is greatly disturbed, because that accomplished master of the gentle pastime says: "Doubt not but that angling is an art—an art worth learning," and his "jury of twelve flies" can be tested "to betray and condemn all the trout." Ned should read "Favorite Flies," by Mary Orvis Marbury, and he will then see a very large panel of expert anglers who in the aggregate give their experience with fully 300 favorite flies, while he affirms that a half dozen at most, and of his own make, are all he desires for an outing. While I do not acquiesce in his vagaries, I must honestly confess that he always secured an equal share of the trout when angling with me in either Lake Superior or the famed Nipigon. His ingenious fancies in the feathery art have been a source of great pleasure to me, but, I will also add, of much profit to him.

As we have followed this subject for the present far enough, we will revert once more to its practical part and cast our flies for the loveliest fish that swims. We had fished the pointed headland that leads to the bay till the radiant family evinced by their non-responses that they were not just then receiving company. Ned suggested a trial of the big rock below and to it we went. He took one end and I the other, and never were waters so completely showered and danced and skittered with flies as those which encompassed the gigantic rock of a hundred yards or more.

As the day was fast sinking and scrolls of pearly clouds were drawing themselves around the mountain crests and being wafted into the distant air, we concluded to start for camp with our two trout without further delay. The return trip was one of positive delight, the pictures of fading tints, the embodiment of lustrous light and most tender of shade, being really indescribable.

"See where the falling day
In silence steals away,
Behind the western hills withdrawn,
Her fires are quenched, her beauty fled,
While blushes all her face o'erspread,
As conscious she had ill fulfilled
The promise of the dawn."

Reaching the point where we had caught our trophies we made a brief halt, and it was an earnest test between

us who should coax and hang the first trout. Ned's flies went whizzing around quite lively, while mine were kissing the shady surface with the same intent. Alas, alas, that infernal bandit of red-headed and red-bodied notoriety received the first response, which came with a thunderbolt splash that slightly disturbed my equanimity. Ned sent the curved poniard into the lovely pilferer with a vengeance and after that played him like a master of the art, and then boated him, with his heart in a tumult of delight.

"Another knock down for the 'dusting brush,' the brush of deep dyed red, the brush that tempts and then devours," cried out Ned when he had taken in the loveliness of his victims.

"Say, boys, pull ahead for home. We want no more trout," I solemnly replied.

Ned triumphantly looked at me, and on seeing my somewhat disappointed air like a generous foe abstained from any reference to the success of his red-headed devil or the excess of his spoils. I was a little in the sulks, just a little, but determined if that flaming monstrosity of his excelled in our next outing it would necessitate some very fine and hard work on his part. I carried the silken banners of the artistic fly-makers, and would survive or perish in their behalf.

As we pushed along to our quarters, a delightful freshness, redolent with spruce and balsam, was in the air; the cool waters purled like a gentle streamlet, kind, quiet, soothing, but melancholy, while above a few faint stars looked from the unfathomed blue. Even

"The sunbeams dropped
Their gold, and passing in porch and niche,
Softened to shadows, silvery, pale and dim,
As if the very day paused and grew eve."

Reaching camp, we felt the need of a fire, and soon the half-breeds had the white smoke and golden sparks curving upward. There is nothing so pleasing as to gather around a camp-fire and while away the hours. In sweet mood we fight our battles o'er again and renew the pleasures of the past strife; stories of adventure are related, songs are sung, jokes are cracked and plans for the morrow consummated. Our half-breeds always added to such entertainments, and many an Indian story with its superstitious tendency has Kenosh related. That evening he was unusually talkative and interesting, for he was really, notwithstanding his pigeon-toed English, an excellent and impressive narrator. After he had told a very absurd and fabulous story of the creation of the Indian, he turned to us for our share of the programme. Ned's bear story was still ringing in his ears and he insisted that he was a "big story man." He tried to draw Ned into another recital, but his *el principe* was not half smoked yet and so he would not yarn just then.

"Well, you tell something then," he said, turning to me.

"You don't want any more bear stories," I replied.

"No, no, no burnt bears; they too much for me," he answered.

"I could tell a story of a man that killed a bear and then took to a tree to get away from it," put in Ned.

This created quite a laugh at Kenosh's expense, and one in which he did not join. It was a *quid pro quo* for Ned and completely silenced the dusky hero in the affair, who concluded that he was no match for the pale-faced angler of the snowy locks.

"Well," says I, turning to Kenosh, to relieve him as much from the embarrassment he was thrown into by Ned's piercing arrow as aught else, "I will tell you a story on one condition."

"What be it?"

"That you ask me no questions about it after I am through."

"All right, go ahead."

After the boys fixed the fire and had taken seats on the ground, with their backs against the flinty wall and their eyes and ears opened wide, I started the story in the old formula by stating that:

"Once upon a time a cunning fox came to a meadow where a flock of fine fat geese were feeding, and he said with a grin, 'I am come just as if I had been invited; you sit together so charmingly, I can eat you one after the other!' The geese cackled for terror, and sprang on their feet, and began to groan and beg pitifully for their lives; but the fox would hear nothing and said, 'There is no mercy—you must die!' At length one of them took heart and said, 'If we poor geese must at once give our young lives, show us yet one single grace, and permit us to say our prayers, that we may not die in our sins. Afterward we will all stand in a row, and you can pick out the fattest as you want us.' 'Well,' said the fox, 'that is a just and pious request. Pray away; I will wait for you.'

"So the first one began a long prayer and it would not cease; the second also commenced before his time and cried 'Ga, ga, ga!' the third and fourth soon followed, and in a few minutes they were all cackling together their prayers.

"When they have done praying this tale shall be continued, but meanwhile, I suppose, they are praying still."

"When will they stop praying?" inquired Kenosh, with a queer look on his face.

"You were to ask me no questions after I had concluded the story."

"Oh, I see, you fool me. White man too much for half-breed."

Ned at this finale having smoked sufficiently tossed away his unfinished cigar and, leaning back, laughed heartily at Kenosh being so cleverly tricked. The half-breed felt much embarrassed over the *contre coup*, and sat for quite a while holding his head with one hand, as if endeavoring to solve the riddle of "The Geese and the Fox." At last, having partly returned to his normal condition, he turned to me and said,

"You tell me when they done praying what the fox did?"

"Kenosh, you must keep the compact; ask me no questions."

"Me —— fool, that all."

Ned and I had to roar at his confusion, with his son Jo adding to the merry shouts.

The wily half-breed now threw up the sponge and never again reverted to the subject, but he kept in a deep study the remainder of the evening, doubtless trying to evolve some scheme wherein he could even up matters with the pale-face joker.

ALEX. STARBUCK.

[TO BE CONTINUED.]

IN NORTHERN WISCONSIN.

CHICAGO, July 17.—Five weeks ago a friend and myself left hot and dusty Chicago for a month's fishing trip among the lakes of northern Wisconsin.

Taking the 5 P. M. train on Chicago & Northwestern R. R. for State Line, Wis., at which place we arrived at 5.30 A. M. next day. After a good country breakfast, prepared by a comely woman of evident Irish descent named Sullivan, we started on our twelve miles ride through the woods to our destination, Bent's Resort, Lake Mamie, Vilas county, Wis.

The conveyance was a good strong buckboard, made expressly to stand the daily trip over this rough road. It was a typical backwoods wagon, as were the horses, harness and driver, the latter being a character. He wore a broad-rimmed gray felt hat, on which braid and gold embroidery were prominent. Around the hat, serving as a band, was a strip of black cloth on which were embroidered the words "Camp Assiniboine." The balance of his make-up was in conformity with his hat. Our first impression of the rig was that it was entirely too cumbersome, heavy and unwieldy, but before we had gone very far we changed our opinion. We sat in the middle seat and found the "board" rode very easily. This driver knew his business, as by talking to his team, saying, "Back, Colonel," "Steady, Nellie," "Easy there, beauties," he avoided the ruts, stumps and rough places exceedingly well.

About five miles from State Line our trials and tribulations commenced. Mosquitoes made their appearance, and in the language of my friend "they didn't do a thing to us." They were not your city mosquitoes, but big, cadaverous, hungry, hump-backed fellows with bills half an inch long. They were aggressive and no respecters of person.

When we arrived at Camp Assiniboine we were sad sights. The first lake we came to was the Saw Mill Lake, which contains no fish now; the next was Black Oak, named for the many black oak trees growing on its shores—a beautiful sheet of clear water with fine beaches.

In the early spring and during the fall landlocked salmon and pike are plentiful in this lake. We next came to Mirror Lake, very small, which contains nothing but carp, the fry having been put in by a half-witted homesteader who formerly lived on its shore.

Here we were halfway to our destination, and our ride was then through the virgin forest. After being out from State Line three hours we first got our glimpse of Lake Mamie and the camp. In five minutes we were at our journey's end, where we received a hearty welcome from the boys. After a thorough clean up, a good refreshing drink, we sat down to a black bass dinner, excellently cooked by Mrs. Chas. Bent. We had our appetites with us and did full justice to the meal.

We took a day's rest to get our bearings and ascertain about the different lakes.

It is an indisputable fact that with the aid of a guide one can fish for thirty days and fish in a different lake each day, and not be away from Camp Assiniboine over night.

We concluded to go to Wild Cat Lake, twelve miles distant, as it was getting late in the season to catch muskalonge.

We were informed it was a hard journey to go there on account of the portages, and that as we were the first to go there this summer we might encounter difficulties in getting through the connecting streams between lakes, but as we were determined to go preparations were made, such as packing provisions, tent, cooking utensils, blankets, etc.

Two guides were assigned us, and very good fellows they proved to be. One was an Irishman named Wallace, full of Irish wit, song and volubility of speech; the other "Dele" was the younger, of rather quiet disposition and manner.

Everything was made ready and at 9 o'clock we dipped oars and were off for Wild Cat Lake. Many of other fishermen who were at the camp made light of our going, saying that I never could stand the portages, as I was too slightly built, but at all events they gave us a hearty cheer and we were off.

Leaving the camp, we crossed lakes Mamie, Crooked, West Bay, through the thoroughfare to Big Lake, crossing which we came to the portage to Palmer Lake, a distance of 1¼ miles, carrying our large boat, provisions, etc. Reaching the shore of Palmer, we again embarked, crossed this lake until we came to the west branch of the Otonagon River, which stream we traversed for two miles until we reached Tenderfoot Lake.

This stream is very picturesque, being very winding, overhung with pine, cedar and birch trees, and covered with the most beautiful and large pond lilies we had ever seen. We could see the ruins of many beaver dams, saw several deer, porcupines, mink, cranes, hawks and eagles.

We reached an island in Tenderfoot at 3 o'clock, where we camped over night. My friend and I took a small boat and we here first wet our lines, the result of which we caught thirty-two small-mouthed black bass in one and a half hours, the smallest of which was not under 2lbs., and ranging to 4lbs. We had a good fish fry for supper that night; the other fish we set free, not wishing to be wasteful.

The next morning we again started on our journey at 5:30 o'clock, dividing the party and taking smaller boats. After crossing Tenderfoot Lake we made a portage into Sanborn Lake, crossing which we then went through Sanborn Creek into Morton Lake, thence across to Morton Creek, through which we went to McCullough Lake. After crossing this lake we made a short portage into Knight Lake, which we crossed, and then commenced on the long portage of two and one-half miles to Wild Cat.

It was quite a severe task, as we made steep ascents, sharp declines, and through marshes; but we went on, and reached the shore of Wild Cat at 11 A. M., being four and one-half hours *en route*. We were all tired and hungry. Dinner was then cooked, after which we felt much refreshed.

We then embarked for the point where we were to pitch camp, and in thirty minutes were on the spot. All hands fell to, and before we had realized it camp was in order, even to making our beds of pine and balsam boughs.

At 4 o'clock we got into our boats and started for the muskalonge grounds. My friend caught the first one, 10lbs. in weight. I was almost envious, but before I could say a word I had one on my hook, and the way he started to swim was something new to me. He made a jump out of water that was a sight and an experience I never had before, this being my first muskalonge fishing. After a good hard fight he was brought to the boat's side; the guide hitting him over the head with a club, he was stunned enough for us to bring in the boat, which was promptly done; we finally killed him by cutting his vertebræ. I now had landed my first "musky" and felt quite proud over the feat.

Wild Cat is the nearest lake to Camp Assiniboine that contains "muskies," its waters flowing into the Mississippi River, the others into Lake Superior.

We remained here for five days, and as far as known were the first fishermen on Wild Cat this spring or summer.

We had a fearful storm one afternoon while here, the wind was high, rain heavy and much thunder and lightning.

We built a large camp-fire, sat around it and tried to make ourselves cheerful by telling yarns and singing songs, but to no purpose. It was too gloomy, so we all went to bed at 6 o'clock.

Deer were very plenty on the shores of this lake. The writer and his guide saw thirteen different ones in one day.

One night we had quite a concert which prevented us from sleeping much, as between the concert of the frogs, owl hooting, loons hallooing, and the howling of wolves sleep was quite impossible.

We had exceedingly good luck during our stay, having caught sixteen muskalonge and ninety-seven bass, the smallest of the latter weighing 2½lbs.; anything smaller we did not count.

Provisions gave out. As we had all the fishing we desired in Wild Cat, we decided to return to Camp Assiniboine.

Starting at 5:30 A. M., we reached our cabin at 4 P. M., after stopping an hour in Tenderfoot to cook dinner. We arrived in good cheer, well sunburned and joyful of our trip.

After a day's rest we again started to fish in the other lakes we had not yet fished in, viz., Crooked, West Bay, Big, Morley, Leo, Lindsay, Poor, Fish Hawk, Thousand Island, Bass, Palmer, McCullough, Knight, Morton and Tenderfoot.

We spent two or three days on some of the larger lakes, such as Big, Morton, Palmer and Tenderfoot, where we caught our largest bass. At times the bass bit so rapidly that after two hours' fishing the novelty wore off, and we seemed to be fishing for market.

After selecting what fish we wanted for our own consumption and remembering our Chicago friends, we released the balance to be again caught by some good angler. It can be safely said we caught 700 fish during our stay.

After having been at the camp "No see um, big feel um" made their appearance. The above quotation is what the Indians call the little black flies that bite so hard. The fishing and deer hunting should be good this fall, as then muskalonge, landlocked salmon and rainbow salmon will resume their biting, and deer should be very plenty, judging from the number we saw every day.

There are trout streams in the neighborhood, but we did not try them, though we met parties who did make good catches.

Not far from Lake Mamie are the Indian reservations of the Pottowatamies and Chippewas. We met several of the families encamped on the different lakes.

The Indian men "shine" for deer at night, a practice which should be stopped, as they do not discriminate between buck and doe, and many fawns are left in the woods to die.

Eagles are not an infrequent sight, as almost every day we would see one or more soaring in the air. We saw several eagles' nests in the limbs of tall pine trees.

During the last half of our stay Horace Bent guided us, from whom we learned much concerning the surrounding country. He entertained us with his fund of experience with different fishermen he has met during the past five years. Charlie Bent is the boniface and a good one he is.

Our stay was of five weeks' duration, and it was with great reluctance we started homeward. We hope to visit this camp again in September next, as we are infatuated with the place.

Plenty of fresh air, pure spring waters, good food, accommodating guides, plenty of fish, obliging hosts, we could ask for nothing more. When we returned to our hotel, the Chicago Beach, the manager jestingly refused us admission, saying we were so brown and hair so long that we were Indians. We had a good time, came home refreshed and strong.

WILLIAM K. MCCLINTOCK.

The Nipigon.

NIPIGON, July 20.—The following sportsmen, J. L. Smith, of Minneapolis; Hon. Chas. B. Elliott, Minneapolis; Edward Hazen, of Duluth; Judge Morrison, of St. Paul, and Mr. Clark, of St. Paul, have just returned from a two weeks' trout fishing trip up the Nipigon River. They report trout very plentiful, and they caught some very fine specimens. Mr. Clark caught one 6½lbs., the largest caught. Mr. Smith caught one 5½lbs., and several 4 and 5lbs. each. They had very fine weather and altogetner a very enjoyable time.

A party of four lady anglers from Cleveland, O., are at Camp Alexander, on the Nipigon, trout fishing and enjoying themselves.

Mr. John A. Lea, of Independence, and Mr. W. B. Stewart and M. C. Pelkington, of Scotland, have gone up the Nipigon for a three weeks' trout fishing trip.

July 22.—A Mr. Green, of Amsterdam, N. Y., caught a speckled trout that weighed 8lbs., in the Nipigon River, on July 21. This is the largest trout caught this season.

JOHN E. NEWSOME.

Rudyard Kipling's Salmon.

WHEN I went down the late Gov. Russell was on the train and we were together a day and a half. I found him one of the most entertaining companions I have met in a long while. If he had stayed on the river instead of going to the Chicago convention, who knows but what he may have been alive to-day?

Returning home I had the pleasure of traveling a greater part of two days with Rudyard Kipling, who had been down around Gaspe, and was chock full of enthusiasm and joy because he had taken a 15lb. salmon, the first and only one, I believe.

M.

FISHING IN NEW ENGLAND.

Boston, July 27.—Codfishing is a source of pleasure to many of the tired merchants and professional men of Boston. They go a-fishing off several points along the south shore, as well as in Buzzard's Bay, where some good hauls of bluefish have lately been made. Several points off Nahant are noted for giving good sport with codfish. Tuesday Mr. J. Hallett, of the *Industrial Record;* John Corbet, the celebrated football halfback; Francis Snow and one or two others went codfishing off the Nahant Ledges. They took in a few hours forty codfish, weighing from 7 to 10lbs. They are much delighted with the sport, and will go again in a day or two.

Wm. F. Gregory, with his wife and boys, is off on a fishing trip that promises to be a good one. They went first to Kineo, Moosehead Lake. From that point they started with the view of canoeing and carrying through to the waters of the St. John, and down this river to the Provinces. They will fish and camp by the way. The party is quite a large one, including also Mr. S. A. Phillips and Walter Balthray. Nine guides also make up the equipment. Mr. Gregory is one of the principals of a leading boot and shoe manufacturing concern and Mr. C. W. Shaw the other. Both have lately become much interested in fishing. Mr. Shaw is an enthusiastic member of the Duck Lake Club, at the Schoodics.

L. M. Crane, with his two sons, L. O. and J. F. Crane, is off for Round Mountain Lake. The two sons are accompanied by their wives. All are earnest fly-fishermen. The trip has long been planned, but put off for unavoidable circumstances till late in the season. A letter, however, from Mrs. Charles L. Bly last week, mentions excellent fly-fishing, and hence the Crane party is more hopeful. If trout are to be had, there is patience and skill enough in the party to take them.

G. N. Smalley and his son, Harry Smalley, are enjoying a fly-fishing trip at Big Island Pond. Late reports from them mention excellent fishing. They went in by way of Canada.

The Maine Editors and Publishers' Association has completed its tour of the Rangeley Lakes. Quartered at the Birches and Bemis, they were also entertained at the Rangeley Lake House and Mountain View House. J. Parker Whitney entertained the gentlemen and their ladies at his beautiful spot on the Upper Richardson. G. S. Rowell, editor of the Portland *Advertiser*, went a-fishing on Thursday, and became the lion of the party by landing a 5½lb. trout. Doubtless that region will now receive the desired boom through the Maine newspapers, a boom that makes the real sportsman tired, and causes him to seek woods and waters more remote.

Mr. James H. Jones has returned from his fishing trip on the brooks in Oxford county, Me. He went without great expectations, since it is midsummer, and generally the streams are low. From Buckfield, accompanied by his father, he fished some of the brooks in Buckfield, in Sumner and in Woodstock. He caught strings of trout that surprised the natives, who are generally too lazy to go a-fishing after the first "go off" in the spring. He caught trout up to ¾lb. in weight, and fine strings, out of the very brooks the natives told him it was no use to fish He visited Little Concord Pond, in Woodstock, and found that Portland parties had a camp there, and that they have taken some big hauls of trout in the spring. From a brook in that section he took an elegant creel of trout. Deer are in that section, frequenting Big Concord Pond, Little Concord and Shag ponds. Five were killed there last fall. Mr. Jones, Sr., had a good sight at one deer. Both gentlemen were surprised at the beauty of the scenery of that section. Streaked Mountain hangs over Shag Pond, 2,000ft. above the sea, and 600 to 800ft. above the pond. Little Concord Pond is a jewel among the mountains that it takes a hunter to find. The distance is nearly twenty miles from a railroad, and a mile or two from an old country road that has been but little used for many years. But the curious fact is that such an animal as a deer was almost unknown in that section thirty years ago. Now they are really plenty. Special.

SUNDRY TOLEDO GOSSIP.

Toledo, O. July 24.—*Editor Forest and Stream;* It was scarcely a month ago that I made up my mind that Forest and Stream ought to have a bicycle department, and while I was considering whether or not it was my duty to write the editor to that effect, behold! the department blossomed out as it were spontaneously. The relation of the bicycle to the fisherman is perhaps as intimate and direct as in any other line of independent sport. For the past year or two some of our local fishermen have been riding their wheels along the bass rivers adjacent to Toledo, and we have discovered that as a dress for wading our bass streams the sweater, knickerbockers and long stockings make a costume admirably adapted to use with either rubber boots or full-length mackintoshes. Toledo fishermen are notably enterprising and up to date, and they are not only quick to adopt the good ideas of others, but have plenty good ideas of their own. For example, I encountered one of them the other day who had just built a new minnow seine, in the bottom of which, instead of the usual lead weights, he had run a chain. It needs no diagram to explain to the average fisherman that a seine so weighted will adapt itself to every irregularity of the bottom, and thus prevent the escape of the small fry.

And speaking of the bicycle and the fisherman, here was a little trip I took the other day, which illustrates what combinations of cross-country journeying are rendered possible with the aid of the wheel. The route in question was covered by the morning train from Toledo to Dundee, twenty miles, the wheel from Dundee along the banks of the River Raisin to Munroe, twenty-five miles (the same section of that stream that I ran by canoe two months before), thence by coasting steamer along Lake Erie twenty miles more to Toledo. Total of the three sides of the triangle, sixty-five miles; time, twelve hours, with plenty of leisure for a good country dinner in the middle of the day, and for numerous visits and gossip with the fishermen and farmers along the banks. Then too I carried my rod in my hand, my reel and my wallet in my pocket and a pair of waders strapped to the handle bar. I didn't fish, but that was simply because I didn't want to fish. It was pleasanter to lie in the shade and watch the operations of the man with a 20ft. bamboo, and to listen to his explanations of why the fish bit and why they didn't, as well as to hear about some of the fishing they used to have in the river ten or fifteen years ago. (Alas! that some of us should have been born a trifle late to enjoy it.)

Has any one ever said to Forest and Stream that it was Toledo fishermen who discovered this spring that the proper way to take tarpon is to troll for them instead of casting a mullet out into the water and letting it lie there for five or six hours—more or less? That they were eminently successful in this new departure their score shows and the sport was greatly heightened. Possibly there may be others who have used the same method, but so far as I am aware there is no record of it. Perhaps I may be able to send you some notes of their experience later. Jay Beebe.

Long Island Fishing.

Mr. Wm. Brownell, of New York, who has fished in almost every State in the Union as well as along the coast, went to Amityville, L. I., July 15, accompanied by Mr. Linaker, and securing a catboat went fishing for flounders. The fish were biting well and the two were busy for little more than half an hour, when Mr. Brownell, who was fishing with an 8oz. steel rod, felt a sudden tug at his 200ft. of oiled silk line as it began to run out, making the reel fairly sing.

"That's no flounder. It must be a weakfish. She goes like a harpooned whale," said Mr. Brownell, who has spent many years whaling in the North seas. Nearly 150ft. of line had run out, and knowing that he could not stop the fish with such light tackle, the fisherman called to his companion, "Pull up the anchor and follow the direction of my line; I will land this fish even if it be a shark." The boat was put under motion just as the last yard of line was paying out.

The fish sounded and came to a halt, but quick work on the reel did not let it rest an instant. Away it shot seaward, again making the reel hum, the boat following just fast enough to prevent a sudden parting of the line, which was kept taut, the fisherman never for an instant allowing it to slacken, but keeping the fish constantly on the move. Again the fish sounded and again ran; and it kept this up for one hour and twenty-three minutes, when it came to the surface helpless. Mr. Brownell, who had handled it so skillfully, now helped it into the boat. The fish proved to be a striped bass and weighed 24½lbs.

After the excitement caused by the bass had subsided Mr. Brownell tried trolling for bluefish and caught seven beauties, the smallest of which weighed 7lbs. When he came home on the evening train he had the pleasure of showing his friends a barrel well filled with a choice lot of fish. Angler.

New Hampshire Ouananiche.

Boston, July 23.—I have been much interested in the discussions as to the origin of the salmon, and repeat what I have stated before, that I believe the "waunanish" to be the original or aboriginal type. That perhaps in the glacial period, perhaps earlier or later, they were driven out of the fresh-water lakes, where they began life, and crowded down into salt water, and liked it so well that they have spent their winters there ever since, returning to their fresh-water homes to spawn and reproduce their species under familiar and natural conditions. But that some of them do remain in fresh water the first winter after spawning I know, for I have seen the kelts taken in the canals on the Merrimac, which they could only have entered from the upper ends, on their way down to the ocean, in the spring.

If the biennial theory of spawning, now generally accepted, is correct, this gives them a full year in salt water to recuperate for another spawning.

I am also very much delighted to see in your reports from the New Hampshire waters of the steady growth of these fish, the "waunanish," in those lakes, and to consider it as an actual "inspiration," which induced my old colleague, A. H. Powers, and myself to make the first plant of them in Squam and Sunapee lakes in 1877. I shall never forget the eight-mile trip through the woods over a tote road with a buckboard, which my son Sam and I took with two cans of fry, into the Connecticut lakes in 1880. New Hampshire has been well repaid for the expenditures which intelligent Legislatures have authorized for restocking her waters, and I am happy to say that I believe every year shows more and more respect for the fish and game laws, and fewer instances of their willful violation, though they still occur, I hope mainly from ignorance, from small boys and "city sportsmen." Von W.

Barnegat Bay and the Jersey Coast.

Asbury Park, N. J., July 24.—Surf fishing continues much the same as in my last week's letter, with but little of interest to anglers at any point, the only catch of importance being a 27½lbs. bass by Wm. Skirm, of Trenton, taken Saturday evening. Few people realize what the capture of such a fish means, in point of nerve and skill. While it is readily conceded that the heavy weights are not as swift of fin as those ranging from 5 to 15lbs., still their bulldog propensity for a fight is so pronounced that only the experienced can successfully cope with them. One false move, the fouling of line on guides or tip, and the fish with a respectable portion of the tackle is lost, and the angler has only reflection for his consolation.

In a recent issue of Forest and Stream I took occasion to say to the net men "Don't," in relation to their fishing in Barnegat Bay. I know the feeling of the people in that vicinity, to say nothing of the determination of the Fish Commissioners to enforce the law. The consequence is two of the bold spirits are now languishing in the local jail in default of fines imposed. Not within ten years has that body of water been as prolific of fish life as at present. Everywhere as far as vision can reach may be seen the ripple of innumerable schools of menhaden, and to their presence can be attributed the glorious fishing now to be had. Already the bluefish are inside the inlet following their favorite prey, and while it may not be generally known, still it is a fact that the large weakfish—known as tide runners—feed greedily on the menhaden.

On Tuesday evening, in company with Judge Wm. B. Guild, his son Theodore, and John F. Seger, I paid my respects to old Barnegat, and such glorious sport few have experienced, and I think safe to say none have excelled. We took 142 fine tide runners, all magnificent fish, and it occurred to us that they put on their best fighting garb for our especial benefit.

I have taken black bass from stream and lake, and have caught trout under all conditions; the striped bass and bluefish are familiar captives for the past eighteen years, still never have I had more gloriously game fish to contend with, weight considered, than those of which I am now writing. To the angler who is skeptical I would say, come with me any night when the conditions are right and follow out the instructions I have previously given in relation to line equipment. To me the glory of night fishing is superb. The voice of day vocation is hushed; there is nothing but the gentle rippling of the waters to disturb the quiet grandeur of the bay, save the occasional dash of a shark or porpoise in pursuit of his prey. Far away to the eastward shines Barnegat Light with all that its name implies, to the mariner and the local salts as well. The paying out of line to the tide on the swell of expectancy, to be followed by the strike and glorious rush of the yellow-finned beauty, which, unconscious of the nature of his bondage, puts forth all the powers of his nature for liberty—all these are delights whose enjoyment is alone to be appreciated by the enthusiastic.

If anyone finds a hook, leader, float and about 25ft. of line attached to a weakfish of uncertain size heading toward Barnegat Inlet, the same may be returned to William B. Guild, Avon, N. J., and the finder will receive a generous reward, as the party above mentioned is in a quandary as to how it happened so quick.

Leonard Hulit.

Fatal Accident at a Fishing Tournament.

Port Huron, Mich., July 24.—*Editor Forest and Stream:* The annual fishing tournament of the Port Huron Anglers' Protective Association was engaged in Wednesday afternoon at Stag Island, and was brought to a sudden termination by a distressing accident, in which one of the members, William M. Cline, lost his life.

Mr. Cline started out to fish in a boat in company with J. J. Cronan, Dr. W. S. Henderson and James Boardman. The boat was a small one and the four occupants overloaded it, but this fact was not noticed at the time. The party rowed to the Canadian shore and anchored out in the stream nearly opposite the Haynes cottage on Stag Island. The anchor rope was fastened to a seat near the center of the boat instead of at the bow, as is customary, and the boat swung broadside to the current. Fishing had been in progress but a short time when the trouble began. The boat made a sudden pitch toward the down stream side, probably caused by the swells of some passing steamer, and Mr. Cline threw himself to the opposite side to which the anchor line was fastened. This threw the edge of the boat under the water and in an instant the current carried the boat over, and the action of the anchor was to pull it beneath the surface. Mr. Cronan says that when he reached the surface of the water the boat could not be seen, and he struck out for the shore, which was about 200 or 250ft. away. Mr. Cline started to follow, but after swimming 20 or 30ft. evidently felt that he was unable to go so far and turned back to the boat, which by this time had come to the top of the water again. When within about 15ft. of the boat he was seen to throw up his hands, and as he cried, "Hurry up," went down and was seen no more. Dr. Henderson and Mr. Boardman clung to the boat and were rescued; Boardman, however, losing his hold and going down twice before being saved. Fred Wargowski and Peter Hill, Jr., who were in a boat a short distance below, quickly appreciated the situation and were the first to arrive. They pulled Boardman into their boat just as he was going down for the third time, and towed Dr. Henderson into shallow water. They did not realize that one of the party had been lost till Mr. Cronan came running along the beach and asked what had become of Cline. James Boardman was quickly resuscitated after reaching shore and dry clothes were supplied to the party from the cottages at the island. Dr. Henderson was the only one of the party who could not swim at all. James Boardman could swim some, but the excitement unnerved him and he became entirely helpless.

A Bass Story.

Cambridge, Mass.—I haven't been fishing as yet this summer, but have been doing the next best thing—reading Forest and Stream. And reading Forest and Stream is apt to make a fellow want to tell something of his own experiences. If ever there was a black bass crank he stands in my shoes, and anything relating to that wary and stubborn finny is hailed with delight by the same. Here is a black bass story which is true, I know, for it came from the lips of James Bradbury, one of the salt of the earth (or perhaps "salt of the water" would be better), who is my fishing companion every summer on Rodger's Lake, Conn. Mr. Bradbury never tells whoppers, though he catches lots of them. One day while fishing for shiners for bass bait in shoal water, and using a stick no larger than a horsewhip to which was attached a black linen thread and a tiny hook, Mr. Bradbury saw an immense fish move under the boat and swallow the bit of worm. At first he was too much surprised to do anything but stare; then he actually pulled into that boat hand over hand a 6½lbs. black bass, which made little or no resistance. If anyone has beaten this I would like to record it.

In appearance and disposition Mr. Bradbury resembles Fred Mather's Reuben Wood, only Mr. Bradbury still clings to the old-fashioned fishing gear, and often refers to my split-bamboo as a "first-rate pole for catchin' shiners." By the way, I hope Mr. Mather will continue those enjoyable sketches. Joe Cone.

Montezuma Black Bass.

Montezuma, N. Y., July 20.—I send you photograph of a catch of fifty-eight black bass (largest 5½lbs.) and two pickerel, made here one day last week by Messrs A. P. Milne and A. T. Sansbury. The guide was Phinney Helmer, who knows all there is to know about the Montezuma marshes. S.

Lake Wentworth (N. H.) Bass.

Haverhill, Mass., July 24.—I was up on Lake Wentworth (railroad station, Mill Village, N. H.) a short time ago with three brother anglers after black bass. We took, in seven hours' fishing, over 100 fish from ½lb. to 2½lbs. Accommodations are good and guides know their business. Only four hours from Boston, Boston & Maine Railroad C. J. Halpen.

BOYS TOGETHER.

Killaloe Salmon.

Mr. Robert W. Browne, of the American News Co., this city, suggests that American salmon anglers who are going abroad may profitably avail themselves of the excellent fishing at Killaloe, Ireland, where the Shannon yields some large fish. Mr. Browne himself was present at the record capture of a 46½lb. salmon on Oct. 3, 1894. It took an hour to land this fish. In April of this year a 40lb. salmon was taken. The fishing is in preserved waters, and a fee is required. Mr. Browne will give information on request.

The Kennel.

FIXTURES.

BENCH SHOWS.

Sept. 1 to 4.—Kingston Kennel Club's bench show. H. C. Bates Cor. Sec'y, Kingston, Ont.

Sept. 7 to 11.—Rhode Island State Fair Association's fourth annual show, Providence, R. I.

Sept. 7 to 11.—Toronto Exhibition Association's eighth annual show, Toronto, Can. C. A. Stone, Sec'y of bench show.

Sept. 14 to 17.—Montreal Kennel Association's bench show, Montreal. G. Lanigan, Sec'y.

Sept. 22 to 24.—Milwaukee Kennel and Pet Stock Association's second annual dog show, Milwaukee. Louis Steffen, Sec'y.

Sept. 22 to 25.—Queens County Agricultural Society's bench show Mineola, L. I. J. Mortimer, Manager, Hempstead, L. I.

Oct. 6 to 8.—Danbury Agricultural Society's show, Danbury, Conn. G. M. Rundle, Sec'y.

Dec. 15 to 18.—Central Michigan Poultry and Pet Stock Association's show, Lansing, Mich. C. H. Crane, Sec'y.

FIELD TRIALS.

Sept. 2.—Morris, Man.—Manitoba Field Trials Club. John Wootton, Sec'y, Manitou, Man.

Sept. 7.—Kennedy, Minn.—Continental Field Trial Club's chicken trials. P. T. Madison, Sec'y, Indianapolis, Ind.

Oct. 9.—Brunswick Fur Club's annual meet. Bradford S. Turpin, Sec'y.

Oct. 26.—Hempstead, L. I.—Natioonal Beagle Club's trials. Geo. W. Rogers, Sec'y, 250 W. Twenty-second street, New York.

Oct. 28.—Greene county, Pa.—The Monongahela Valley Game and Fish Protective Association's second annual trials. S. B. Cummings Sec'y, Pittsburg.

Nov. 2.—Bicknell, Ind.—Continental Field Trial Club's quail trials. P. T. Madison, Sec'y.

Nov. 2.—Oxford, Mass.—New England Beagle Club's trials. W. S. Clark, Sec'y, Linden, Mass.

Nov. 10—Columbus, Wis.—Northwestern Beagle Club's trials. Louis Steffen, Sec'y, Milwaukee.

Nov. 10.—Leamington, Ont.—Peninsular Field Trial Club, Leamington, Ont.

Nov. 10.—Central Beagle Club's trials. L. O. Seidel, Sec'y.

Nov. 16.—National Fox Hunting Association's third annual trials, Bardstown, Ky. F. J. Hagan, Sec'y.

Nov. 16.—Newton, N. C.—E. F. T. Club's trials. S. C. Bradley, Sec'y, Greenfield Hill, Conn.

Nov. 17.—Chatham, Ont.—International Field Trial Club's trials. W. B. Wells, Sec'y, Chatham, Ont.

Nov. 23.—Newton, N. C.—U. S. F. T. Club's fall trials. W. B. Stafford, Sec'y.

Dec. 14.—Athens, Ala.—Dixie Red Fox Club's second annual trials J. H. Wallace, Sec'y, Huntsville, Ala.

CAN A DOG REASON?

Maple Corner, Wellington, Conn.—*Editor Forest and Stream:* Well, really, I must have my say. Of course, dogs reason. What other conclusion can be drawn! We start out to drive. Sancho expects to go as a matter of course. We say in our usual conversational voice: "Sancho would better stay at home to-day. It is hot and he will run too much." The little dog, apparently asleep on the lounge, gets up, goes out quietly and hides in the shrubbery; this not once, but many times. When nothing is said, he stays around and starts when we do.

We drive the two miles to the station for the mail nearly every morning—the mail stage not coming to our hilltop until afternoon. Often on our return we drive a little way up a crossroad to the cemetery. When Sancho gets to the turn he sits down and waits to see if we are going to make the diversion or are coming directly home. This not once, but dozens of times. There is another cemetery on this drive; there he never stops.

One day some one gave us a life-size picture of a famous actor. Having often heard that a dog would not notice a picture, I pinned it up in the bay window. Sancho was in another room. Presently the door was opened and he came in, noticed the picture immediately, mistook it for a man looking in at the window, went almost frantic barking at it—and he was a dog who never wasted a bark—rushed for the door, and when let out ran around the house to the bay window, looked up and saw the paper, and came back and went under the Glenwood range, a very much mortified dog indeed. We could not fool him that way again; we tried it repeatedly.

One day I threw a paper bag in the open wood fire in the old-fashioned chimney. It burned until the paper turned white, inflated, and the draught took it up the throat of the chimney. Sancho happened to notice it and began to prance and bark as if at a bird in a tree, and he would not be quieted. He was put out of the room, but came back and looked at the picture over the mantle and barked again. His master held him up and let him look and smell behind the picture; but he would not give it up, and behaved so badly that I got more paper bags and burned them in the same way. At the first one he barked a little, soon he ceased to be interested, and I could never fool him again in that way.

One day in New York I bought on Twenty-third street one of those absurd little white woolly dogs that when inflated will walk a yard or so. I had a little Astrachan cloth black penwiper dog, very cute, and I put them on the table side by side and called Sancho to look at them. He sat up in a chair, and I never saw him so interested. He would turn up his head one way and then the other, and try to get at the little toy; but his master held him, telling him what a pretty little dog it was, while he cried and whined as if trying to talk. At length he released himself and, springing upon the table, caught the little thing in his mouth. But one taste of cotton wool was enough—his interest in mechanical dogs ceased from that moment.

Some of the neighborhood dogs he liked and some he did not. Often when he was asleep we would say, "There comes George Knight's dog," and up Sancho would jump and fly from window to window, and beg to go out to meet his friend; but if we said, "There is the Lyons dog," he would look out with no show of excitement and never asking to go out.

At one time we had an invalid niece with us, and her pony Lightfoot was afraid of dogs, so a shepherd dog that always runs out at teams had to be kept chained, and it was amusing to see Sancho's exultation over this dog's discomfiture.

Sancho often for months went with me to call on a sick friend. After awhile she was taken to the hospital. When Sancho went next time he looked for her all about the house, then went to her room and, putting his forepaws on the bedstead, stretched himself up to see if her white face was among the pillows.

I thank Mr. Adams for his defense of our canine friends, and am glad that there is a Forest and Stream to give us his interesting articles. Annie A. Preston.

Continental Field Trials Club.

Indianapolis, Ind., July 24.—*Editor Forest and Stream:* At the request of many owners and handlers of dogs, the Continental Field Trials Club has decided to transfer its fall trials from Bicknell, Ind., to some point in the South where suitable grounds can be had. It is the intention of the club to hold the trials as near to West Point, Miss., as possible, so as to accommodate the patrons of the West Point trials. The date of the trials has not yet been determined, but will probably be about Feb. 1. There will be two stakes run, a Derby and an All-Age Stake. The breeds in each will be run together. The purse in each stake will be $500, divided $200 to first, $150 to second, $100 to third and $50 to fourth, with $10 forfeit and $10 to start. The Derby will be reopened and the entries will close Sept. 1. The entries to the All-Age Stake will close Oct. 1.

I am instructed to say to those who made entries in the Bicknell Derby that their entries can stand and be transferred to the Southern meeting without their having to pay the second forfeit, as the second forfeit is done away with under this new arrangement, only the starting fee of $10 will be further required. To those who prefer they can withdraw their forfeits now and have their dogs declared out of the stake. Mr. Royal Robinson and Mr. W. S. Bell will judge both stakes. Entry blanks will be ready as soon as the location has been determined.

CHICKEN DERBY ENTRIES.

Jas. S. Crane's Firefly, liv. and w. pointer bitch (Rip-Rap—Clipaway II.).

How, Who, Which, Why, What?

Hornellsville, July 25.—*Editor Forest and Stream:* I'm a little like the man who didn't know who he was, after getting over typhoid fever, and went around asking people "Who am I?" and when they told him he was John Smith, he wanted to know, "But who's John Smith?" You see, the boys chaffed me for being disqualified, and when I wanted to know how, when and why, they pointed out that on May 14 the Advisory Committee ordered the Bull Terrier Club to apologize to Dr. Foote and Mr. Schellhass, giving the club fifteen days to eat crow, or it would be disqualified with "its officers," and on May 21 the A. K. C. backed the Advisory Committee up and that the Bull Terrier Club hadn't put crow on the plate yet.

Now I am an officer, as I am one of the executive committee, and the executive committee passed the sassy resolutions; so it looked as clear as a hole through a ladder that I was bounced, and as I hadn't any more to do with passing that resolution than Mr. Chauncey Depew, I couldn't see what I was disqualified for. Then Mr. Vredenburgh, as secretary of the A. K. C., writes me and publishes in the papers that I am not disqualified, and of course that settles it that I am all right yet. Then he hauls me over the coals for making such an "unfounded statement." But, as the executive committee did the sassing, I can't see why they are not "the officers," and as they order the president, vice-president and secretary what to do, it strikes me that they are mighty much "officers," and I don't see that the boys were "unfounded" when they chaffed me.

The long and short of it is, "Who are officers," and who is disqualified? "Who is John Smith?" My old friend Watson writes me that the members of the Bull Terrier Club can be disqualified if they don't get together and eat crow for what "the officers" did. Well, being disqualified don't suit me worth a cent, but when I was a kid I was taught, "Let every fellow skin his own skunks," and I don't propose to skin any but my own. I have killed no skunks lately, as I dislike to skin them.

J. Otis Fellows.

Mr. G. Muss-Arnolt has accepted an invitation to judge dachshunde and Great Danes at Montreal. It is probable that Mr. Arnolt and Mr. Mason will do all the judging at that show.

ESQUIMAUX DOGS AT THE ZOÖLOGICAL GARDENS.

The deposit of eight typical specimens of Esquimaux sledge dogs in the Zoölogical Gardens, where they will remain until September, affords a valuable opportunity of studying the form and to some extent the habits of this most useful variety. To naturalists the Esquimaux dog is exceedingly interesting, inasmuch as it throws great light upon the origin of the domestic animal—breeding freely and being habitually crossed with the wolf in order to obtain greater strength and endurance. I have much pleasure in calling attention to the very correct drawing of specimens of these animals by the well-known canine artist Mr. Wardle. The specimens in the gardens have been employed in sleigh drawing, and several of them are valuable as being experienced and well-trained animals that can be trusted as the leaders of the teams, and are most obedient to the voice of the occupants of the sleighs.

The origin of these dogs has been carefully considered by that extremely practical naturalist, Mr. Bartlett, the superintendent of the gardens. In a contribution to the proceedings of the Zoölogical Society in 1890, he wrote as follows:

There can be no doubt that the Esquimaux dogs are reclaimed or domesticated wolves. All wolves, if taken young and reared by man, are tame, playful, and exhibit a fondness for those who feed and attend to them. The same may be said of all the species of jackals.

I have found no difficulty in crossing wolves and jackals with domestic dogs, when suitably matched. It is a well-known fact that the Esquimaux frequently allows his dogs to breed with wolves, in order to keep up the strength, the power of endurance and the courage of the race.

Domestic dogs exhibit many of the habits of wolves and jackals, such as the scratching up of earth with the front feet, and the pushing back of it with the hind feet, in order to cover up the droppings.

The whining, growling and howling of wolves, jackals and dogs are so much alike as to be undistinguishable; but the barking of dogs is undoubtedly an acquired habit, and doubtless due to domestication. Wolves and jackals in a wild state never bark, nor do Esquimaux dogs or dingos, but if kept associated with barking dogs, these and other wild dogs in many instances acquire the habit of barking.

A well-known instance of this occurred under my notice. A wild Antarctic wolf, after a few months, hearing the barking of dogs in the immediate neighborhood, began to bark, and succeeded admirably. The same thing has happened to my knowledge in the case of pure-bred Esquimaux dogs and dingos.

The utility of the Esquimaux dog in the frozen regions of the North is well known. Without its aid, locomotion and life itself would be impracticable in these snow-covered regions. Its power and capability of endurance are most remarkable. In proportion to its size, there is no animal that has so great a power of draught as the dog, nor has any other the capability of such violent and long continued exertion. The dog is of all animals that which draws most willingly. Those who have witnessed its employment in Belgium and other parts of the continent must be fully aware of the readiness with which it throws itself into the collar, and pulls with a force which is marvelous for so small an animal. In this country, however, its use for this purpose has been for many years forbidden by an act of Parliament, which was passed at the instigation of maudlin sentimentalists, who thought that because the dog is a domesticated animal it should not be employed in the way in which it was of great service to man. Much ridiculous nonsense was said and written respecting its being unfitted as a beast of draught, and that its feet were incapable of enduring the strain put upon them and the friction of the roads—a statement which is disproved by an examination of the Belgian dogs, and which, if true, would be a reflection upon the design of its structure. The prohibition of the utilization of the dog as a draught animal, because in some instances it had been overtasked by brutal owners, is as absurd as the prohibition of the use of donkeys and horses would be because in some cases there are masters who overtask and ill use them. Into the power and endurance of the dog as a sledge drawer it is unnecessary to enter, as it is familiar to all readers of works on Arctic travel and exploration.

The dogs now in the Gardens are the first installment of those that are designed for use in the proposed Antarctic exploring expedition which is to start in September next. This expedition, according to a statement of Mr. Bowick, the chairman of the executive committee, will consist of a whaling vessel of about 300 tons, to be accompanied by a small steamer of about 70 tons. The party is expected to leave in September, and, after calling at Melbourne, to proceed direct to Cape Adair, Victoria Land, which under favorable circumstances should be reached in about fourteen days. There the specialists will be landed with their instruments and outfit for one year. Provisions for a considerably longer period will, however, be taken ashore.—*W. B. Tegetmeier in London Field.*

THE TYPE OF ENGLISH SETTERS.

Pittsburg.—*Editor Forest and Stream:* I am an admirer of the English setter, concerning both as he is of interest on the bench and useful in the field, though I am somewhat the more partial to him as a working dog. This is not strange at all when it is considered that my greatest pleasure is shooting over the dog afield. Of course the matter of type is a secondary affair in the consideration of a field dog, though by that I do not mean that it is not an important consideration. I wish it understood that the critical scrutiny from the bench show standpoint is not in evidence. Though chiefly admiring the setter for his real usefulness afield, I have my own ideas of type, as nearly every sportsman has. To be frank on this matter, I think that there is very little real type in the English setter of to-day. It is the rarest thing in the setter classes at shows to see two dogs which are at all near a standard. They all differ from each other and from the standard. Judges are censured by the disappointed exhibitor and the virtue of the standard is invoked by the latter to show that he is correct, and it would seem that each disappointed exhibitor had in mind that the standard exactly fitted his own dog, and only in part could any others find any of it which would fit them.

In bringing such a miscellaneous assortment of setters before a judge, the most that could be expected of him in reason would be to award the prizes accordingly as the dogs more or less came up to the requirements of the standard. It would be manifestly unjust to censure the judge for placing a dog first which did not meet the requirements of the standard when there were no dogs in the class which could meet such requirements.

I am firmly convinced that the past few years have done more for the degeneration of the breed of English

setters than all the preceding years have improved them. How exceedingly unjust it is then to find fault with the judge for the absence of type in his awards when there is no uniformity of type for him to pass upon. This state of affairs is brought about by the breeders themselves, not by the judges.

Contrast the light, weedy specimens of the English setter to-day, which may be seen about Pittsburg and in the South at the trials, with the well-developed dogs of ten or twenty years ago, and then contrast the dogs of to-day one with another. It will be found that they differ greatly from the dogs of the years gone by and from each other as they are supposed to represent the breed to-day.

Note the manner in which the pointers have steadily overtaken the setters in the competition in the trials, and to-day are admittedly the superior of the long-haired rival which so proudly and so boastfully held the supremacy a few years ago. Far be it from me to insinuate that the ascendency of the pointer is due to the decline of the setter. The pointer has greatly improved and deserves much praise for it and for the persistent pluck which accomplished so much in the face of such discouragements as were his in the struggle for victory; but I do claim that the ascendency of the pointer is in a measure due to the degeneration of the setter. It made a speedier and an easier task for him that his rival degenerated as he improved himself. The bench show and the field trials alike are a witness to the decline of the English setter.

Each interest is inclined to blame the other. The advocates of the bench show claim that the field trials have harmed the type of the breed, and the field men reply that the bench shows have developed a type worthless in the field for shooting purposes. And for the unfortunate results it seems to me each in his own field is to blame, the field men for the field dogs and the showmen for the show dogs. There are no two types, no distinct field type and bench type. If a lot of dogs were turned loose together, no one could tell which was the field and which the workers, for some handsome dogs are good field dogs, and *vice versa* some homely ones are excellent in the field, and some of both sorts are worthless, yet few are near the standard.

FIELD TRIALER.

The Toronto Show.

THE following specials have been offered by the American Dachshund Club, to be competed for at the Toronto Industrial Exhibition Association's Dog Show, beginning Sept. 7.

1. The Venlo Challenge Cup, value $100, for best dog or bitch in the show, the property of a member, to be won three times, a diploma also being given with each win.

2. The Klein Breeders' Trophy, value $50, for the best dog or bitch puppy, bred, owned and exhibited by a club member, to be won by three different dogs bred by same exhibitor, diploma given with each win.

Also $5, club special, for best black and tan dog, same for bitch. $5, Arthur Froembling special, for best red dog, same for bitch. $5, by a friend of the breed, for best brace (dog and bitch) black and tan, open to all. $5, by a friend of the breed, for best brace (dog and bitch), reds, open to all. $10, to the owner of the best sire, represented by two or more of his get out of two or more bitches, open to all. Silver medal, to the best American bred dog or bitch.

The secretary is holding the prize list back on account of the number of special prizes that are rapidly coming in. All those desirous of donating specials please to notify the secretary at once, so that they may appear in the prize list. The judges so far appointed are Messrs. James Mortimer, of New York city, and J. F. Kirk, of Toronto.

C. A. STONE, Sec'y.

Queens County Agricultural Society.

HEMPSTEAD, L. I.—*Editor Forest and Stream:* The following gentlemen have been invited to judge at the above forthcoming show:

Dr. Richard H. Derby, mastiffs; Mr. W. H. Joeckel, St. Bernards; Mr. Charles D. Bernheimer, Great Danes and poodles; Mr. H. W. Huntington, greyhounds, deerhounds and Russian wolfhounds; Mr. A. C. Pickhardt, pointers; Dr. H. Clay Glover, English, Irish and Gordon setters; Mr. A. Belmont Purdy, foxhounds; Mr. A. Clinton Wilmerding, field, cocker, Clumber and Irish water spaniels; Mr. A. D. Lewis, collies; Mr. George B. Post, Jr., beagles; Mr. C. G. Hopton, bull dogs; Mr. Perry Tiffany, bull terriers; Mr. C. F. Leland, Boston terriers; Mr. German Hopkins, fox terriers; Mr. Lawrence Timpson, Basset hounds, dachshunde, Irish, Scottish, Skye and Dandie Dinmont terriers; Mr. R. F. Mayhew, bloodhounds, Newfoundlands, old English sheep dogs, Bedlington terriers, black and tan, white English and Yorkshire terriers, pugs, Italian greyhounds, schipperkes, King Charles, Blenheim, Ruby, Prince Charles and Japanese spaniels and miscellaneous.

JAMES MORTIMER, Sec'y and Supt.

POINTS AND FLUSHES.

We have received a copy of the following circular from Mr. John Wootton, the Hon. Secretary-Treasurer of the Manitoba Field Trials Club, which in itself shows the activity of the club and its earnest endeavor to remove all obstructions to American patrons and make competition in Canada as easily obtained as if it were in the United States. Much praise is due the club for its work in behalf of American patrons, and they should manifest their appreciation of it by a liberal entry. The circular is as follows: "The Manitoba Field Trials Club have made arrangements with the customs authorities so that all American dogs entered in either the Derby or All-Age stakes will be admitted free of duty and without a bond or deposit of any kind at either Gretna or Winnipeg. But in order to obtain the benefit of this arrangement handlers or owners must make their entries with the secretary in time for him to communicate with the club's customs brokers at these ports of entry. Mr. M. Long is the club's broker at Gretna and Mr. S. T. Hanscombe at Winnipeg. In consequence of the delay in perfecting these arrangements the club have found it expedient to extend the time for receiving entries for their Derby till Aug. 1, at which date the entries for both stakes will positively close."

A Minneapolis exchange is very sanguine that a successful bench show could be held in that city, and indeed there is no valid reason why such a show should not be held; but its standard of successful shows is entirely too high. At Milwaukee it estimates there will be 1,500 blue-blooded dogs. A circuit meet of the coursing associations, to follow the bench shows, it predicts would bring to Minneapolis 500 greyhounds. Here is indirectly the old, old question, whether the greatest pleasure is in the anticipation or the reality.

There seems to be much misapprehension concerning the status of a suspended club and its members in their relations with the A. K. C. The suspended club is deprived of A. K. C. privileges. The individual standing of the members is not affected in the least, except in such case as they were officers. Of course, the Bull Terrier Club of America's suspension is the matter under consideration. The suspension clause concerning this matter is as follows: "Ordered, that the Bull Terrier Club of America be and is hereby granted fifteen days in which to comply with the resolution of this committee, adopted at its meeting April 1, 1896, in default of which said club and its officers, nolding office on Jan. 13, 1896, shall be suspended." The officers of the club not in the official capacity but as individuals are suspended, and the club as an organization is deprived of A. K. C. privileges.

Science Siftings this week contains an account of interesting—albeit cruel—experiments with regard to the brains of dogs, the result being to show that where dogs are trained to do things which require mental effort or the exercise of a special sense, such as the color sense or the sense of number, extraordinary development of certain portions of their brain ensues. This suggests the conclusion that training through many generations would enable the brains of dogs to approximate in some spheres of mental activity to those of men.—*British Fancier.*

Mr. H. B. Donovan, Secretary-Treasurer of the Canadian Kennel Club, announces that a nomination and executive meeting of the club will be held at Queen's Hotel, Toronto, on Friday, Aug. 7, at 8 P. M. The business to come before the meeting is to receive nominations for officers for the ensuing year, incorporation, reception of new members and other business.

On July 26 Thomas Atwater Jerome died at New Brighton, Staten Island, N. Y., of acute gastritis. He was conspicuous in canine interests in the beginning of bench shows and field trials. For many years he held a position in the Custom House of New York, which ill health forced him to resign about four years ago. He was born in 1810.

Communications for this department are requested. Anything on the bicycle in its relation to the sportsman is particularly desirable.

SQUIRREL SHOOTING WITH A BICYCLE.

[*Concluded from page 74.*]

FOR half an hour I listened to the sounds of the woods, the faint rustling of the leaves that every now and then suggested the scamper of a squirrel, the notes of the migrating robins in the treetops or the strident cawing of suspicious crows.

From time to time I could hear shots that betokened others were afield already, and I knew that my time for hunting was short, for soon the woods would be full of a medley assembly from city and country, and the game that wasn't killed would all be in hiding. So as I saw nothing I began to grow a trifle nervous, and consider the advisability of moving on.

A gun fired a short distance ahead deterred me, and presently my patience was rewarded, for I sighted squirrel number two coming through the trees in my direction. This squirrel, however, was of a capricious temper, and descended to the ground at frequent intervals, while at other times he made side excursions to various small hickories that as far as I could see contained no nuts. He was barely out of range during these maneuvers, and his conduct was highly exasperating considering the rapid approach of daylight and the consequent termination of my hunt.

After thirty minutes or so of such meaningless action, the squirrel at last appeared on the trunk of a fallen tree 50yds. away, and I risked a shot with the result of scoring a miss. I ran to the spot as fast as I could, knowing my action would rattle the squirrel and prevent him finding a good hiding place, and when I got to the log I stopped and sat down.

I scanned the neighboring trees without moving more than I could help, and presently detected a movement in the top of a large oak that grew on higher ground to my left. A little later the squirrel ran out on a dead branch and began cussing at the mortal who had given his nerves such a shock a moment before. This was my opportunity. So taking a very careful sight at the white chest which showed plainly over the small branch upon which the squirrel perched, I fired. The shot struck fair, but instead of falling the squirrel caught the branch by one hindfoot and hung, his body gently swaying backward and forward. I sat and watched him for several minutes, thinking he would fall, but though he showed no signs of life he still hung there supported by the involuntary grasp of his scimiter claws. Finally I dislodged him by another shot, and then I moved on to a corner where intersecting fences met.

I had seen squirrels before in this neighborhood, and an old and shattered chestnut of enormous proportions bore evidence of being a den tree by thousands of claw marks on its heavy trunk. The rail fence which ran past it, too, was literally covered with these hieroglyphics which are so full of meaning to the hunter of small game.

At this spot I did not have long to wait, for presently, right over toward the sun, I saw a gray approaching. He was a long distance off and looked very small as he ran along a branch outlined against the sky or down a tree trunk, but later he proved to be a particularly large squirrel. While watching this squirrel I suddenly spied a second following exactly the same path the first was taking. The route through the treetops was no doubt a well-known runway, for the second squirrel duplicated each crook and turn made by the first even to the minutest detail, though he was, as a rule, several trees behind. As the squirrels approached they passed a region where the trees, which were large oaks, grew very sparsely, and here it was interesting to watch their knowledge of the route.

At many points it seemed impossible that they could advance further without descending to the ground, but every time they conquered the difficulty without hesitation. Sometimes they would enter an apparently isolated tree, run up the trunk or down, as the case might be, and then almost doubling back on their track pass into some neighboring tree by the only available branch.

When the first squirrel was almost within range he executed a very peculiar maneuver, which, strangely enough, was exactly duplicated by the second. A large oak had one of its main branches near the top shattered either by lightning or the wind, and when this tree was reached both squirrels in succession ran out this branch to its very end and seemed to sink their bodies in some cavity. They remained here for some moments and then retraced their course to leave the tree, showing that this had been a detour with a purpose. What it meant I have no idea.

By the time the second squirrel had left the seared limb the first was in the act of crossing into the big chestnut near which I stood. For an instant both squirrels were lost to sight, and taking advantage of the opportunity offered I raised my rifle and held it ready to fire. A moment later the first gray came in sight, but I waited a little longer to give the second a chance to catch up.

The first squirrel ran up the side of the chestnut till he came near the top, and then fearing he would go into a hole and be lost I made a slight movement that caught his eye and gave me the chance for a shot. A better mark could not be desired than he made as he paused, outlined against the sky, and when I fired he came down, turning convulsive somersaults as he fell.

The same instant squirrel number two, who had meanwhile gained the chestnut, jumped around to my side of the tree to see what the trouble was, and I dropped him with the second shot immediately beside his partner. They fell so close to each other in fact that a handkerchief would have touched each as they lay.

This was destined to be my last game for the day, for as I moved on I began meeting parties of boys and men armed with shotguns every little distance, and soon the woods were full of hunters. These hunters made a practice of shooting every nest they came too, but they picked up very few squirrels in this way, and in fact it was only very occasionally that they could boast of any game at all.

It went against the grain to see the nests fired into, for undoubtedly squirrels were killed or wounded in some of them that could not be disloged, and it was a waste of breeding stock for another year. It was also a matter of some danger to be in the woods in company with so many reckless shooters, so I pushed my bicycle ahead rapidly, aiming for the Richmond road, a mile south of the point where I had left it in the morning. Once as I passed through a corner of the woods where there were less hunters than elsewhere I saw a gray on the ground 200yds. ahead, but he had treed or holed before I got there and I left him in peace.

After I reached the road it was all smooth sailing. The grade is down hill and one can coast most of the distance from the woods to the railroad. Though it was a holiday, large gangs of Italian laborers were at work on the street railway line, rushing it toward completion, and as I passed these the squirrels hanging from my handle bars were the cynosure of all eyes. Several times some swarthy workman rushed out in my path and asked to examine the game, and as I humored them knots of gesticulating, jabbering Dagos would cluster around and stroke and examine the squirrels. The instinct of the chase seems to be strong in these Italians, but I have never had the pleasure of seeing one that knew how to shoot, though one runs across them frequently in the woods about New York armed with all kinds of antiquated weapons.

I reached the Rapid Transit R. R. by 9 o'clock and was back in New York at 10, having enjoyed the pleasures of hunting and cycling combined. To my mind cycling is made doubly attractive if it has some object. It has never been any satisfaction to me to pedal off the miles without regard to circumstances or surroundings. If I can add a little exploration for signs of small game during the summer and a little hunting during the open season the pleasure is more than doubled. With the aid of the bicycle one can visit out-of-the-way nooks that are not easily accessible either by rail or on foot, and the weight of a small caliber repeater strapped to the wheel detracts in no way from its running qualities.

J. B. BURNHAM.

A New Record.

AN hour and twenty minutes for a distance of ten miles does not look like much of a record for a bicycle rider, yet when it is known that this was accomplished riding backward the time for the performance seems very creditable. A Frenchman named Paupart is the hero of this so-called record. The fact that he rode from Paris to Versailles over a crowded course and at the risk of constant collision with passing vehicles does add to one's appreciation of the quality of this crab-like rider's brains.

Swift Justice.

A YOUNG cyclist rushing along the Grosse Frankfurter Strasse at racing pace knocked down an old lady who was crossing the road. Without troubling himself about the result of the collision, he sprang on his machine and was rushing off, when, in his hurry, he himself came into violent contact with a beer wagon, one of the wheels of which passed over his right leg, breaking it above the ankle.—*Berliner Tageblatt.*

Egg Races.

IN Paris they have adapted the idea of potato races to bicycling by placing five eggs at different points in the course and requiring the bicycle riders to break them with their front wheels. Egg races are said to be highly amusing, for it is not as easy as it looks to break the eggs and finish in good time.

Night Effects.

ON the other side of the Atlantic they have a pretty custom of carrying paper lanterns at the handle bars of their bicycles instead of the conventional light. If one happens to be caught out late without his lamp all he has to do is to go to some convenient shop and buy a Chinese lantern, which costs but a few cents. Once in a while in New York one sees parties of cyclists so equipped, but here the idea seems mostly to be confined to the feminine element, which is quick to appreciate the attractive effect. Looking up the Boulevard these summer nights at the gliding lights of the hundreds of firefly bicyclists, the occasional parti-colored lights of the paper lanterns furnish pleasing contrasts in what *Life* has termed "The charge of the Light Brigade."

For the Chain.

BICYCLISTS who have not yet found a chain prescription that suits them might try the following, always bearing in mind the fact that gasoline is a bad thing to have in the neighborhood of a light. Clean the chain in kerosene to cut stiff grease; then cleanse with gasoline. Next immerse in a pan containing a mixture of hot vaseline and graphite, the graphite being added till the combination is nearly black. Work the chain around till the mixture enters all the joints, and when cold wipe the chain clean of all surplus grease. This treatment is said to last a long time, and it undoubtedly has good points; but the plan of mixing lubricants designed to act on the surface of the chain with those intended to penetrate the joints is of doubtful utility.

Canarsie Y. C. Special Race.

THE Canarsie Y. C. sailed a special race on July 19 for cups presented by Com. C. O. Herx and Vice-Com. F. V. McGeehan, the course being a 10-mile triangle. The wind was fresh from the south. The times were:

	Start.	Finish.	Elapsed.	Corrected.
Siren	2 52 01	4 52 47	2 00 46	1 59 35
So So	2 52 46	4 47 51	1 55 05	1 53 30
Caddie	2 52 46	4 53 02	2 00 16	2 00 09
Lochinvar	2 53 00	4 54 02	2 01 02	1 56 32
Peach	2 53 05	Did not finish.		
Anna	2 54 03	Did not finish.		
Meteor	2 54 29	4 50 26	1 55 57	1 54 02

The 30ft. Class at Newport.

AFTER the regular Sound regattas of the early part of July, the 30ft. fleet divided, a number of them going to Newport, where their owners reside. To keep the sport going in the class, Messrs. Duryea, Ellis and several others arranged a series of sweepstake races, to be sailed off Newport, the first of which took place on July 14. The starters were Asahi, sailed by Capt. Nat Watson; Hera, sailed by Mr. C. Burd; Vaquero III., sailed by Mr. Duryea, and Esperanza, sailed by Capt. Aubrey Crocker. The course was from off Brenton's Cove around Dyer's Island Buoy and return, keeping to the westward of Rose Island, 18 miles. There was a fresh S.W. wind and a sea in Narragansett Bay when the race was started at 2:35. Hera led on the reach to Rose Island, then they squared away and set spinakers for the lee mark, where the times were:

	Turn.	Elapsed.
Asahi	3 30 15	1 00 15
Esperanza	3 30 26	1 00 26
Vaquero	3 30 34	1 00 34
Hera	3 30 50	1 00 50

On the beat home Hera lost her mast, the stick breaking just below the head; she was towed home by a steam yacht. Asahi sailed out in the channel, where the breeze was stronger than inshore, though the water was rougher, and easily distanced the others which held to the shore. The times were:

	Start.	Finish.	Elapsed.
Asahi	2 30 00	4 44 30	2 14 30
Esperanza	2 30 00	4 47 15	2 17 15
Vaquero	2 30 00	Did not finish.	
Hera	2 30 00	Did not finish.	

Only three boats started on July 15, Hera not having a new mast. Mr. Bayard Thayer, owner of Asahi, sailed her, the other two being handled as on the previous day. The wind was still from the S.W., with rough water, the course being direct to Dyer's Island and return, 16 miles. Vaquero was first over the line, with a reef in her mainsail. After a start at 2:35, the turn was timed:

Vaquero.....3 19 00 Esperanza.....3 19 04
Asahi.....3 19 03

In beating home Mr. Duryea steered the best course and won very cleverly, the final times being:

	Start.	Finish.	Elapsed.
Vaquero III	2 33 00	4 30 36	1 57 36
Esperanza	2 33 00	4 33 23	2 00 45
Asahi	2 33 00	4 33 45	2 00 23

In the third race, on July 17, a new course was chosen, down the Bay from Brenton's Cove and around the Brig Ledge Buoy, off Wickford, 17 miles. There was a moderate S.E. breeze. Asahi won, the times being:

	Start.	Finish.	Elapsed.
Asahi	2 35 00	5 11 55	2 36 55
Esperanza	2 35 00	5 13 10	2 38 10
Vaquero III	2 35 00	5 16 30	2 41 30

On July 18 the Dyer's Island course was sailed again, a S.E. wind of moderate force making a run up and beat back. Hera was in trim again and made up the quartette. The times were:

	Start.	Finish.	Elapsed.
Esperanza	2 25 00	4 59 18	2 34 18
Vaquero III	2 25 00	5 04 25	2 39 25
Hera	2 25 00	5 04 47	2 39 47
Asahi	2 25 00	5 00 07	2 41 07

The fifth race was sailed on July 22 under different conditions, a light S.W. wind and rain. A triangular course, from off Brenton's Cove around a mark off Jamestown and the Bishop's Rock Buoy, two rounds, making 14 miles The start was made at 3:15, Asahi leading over the line and around the course, the times being:

	Finish.	Elapsed.
Asahi	5 48 15	2 33 15
Esperanza	5 49 50	2 34 50
Vaquero III	5 50 45	2 35 45
Hera	5 51 40	2 36 40

On July 24 a race was sailed over the Jamestown and Bishop's Rock Buoy triangle, starting in a very light wind that increased to a fresh breeze during the race, the day being rainy. Hera got a good lead early in the race, and finally won, though Asahi was a close second. The times were:

	Start.	Finish.	Elapsed.
Hera	2 35 00	5 21 55	2 46 55
Asahi	2 35 00	5 22 05	2 47 05
Esperanza	2 35 00	5 22 45	2 47 45
Vaquero	2 35 00	5 24 48	2 49 48

Another race was sailed next day over the 18-mile course around Brig Ledge Buoy, the wind being very light and favorable. The times were:

	Finish.	Elapsed.
Asahi	7 04 09	4 29 09
Vaquero	7 12 20	4 37 20
Hera	7 12 30	4 37 30
Wawa	7 16 30	4 41 30

Seawanhaka Corinthian Y. C.—Roosevelt Cup.

OYSTER BAY, L. I.

Saturday, July 18.

THE Seawanhaka C. Y. C sailed a club race for the Alfred Roosevelt Memorial cup on July 18, open to yachts under 50ft. racing length. The day was fair, with a light breeze; the course was on Cold Spring and Oyster Bay harbors, starting and finishing off the club house. The times were:

	Length.	Allowance.	Start.	Finish.	Elapsed.	Corrected.
Nameless	24.09	16 23	3 20 43	5 41 58	2 21 58	2 05 35
Bogie	19.00	26 50	3 20 57	5 42 11	2 22 11	1 55 21
El Heirie	14.93	37 31	3 20 15	5 41 15	2 21 15	1 43 44
Dodo	25.00	16 15	3 21 02	5 43 51	2 23 51	2 07 36
Meteor	24.00	17 44	3 20 30	5 48 13	2 28 31	2 10 29
Mirth	41.70	Allows.	3 21 35	6 00 22	2 40 22	2 40 22
Indolent	37.00	3 26	3 21 21	5 27 29	2 17 29	2 14 03

El Heirie won very easily, defeating all but Indolent on elapsed time and with a big allowance to spare. A race for the club cats was also sailed, resulting as follows:

Start 3:30.	Finish.
L. L. Brewer	5 31 57
C. A. Sherman	5 30 24
D. Burnham	5 33 47
Jacob Smith	5 30 53

LADIES' RACE.

The Seawanhaka C. Y. C. sailed a ladies' race on July 25, the conditions being: Each boat must be steered by a lady of the family of a member of the club or a lady, his guest. Crews shall be limited to three in number and must be ladies of the families of members or ladies, their guests. A "life guard," in the form of a man, who must be a competent sailor, shall be carried on board each boat. He shall refrain from assisting by word or act in the management of the boat during the race, except in case of danger. Should he find it necessary to thus interfere, his boat shall be disqualified and must immediately withdraw from the race. A signed declaration that this condition has been strictly complied with will be required from the life guard on the winning boat. A life guard may warn his crew if in danger of physical injury and may inform the skipper as to right of way when approaching another boat.

One catboat was manned by Mrs. D. Leroy Dresser, with C. A. Sherman as life guard; the other by Miss Bisland, the former being the winner. The prize, offered by Com. Rouse, was a silk belt with gold clasp bearing the club burgee in enamel.

Ogdensburgh Y. C. Regatta.

THE first regatta of the Ogdensburgh Y. C. on July 28 has attracted the sailing men of the St. Lawrence, and a very large attendance of spectators is promised. The principal event will be the race of the 15-footers for the handsome trophy already described. The course will be a 4-mile triangle on the river off Ogdensburgh, sailed three times. The first event, to start at 11 A. M., will be the open race for the Bell challenge cup, open only to yachts enrolled in the Ogdensburgh Y. C., the cup to be won three times by a yacht in order to be held permanently. It has been won twice by the catboat Gether. Some of the 15-footers will probably start in this race, receiving time from the larger catboats and sloops.

The 15-footers will start at 2 P. M., the entries being:

Club.	Skipper.	Crew.
Sothis, Royal St. Lawrence	G. H. Duggan	.....
Missie, Royal St. Lawrence	Mr. Kitson	V. Pelletier.
Anita, Royal St. Lawrence	S. Davidson	H. G. Eadie.
Mischief, Royal St. Lawrence	W. A. C. Hamilton	Arthur Hamilton.
Peggy, Ogdensburgh	W. I. Zerega	C. A. Hayden.
Gold Bug	G. Dorwin	J. Leair.
Vesper, Vesper	Paul Butler	Butler Ames.

Sothis is the younger sister of Glencairn, the models being practically identical. She has the Scarecrow rig, of large area.

Missie, Mischief and Anita are also of the Montreal fleet, the latter with a gaffsail. The three with the leg-o'-mutton sails have a very light jackstay, a single strip of steel. All have large steel centerboards. Peggy is an exact duplicate of the original Ethelwynn in model and rig. Gold Bug was built surreptitiously by one of the workmen who was employed on Ethelwynn when she was built at the Clayton shops last year, and who availed himself of the opportunity to make a copy of the design. She is rigged with a gaffsail. Vesper is in the same trim as in the Seawanhaka trial races, but has a new sail, boom and gaff by Wilson & Silsby, and a new centerboard, a single plate of steel. With a good breeze a close and exciting race is probable. After the 15ft. race four crews from Brockville will compete in four-oared shells. In the evening a reception will be tendered to the visitors by the Century Club, of Ogdensburgh.

The City of the Straits Trophy.

THE silver ship offered in 1887 by Detroit yachtsmen as a permanent trophy for any yacht winning it three times, and won by the City of the Straits, has just been redonated as a permanent challenge trophy under the following conditions:

Whereas, The City of the Straits Yacht Racing Association on the 20th day of May, 1892, made and executed a certain deed of trust of the Mabley & Co. silver ship—a trophy won by said association—to the undersigned as trustees, to be preserved as a perpetual challenge cup to be competed for by sailing yachts under certain rules, conditions and regulations;

Whereas, It has been found impossible to comply in all respects with the literal terms of said deed and secure the competition desired and intended by the grantor; now,

Therefore, We, the trustees named in said deed of trust, in order to carry out the intent of the grantors in said deed and by virtue of the power granted us therein, do make the following terms and conditions under which said trophy shall be sailed for, to wit:

1. This ship shall be designated and offered as a challenge prize to be awarded under the conditions herein following to the yacht club represented by the winner of the international race to be sailed at the head of Lake Erie on Aug. 24, 25 and 26, between the yachts Canada, of Hamilton, Ont., and Vencedor, of Chicago.

2. This ship shall always remain as a perpetual international challenge trophy for friendly competition between organized yacht clubs on the chain of lakes.

3. The winner of this silver ship in the races above mentioned shall give a bond for its safekeeping and delivery under the conditions following to the trustees herein named, and shall hold the same subject to the conditions following:

4. Any organized yacht club on said chain of lakes, either in the United States or Canada, shall always be entitled to the right of sailing a match for this silver ship with a yacht or vessel propelled by sails only against any yacht or vessel belonging to or enrolled in the club holding the ship.

5. Any club challenging for this silver ship shall give three months' notice in writing to the club holding the same, naming the dates for the proposed races, but no race shall be sailed on any of the days intervening between Nov. 1 and May 30. Accompanying the three months' notice of challenge there must be sent the name of the owner and a certificate of name, rig and the following dimensions of the challenging vessel, viz.: Length on the load waterline; beam at load waterline; extreme beam, and draft of water.

6. All challenge races for this silver ship shall be sailed in the open lake, as follows: The first race, 10 nautical miles to windward and return; the second race, an equilateral triangle of 21 nautical miles, the first side of which shall be a dead to windawrd; the third race, if necessary, shall be 10 nautical miles to windward and return. One week day shall intervene between the conclusion of the first and the start of the next race. These courses shall be practicable in all parts for vessels of 12ft. draft of water, and shall be selected by the club defending the silver ship. These races shall be sailed subject to the rules and sailing regulations of the New York Y. C. as far as the same do not conflict with the provisions of this deed of gift.

7. The challenged club shall not be required to name its representative vessel until the time agreed upon for the start, but the vessel, when named, must compete in all races, and each of such races must be completed within five hours or no race.

8. Should the club holding the silver ship be for any cause dissolved, the custody of said ship shall at once revert to the trustees herein named, as successors or assigns.

9. It is distinctly understood that said ship is to be the property of the club, subject to the provisions of this deed, and not the property of the owner or owners of the vessel winning the match.

10. When a challenge from the club fulfilling all the conditions required by this instrument has been received, no other challenge shall be considered until the pending event has been decided.

(Signed) ALEXANDER I. MCLEOD,
C. D. JOSLIN,
BRUCE GOODFELLOW.

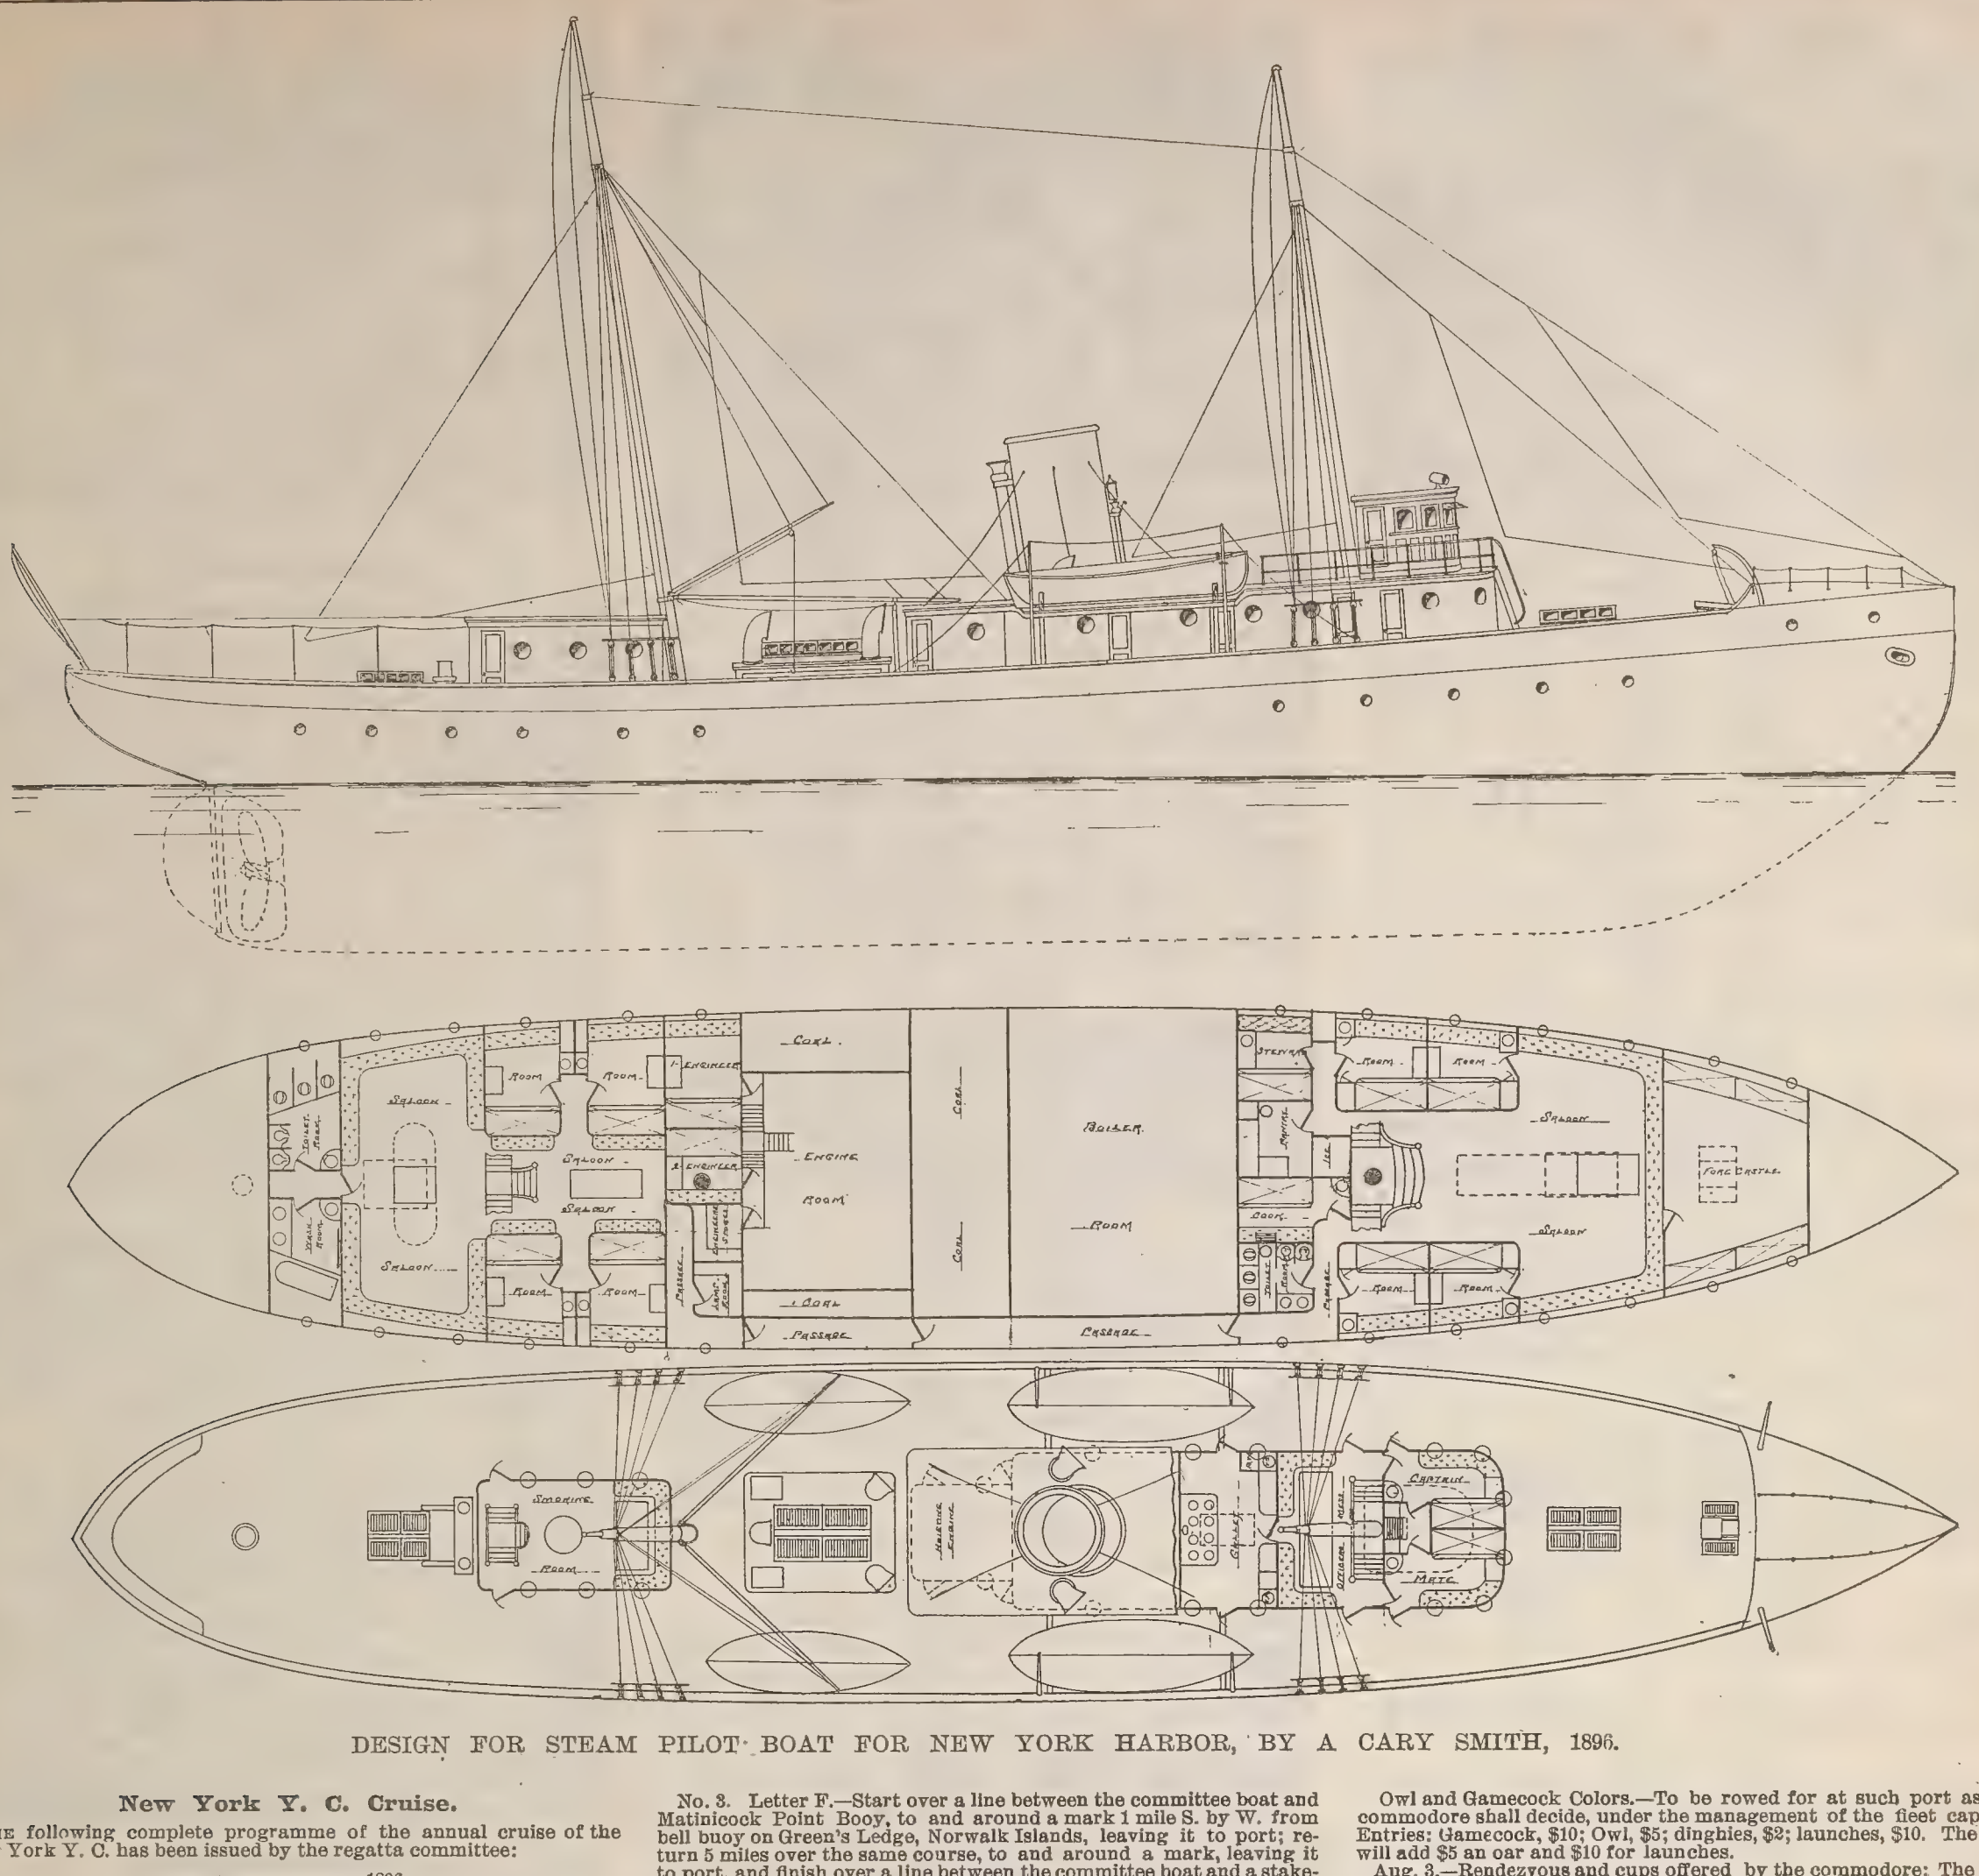
YACHTING NEWS NOTES.

A special meeting of the New York Y. C. was held on July 16, at which the following amendment to the racing rules was finally adopted: Amend rule 1, section 3, as follows: Class IV.—Not over 60 and over 51ft. racing length. Class V.—Not over 51 and over 43ft. racing length. Class VI.—Not over 43 and over 36ft. racing length. Class VII.—Not over 36ft. racing length. This classification is in accord with that of the other leading New York clubs in and out of the Yacht Racing Union, and is a decided improvement upon the old one of the New York Y. C., both in evening up the limits of the classes and in including the smaller yachts. The following members were elected: Leroy Taylor, Jr., William H. Hampton, George G. Tyson, Lieut. M. A. Anderson, U. S. N.; Paymaster Charles Webster Littlefield, U. S. N.; Lieut. William Veazie Pratt, U. S. N.; George R. Thorne, Francis Peabody Magoun, Augustus C. Tyler, Capt. R. D. Evans, U. S. N.; Ensign H. K. Hines, U. S. N.; G. K. Clarke, Jr., Nathaniel L. Francis, Dr. George L. Peabody, John E. Wayland, George W. Merrihew, J. Langeloth, Thomas McCaleb, Lieut. Henry P. Huse, U. S. N.; J. Joseph Albright, George P. Andrews, Robert H. McCurdy, Frederick Berg, Jr., J. Murray Mitchell, Past Assistant Engineer Martin Bevington, U. S. N.; Edward F. Cole, Charles Raoul Duval, Harry L. Kennedy and James M. Hoghart.

Something novel in the way of a steam launch is now on the ways at Ayers' shops, Nyack, designed by C. D. Mosher for F. P. Magoun, of New York. She is 40ft. over all, with a beam of under 5ft. and intended to carry 200 H. P., a single screw, quadruple expansion engine. The frames are of aluminum angles ¾×¾×⅛in., spaced 6in; the keelsons, stringers and other members are of aluminum, and the planking is double, the outer skin of ¼in. mahogany. There are six bulkheads of aluminum. In model she is unlike the Feiseen and Nada type, with a deep U section and round bilge more like a rowing gig, but the stern is a modification of the hourglass pattern. A speed of thirty miles is looked for. Messrs Mosher and Magoun have been at work for a long time experimenting with models, perfect working models of hull and engines to a scale of 1½in. having been constructed and run in the baths of the Produce Exchange, New York.

An interesting novelty among our exchanges is the special fiftieth anniversary number of the *Scientific American*, a publication in every way worthy of the event it is designed to commemorate, the half century anniversary of this great technical journal. The marvelous progress of invention during this period is ably described in a series of special articles on such subjects as the Trans-Atlantic Steamship, Railroads and Bridges, Physics and Chemistry, Progress of Printing, Iron and Steel, Phonograph, Telephone, Naval and Coast Defense, the Sewing Machine, Electric Engineering, the Locomotive, Photography, Telegraph, Telescopes, the Bicycle. A special feature of the number is the $250 prize essay on "The Progress of Inventions During the Past Fifty Years." Apart from any transient interest, the number is well worthy of preservation as a comprehensive and reliable record of progress in the arts and sciences.

On Tuesday, Aug. 4, a regatta will be held at Port Dover, Ontario, on the north shore of Lake Erie, preceded by a rendezvous and reception on Monday, with a dance in the evening for the visiting yachtsmen. The regatta will be open to yachts in three classes, 40ft. and over, 30 to 40ft., and under 30ft., and will be sailed under the rules of the Interlake Y. A. Particulars may be obtained of J. E. Itter, Port Dover, Ontario.



The 1896 edition of "Kiley's Yachtsman's Guide and Nautical Calendar," compiled and published by M. J. Kiley, Boston, still holds its place as one of the most convenient and useful aids to the yachtsman. The information in the form of charts and sailing directions has been revised to date, new illustrations have been added, and everything possible has been done to improve it; the price remaining at the same low figure.

The annual regatta of the Riverside Y. C. will be sailed on Aug. 1 over the club course off Riverside, Conn. Prizes will be offered in all regular and special classes of the Y. R. U., whose rules will govern. Entries must be made in writing to George E. Gartland, 11 Wall street, New York.

A handsome cup has been offered by Mrs. O. H. P. Belmont for a series of races for the 15ft. class off Newport this month, her son, W. K. Vanderbilt, Jr., owning one of the yachts, the handsome bulb-fin built by the Herreshoffs last year.

On July 23 the Royal St. Lawrence Y. C., of Montreal, gave a warm reception at its Dorval quarters to Messrs. Duggan and Shearwood, a very large number of members and guests being present.

Alborak, the Paine 40-footer of 1891, has been put in commission and will be used by John G. Paine this season. Gen. Paine still owns Jubilee, but has no yacht in commission.

DESIGN FOR STEAM PILOT BOAT FOR NEW YORK HARBOR, BY A CARY SMITH, 1896.

New York Y. C. Cruise.

The following complete programme of the annual cruise of the New York Y. C. has been issued by the regatta committee:

THE AUGUST CRUISE, 1896.

Rendezvous, Glen Cove, L. I., Aug. 3.—In conformity with General Orders No. 2, the regatta committee announce the following details with regard to the racing events and other incidents of the cruise:

General Directions.—By invitation of the Commodore, the committee will make the cruise on the Sylvia. Yachts entered for any racing event will display their private signals and numbers as directed in Rule IX., section 3. They will show no other colors. Club rules will govern all events unless otherwise directed. The course will be signaled before the preparatory signal is made. Should a signal gun miss fire, a prolonged blast of the whistle will be given. At the finish of each race the Sylvia will display a large club signal at the fore and show a red ball by day, and after dark she will show four white lights, hung vertically, and will burn club signals at ten minute intervals. Yacht numbers, extra copies of this circular and detailed sailing directions for the Goelet cups can be obtained at the club house and on the Sylvia.

Cruising Trim.—Anchors on the bow and at least one cable bent; cruising complement of boats carried (launches optional); cruising deck, cabin and galley fittings and fixtures in place; topsails extending above the truck and beyond the end of the gaff barred. Water can be taken into the tanks up to 8 A. M.

N. B.—The tug Edward Luckenback, which has been chartered as a general utility boat, will accompany the squadron. When she takes the Sylvia's place at the finish of a race she will be distinguished by the same signals as those directed for the Sylvia. Members wishing to proceed on her from port to port will notify the superintendent of the club, who will be on board. On Aug. 3 she will leave N. Y. Y. C. station No. 2 for Glen Cove at 9 A. M.

Glen Cove, Aug. 3.—The Commodore offers a cup for schooners and a cup for single-masted vessels and yawls. This event will be open to yachts belonging to the club, in cruising trim; and it will not be restricted to yachts intending to make the cruise. Special prizes—The Commodore also offers a cup for 30-footers owned by members of the club, two or more to start, and a cup for second, if four or more start.

The start will be off Glen Cove at such time in the afternoon as the meeting on the flagship shall decide. The finish will be off Huntington Harbor.

STARTING SIGNALS.

No. 1. Preparatory.—A gun will be fired and the blue peter hoisted.

No. 2. Start for 30-footers (one-gun start.)—Ten minutes later a second gun will be fired and the blue peter lowered.

No. 3. Start for single-masted vessels and yawls.—Five minutes later a third gun will be fired and a red ball hoisted.

No. 4 Start for schooners (handicap time for single-masted vessels, etc.).—Five minutes later a fourth gun will be fired and a second red ball hoisted.

No. 5. Handicap time for schooners.—Five minutes later a fifth gun will be fired and both balls will drop.

COURSES.

No. 1. Letter C.—Start over a line between the committee boat and Matinicock Point Buoy, to and around a mark 10 miles E.N.E. from the point of starting, leaving it to port; thence 5 miles west to and around a mark, leaving it to port, and finish over a line between the committee boat and a stakeboat 1 mile west from Eaton's Point light, 21 miles.

No. 2. Letter D.—Start over a line between the committee boat and Matinicock Point Buoy, to and around a mark 1 mile north of Lloyd's Point Buoy, leaving it to port; to and around a mark 1¾ miles E. by S. from Great Captain's Island light, leaving it to port, and finish over a line between the committee boat and a stakeboat 1 mile west from Eaton's Point light, 21 miles.

No. 3. Letter F.—Start over a line between the committee boat and Matinicock Point Booy, to and around a mark 1 mile S. by W. from bell buoy on Green's Ledge, Norwalk Islands, leaving it to port; return 5 miles over the same course, to and around a mark, leaving it to port, and finish over a line between the committee boat and a stakeboat 1 mile west from Eaton's Point light, 21 miles.

N. B.—The marks will be floats displaying red flag with white stripe. The stakeboat will display a large club signal.

Newport, Aug. 7.—For schooners, a $1,000 cup. For single-masted vessels and yawls, a $500 cup; offered by Capt. Ogden Goelet, N. Y. Y. C., and open to yachts belonging to the club that have not hauled out to clean since the commencement of the cruise. Capt. Goelet reserves the privilege of inviting foreign yachts that may be in American waters to enter the race.

Course.—The course will be triangular, 10 miles to a leg, from Brenton's Reef Lightship.

Start.—Half-past ten A. M., off Brenton's Reef Lightship. Entries, which must be in writing, will be received at the club house, New York, up to 10 P. M., Aug. 2, and on board the Sylvia up to 8 A. M., Aug. 7.

There will be the customary runs from port to port in cruising trim.

Entries.—Crossing the line will be regarded as an entry, unless otherwise directed.

Prizes.—In each class (including mixed class, Rule II.) there will be a prize for first if two or more start, and a prize for second if four or more start.

Special Prizes.—The vice-commodore offers a cup for the schooner winning the greatest number of runs, all schooners sailing as one class. The rear-commodore offers a cup for single-masted vessels and yawls upon similar terms. The fleet captain will offer a cup for 30-footers owned by members of the club, to be sailed for at Newport during the cruise.

STARTING SIGNALS.

No. 1. Preparatory.—A gun will be fired and the blue peter hoisted.

No. 2. Start for single-masted vessels and yawls.—Ten minutes later a second gun will be fired, the blue peter lowered and a red ball hoisted.

No. 3. Start for schooners (handicap time for single-masted vessels, etc.)—Five minutes later a third gun will be fired and a second red ball hoisted.

No. 4. Handicap time for schooners.—Five minutes later a fifth gun will be fired and both balls will drop.

COURSES.

After the commodore has ordered the squadron under way, the committee will establish the start lines, which, like the finish lines, will be between the committee boat and the points indicated below.

Huntington Bay to New London.—From Eaton's Point Buoy to New London Light, leaving Cornfield Shoal L. S., and Bartlett's Reef L. S. to port; 64 miles.

Huntington Bay to Morris Cove.—From Eaton's Point Buoy to a mark displaying red flag with white stripe, one mile south from Luddington Rock; 28 miles.

Morris Cove to New London.—From a mark displaying red flag with white stripe, off breakwater, to New London Light, leaving Bartlett's Reef Lightship on port hand; 40 miles.

New London to Newport.—From Sarah's Ledge Buoy to Castle Hill Light, leaving Race Rock on port hand; 40 miles.

Newport to Vineyard Haven.—From Brenton's Reef Lightship to West Chop Buoy (red No. 2), leaving Vineyard Sound Lightship on port hand; 37 miles.

Vineyard Haven to New Bedford.—From West Chop Buoy to Clark's Point, through Quick's Holl; 21 miles.

New Bedford to Newport.—From Clark's Point Light to Brenton's Reef Lightship, leaving Hen and Chickens Lightship on starboard hand; 27 miles.

Vineyard Haven to Newport.—From West Chop Buoy to Brenton's Reef Lightship, leaving Vineyard Sound Lightship on starboard hand; 37 miles.

Owl and Gamecock Colors.—To be rowed for at such port as the commodore shall decide, under the management of the fleet captain. Entries: Gamecock, $10; Owl, $5; dinghies, $2; launches, $10. The club will add $5 an oar and $10 for launches.

Aug. 3.—Rendezvous and cups offered by the commodore: The Sam Sloan (Starin Transportation Lines) will leave N. Y. Y. C., Station No. 2 (foot of East Twenty-sixth street) at 10 A. M., and will make a landing at Glen Cove. She will touch at Glen Cove returning, and will reach Station No. 2 at about 7 P. M. Tickets (which can be obtained from the superintendent at the club house, and which will include lunch, exclusive of wines, etc.) for members and their friends, $2 each. Ladies tickets, $1.

Newport, Aug. 7.—The Goelet cups. The ocean going tug, E. L. Luckenback, will leave the foot of Long Wharf (Old Colony Dock) at 9:45 A. M. Members can obtain tickets, $2 each, including lunch, but exclusive of wines, etc., and also extra tickets at the same price from the superintendent at the New York club house, on or before Aug. 2; or from Captain F. P. Sands, N. Y. Y. C., Station No. 6, Newport, on or before the morning of the race.

S. Nicholson Kane,
Archibald Rogers,
Gouverneur Kortright,
Regatta Committee.

Steam in the Pilot Service.

The present year has witnessed a radical change in the pilot service of New York in the abandonment of the fleet of sailing vessels so long used and so famous, in favor of a smaller number of steam vessels. As conducted from the earliest days, in sailing vessels of fifty to eighty tons, the fleet has of late years included over twenty pilot boats owned by New York pilots and about ten by New Jersey pilots. Some dozen years back an attempt was made to substitute steam for sail, the large, sea-going tug Hercules being used by a party of pilots; but it met with violent opposition and was soon abandoned. This year, however, the experiment has been made by common consent, the entire fleet of over twenty schooners has been offered for sale, and a tug chartered to take their place. This temporary vessel will shortly be replaced by a new steam pilot boat specially designed by Mr. A. Cary Smith, the designer of Lasca, Iroquois, Ariel and the Sound steamers Peck and Lowell. The accompanying plans show the proposed vessel, the contracts for which have not yet been awarded. The dimensions are: over all 155ft., l.w.l. 141ft., beam 28ft., draft 14ft. She will be built of steel and fitted with powerful engines. The design is specially planned for the hard service off the coast in all weathers, to make a fast and eminently seaworthy vessel.

The Halifax River Y. C.

The Halifax River Y.C., of Daytona, east coast of Florida, was organized in the winter of 1896, and has a club house now building on the beautiful Halifax, Daytona. The club started with forty members. The club consists mostly of Northerners who spend the winter by the Halifax, escaping the rigor of the Northern winter climate. V. Vuillaume, the commodore, is one of the old Jersey City Y. C. members who has been located for some fifteen years on the Halifax in the orange culture.

The following yachts are enrolled in the club: Sultana, 18ft., Carl Knapp, Port Orange; Tritan, 17ft., C. Ruell, Chicago; Omia, 18ft., J. H. Dimon, Brooklyn; Ah-Ah, 18ft., C. Merrill, Maine; Wautag, 19ft., M. Edsell, Brooklyn; Belle, 18ft., Jerome Maley, Daytona; Long Nose, 22ft., W. Brom, Port Orange; Arrow, 16ft., W. Readsley, Connecticut; Winkle, 16, Robert Maley, Daytona; Weasel, 16ft., R. Stan, Wisconsin; Unknown, 18ft., Charles Frossard, Port Orange; Spray, 20ft., John F. Mumm, Brooklyn.

The club has sailed two races, February and March, course 5 miles to windward and return, each won by Sultana.

Larchmont Race Week, 1896.

As told last week, the first annual race week of the Larchmont Y. C. opened on July 18 with the postponed annual regatta of July 4, continuing as follows:

SECOND DAY.

Monday, July 20.

The programme for Monday included a special race for schooners in racing trim, in one class; a special race for schooners in cruising trim, one class; the third series race for 34ft. and 30ft. special classes; a special race for the 21ft. class, and a race for the 15ft. class. Of the schooners, Colonia, Emerald and Amorita sailed in the racing division, and Ramona, Atlantic and Elsemarie as cruisers. There was a fresh S.W. breeze, with a little rain at times, the conditions making a lively and exciting race. The usual club triangles were sailed, the start being made at 11:30. The first round was timed:

Colonia	1 08 55	Carolina	1 32 53
Emerald	1 12 46	Raccoon	1 32 59
Amorita	1 20 08	Mai	1 33 10
Acushla	1 26 35	Departure	1 33 24
Dragoon	1 26 47	Musme	1 36 20
Ramona	1 28 33	Argonaut	1 36 38
Elsemarie	1 31 05	Atlantic	1 38 46

The 21-footers and 15-footers were not timed. In the 30ft. class both Mai and Carolina were disabled while holding leading places and compelled to withdraw. Departure sailed with a reefed mainsail and scored her first victory in the class, coming in first. The full times were:

SCHOONERS—IN RACING TRIM.

	Start.	Finish.	Elapsed.	Corrected.
Colonia	11 35 32	2 38 31	3 02 59	3 02 59
Emerald	11 26 23	2 46 04	3 09 41	3 07 58
Amorita	11 36 33	2 57 53	3 21 20	3 08 16

SCHOONERS—IN CRUISING TRIM.

Elsemarie	11 37 25	3 15 34	3 38 09	3 38 09
Ramona	11 38 00	3 10 58	3 32 58	3 32 58
Atlantic	11 38 00	3 29 12	3 51 12	3 39 56

SPECIAL 34FT. CLASS.

Dragoon	11 44 52	3 06 33	3 21 41	. . .
Acushla	11 45 49	3 06 05	3 20 16	. . .

SPECIAL 30FT. CLASS—START 11:51.

Musme	. . .	3 13 27	3 22 27	. . .
Departure	. . .	3 12 42	3 21 42	. . .
Argonaut	. . .	3 21 13	3 30 13	. . .
Raccoon	. . .	3 12 52	3 21 52	. . .
Mai	. . .	Disabled.		
Carolina	. . .	Not timed.		

15FT. CLASS—START 11:56.

Paprika	. . .	1 57 41	2 01 41	. . .
Hope	. . .	2 15 57	2 19 57	. . .
Yola	. . .	Not timed.		

21FT. CLASS.

Houri	11 44 53	1 40 08	1 55 15	. . .
Celia	11 44 12	1 41 01	1 56 48	. . .
Vaquero	11 45 15	1 42 58	1 57 43	. . .

THIRD DAY.

Tuesday, July 21.

The programme for Tuesday was a varied one, giving the racing men a day of rest and more or less boisterous amusement about the harbor; it included a four-oared gig race for the Hen and Chickens Colors, presented by Com. Gillig; pair-oared gig race, for Dauntless Colors, presented by H. B. Seeley; dinghy race, for Execution Colors, presented by H. B. Seeley; race for naphtha launches exceeding 21ft. l.w.l.; race for naphtha launches 21ft. l.w.l and under; race for the Eastward and Westward challenge cup; tub races and water sports, and an illumination and ball in the evening.

Fortunately the day was pleasant, as many ladies were among the spectators. The first race, for naphtha launches, was won by Republic in one class and Sachem in the other. The Hen and Chickens Colors were won by Ramona's gig. Crusader's pair-oared gig won the Dauntless Colors and Amorita's dinghy won the Execution Colors. The rest of the day was devoted to general water sports, swimming races, water baseball, etc., and in the evening the club house and grounds were illuminated and a ball was given.

FOURTH DAY.

Wednesday, July 22.

Wednesday was a day of calms and drifting, with rain and mist in the morning. Emerald did not start, so that the schooner class was reduced to Colonia and Amorita, an ill-matched pair in size. The programme included open races for all classes and fourth series races for the 34ft. and 30ft. classes. The racing throughout was fluky and inconclusive. The times were:

SCHOONERS—SPECIAL—CLASS A.

	Start.	Finish.	Elapsed.	Corrected.
Viator	12 08 00	3 30 04	3 22 04	3 22 04
Sachem	12 08 00	5 11 22	5 03 22	4 58 22
Ramona	12 08 00	6 15 33	6 07 33	6 07 33

Once around the course, 10¾ nautical miles. Viator wins by 1h. 36m. 18s.

SCHOONERS—CLASS B.

Colonia	12 06 07	6 45 10	6 39 03	6 39 03
Amorita	12 06 11	6 49 30	6 43 19	6 33 57

Twice around the course, 21½ nautical miles.

CUTTERS—CLASS 4.

Wasp	12 13 52	7 07 46	6 53 54	6 53 54
Carmita	12 13 46	Did not finish.		

Twice around the course, 21½ nautical miles.

CUTTERS—CLASS 5.

Uvira	12 16 00	Did not finish.
Choctaw	12 16 00	Did not finish.

CUTTERS—CLASS 6.

Norota	12 16 00	Did not finish.

CUTTERS—CLASS 7.

Infanta	12 16 00	5 01 45	4 45 45	4 41 21

The Wintringham 30-footer Argonaut won her first race.

FIFTH DAY.

Thursday, July 23.

Wednesday night brought a change of weather, the rain and dampness disappeared before a fresh N.W. breeze, making fine racing weather. None of the larger boats came to the line, however, for one of the best days of the season. The course for the larger yachts was the Parsonage Point and Red Springs triangle, sailed twice, 21½ miles. The start was made at 11:35, all but the 51-footers being reefed, many carrying two tucks. Apart from the regular classes, Uvira and Choctaw sailed a private match. The first incident of the day was the knocking down of Acushla before the start, her cockpit filling, the accident delaying her some three minutes. The first leg was a free reach, the second a reach and the third to windward. Disasters were many: Presto broke her tiller, Raccoon sprung the jaws of her gaff and tore a small hole in the sail, which later on, when on the wind, split in two; Mai parted her thwart halyards; Acushla split her jib and Yola capsized. The first round was timed:

Volsung	12 49 08	Choctaw	1 26 22
Lizzie V	12 53 04	Dragoon	1 36 56
Oconee	12 53 39	Acushla	1 40 47
Ethel	1 00 20	Musme	1 48 24
Loyalty	1 00 42	Mai	1 49 57
Dosoris	1 02 01	Carolina	1 50 55
Uvira	1 21 16	Raccoon	1 57 40
Awa	1 24 34	Departure	1 57 56
Paprika	1 25 13		

The final times were:

CUTTERS—CABIN TRUNKS—CLASS 5.

	Start	Finish	Elapsed.	Corrected.

Choctaw	11 36 44	3 18 48	3 42 04	3 36 04

Course, 21½ miles.

SIXTH DAY.

Friday, July 24.

The schooners were ready again on Friday morning, though there was but a light easterly breeze. This, however, increased during the progress of the race until the finish was made in a strong breeze and nasty sea. The new schooner Quisetta, whose début in these races had been looked for with much interest, only reached Larchmont, in tow of a tug, on Friday morning, being about three months late in completion. The start was made at 12:05 for the schooners, Emerald being a couple of minutes late. The first leg was to windward, to the markboat out in the Sound, with a freshening breeze. The end of the first round was timed:

Norota	1 59 21	Dragoon	2 02 56
Colonia	2 00 13	Amorita	2 04 23
Acushla	2 00 50	Raccoon	2 05 24
Mai	2 02 00	Departure	2 06 44
Musme	2 02 05	Carolina	2 07 10
Emerald	2 02 53		

The second round was sailed in a strong breeze from N.E. and a nasty sea. The times were:

SCHOONERS—ALL IN ONE CLASS.

	Start.	Finish.	Elapsed.	Corrected.
Colonia	12 07 57	3 25 48	3 17 51	3 17 51
Emerald	12 08 00	3 31 06	3 23 06	3 21 23
Amorita	12 08 00	3 37 30	3 29 30	3 16 26

Course, 30 miles.

Yola	Not timed.		

Course, 11 miles.

SEVENTH DAY.

Saturday, July 25.

The last day of the race week was by far the best in the matter o weather, the wind being strong from N.W., making a rattling race The only drawback was the absence of yachts, the fleet, though a comparatively large one, being broken up into pairs and trios, only one out of fifteen classes having more than three starters. Ramona and Elsemarie were put together, with a handicap of 5m. in favor of the latter. Wasp allowed Norota an arbitrary handicap of 20m. Uvira allowed Liris 8m. The new schooner Quisetta was under way, but did not start. The only new boat was the 20-footer Eos, designed by Chas. Olmstead for P. F. Dodge and sailed by F. B. Jones, winning easily in her class. The start was made at 11:35, Colonia going over promptly, while Emerald was handicapped. The schooners carried working topsails, but the smaller craft had one and two reefs in. All but the 15-footers sailed the Parsonage Point and Red Springs triangle. The yachts traveled at a high speed through the first two rounds, but the wind fell on the last round. Amorita had no competitor and gave up, while Norota also withdrew, having no chance beside Wasp. The times were:

SCHOONERS—SPECIAL—CLASS A.

	Start.	Finish.	Elapsed.	Corrected.
Ramona	11 58 27	5 10 45	5 12 18	5 57 18
Elsemarie	11 59 01	4 57 23	4 58 22	4 58 22

Course, 3²¼ miles.

Course, 10½ miles.

The week ended with a grand display of fireworks in the evening, accompanied by music by the Seventh Regiment band. The success of the experiment insures its continuance in future years.

The Yacht Racing Union.

The Yacht Racing Union of Long Island Sound comes in for some complimentary remarks from the *Yachtsman*, as follows:

The Yacht Racing Union of Long Island Sound bids fair to teach its British prototype some useful lessons. To begin with, the Y. R. U. of L. I. S. has a much more impressive name than the Yacht Racing Association of the Cumbraes and the adjacent islands of Great Britain and Ireland. But, as we all know, there is nothing in a name and so we must let this point pass.

One of the lessons already taught by the New York organization to British yachtsmen is, that to be thoroughly useful such an association must be formed of club representatives exclusively, and that only such clubs as seek to benefit by the rules of the organization should be entitled to send representatives. In the case of the Y. R. U. of L. I. S., each club sends a representative for every hundred or fraction of hundred of its members, and there is a restriction that no bloated club may send more than five representatives to the union—all of whom (so far as may be practicable) are to be chosen from the race or regatta committee of each club. The powers of the union are merely advisory, and no club is bound by its action unless it likes. This sounds modest, but modesty is often seen in great men and great organizations, though, indeed, our Y. R. A. is a conspicuous example of a body whose influence is not to be altogether attributed to this quality. The Y. R. U. has a council of seven (selected from club representatives, with the proviso that no club shall have more than one of its representatives on the council) who manage the affairs of the union. But here come some weak points, borrowed from our Y. R. A.: There is only one general meeting of the union each year, and the council of seven have the power to fill any vacancies occurring in its ranks between these annual gatherings.

The foregoing will suffice to show that the infant organization of Long Island Sound has been launched with the sole purpose of promoting yacht racing—just as our Y. R. A. was originally instituted—and that the grotesque nature of the British Association's constitution has been to a great extent avoided. It would be well for the American Union to take fuller warning from our British Association's faults, and for our own Y. R. A. to consider the constitution of the Y. R. U. We have contended for many years that any central yacht racing committee, to be authoritative, must of necessity be composed of club representatives alone, and that instead of giving its council such great powers as seem to be thought right, a little more use might be made of the penny post, with a view to ascertaining the views of each constituent club on vital questions. This we suggest now only for the benefit of the American Union—our own Y. R. A. is, we fear, beyond redemption. It will go struggling on and on in its own simple way, always oblivious of its professed object, and ever content to allow its council to remain a brilliant example of a mutual admiration society.

In the matter of a long and complicated title, the Y. R. U. is quite as badly handicapped as all similar organizations; no one has yet succeeded in coining a short and sufficiently definite name. We hope that in time the Y. R. U. of Long Island Sound will give place to a similar but much larger national body that, being the only one in America, will need no superfluous initials to distinguish it from others. We agree with all that the *Yachtsman* says in praise of the young association, it has been most ably managed thus far, and many of the weak points of the British Y. R. A. have been avoided. At the same time it is only fair to say that it has not yet been put to the test of time, as has the other. The task of properly balancing the opposing forces in such a body, so as to preserve a certain amount of power and authority in the hands of a governing body that is not too large for efficient work, and at the same time to keep this body in close touch with the wishes of the association at large, is a most difficult one. In the case of the British Y. R. A. the governing body is at once weak and strong, it possesses and exercises certain autocratic powers and at the same time has not the power to enforce its decrees in the face of objection from any club. There are still many hard problems ahead of the Y. R. U., but with a continuance of the same good sense and moderation that has thus far marked its work, no serious trouble is to be feared from them.

Canoeing.

AMERICAN CANOE ASSOCIATION, 1895.

Commodore, Wm. R. Huntington, Rome, N. Y.

New York C. C.

In its present location the New York C. C. offers to the owners of small craft such facilities as they have long needed about New York, and which they can obtain through no yacht club. The club's station at Bensonhurst fronts on Gravesend Bay and is close to the waters of the Upper and Lower Bays and the Shrewsbury, the sailing and cruising ground of many New York yachtsmen. The club has now a large house with every facility for the comfort of its members, among whom are owners not only of canoes, but of all types of small craft and yachts. The dues are far less than those of the regular yacht clubs. The following notice has recently been sent out:

To the Members of the New York C. C.:

Arrangements have been completed providing comfortable lodgings at the club house for members who wish to remain over night or for a few days. The regular rooms have all been taken for the season, but there may be a few vacancies during August, when some of the regular lodgers are away on vacations. Cot or bed, over night, 50 cents. Dinner, 50 cents; breakfast, 35 cents; lunch, 35 cents.

A locker room in the club house has been fitted up, opening off the bathroom, for the convenience of those members who ride wheels and do not live in the house. There are twenty lockers in all. Price, $1 for the season. Send application to chairman of house committee, Mr. I. A. Brownell.

The locker room in the boat house on the pier has been put in order and lockers built, and as there is a great demand for the limited number thus far constructed, an early application will be necessary to secure one. Price, $2 for the season. Send application to Capt. H. H. Smythe.

A fresh-water shower bath is now being constructed in the boat house, and it will be ready in a few days. The small boat house on shore is now available to members as a repair and storage shop and varnishing room.

The W. C. A. Meet.

[*Special to Forest and Stream.*]

W. C. A. Camp, Dodge's Point, Mullet Lake, Mich., July 21.—The W C. A. has here the best place for a canoe meet it ever had and will probably never find a better anywhere in the United States, but it is a shame that a location so ideal and hospitality so princely as that tendered by the Dodge's Point Club of Cheboygan are enjoyed by less than a dozen men out of the entire Association. Not an officer of the Association is here except the chairman of the regatta committee, and if the W. C. A. were utterly dead there could not be a worse fact apparent. The names of those present are O. A. Woodruff and W. H. Crawford, Ruckawa C. C., and W. H. Kemper, of Dayton, O.; N. B. Cook, Kenwood C C., Chicago; W. H. Yardley, St. Paul, Minn.; T. S Gates, Columbus, O.; S. B. Mettler, Harry Chafin and W. W. Todd, Whoo-Whoo C. C., Jackson, Mich.; C. H. Gould and W. C. Noack, Detroit C. C.; Geo L. Alexander, Grayling, Mich. Of course with so meager a representation the meet is not really a meet at all, and not even a quorum can be obtained for the election of officers. This is simply deplorable, for the members never in their history had so perfect a chance for a delightful time. Even the confirmed Ballastites call this point superior to anything they have ever seen. Wind and water are fine for sailing and swimming, the scenery is lovely and the arrangements the best ever known. The local gentlemen and their families are pleasant and hospitable to a degree and not one element is lacking for a successful meet except attendance.

The regatta is, of course, hardly entitled to the name. The Longworth cup race will not be sailed, for there is not a Class C canoe in camp—here on the finest cruising grounds the association ever saw.

The Class B race, for the Gardner cup, was won by W. W. Todd, of Detroit, in two straight heats, untimed; T. S. Gates, second. Five entries.

The Class A races, for the W. C. A. trophy, had five entries in the first heat. The wind was hard and squally. Canoe Wood broke her steering gear and was over four times in spite of all her veteran skipper, O. A. Woodruff, could do. The heat was won by that old sailor and Association standby, N. B. Cook, of Chicago, in canoe Carrier Pigeon, which he has decked in with washboards until he has near a bath-tub cockpit. He has also on a bulb keel and 100lbs. of ballast. In this heat Mr. Todd, of Detroit, was second.

The second heat of the trophy race was a pretty affair between Carrier Pigeon and Wood, the only entries. Wood was never passed from the first buoy and was admirably handled; the entire race sailed without a tack on any leg, and the buoys shaved by near jibes time after time. The wind was light and steady. The boats kept well together, Wood ahead, however, by some distance at the finish.

Paddling, for the Minnehaha cup (a new and handsome trophy offered by Minnehaha Club, of Detroit), called out but two entries: Noack, of Detroit, and Yardley, of St. Paul, the former winning by one-third the course.

Paddling, class 1, was also won by Noack; Yardley second.

Paddling, class 2, was won by Yardley; S. B. Mettler, of Jackson, Mich., second. No other races have been run. No cruising has yet been done. Residents have offered many invitations, and those present are delighted with Mullet Lake as a place for a meet, and simply pity those who did not come.

W. C. A. Camp, Dodge's Point, Mullet Lake, Wis., July 22.—No more lovely summer country lies out of doors than that of the upper portion of the Michigan south peninsula, and no part of that favored section surpasses in point of general attractions the beautiful body of water which bears the unpoetic name of Mullet Lake. The grounds committee of the W. C. A., who visited this region last September, were well content as soon as they found this spot, and their decision would receive the indorsement of the entire membership of the W. C. A were it here. The Madison and Oshkosh and Milwaukee men, if any of them were present, would admit that their local attractions could claim small degree in comparison with those of this northern country. Even the most devout admirers of Ballast Island stick their flags to Mullet Lake. Mr. Woodruff, who still ruffles up at word of disparagement of Ballast or reference to the diary of the Ballast Island Summer Girl, frankly says that he does not think Mullet can be surpassed in the entire country as a site for a canoe meet. The water is very bright and pleasant, and free from the stagnant quality of inland lakes, such as those of Madison or Winnebago, and yet it has been found quite warm enough for comfortable swimming, which is not the case at the Snow Islands, above here, where it was once thought the camp might be located. The winds have proven steady, yet not violent, and a racing or a cruising breeze has marked almost every day. The weather has been ideal, the nights cool and the days temperate. There are no mosquitoes at all at this season, even on the trout creeks of the region, and indeed there can hardly be anything unpleasant urged against the locality, which has so many things to recommend it. A canoe meet here can be really a meeting of canoeists and not a summer resort party. There is something to see and something to do and somewhere to go. The flavor of the forest and the waters is about it all, and the small craft do not seem purposeless and merely accessory, but essential and primary. Not that this country is rude or that it is inaccessible. The tenderest canoeist can reach Cheboygan, 6 miles away, by palatial steamer or by palace car, and thence ship by steamer, carriage or bicycle direct to Dodge's Point, the superb and commanding site of of the W. C. A. camp. From Chicago or Milwaukee boat can be taken for Mackinaw City, or if one cares to vary his journey he can land at Traverse City and thus work north to this point, passing a dozen summer places of great degree of popularity. He can come via the Grand Rapids & Indiana line to Petoskey or take the same line a little further to Oden-Oden. The latter is perhaps the best way to go in to Mullet Lake, though not the most direct. It takes one over half a day of steamer travel (by small boats built for the route) over the lovely and circuitous route known as the Inland Route, from Oden-Oden through Crooked Lake, Crooked River, Burt Lake, Indian River and Mullet Lake. The first boat stops for dinner at Topinabe, at the upper end of Mullet Lake, and the concluding eight miles to Dodge's Point is made by the second little steamer, which runs down over the Cheboygan end of the line. Thus one may navigate delightfully fifty miles of the waters which cut off the upper cap of the Michigan south peninsula. He will be all the time in the great pine wilderness. He will be at the shores of such trout and grayling streams as the Maple, the Pigeon, the Sturgeon, the Carp, and even at the camp will have a trout stream (Nigger Creek) within five miles of him, where the trout average over 10in. and go up to 2lbs., as the writer hereof knows. In all this country the irredeemable wildness of the northern pine wilderness preserves it from the civilized hand of man. It is left for the canoeist and the angler and the traveler. This is the place to go, and not to a land of hotels, peanut stands and beer gardens. Mullet Lake is not the only place in the region for a canoe camp. There may be sites almost equally good near Traverse City, and it would seem desirable that one or two more sites should be tried. By that time it can be determined whether canoeing is really going to be anything in the West. If it is, it can surely be best developed by going into a canoeing country in canoeing fashion. If it is not, then the lovers of Ballast should have their wishes received with absolute respect, for they would indeed be almost the majority and the minority also, after the fashion of that ancient mariner who was the cook and the captain bold and the crew of the captain's gig. But even did those regulars, the old guard of the W. C. A., who have really held it together, have offered to them another year the choice between Ballast, Winnebago, Madison, Mullet Lake, and one or two other points of this region, it is no certain thing that they would ever again vote for Ballast, for the latter spot has no one point of superiority to this point, except a small one in regard to accessibility. From Cleveland, Dayton or Chicago it can be reached in a little less time, though at very much less expense. All those points, and also Detroit, Milwaukee, Madison, Davenport and St. Paul, can without trouble get into this region and for all but two or three of those cities the country is much more central and accessible than Ballast. After seeing several meets of the W. C. A. I would not think it best to go again to Madison or Oshkosh; but I think the Western boys should be willing to go as far east as this and the Ballast boys be willing to go as far north. It is asking too much of Wisconsin or Illinois or Minnesota men to go to Ballast, which has almost nothing of further interest to offer, and whose sole claim is that of accessibility, and of accessibility for only a few. Forest and Stream has fought the Ballast idea and begs to take upon itself some credit for the fact of a Northern meet. In this it has acted upon the notion that the sport was to grow. If it is to stand still Forest and Stream has no further word to say against Ballast. The members of the W. C. A. will be the ones to decide the policy and the belief of the association. Perhaps their course will largely determine the future of the W. C. A. Viewed from the standpoint of the present meet, the future is not bright; yet this may be no criterion at all, for the country is passing through an era of unprecedentedly depressed business feeling, and other sports are just now springing up. Those of the W. C. A. who stayed away from the twelfth annual meet perhaps did so for business reasons largely. Perhaps they will come out another year. There seems no definite reason that the end of the world has come for canoeing in the West, and indeed it is the amateur sports of the rod, the gun, the paddle, which find their source and support in the deepest and most constant impulses of human nature, and which are therefore most likely to survive, even at the expense of others more mushroom and expansive. If the sport does flourish in the West, it will be the firm belief of Forest and Stream that this journal has pointed to its representative body a way better than the old way. Of all the meets of the W. C. A. which Forest and Stream has reported it is prouder of this Mullet Lake meet than of any or all the others, small and meager though it be. It is a step in the right direction. There is a song of a gentleman who never cared to wander from his own fireside, but history does not state that he was a canoeist. Forest and Stream has a warm affection for the W. C. A., and all Forest and Stream has cared to do is to show that there is more than one place on this wide earth. Mullet Lake is not the only place, either. There is a volume of wisdom in the slang expression, "There are others." Just at present, in the enjoyment of the many pleasant features of this place, it seems difficult to realize this. Next year let us hope that all the boys may meet at some such place as this, and if it be Mullet Lake again there will be no cause for tears.

The Dodge's Point Club, of Cheboygan, under whose auspices the meet is held here, is a country club of forty-four members, owning one of the handsomest bits of property in the State. They have only recently purchased their property, upon which they erected a handsome three-story club house last August, the latter known as the Waldemere. Here the W. C. A. men have been privileged to take their meals, and have sat at the best table they have known in at least six years or probably at all. The site of the club house is fine, crowning a gentle eminence running out into the long sheet of water called Mullet Lake. There is a grand open esplanade which might serve as parade ground for a four-company post of cavalry, all this hedged and backed by a lovely native forest. Prime bits and views offer at every hand. A railroad station and post office and telegraph office are within ¼ mile, and there is a telephone to Cheboygan, which is distant only six miles, over a good and pleasant road. So the wildness is well tempered for any shorn lambs who fear the tooth of the actual wilderness. The circular driveway of the club house is well lined with large house tents, where many of the club members live at times for several weeks, and one member, Mr. C. E. Mould, has erected a woods cottage of handsome design and equipment. The Whoo-Whoo Club, of Jackson, Mich., also own property and have up a large house tent. These temporary homes all front upon an incomparable beach, and lie among thick virgin forest. In front of the club house is a grand lawn, fronted by a large boat house and fine dock. A canoe dock, 96ft. long, adds the only thing needed to make this an ideal place for the W. C. A. meet. But good as it all is naturally, the half is not told until one mentions the generous hospitality and warm-hearted courtesy of the club members, of which enough can really not be said. They have done everything possible to make the visit of the W. C. A. a pleasant one, and not the least of the privileges of the meet will be rated the new acquaintances and friendships formed. It was a great disappointment to the members of the Dodge's Point Club, as well as to the W. C. A., that so few were present at the meet. There was talk here of an attendance of 100 to 150, and that a scant dozen of men should represent the total seems too bad. The club put up the new boat house in preparation for this meet, and when the canoeists stepped from the dock the first thing to meet their eyes was the banner bearing the legend "Welcome, W. C. A." And the W. C. A. was made welcome and royally entertained. The ladies of the club have left no effort unmade by way of hospitality, and the gentlemen have been equally careful and kind. The canoe camp made such return for this as is possible in the unique canoe methods. There were camp-fires, well attended and enjoyable, fireworks, music, sailing and paddling parties, Welsh rabbit parties, etc., the festivities sometimes prolonged into the small hours. Mr. E. O. Penny, manager of the Waldemere, and Mrs. Jos. McKie, stewardess, added more than a little to the comfort of the boys. In such entertainment as the W. C. A. could offer the big tent of that standard and reliable club, the Ruckawa C. C., of Dayton, O., was foremost, indeed the only one. Messrs. Crawford and Woodruff, of the Ruckawa, represented camp life as it should be done by a dozen clubs at this meet, and the Association should thank them for sustaining its credit so thoroughly. When the W. C. A. meet comes to be held without the Ruckawa Club and the presence of W. H. Crawford and O. A. Woodruff it will be time for it to adjourn *sine die*. Mr. Yardley, solus, made a good aid.

Mrs. Crawford was present a few days, coming down from the Crawford cottage at the Snow Islands. Many young ladies from Cheboygan and other points visited friends at the club house or cottages and incidentally learned of the fascinations of a canoe camp, adding much to the fascinations of the same in the manly hearts of the sailor men there present. Those who did not come will never know what they missed. The gentlemen from St. Paul, Detroit and other points are practically certain to wish to return to a place where every prospect pleases, and only man is unbeautiful.

The W. C. A. trophy tables at the Waldemere made a pretty display, including the three old-time cups, the Gardner, Trophy and Longworth cups, and the new and handsome cup offered by the Minnehaha Club, of Detroit, for paddling competition. There was a fine barometer offered for race No. 1 by Chase S. Osborn, State game warden, and for the other races a choice assortment of kodaks, pennants, fishing rods, compasses, knives, belts, golf hose, mugs, flasks, etc., etc., among which one must not forget the quaint sampler design offered by Mrs. Turrill, mother of John Turrill, who for once in his life overlooked a good thing and stayed away.

CONCLUSION OF THE RACES.

It will be noted that the present meet of the W. C. A. can hardly be called an official one, and it will have been observed that the races were not timed; therefore it would be bootless to go into much description of them. Three races remain to be mentioned after those already reported. The hurry-scurry was won by Noack, of Detroit Boat Club; Yardley, of St. Paul, second. The third heat of the trophy was sailed very late in the evening of Monday with a light breeze. The racing programme as usual lagged and was tardy in getting off, but it was really undesirable to sail a race so nearly in the dark that the winning boat could barely be distinguished as she crossed the line. Two only entered for this, Carrier Pigeon and Wood. Mr. Cook had relieved the former of some ballast, and though the wind was light, he got a puff that laid him over at the third buoy, though he righted and came in all right. Mr. Woodruff sailed as usual a brainy race, and wasted no time or space at the buoys. Mr. Woodruff won by a big lead, Mr. Cook not giving him so hard a bout as before. Mr. Woodruff having thus taken the last two heats won the trophy. The second prize was a handsome kodak. The passenger race had work to fill, though there were only four entries, Carrier Pigeon, Wood, Psyche and Isabel. These having at length taken in crews, got away under almost a dead calm late Tuesday morning. This was to the liking of Carrier Pigeon, N. B. Cook skipper, who won with ease. Woodruff was a good second, and Isabel, Grandpa Gates skipper, an exceedingly bad third, for which he won the "Ruckawa cup," a vast tin loving cup, larger than a wash boiler, and decorated with the legend, "The Ruckawa Cup, July, 1896." Psyche, Todd skipper, withdrew on the first leg, seeing no sailing ahead in so faint a breeze. Race untimed. The consolation race, sailing and paddling, had two entries, T. S. Gates and W. H. Yardley, the former winning handsomely. This closed the regatta.

Mr. Alexander, attorney for the Michigan Central R. R., extended an invitation to the angling members of the W. C. A. to fish on the preserve of the Fontinalis Club, near Vanderbilt, in the Sturgeon River, of which a few members availed themselves for Wednesday. One of the best angling countries of the West lies immediately about Mullet Lake. As has been earlier stated, the attractions for cruising are not surpassed by any region of the West. Perhaps enough has been added by way of local description to certify all canoeing readers that Mullet Lake this year had every requisite for a gloriously successful canoe meet, except the canoeists. Wherever the meet may fall for next year, it is earnestly to be hoped that the faithful ones of this year will again be on hand, and that their ranks will be filled, as they should always be, with numbers from Wisconsin, Illinois, Michigan, Minnesota, Iowa and Ohio. No more gentlemanly sport exists, and none more attractive to spectators. No pastime is better or more restful or more healthful than that of a week in camp. The experience of this year, while it may seem to indicate disaster in the ranks of the W. C. A., may very well be the forerunner of a better day, for the added knowledge of localities may lead to a reconciliation of the different beliefs in regard to the proper spot for holding the annual meets.

It was a matter of regret that Mr. Stearns, the able secretary who got out the best year book the Association ever printed, was detained away by the recent death of his brother. Com. Pennewell was also absent. No quorum being possible for election of officers, the present officers will hold over.

E. Hough.

1206 Boyce Building, Chicago.

Canoeing in England.

There is no disguising the fact that the outlook for canoeing in this country is most discouraging; while there are many canoe clubs in fairly prosperous financial condition, with good club houses and large fleets of canoes, there is no life or activity in either cruising or racing. Not only have no new canoes been built this year, but there have thus far been no races, and the division meets have failed to bring out even a fair attendance in spite of earnest efforts on the part of its officers. We hope, from what we hear, that the Grindstone meet will show a marked revival of interest, though it should be but temporary; and that the discouraging state of affairs reported at the W. C. A. meet may not be duplicated. The condition of the sport in England is discussed as follows in the *Field* of July 18; the cable has already reported briefly that Mr. Howard has won the challenge cup:

The canoe sailing races of the year, which have taken place this week at Burnham-on-Crouch, in Essex, may usefully be compared with the racing in years gone by, so that we may form a fairly practical view as to whether the sport is being run on the best lines. Unfortunately, at the time these notes go into type only two days' racing out of five has been accomplished, and the most important event, the £50 challenge cup race, sailed on the 17th, of course, cannot be reported in the *Field* until next Saturday, the 25th.

We say above the "races of the year," because in these races, as competitors, we find representative men picked from the leading clubs round the coast. Of course, there are some well-known sailors who, in recent days and for many years, have shown in the front rank of canoe sailing, and who are not competing this year at Burnham; but it is morally certain that, should the cup be won by a challenging club, the old blood of the Royal C. C. would be at once stirred up, and the best men again put themselves forward to retrieve the cup next season.

To take the cup at the present time, though it can only be accomplished by a first-rate man and boat, is by no means the same thing as holding the cup when the club and clubs have been roused by an actual win away from the old senior club. The common cry of "wolf" has been so repeated in the last few years, with no real appearance of the fabulous animal, that members in early spring, hearing vague rumors that "Stars and Stripes" will come and take the cup, treat the matter on the basis that "we have had two seasons of that and no race," and so they let things drift or they do not put themselves to expense and inconvenience to take up what has been, and may be, a fool's errand, owing to the foreign challenger at the last moment crying off from competition. This, we say, is all changed when a foreigner or another English club holds *pro tem.* the challenge cup; then it must be won back.

This time there is no international competition, the American canoeman, Mr. Howard, being merely representative of an English club, the British Canoe Association. It would, from a racing point of view, have been more satisfactory had some American club backed Mr. Howard's challenge; but no matter now, the title "International" is sure to be clapped on to the race by those across the water, even if it does not rise to "Championship of the World."

Turning now to Burnham-on-Crouch and the doings of canoemen there, the water is all that any one could wish as a racing place, but the conveniences for "tuning up," for fitting, rigging and hauling out, are a long way from even fairly comfortable; the getting there is long and stupid, the forty-one miles take close on two hours by train and the trains are few. Owing to the tidal nature of the place, those canoes which do not take the shore near about high water have to be moored away out in the stream among the yachts, consequently there is none of the old-time inspection of each other's gear and novelties, none of that concentration of men, canoes and ideas as there used to be on the club raft at Hendon Lake, or even at Bourne End on the Thames. Burnham as at present fitted is a splendid place for small yachts, or even for canoe-yawls, but by no means is it perfection for canoes, except just as to the sailing course.

Among some of the competing craft there is much room for improvement as to condition of both rig, fitting and state of hull. One would have reasonably expected that, for a week's important racing, including the challenge cup, each canoe would be spick and span with new gear and new sails, and the latest finish in varnish, etc. We were sorry, however, to see mildewed old sails all out of shape on one, tanned sails on another; rotten played out rope running gear, and a want of varnish or paint. Well, it is not the way racing yachts are kept, nor is it the way racing canoes used to be kept, and it is decidedly the way to have mishaps during a race; but no commiseration should be extended to slovenly-fitted craft for such mishaps.

Of canoe model there is really nothing novel. The American canoe Yankee is simply a racing machine, 16ft.×30in., of shallow V section, the lightest possible displacement. She is balanced entirely and only by her man hiking out on a long sliding plank seat, but for which he could not sail her. She differs from others to some extent in her rig, which is of main and mizzen form, the mizzen, however, being nearly as large in area as the mainsail. She reaches along extremely fast, but is comparatively poor at windward work. However, by the time this is published we shall know just how much she is better or worse than the English canoes. The Pruces is practically a Sharpie model, or, more correctly speaking, just about on the lines of the old-fashioned duck-punts for sailing on to fowl with a big gun in winter time. She is rigged with bafter main and mizzen; she also is 16ft.×30in., and fitted with a light centerplate and a long, sliding plank seat. The Dragon is a more shapely form, but yet quite the machine type; she was designed by Mr. Linton Hope two years ago for Mr. de Quincey, and now owned by and is being sailed in the very able hands of Mr. Lawson. She carries her allowance of sail all in one balance lug, and she has a bulb-ballasted centerplate and a very small "bucket well," and a long sliding seat. Serpent is of semi-Sharpie type, but is fitted with a heavy bulb-ballasted centerplate, and is of the narrow or 30in. racing class. In the canoe-yawl class there are two of racing breed, semi-Sharpies, shallow things, nice enough to sail for an hour or so in a race, but not comfortable enough nor roomy enough for long cruising or much rough-water work. They are the Rogue and Meryl. Slaney is a bold and somewhat tubby hulled canoe-yawl, fitted with bulb-fin and sloop rig, a craft which should be able to stand a considerable dusting, and would travel fast in a strong breeze if put to it nicely.

Of new boats, the Vanessa and Solitaire are built to the new cruising canoe definition, and as they are but turning up at this time, it were better to see further performances before judging their merits.

Rifle Range and Gallery.

New Jersey State Rifle Association.

The sixth annual meeting of the New Jersey State Rifle Association will be held at Sea Girt, N. J., Aug. 31 to Sept. 5. The matches will be:

No. 1. Members' match, 7 shots at 200yds.
No. 2. The Kuser match, 7 shots at 500yds.
No. 3. All-comers' military match. 7 shots at 200 and 300yds.
No. 4. The Schuetzen match, 7 shots at 200yds. on standard American target.
No. 5. Hayes medal match, 7 shots at 500 and 600yds.
No. 6. The Perrine memorial match, 7 shots at 200 and 300yds.
No. 7. The Gen. E. P. Meany match, 10 shots at 500 and 600yds.
No. 8. Department of Rifle Practice match, open only to inspectors of rifle practice of U. S. Army and National Guard, 25 shots at 500 and 600yds.
No. 9. New Jersey Rifle Association trophy match, 7 shots at 500 and 600yds.
No. 10. President's match for the military championship of the United States of America; divided into two stages; first stage, 10 shots at 200 and 300yds.; second stage, 10 shots at 500 and 600yds.
No. 11. Trenton Interstate Fair match, 7 shots at 200 and 300yds.
No. 12. The Sumner match, 10 shots at 200 and 300yds.
No. 13. The carbine team match, open to teams of five from any regiment, squadron, or troop of cavalry of the U. S. Army and National Guard; 7 shots at 200 and 500yds.
No. 14. Company team match, open to teams of five from any company of the National Guard of any State or the U. S. Army; 10 shots at 200 and 500yds.
No. 15. Military revolver match, scores 6 shots each, one minute time limit.
No. 16. Revolver match, 5 shots at 30yds. on American standard target (reduced).
No. 17. Pool matches, to be shot in groups of ten, all distances, 10 shots.
No. 18. Prizes for individual skirmish.
No. 19. Prizes for the best aggregate score; prizes: First, to the competitor making highest total; second, to the competitor making second highest total; third, to the competitor making third highest total.
No. 20. Regimental team match (interstate), open to teams of six from the regimental battalion and separate company organizations of the National Guard and Naval Reserve and the U. S Army or Navy; 10 shots at 200 and 500yds., and two skirmish runs of 20 shots each.
No. 21. New Jersey National Guard match, open to teams of six from each regiment of National Guard or Naval Reserves of New Jersey. Condious the same as in No. 20.
No. 22. The Columbia trophy match, open to teams of six from the National Guard of New Jersey; 7 shots at 200, 300 and 500yds, and two skirmish runs of 20 shots each.

Bullseye targets will be open all the time during the meeting; 50 per cent. of the receipts will be divided among the holders of bullseye targets.

MATCHES OF THE NATIONAL RIFLE ASSOCIATION.

No. 1. Wimbledon cup match, open to everybody; 30 shots at 1,000yds.; prize, the Wimbledon cup, value $500.
No. 2. Hilton trophy match, open to teams of 12 from U. S. Army and National Guard organizations, and any other country; prizes, the Hilton trophy, valued at $3,000, and a medal to each member of team.
No. 3. Interstate military match, open to teams of 12 from U. S. Army and National Guard organizations; prizes, bronze "Soldier of Marathon," value $350, and a medal to each member of the winner's team.

The Forest and Stream is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Presque Isle Rifle Club.

July 25.—Regular practice shoot. Conditions: 200yds., off-hand, standard American target, 7-ring, black. Scores:

J G Germann	10	8	7	8	7	9	7	10	9	7—82

America Ahead at Bisley.

Mr. Walter Winans has again carried off the honors at the Bisley revolver competitions, using for the military series a .45cal. Smith & Wesson, with his patent military front sight, and U. M. C. smokeless powder ammunition; and for the "Any," or target revolver series, a .44cal. Russian model Smith & Wesson, with U. M. C. gallery ammunition. He won first in the military series: sliding target, disappearing target, rapid firing, and advancing target matches, and second in the limited entry and the 50yd. target matches. In the "Any" series he won first on sliding target, on disappearing target, in rapid firing, on 50yd. target, advancing, and the military and "Any" revolver aggregates; with second in the "Any" limited entry.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Aug. 4-6.—Chicago, Ill.—Tournament of the Du Pont Smokeless Powder Company. E. S. Rice, Mgr.

Aug. 4, 5.—Auburn, N. Y.—The Auburn Gun Club will hold a blue-rock tournament, using the "Maugatrap" for the first time in New York State; programs will be out in a few days. Mr. Paul North will have entire charge of the shoot.

Aug. 5.—Sandusky, Ohio.—Annual tournament of the Sandusky Gun Club; $100 added money and $100 in merchandise prizes.

Aug. 5-6.—Greenville, Texas.—North Texas Gun Club League. Two days. Targets. Will L. Sargent, Sec'y.

Aug. 11.—Albany, N. Y.—Tournament of the West End Gun Club. Bluerock traps and targets. Horace B. Derby, Sec'y.

Aug. 11-14.—Detroit, Mich.—Jack Parker's sixth annual international tournament. Fuller details later.

Aug 12-13.—Duluth, Minn.—Central Gun Club, fourth annual tournament; excellent programme.

Aug. 26-27.—Burlington, Vt.—Tournament of the Interstate Association, under the auspices of the Lake Side Rod and Gun Club.

Aug. 26-27.—Kalamazoo, Mich.—Tournament of the Celery City Gun Club, in connection with Michigan Trap-Shooters' League.

Aug. 31-Sept. 2.—St. Paul, Minn.—Annual tournament of the St. Paul Gun Club, at State Fair Grounds. B. F. Schurmeier, Sec'y.

Sept. 2-4.—Buffalo, N. Y.—Tournament at Audubon Park. Targets and live birds. B. F. Smith, Manager.

Sept. 7.—Marion, N. J.—Sixth annual tournament of the Endeavor Gun Club. Targets. J. A. Creveling, Sec'y.

Sept. 8-10.—Galt, Ont.—First annual tournament of the Ontario Rod and Gun Club; $800 to $1,000 added money.

Sept. 10.—West Lebanon, N. H.—All-day shoot of the West Lebanon Gun Club.

Sept. 15-16.—Kansas City, Mo.—Third annual tournament of the Schmelzer Arms Company; $750 added money.

Sept. 29.-Oct. 2.—Harrisburg, Pa.—Tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Harrisburg Shooting Association. First three days, targets; fourth day, live birds.

Oct. 6-8.—Indianapolis, Ind.—Autumn tournament of the Limited Gun Club. Open to amateurs only. Two days, targets; one day, pigeons and sparrows. Royal Robinson, Sec'y.

Oct. 7-9.—Newburgh, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association; targets and live birds added money announced later.

1897.

March 23-25.—New York City.—The Interstate Association's fifth annual Grand American Handicap at live birds.

June (third week).—Cleveland, O.—Fourth annual tournament of the Chamberlin Cartridge and Target Company.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

The Thomaston Gun Club was organized last week with the following officers: President, Chas. W. Sherwood; Vice-President, W. R. Taylor, Jr.; Secretary and Treasurer, Chas. B. Onderdonk; Field Captain, R C. Warren. The club will hold shoots every other Saturday afternoon on the grounds at Thomaston, L. I., commencing Aug. 1. Any person wishing to receive notice of open sweepstake days will send their names to the secretary.

The second annual tournament of the Monroe Gun Club will be held at Monroe, La., Aug. 19, 20, 21 and 22 The two first days' shooting will be at inanimate targets, ten events each day, 20 birds to an event; $15 will be added per event by the club. The two last days will be given up to the shooting of 1,000 live pigeons; entrance per 10-bird match $7.50, all surplus to be added. A. S. A. rules to govern, except black powder and 10-gauge guns will be barred. Open to the world; no handicaps, five moneys. For further information, address the secretary, Harry Wm. Stevenson.

Next week should witness the gathering together of a large crowd of live-bird shooters at Watson's Park, Chicago, Ill. The tournament of the Du Pont Smokeless Powder Company, under the management of Mr. E. S. Rice, Messrs. Du Pont de Nemours's Western agent, will be the attraction. The contest for the Du Pont Smokeless Powder handicap trophy, now held by Fred Gilbert, is the main event, with a team contest a close second. Live birds only will be used during the tournament.

On Aug. 4-5 the Auburn, N. Y., Gun Club will hold a target tournament with Paul North and his magautrap as the special features. As there has been no target-shooting in New York State to amount to much since the State shoot at Buffalo the first week in June, with the sole exception of the Syracuse shoot, the Auburn Gun Club should have a good shoot. All who attend will have a thoroughly pleasant time; Messrs. George Corning, Jr., Charlie Tuttle, Carr, Brigden, etc., will certainly see to that part of the programme being satisfactorily carried out.

Jack Parker has, as usual, gotten out an interesting programme for his shoot at Detroit, Aug. 11-14. A special point of interest is the fact that all purses will be divided on the Rose system. There will be five moneys with ratio points of 8, 5, 3, 2 and 1.

Phil Daly, Jr., will no doubt see to it that there will be plenty of shooting this fall at Elkwood Park. Leander Campbell and his blackbirds will be heard of at that popular shooting resort many times before the winter's frosts and snow drive the blackbirds from their roosts n the reed beds of New Jersey. Mr. Daly won the main event at the Hollywood grounds on Saturday last, July 25, by scoring his 15 live birds without a skip.

The New Jersey Amateur Trap-Shooters' League held its second shoot on the grounds of the Boiling Springs Gun Club, Rutherford, N. J., on July 25. All five clubs forming this new organization were represented by teams, the winners in the team race being the Bergen County Gun Club, who beat the Endeavors, of Jersey City, by the narrow margin of 2 breaks.

The next tournament of the Interstate Association will be held at Burlington, Vt., on Aug. 26-27. The tournament will be held under the auspices of the Lake Side Rod and Gun Club of that city. There are several good gun clubs in Vermont, and these clubs can boast of many excellent shots. The gun clubs of Montreal and others located along the border can also be looked upon as likely to furnish some competitors at this tournament. Those who attend will be able to take away with them a pointer or two on running tournaments. The Interstate Association's mission is to instruct, and during its career, both this season and in past years, it has done much to boom trap-shooting in all parts of this country.

The Rose system is making new friends every day. A simple explanation of its workings, like that which we gave in our issue of July 11 and which we repeat in this issue, does much to help on the work of familiarizing shooters with its capabilities. The Rose system is a good thing and should be pushed along.

The boys have had lots to say during the past week in regard to the coming championship race between Heikes and Gilbert for the World's Championship cup, presented by the American E. C. Powder Co., emblematic of the championship of the world at inanimate targets. As some of the boys say, "There's going to be a tight race between the Bald Eagle of the Ohio Valley and The Houlihan of Spirit Lake!"

B. F. Smith, of Audubon Park, Buffalo, N. Y., announces a three-days' tournament at live birds and targets for Sept. 2-4. "Buffalo" Smith has good grounds at his command; they are easily reached by electric cars from the center of the city. With the support of the shooters of Buffalo city—and Smith certainly can reckon on that—the September shoot at Audubon Park ought to be a very pleasant affair.

We have received the following telegram from E. S. Rice, representative of the Du Pont Smokeless Powder Co., and manager of their tournament, to be held at Chicago, Aug. 4, 5 and 6: "Please announce to shooting public the refusal of Eastern and Southern associations to reduce rates to our tournament. Western and Southwestern roads promptly granted round trip for one and a third fare."

On the New Utrecht's Grounds.

Brooklyn, N. Y., July 18.—Capt. A. W. Money and A. A. Hegeman shot a match at 30 singles and 10 pairs to-day on the grounds of the New Utrecht Gun Club, on Dyker Meadow. The match was for the New Utrecht challenge plate, which Capt. Money won on Dec. 7, 1895, and has since held, defeating in turn Dr. Littlefield, Deacon and Hegeman. After the match a number of 10-target sweeps were shot. Scores:

Capt Money	11110111110111111011000101111111—23

July 25.—The regular weekly shoot of the New Utrecht Gun Club was held on Dyker Meadow to-day. In the club shoot Hegeman won the Class A medal with 21 kills, while Pool and O'Brien won Class B and Class C medals respectively, because they had nobody to shoot against. Adams and O'Brien shot a 15-target match which O'Brien won, 14 to 12. The sweeps were all at 10 targets; Nos. 1 and 2, known angles; No. 3, expert rules; No 4, 5 pairs; and No 6, reversed angles. Scores:

The Rose System.

It is with great pleasure that we note Jack Parker's intention of giving the Rose system of dividing purses a trial at his annual tournament in Detroit, Mich., Aug. 11-14. These annual affairs at Detroit are always very popular, chiefly on account of the personal friendship entertained by trap-shooters in general for the manager and promoter of the tournaments. The attendance at the Detroit gatherings is always satisfactory, so that there at least is an excellent chance for what may be termed a public trial of the system we think so highly of.

During the past year and a half we have repeatedly called attention to the many excellent features of this system, and it appears as if the trap-shooting public was at length beginning to awaken to the benefits likely to accrue to its favorite sport by a general adoption of this system. The fact that the system absolutely prevents the dropping for place and the pooling of issues incident to the old system is in itself a great thing. Its best feature, however, is that it is an equitable system, paying a man strictly according to his deserts.

In a comparatively recent issue of a certain sportsmen's paper, a correspondent, writing on the subject of handicapping the expert, closes his remarks with the following: "Use the Rose system instead of class shooting * * *." The above shows that even as yet some enthusiasts who are in favor of the Rose system do not thoroughly grasp what the system really is. The Rose system was devised specially to preserve *class shooting*, and to do away with the injustices that are necessarily a part of the division of the purses when the old system is in use.

In our issue of July 11 we gave a very full explanation of the workings of this system, and also gave an example showing how very simple it is when one comes down to practical work in a cashier's office at a tournament. With the idea of thoroughly familiarizing shooters with the system, we again give the explanation of it that appears in the programmes issued by the Interstate Association, together with the example quoted above:

(1) Decide upon the number of moneys into which the purse is to be divided, and then find the ratio into which it will be divided from the following table:

If into
2 moneys—at the ratio of 5 to 3.
3 moneys—at the ratio of 5 and 3 to 2.
4 moneys—at the ratio of 5, 3 and 2 to 1.
5 moneys—at the ratio of 8, 5, 3 and 2 to 1.
6 moneys—at the ratio of 13, 8, 5, 3 and 2 to 1.

(2) For the sake of example in working out this system, let us take a 15-target event, $1.50 entrance, 4 moneys, 24 entries, $10 added to the purses, targets at 3 cents each. This will give us a net purse of $35.20, targets taking $10.80 out of the total purse. Suppose when the event has been shot there are three straight scores: one 14, four 13s and one 12. Under the old percentage system of 40, 30, 20 and 10 per cent. class shooting, it is manifest that the single 14 would have the best of the four men with straight scores, while the man with 12 would also be better off financially than either of the four men who broke one more target than he did. Under the Rose system this temptation to drop for place is done away with. Proof of this is given below:

The ratio points are 5, 3 and 2 to 1. Therefore,

No. of ties for 1st money 3×5=15
No. of ties for 2d money 1×3= 3
No. of ties for 3d money 4×2= 8
No. of ties for 4th money 1×1= 1

27)$35.20($1.30
27 per ratio point.

82
81

10 cents over.

Therefore,

each man with 15 receives $1.30×5=$6.50
each man with 14 receives 1.30×3= 3.90
each man with 13 receives 1.30×2= 2.60
each man with 12 receives 1.30×1= 1.30

Under the system usually adopted at tournaments, the three men in for first money would have received $4.69 each; the man with 14 alone taking second money, $10.56; the four men in for third money would have drawn down $1.76 each, but the shooter who had the luck to drop one more target would have received fourth money, $3. 52, or just double their share.

It may seem from the above that the system is a complicated one, and would involve a great deal of work in the cashier's department. To disabuse one of this idea, we give an example of an event, the third event on the second day of the Iowa State tournament, working out the example by a system learned from the cashier at the Binghamton, N. Y., tournament. It will be noticed that he rules each page off into five columns; in the first he enters the names of the shooters: in the second he places their respective scores. He then ascertains the place obtained by each man and puts in the third column the number of points due to him. At the bottom of this column he figures up the total number of points, dividing the net purse by that sum. In the fourth column he places the amount due each man, checks it off as soon as the amount is paid, or the cash equivalent placed in the pay envelope. The fifth column is used for figuring the net purse and for finding the value of each point.

Event No. 3. 15 targets. Entrance $1.50. Added money ——. No. of entries, 27. Price of targets, 2 cents. No. of moneys, 4.

	Score.	Points.	Amount due.

Deduct for targets at 2cts. each = 8.1
Net purse ..... =$32.4

48* per point.

3
33
24 c over.

* Divide net purse by sum of the points.

Under the older system each man who broke 15 would have received $2.16; each 14 would have drawn down $4.86, while the 13s would have received exactly the same amount as the straights—$2.16; each 12 would have been paid 54 cents.

It is a simple matter for anybody to take a copy of Forest and Stream and work out any number of similar examples. It looks to us as if the duties of a cashier's office were lightened rather than rendered more arduous by the introduction of the Rose system.

Cincinnati.—*Editor Forest and Stream:* I cannot recall the time when I have read anything else with so much interest as your editorial explanation of the Rose system, and I am sure I never read anything of more profit concerning the equity of trap-shooting. All combinations of winnings, after the ratios are once determined, adjust themselves with such admirable, mathematical nicety and justness that the only strange feature of the whole matter is that it was not adopted sooner.

Forest and Stream is deserving of great credit for advocating this system and so forcibly presenting its merits. It is fair to the amateur and expert alike, all those who are expert enough to enter into consideration in arranging the winnings and honors of the competition. If a shooter has no skill he is entitled to no consideration in the awards.

The entire absence of any uniformity in the working of the older system, and the constantly recurring circumstance of a shooter winning more money by breaking less or killing less birds than some other competitor, should have condemned that system long ago. It had nothing to commend it and much to condemn it. Owing to the uncertainty of its working and its entire inefficiency in evoking even and honest competition, it was unworthy the name of a system. Nothing is a system which has not settled procedure in it which will in an orderly manner end in certain desired results. The older system (let us call it that for the want of a better term) so constantly miscarried and offered such numberless opportunities for a man to reap greater reward by shooting, not to do his utmost, but to govern his score by the opportunities which the defects of the system presented, that it is not strange that "dropping for place" became almost a recognized feature of trap-shooting. It was a natural product of the system. Shooters have been blamed for taking advantage of the system, when the system honestly followed was an insult to their intelligence and a defeat of skill, for the better a man shot so that he was in the best class, the less he received, and it was not an infrequent happening that the expert did not receive enough to pay for his ammunition. Yet in the face of the fact that a faulty system was forced on the public, one which rarely ever produced fair results, it was a difficult matter to induce the trial of other systems, so firmly do habit and tradition enslave the masses. Considering the constant unfairness of the old system and the premium it offered on "dropping for place," it is a most extraordinary feature of the trap-shooting world that so many kept on shooting straight under a system which so palpably worked an injustice to them. In the many arguments against the "dropper" and denunciations of him, I never noted any denunciation of a dishonest system, for if it was dishonest for the "dropper" to shoot for the place which resulted in the most profit and not shoot at his best, it was equally dishonest to force a shooter to compete under a system which beat him out of his just rewards. The competition professed to be founded on a principle of skill, and the skillful shooter found in the result that his skill was quite likely to accomplish his defeat. The older system militated against skill. Not infrequently did the men in second place win more than the men in first, and not infrequently did the third men win more than either, as has been most clearly shown in your admirable article, to which I referred in the beginning of this letter.

Thus, with a system (the Rose system) which works with absolute mathematical precision, with its incentive to every man to shoot at his best with the full knowledge that he will be rewarded according to his skill, and with the incidental elimination of all the abuses and odium which were inseparable under the old system, there should not be any hesitation in deciding between the two systems. With the adoption of the Rose system, aside from its justness, there would be detached so much of stigma of the old system that the trap world would be purified and start on a future whose great prosperity and good fellowship no one can forecast.

Push It.

Walsrode Gun Club.

Guilford, N. Y., July 20.—Inclosed find a sample of the clay-smashing work at practice of the Walsrode Gun Club, of Guilford, N. Y.:

The Interstate at Portland.

PORTLAND, Me., July 23.—The trip to Portland, Me., to attend the fifth tournament of the Interstate Association, given July 22 and 23, under the auspices of the Portland Gun Club, was one of the most delightful I ever made. We went by water from New York via the Maine Steamship Co.'s steamer Cottage City. At Pier 38, East River, the starting point, I met Elmer E. Shaner, manager of the Interstate Association, and Noel E. Money, of the American E. C. Powder Co., *en route* to Portland by the same line. The boat was crowded, and though we had hired four berths two days before, we found we were unable to secure them. However, Elmer's persuasive tongue and the almighty dollar combined got us one of the steward's staterooms, and so we were able to pity the poor beggars who passed the nights on the floor and chairs of the saloon. We had such a jolly, cool trip, the sea air made us all very hungry and very sleepy. I don't believe old U. M. C. Thomas would have ever waked up at all if he had been with us. It did us all good, and Noel Money, who had come on purpose to get rid of malaria, said he had not felt so well for months.

We left our dock just above Brooklyn Bridge at 5 P. M., and steamed up against the tide, which was running like a mill race, past the Navy Yard and Blackwell's Island, through Hell Gate, sitting on deck until we came to Fort Schuyler and darkness began to close in. And then to bed with three blankets, and a sleepiness nothing could disturb.

Next day was deliciously cool, with hardly a ripple on the water—though an ocean roll or two made Elmer Shaner rather green about the gills.

The only place we stopped at was Cottage City, Mass., and after a most delightful trip we passed Portland Head, and steaming up the magnificent harbor, which is one of the finest in the world, arrived at our dock exactly on time—6 P. M. Mr. Darton, Mr. Adams and some other members of the gun club met us, and after supper took us driving behind a pair of good horses, and showed us Deering Park and the fine old city of Portland.

Everyone you meet here talks of game, shooting, fishing and camping out, so that you soon realize what a game State you are in, and soon we have invitations to shoot moose, for the fall to hunt foxes, or to go after woodcock and grouse, that are in any quantities according to all accounts; while every other man presses you to come with him for a week after bass, trout or landlocked salmon. On Tuesday Elmer had the traps and everything all ready, and practice shooting was carried on all the afternoon. The grounds were in first-rate condition and everything promised well for a first-class tournament.

First Day, July 22.

Wednesday morning, the first day of the tournament, was gloriously fine, and the opening event had 40 entries. Event No. 2 showed 42 entries. The Rose system of dividing purses was in force at this tournament, and was voted by every one to be a great success. True, there were no big winners, but the number of shooters who participated in the division of the purses and left the tournament satisfied with their winnings and that they had had a fair show for their "white alley" has seldom been equaled at any tournament. Justus von Lengerke, Noel Money, Louis Schortemeier (Schorty) and many others were loud in their praise of this system. I firmly believe it is only a matter of time until the Rose system will be generally adopted at all tournaments.

The rule allowing any one to shoot for targets only was received with favor, although not many availed themselves of it.

Everything ran smoothly, as they always do, with Elmer E. Shaner at the helm (we have become nautical), and every one agreed it was one of the best shoots they had ever attended.

The trade was represented by S. A. Tucker and O. R. Dickey, of Parker Bros.; U. M. C. Thomas, of Union Metallic Cartridge Co.; Justus von Lengerke, of Von Lengerke & Detmold; Noel E. Money, of the American E. C. Powder Co.; H. P. Collins, of Hazard Powder Co., and W. L. Collville and J. Fanning, of Gold Dust Powder Co.

The local shooters turned out in force and there was a good delegation from Massachusetts. In the evening the club entertained the visitors and took them to Riverton and Deering Parks and over to the islands in the bay.

The first day, Noel E. Money, using E. C. powder and smokeless shells; Schorty, E. C. powder and smokeless shells, and Fanning, Gold Dust powder and Acme shells, tied for first average with 90 per cent. The second day, O. R. Dickey, E. C. powder and Rapid shells, won first average with 90.9 per cent. High average for both days was won by Dickey, with 89 5 per cent. Second high average for both days was won by Money with 88 per cent., and third high average by Von Lengerke with 87 7 per cent. Scores:

The following men shot in two events only: Fisher broke 6 in No. 9 and 15 in No. 10, Trunday 13 in No. 3 and 7 in No. 6, Merrill 8 in No. 9 and 16 in No. 10.

Following are the scores of the men who shot in one event only: Chisholm 8 in No. 9, Hall 3 in No. 1, Jones 8 in No. 5, Peterson 9 in No. 10.

NOTES.

Ask Noel Money how he can shoot wooden targets.

Elmer Shaner had his hands full with "the awkward squad."

Portland is a great place for drug stores, cold nights, sportsmen and good fellows.

Justus von Lengerke talked ruffed grouse and Noel Money fox hunting the whole time; it made V. L.'s mouth water to hear that most anywhere within half an hour's ride of the city you could flush 50 to 100 grouse in a day. GOTHAM.

Arkansas State Sportsmen's Association.

HOT SPRINGS, Ark., July 23.—The sixth annual tournament of the Arkansas State Sportsmen's Association, although the attendance was rather light, was in every sense a decided success. The Association really derived more benefit from this meeting than some of its predecessors, which can alone be attributed to the manner of dividing the purses. The system used was the equitable one, and this gave universal satisfaction and was conducive of much good; for when the tournament was over few were out of pocket, and, of course, there were no big winners, yet those who shot well won enough to pay expenses and a few dollars over.

In a number of events everybody got in for a place and each received more than their entrance money. This, of course, is only possible where the added money exceeds the cost of the birds, which it did in every event here, there being $10 added to all of them but the trophy contests. As stated above, the equitable system is an excellent one to use where money is added; but when nothing is added and the birds are charged for, it would be very unsatisfactory, as no matter how well one shot, it would be a difficult matter to keep even, to say nothing of the cost of shells, hotel bill and traveling expenses. Nor do I think it would prove practical at large tournaments.

The tournament was held at Whittington Park, a convenient place and easy of access, though with a very trying background—a nice, big mountain covered with trees. The ground inside the park, which is of white clay, also added to the difficulties of the shooter. The glare of the sun on this had the same dazzling effect on the eyes as though it shone on snow. This handicap, and the fact that all of the shooters were somewhat rusty from lack of practice, accounts for the very low averages made.

Trap-shooting in this State has reached its very lowest ebb, and it is safe to assert that the effect of this tournament will be very rejuvenating to the sport. At Pine Bluff trap-shooting has been in a dormant state for three years, but recently it has taken on new life and is now flourishing again. The weekly shoots of this club are always well attended; therefore the association acted very discreetly when it chose Pine Bluff as the place for holding the next annual tournament.

Right here I wish to assure the shooters of the country that we will be doing business again next year, and that, too, on a somewhat larger scale.

There were present, aside from the local shooters: John M. Pemberton, farmer Dave T. Alexander and W. R. Duley, Little Rock; J. T. Lloyd, W. A. Leach and J. B. Spears, Pine Bluff; Wallace Miller, Austin, Texas, and Herbert Taylor, St. Louis, Mo., representing the Du Pont Powder Co.

First Day, July 21.

The first day was an extremely sultry one, and the bright glare of the sun was also very trying on the shooter. The principal event of the day was the individual championship contest. This was won by G. W. Hughes on the fine score of 47 out of 50 He and Lloyd also tied on the high average with a percentage of 85 2. The others follow in the order of merit. There was $90 added to the purses, $10 to all but the championship event:

Second Day, July 22.

The scores on the second day were not much of an improvement over those of the previous day. The weather was again very hot, though a heavy shower about noon cooled the atmosphere some. The team race for the Keeley cup created some little interest, and this was won by the local club on a very ordinary score. J. T. Lloyd led in the sweepstake events with an average of 90.3. There was $10 added to each of these events:

Events:	1	2	3	4	5	6	7			
Targets:	*20*	*20*	*20*	*15*	*15*	*20*	*25*	Shot at.	Broke.	Av.

Collings	111110111001101—11		

NOTES.

J. T. Lloyd shot in something like his old-time form, especially on the last day, when he reached 90 per cent., he being the only shooter to accomplish this feat.

G. W. Hughes, "Old Man Hughes," as he is familiarly called, in addition to winning the championship, also captured the $5 for the longest run, 35 straight was the extent of it.

John J. Sumpter, Jr. (the only Arkansas traveler), was unfortunately taken very ill on the morning of the first day of the shoot, and this accounts for his taking part in only a few of the opening events. His genial countenance was decidedly missed. John is a good jovial fellow and his presence always adds much zest to a shoot.

W. R. Duley was shooting two kinds of cornshellers, a Winchester and a Burgess, neither, however, seemed to be the proper thing. Lack of practice, Duley, like a number of others, is what your indifferent showing can be attributed to.

Herbert Taylor, the Du Pont's representative, as usual, made a host of friends for his company and himself. His shooting too has improved wonderfully. When I first met him at the Atchison shoot he was making about 60 per cent., while here his average was a trifle over 80 per cent.

At the annual meeting of the association, Pine Bluff was chosen as the place for holding the next annual meeting and tournament, and the following officers were elected to serve for the ensuing year: J. T. Lloyd, Pine Bluff, President; John M. Pemberton, Little Rock, Vice-President; Paul R. Litzke, Little Rock, Secretary, and C. N. Rix, Hot Springs, Treasurer. PAUL R. LITZKE.

Shooting at Wopsononock.

ALTOONA, Pa., July 25.—The second all-day shoot of the Altoona Rod and Gun Club for this season was held at Wopsononock to-day. The meeting did not have as large an attendance of shooting men as the club had looked for, but as the day was fine and the large crowd of ladies and gentlemen who visit this beautiful resort on every Saturday during the summer months gathered at the shooting grounds and watched the boys "break 'em" throughout the entire programme, the occasion was rendered most pleasant. Eleven events were decided, and, had it not been for a shabby trick played on the club management by the dealer who furnishes the shells to the shooters, at least half a dozen more events would have been pulled off. At 4 o'clock everybody was out of shells, necessitating a close of the sport at the time in the day when the conditions are the most favorable for target shooting on these grounds.

This condition of affairs, however, will not occur again, as the club intends in the near future to handle its own shells, and thus avoid a recurrence of the predicament in which they were placed to-day.

The greatest interest was taken in the medal contest, a 25-bird affair, for the club's gold and silver medals and a small entrance fee from each contestant. Booky and Clover tied for the gold medal in this race with 24 breaks out of 25, and in the shoot off at 10 birds in the next event they each scored 10 straight, making a total of 34 out of 35 shot at, when on account of the scarcity of shells they agreed to decide it at the next club shoot in August. Houck, a member of the Huntingdon Gun Club, and also a member of the Altoona Club, won the silver medal with a score of 20 out of 25. Scores:

Dedham Defeats Hingham.

BOSTON, Mass., July 18.—The Dedham Sportsmen's Club held its regular weekly shoot to-day. There were 22 shooters present. The feature of the afternoon was a team race between the Dedham Gun Club and the Hingham Gun Club. Hingham was represented by Henderson, Allison, Howe, Waldo and Lincoln, while Smith, Cole, Gordon, Rapid and Herbert held up Dedham's end. The conditions were 20 targets per man, 10 at known and 10 at unknown angles. Dedham won, 83 to 76. The Dedham Gun Club will hold its first annual handicap tournament on Saturday, Aug. 8. Scores:

ROBT. SMITH.

Gilbert Accepts Heikes's Challenge.

OAKLAND, N. J., July 22.—*Editor Forest and Stream:* I inclose herewith copy of Mr. Fred Gilbert's acceptance of Mr. Heikes's challenge for the American E. C. cup and championship of the world at inanimate targets. Yours truly, THE AMERICAN E. C. POWDER CO., LTD.
(Albert W. Money).

CHICAGO, Ill., July 24.—*Noel E. Money, Secretary the American E. C. Powder Co., Ltd:* DEAR SIR—Your valued favor of the 15th inst, addressed to me at Spirit Lake is forwarded to me at this city, arriving in this morning's mail.

I note deposit of check in your hands in the sum of $50 by Mr. Rolla O. Heikes, of Dayton, O., together with challenge to me for the E. C. cup and the championship of the world at inanimate targets.

I am under obligation to you for copy of conditions governing holder of cup, and I am especially obliged to you for placing with these conditions no restriction upon me as to make of powder contestants shall use.

I cheerfully accept the challenge of Mr. Heikes, and will name Thursday, Aug. 20, 2 o'clock P. M., Watson's Park, Burnside, Ill., as grounds. Very respectfully yours, FRED GILBERT.

Jacksonville Gun Club.

JACKSONVILLE, Fla., July 24.—In all probability Jacksonville will soon be able to boast of an "up-to-date" gun club, and from the material now in sight there will be nothing in the State, or in sister States either, that can touch it. Some years ago Jacksonville had a club and some crack shots were developed, but after a while the interest waned and it was allowed to die out. Since then many improvements have been made in trap-shooting paraphernalia, which greatly add to the enjoyment, and it is the intention to organize a first-class club and to purchase all the modern improvements, which, in themselves, are sufficient to excite an interest in the hearts of all lovers of the gun.

One of our leading sportsmen, who is deeply interested in this new club, has generously offered to donate a handsome solid gold medal for the members to compete for. If the local sportsmen will but show the proper spirit in coming forward without being coaxed, it will cost the individual member but very little.

It is requested that all those interested either call on or drop a card to Dr. W. T. S. Vincent, 317 Main street, and they will be notified of place of first meeting and time set for election of officers and organization.

Brunswick Gun Club.

NEW BRUNSWICK, N. J., July 25.—Inclosed are the scores made this afternoon at the club's regular monthly shoot:

Stevens	11100011111111111111110111	21

HENRY H. STEVENS, Sec'y.

Cook County Trap-Shooters' League.

Oak Park, Ill.—The fourth contest of the Cook County Trap-Shooters' League was held on the grounds of the Cicero Gun Club. A light rain fell throughout the entire day and made it very disagreeable for the shooters; however, quite a number participated in the events, which were as follows:

Set traps No. 1, five traps, targets, sweepstakes, targets extra.

No. 1, 10 targets, known traps and angles, 50 cents entry, three moneys: S. Palmer 5, McDonald 2, Lowrey 4, Grubbs 7, Church 8, Adams 7, Von Platen 4, Williams 2.

No. 2, 15 targets, known traps, unknown angles, 75 cents entry, two moneys: McDonald 4, Lowrey 5, Williams 8, Von Platen 1, S. Palmer 7, Barnard 4.

No. 3, 10 targets, unknown traps and angles, entry 50 cents, three moneys: S. Palmer 3, Church 8, Barnard 2, Williams 2, A. Cheesman 6, Lowrey 7.

No. 4, same: Williams 7, Stannard 8, Liddy 7, Church 7, Adams 8, Grubbs 6.

No. 5, same: Stannard 7, Adams 9, Bingham 10, Gilbert 9, Hicks 8, Steck 10, Barto 9, W. D. Stannard 3, Head 7, Church 8, Shaw 6, Wright 7, Glover 6, S. Goodrich 8, Smith 10, Ruble 8, Webster 7, S. Palmer 7, Einfeldt 6, Wilcox 6, Grubbs 7, Liddy 6, W. Palmer 3.

No. 6, 15 targets, known traps, unknown angles, 75 cents entry, three moneys: Hicks 10, Adams 11, Stannard 12, Wright 9, Bingham 13, Barto 10, Gilbert 10, Church 14, Shaw 13, Murphy 4, Head 7, Johnson 5, Ruble 13, Goodrich 9, Glover 10, Smith 8, Wilcox 11, Steck 13, Grubbs 8, W. D. Stannard 11, Kuss 19, Cop 9, Patterson 9, Irwin 8.

No. 7, 20 targets, known traps, unknown angles, $1 entry, four moneys: Bingham 18, Ruble 12, Steck 12, Shaw 17, Wright 16, Hicks 18, Adams 17, Barto 14, Webber 11, Liddy 13, Church 13, Grubbs 12, Patterson 14, Kuss 14, Fehrman 16, Johnson 10, Murphy 5, Gilbert 16, Bowers 12, Goodrich 13, Glover 16, Wilcox 14, Stannard 17, W. Palmer 12, Spreyne 9, Lampheir 16, Carter 15, Wescott 14, Piltz 10, Dr. Carson 12.

No. 8, 15 targets, same, 75 cents entry, three moneys: H. F. Carson 9, Johnson 5, S. Palmer 8, Buck 8, Eich 12, Hart 8, Adams 8, Rexford 8, Antoine 8, Kuss 9.

No. 9, same: Einfeldt 9, Metcalf 3, Murphy 4, Liddy 10, R. B. Carson 0, Black 8, Petrie 5, Booth 8, Cooper 8, Cop 9, Good 2, Jones 7, Leech 8, Stiger 8, Dr. Carson 5, Levi 7, Von Platen 8, Wescott 7, Rexford 9.

No. 10, same: Young 13, Head 9, H. Carson 8, Webber 7, W. Palmer 8, Russell 5, Dr. Carson 8, Spreyne 8, Petrie 10, Johnson 7, Ruble 14, Fehrman 10, Adams 7, Kuss 13, Booth 10, Stiger 8, Von Lengerke 12, Matthews 3, Bingham 5, A. W. Adams 15, S. Palmer 6, Von Platen 6, Antoine 11.

No. 11, same: Young 9, Stiger 8, Murphy 9, Russell 8, Kettlestrings 11, Dr. Carson 10, Buck 9, Smith 5, A. W. Adams 11, Stiger 7, Sherman 2, Metcalf 9, Cooper 8, H. Carson 7, Adams 7, Fehrman 6, Goodrich 5, Dr. Wescott 11, York 3, Rexford 5, H. Carson 10, Booth 11, Wright 13, Bowers 5.

No. 12, same: Young 7, Booth 11, Murphy 9, W. D. Stannard 6, Rexford 10, Cooper 12, Russell 5, Stannard 11, Kuss 13, Goldsmith 5, Adams 10, Antoine 10.

No. 13, same: Wright 9, Steck 9, Goodrich 7, Booth 9, Murphy 5, Cooper 12, Ruble 12, Hicks 13, Young 12, Cop 11, Russell 8, Kettlestrings 11.

Set traps No. 2, five traps, targets for practice and the League contest. The following are scores of the League:

Withdrew.

The shoot off between the low men in each club for the keg of Du Pont powder resulted as follows:

Goodrich (Eureka)	11010	01010	01110
Piltz (Garfield)	01000		
Cop (Garfield)	10000		
Levi (Garden City)	00000		
Barnard (Cicero)	01101	11000	00110
Webber (Cicero)	01001		

On set No. 3, 5 traps, English sparrows were shot. Fred Gilbert, the Du Pont powder champion, here shot at his first sparrow, killing 33 out of 35.

Following are the sparrow events:

Event 1, 5 sparrows, 5 unknown traps, set 3yds. apart and 25yds. from the score, with a 25yd. boundary, $1.50 entry, 3 moneys: S. Palmer 3, Lowrey 5, Steck 3, Ruble 4, Williams 2, Barnard 1, Von Platen 1.

No. 2, 10 sparrows, $2 entry, 3 moneys: Parker 8, Goldsmith 7, Palmer 8, Rexford 4, Levi 2, Steiger 3.

No. 3, same: Palmer 7, Webster 6, Staples 9, Gilbert 10, Mathews 8, Kuss 8, Parker 6, Von Lengerke 9, Einfeldt 6, Bingham 10.

No. 4, 5 sparrows, $1.50 entry, 3 moneys: Gilbert 4, Bingham 5, Palmer 2, Shaw 3.

No. 5, same: Wescott 0, Liddy 5, Gilbert 5, Staples 3, Webster 5, Goodrich 4, Adams 3.

No. 6, same: Russell 2, Gilbert 5, Webster 3, Bingham 4, Palmer 4.

No. 7, same: Palmer 5, Webster 5, Einfeldt 3, Staples 5.

No. 8, same: Smith 1, Palmer 1, Einfeldt 3, Bissell 2, Webster 5.

No. 9, 10 sparrows, $2 entry, 3 moneys: Einfeldt 8, Stannard 5, Gilbert 8, Palmer 6, Webster 8, Hicks 5.

No. 10, same: Webster 10, Palmer 7, Steck 9, Goodrich 7, Wilcox 7, Hicks 9, Barto 7, Wright 10, Glover 2, Lowrey 8, Ruble 8.

As usual, the last shot was fired by starlight, and Tom Hicks was about the last one on the grounds.

Gordo.

Pennsylvania and Ohio Border League.

Greenville, Pa., July 18.—The fourth tournament of the Pennsylvania and Ohio Border Gun Club League was held at Greenville to-day, and was a decided success. Paul North's magautrap was used, and few if any birds were broken by this trap. The league shoot was shot from the five traps as heretofore, as it would have been unfair to have changed traps at this stage of the tournament. Scores:

At the Hollywood Traps.

Long Branch, N. J., July 25.—Phil Daly, Jr., won the Takanassee Cup to-day at the Hollywood grounds. The field was a small one, only eight entries being obtained. Among the number were A. L. Ivins, Bland Ballard, Leonard Finletter, E. H. Godschalk, etc. The conditions were: 15 live birds, $15 entrance, handicap rise. Daly, who shot from the 28yds. mark, killed all his birds. Ballard and Ivins, both of whom were at 30yds., and Godschalk (28yds.) tied for second place with 13 kills each. The scores were:

P Daly, Jr. (28)	222222212212221—15
Ballard (30)	223•22•22222222—13
Ivins (30)	222021•12222221—13
Godschalk (28)	2222120•1221221—13
Hooper (28)	02120•022122211—11
Branch (26)	1•2221021212100—11
Finletter (29)	02022•222222020—10
Wilson (27)	01•000 w

Proposed Syracuse Stock Company.

There is a well developed sentiment in Syracuse, and in fact elsewhere in central New York, in favor of the organization of an association to take up the work begun by the *Herald* when it fathered the recent shooting tournament held at the State Fair grounds. Local sportsmen are fully convinced that Syracuse can be made a sporting center, and that such an organization can be made self-sustaining if not profitable. Offers to take stock have been freely made to the late management, and in order that the matter may take form it is proposed that the gentlemen willing to take part in such a project write their views and state what stock they are willing to take, based on shares of $50 each, par value, the company to be stocked at $5,000 or $10,000, to be decided later on. Immediate action is necessary, as it is important that a date shall be claimed for the next meeting well in advance. Letters should be addressed to Arthur Jenkins, Chairman, *Herald* office, Syracuse. A preliminary meeting will be called shortly after Aug. 1.—*Syracuse Evening Herald.*

Pawtuxet Gun Club Wins.

Pawtuxet, R. I., July 18.—The second of a series of four matches between the Pawtuxet Gun Club and the Rhode Island Trap-Shooters' Association was shot here to-day, and resulted in a victory for Pawtuxet by the narrow margin of one bird. Each team has now won a match, but Rhode Island still leads by 6 targets, as the number of targets broken in the entire series, 500 targets, decides the winners. The scores:

Pawtuxet Gun Club.		R. I. Trap-Shooters' Association.

The Audubon Tournament.

Buffalo, N. Y., July 20.—Our arrangements for the shoot have been changed a little as to date; it will be from Sept. 2 to 5 inclusive—two days targets and two days live birds. The targets will be thrown from the celebrated magautraps. We have at present about $1,000 pledged in added money and guns, etc. Our programme has been divided into two classes—open events and amateur events—the latter open only to 75 per cent. and under shooters. The last day we will have a grand handicap at live birds, namely, the Audubon Park Handicap, for which we will give a very valuable trophy and a large guarantee.

B. F. Smith, Manager.

Lynchburg Gun Club.

Lynchburg, Va., July 21.—The regular weekly shoot of the Lynchburg Gun Club was held to-day and the following scores were made:

Events:	1	2	3	4	5	6	Events:	1	2	3	4	5	6

PUBLISHERS' DEPARTMENT.

A New Line of Pullman Drawing Room Sleeping Cars.

The popular Southern Railway, Piedmont Air Line, has recently equipped its Washington and South-Western Vestibuled Limited between New York and New Orleans with Pullman's latest double drawing room, smoking room and ten-section sleeping cars. These cars were built by the Pullman Company especially for this line, and are known as the "Empire" style. They are most elegantly finished in every respect, and have all of the most modern conveniences that are necessary to give the traveling public safety, comfort, etc. The Southern Limited leaves New York daily at 4:30 P. M.—*Adv.*

Spark Deflectors in Coaches.

The Southern Railway, Piedmont Air Line, always looks after the comfort of its patrons. They have recently placed spark deflectors for use in their thoroughfare coaches; the use of the device will add materially to the comfort of its coach passengers.—*Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, AUGUST 8, 1896.

VOL. XLVII.—No. 6. No. 346 BROADWAY, NEW YORK.

For Prospectus and Advertising Rates see Page x.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, **$5.**
Forest and Stream *6 months and any two of the pictures*, **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

FOREST AND STREAM OFFICE

346 Broadway

NEW YORK LIFE BUILDING

Present Entrance on Leonard Street

Readers accustomed to buying the FOREST AND STREAM *at news stands, and who are going out of town to points where they cannot purchase from newsdealers, may have the paper mailed from this office for any length of time at the rate of forty cents per month.*

BIRDS AND FARMERS.

THE advocates of protection for our small birds present two sets of reasons for preventing their killing: the one sentimental, and the other economic.

The sentimental reasons are the ones most often urged; they are also of a kind to appeal with especial force to those whose responsibility for the destruction of the birds is greatest. The women and girls, for whose adornment birds' plumage is chiefly used, think little and know less about the services which birds perform for agriculture, and indeed it may be doubted whether the sight of a bunch of feathers or a stuffed bird's skin suggests to them any thought of the life that those feathers once represented. But when the wearers are reminded that there was such a life; that it was cheery and beautiful, and that it was cut short merely that their apparel might be adorned, they are quick to recognize that bird destruction involves a wrong, and are ready to do their part toward ending it by refusing to wear plumage.

The small boy, who pursues little birds from the standpoint of the hunter in quest of his game, feels only the ardor of pursuit. His whole mind is concentrated on that and the hunter's selfishness, the desire of possession, fills his heart. Ignorance and thoughtlessness destroy the birds.

Every one knows in a general way that birds render most valuable service to the farmer, but although these services have long been recognized in the laws standing on the statute books of the various States, it is only within a few years that any systematic investigations have been undertaken to determine just what these services are, to measure them with some approach to accuracy, to weigh in the case of each species the good and the evil done, and so to strike a balance, in favor of the bird or against it. The inquiries carried on by the Agricultural Department on a large scale and those made by various local experiment stations and by individual observers have given results which are very striking and which can no longer be ignored. Some of these results Miss Merriam gives in her paper prepared for FOREST AND STREAM, the first instalment of which appears in this week's issue. It deserves careful study, not only by every farmer, but also by every one who is at all interested in birds or in agriculture in any form. At a time like this, when reports of the ravages of army worms, elm beetles and other noxious insects are constantly heard, a paper such as this has a deep interest for a very large class. Miss Merriam's articles, besides being written in graceful, simple and popular style, give in small compass the results of many papers which have appeared in different reports, not all of them easily accessible, and these reports are often so technical as to be quite beyond the grasp of the general reader. A wide circulation of Miss Merriam's paper would do much to arouse an intelligent appreciation among agriculturists of the vast good done by many species of birds, and would vastly benefit the country.

It is a difficult matter for any one to balance the good things that he reads and believes about any animal against the bad things that he actually sees. The man who witnesses the theft of his cherries by robin or catbird, or the killing of a quail by a marsh hawk, feels that here he has ocular proof of harm done by the birds, while as to the insects or the field mice destroyed, and the crops saved, he has only the testimony of some unknown and distant witness. It is only natural that the observer should trust the evidence of his senses, and yet his eyes tell him only a small part of the truth, and that small part a misleading one. It is human to generalize from our own limited experience, and yet we all know that nothing is more likely to lead to error.

It is certain that without the services of these feathered laborers, whose work is unseen, though it lasts from daylight till dark through every day in the year, agriculture in this country would come to an immediate standstill, and if in the brief season of fruit each one of these workers levies on the farmer the tribute of a few berries, the price is surely a small one to pay for the great good done. Superficial persons imagine that the birds are here only during the summer, but this is a great mistake. It is true that in warm weather, when insect life is most abundant, birds are also most abundant. They wage an effective and unceasing war against the adult insects and their larvæ, and check their active depredations; but in winter the birds carry on a campaign which is hardly less important in its results. It is then that the chickadee, the nuthatch, the brown creeper, the kinglets and the woodpeckers are hard at work all through the short days, searching the crevices and crannies in the bark of the tree trunks and branches, looking among the undergrowth, hunting along the fences for the bunches of eggs, the buried larvæ and the pupa of the insects, which if undisturbed would, when warm weather comes, hatch out millions of creeping, crawling and flying things that would devastate garden and orchard and every crop of the field. It is through this silent, unceasing work by the birds—some in summer and others in winter—that the insect hosts are held in check. The downy woodpecker which we see swinging with undulating flight across the snow-clad fields renders service not less important than the fat robin which flies with a beak full of cankerworms to his clamorous young in the apple tree close to the house.

CONCERNING THE MAN WITH THE WHISTLE.

OF the many idiosyncrasies exhibited by individuals in camp life, petty, constant and irritating, few are so objectionable as habitual whistling. Whistling is the self-absorbing occupation of the man away from home who is not actually in touch with his pleasure, the man without a true purpose of good fellowship in that he is a chronic disturber of the peace and comfort of his companions; the whistler of the early morning hours, who blunders about in industrious nothingness while his companions are yet resting; he of the late night hours, whistling after his companions have taken to their blankets and are endeavoring to sleep. He sits him down to breakfast still whistling and eats hurriedly, as if a pleasure were broken in upon, and were capable of being resumed only by unbecoming haste to finish the task in hand. The meal ended, out breaks again the irritating succession of discords in all their imperfection of faulty time, bad tune and wearisome repetition. Does one of his companions address him, he slackens his lips, ejaculates a hasty yes or no, instantly cocks his lips again, taking breath at the same time, and hurriedly resumes his musical fireworks. He does not hesitate at the effrontery of whistling while his companions are talking to him, and the end of his answer is blended in the resumption of the outpour of discord. In the boat while fishing, in the field and forest, where silence and success are inseparable, the whistler is both an irritant and harmful to sport.

Not infrequently the chronic whistler's repertoire consists of one or two tunes imperfectly learned and repeated with incessant persistence, so that at such rare times as he is silent the refrain, strident and recurrent, reverberates on in the ears of the hearers; thus silence is only a meaningless name. A faulty memory may supplement the tortures inflicted by a bad ear, so that if the whistler follow the tune fairly well part way, he may be at a total oss for the correct finish of it; whereupon the listener is treated to the torment of hearing him feel his way to a discordant and inappropriate finish, or to an earnest impromptu finish which would be ridiculous were it not such a wearisome nuisance.

There are now and then men of true musical taste and attainments, men of perception and tactfulness as to time place and company, who seek to entertain, not themselves but their companions. It is not of such that we write. They are distinct from the whistling camp nuisance, and cannot be confounded with him. The chronic whistler indulges his habit to please himself. Moreover, at the best, a very little whistling, be the same good, bad or indifferent, goes a long way toward supplying the demand in camp.

The whistling habit is peculiarly annoying in camp, the victims are so helplessly defenseless. If the host be the sufferer, he cannot rebuke his guest; and on the other hand, the guest must endure in silence if his host be the offender. Friendly companions are loth to appear churlish in respect to what to others may seem to be but innocent diversion. But the small troubles are often the most vexatious. They are the more so when they must be suffered in silence. That they are gratuitous adds to their sting. The hum of the mosquito in its nocturnal search for blood will disturb sleep and provoke ill-temper, but the sufferer can resent the infliction. The squalling of cats in the back yard invites a shower of missiles. And yet these kinds of annoyances are transient and mild as compared to the ill-selected, out-of-tune, disjointed, fragmentary and maddening efforts of the incompetent whistler who inflicts his discords on his friends.

It may be suggested that his friends should be indulgent and forbearing because they are friends. On the contrary, being friends entitles them to friendly consideration. Friends should receive the same deference in camp that they receive in town. Friendship should not be the plea for inflicting annoyance on one's companions. Whatever the man may be in town, he is an ill-conditioned fellow who will make himself a petty nuisance in camp.

Have you ever been in camp with the fellow who whistles?

YELLOWSTONE PARK BUFFALO

THE wholesale killing of buffalo in and about the Yellowstone Park which took place up to the passage of the law of May, 1894, was very discouraging to all who are interested in the survival of this species. Those who take the most gloomy view of the condition of the National Park buffalo have declared that in their belief there are not ten living animals in the Park. Others, however, think that it is not quite so bad as that, but that there should be forty or fifty left, scattered in little bunches over the reservation. We are gratified to learn that during a trip made through a portion of the Park last July by James Morrison, the civilian scout employed there, he saw fifteen buffalo, of which nine were cows.

At about the same time signs of as many more were seen in two places quite remote from those visited by Morrison, and there seems good reason for believing that at least thirty head of buffalo are still to be found in the Park. No doubt there are others—though they may be very few—in remote corners, and we can feel sure that Capt. Anderson and the force under his command will do everything in their power to preserve these few survivors from destruction. The number of buffalo left alive, however, is so small that even under the most favorable circumstances the increase of the herd must be deplorably slow. It is earnestly to be hoped that the Legislature of Idaho at its next session will pass and enforce a law forbidding under heavy penalties the killing, pursuit or having in possession any buffalo.

Such a law would certainly commend itself to the most intelligent sentiment of Idaho, and we cannot doubt that those who guide political affairs in that State will lend their assistance to carry through such an amendment to the statutes.

During his trip through the Park Morrison saw a bull moose and much other game.

The Sportsman Tourist.

SPORT IN INDIA.

Perhaps Forest and Stream would like to hear something of sport as we have it in India. It is no doubt the greatest sporting country in the world, both because it contains a greater variety of game than any other country, and because the game is more easily got at than in any other country. This is because camping is so well understood and the native servants can keep you comfortable wherever you go, and British law and order, giving absolute security to person and property, rule throughout this great country, so that the traveler, wherever he may pitch his camp, is perfectly secure against molestation. And let me say here a word about the nature of our British rule over India. I have sometimes talked with American gentlemen who seemed to suppose that there was something harsh or cruel in our grasp of that country. Even in such a high class and usually well informed magazine as the *Arena* I remember to have read some nonsense about "India writhing under the iron heel of English despotism." The truth is, that British Government in India constitutes the greatest blessing that has ever been conferred on a large section of the human race.

The population of India, now numbering nearly three hundred millions, is composed of a great variety of tribes and sects—some of them warlike, others very peaceful. Before the British took possession there was nothing worth calling a government. Various native princes and chiefs ruled in the oppressive Oriental style over different sections of the country and perpetually fought with each other. The warlike tribes raided and plundered the weaker races. The roads, such as they were, were infested with thugs and bandits, and travelers had to get together in companies and go well armed. The very cultivator at his plow could hardly consider himself safe unless he had a sword handy. Added to all this turmoil and insecurity, terrible famines prevailed from time to time over large sections of the country, when hundreds of thousands would perish; while cholera and other pestilences were rife.

And now under British rule the whole population enjoys absolute peace and security. Justice is everywhere administered with impartial hand, and the humblest peasant can go to the nearest magistrate and obtain a patient hearing and redress if any man has wronged him. Good metaled roads and railways cross the country in all directions, and by their means not only has a great trade been developed, but the horrors of famine have ceased. When the crops fail in one section the railways easily supply the deficiency by bringing in supplies from other parts of the country. The vast irrigation canals which we have built also render immense tracts entirely safe against any failure of crops and give the cultivator a double or treble out-turn over what he ever had formerly. And by sanitary improvements, such as proper drainage and water supply systems for the great crowded cities, the ravages of pestilence have been greatly diminished, and we already look to the day when the dreaded cholera shall be finally stamped out.

The population fully appreciate all these benefits and there is no discontent under the British rule; at least the only discontented people are the few lawless characters here and there who would prefer a state of licentiousness and disorder, and perhaps a few descendants of the ancient chiefs and nobles who think they have an inherent right to rule and oppress the people. But they have little to grumble at, because whenever we have been compelled in the interest of peace and justice to dethrone some native prince we have always given him and all his family an immense pension and allowed them to live in luxury in their own way wherever they could do no more harm.

The general content of the vast masses of the people with our government was especially seen during the great mutiny of 1857—a mutiny which was stirred up by some of the discontented princes above said, who contrived by secret agents to arouse a rebellion among the native troops, who at that time far outnumbered the British soldiers in the country.

But the population in general raised not a hand to aid the mutineers; on the contrary, where isolated parties of British with their women and children were wandering about, seeking to make their way to some point of safety, the farmers and country people always succored them, and were heartily glad when we suppressed that mutiny and resumed our beneficent rule.

I know that some people, though aware that the British do a vast lot of good wherever they take hold, as in India, suppose that in return for our firm and just rule, law, order and justice, etc., we extract in some way very substantial monetary advantages. But it is not the case that England derives one cent of revenue from India or any other of her possessions. There is no such thing as "exacting of tribute," and never has been. It is only in the extension of trade and business that she benefits, and therein both sides benefit equally. The taxation of the Indian population is very light; a revenue of about £70,000,000 sterling is raised from a population of near 300,000,000. This comes to about $1 a head per annum, and it is all spent in the administration of the country.

We want to get to the shooting and fishing, but I hope Forest and Stream will pardon the above little dissertation. It is a very bad thing for any American to suppose that England rules with a tyrant rod over the supposed "downtrodden millions" of India or any other land. Americans who hold such a mistaken notion are too apt to think that they ought, in the cause of "freedom," to oppose England; and such opinions tend to embitter any of the little difficulties that sometimes spring up between the two great peoples. England is the mother of freedom. In India she has given freedom to that vast population; and it is safe to say that at this day all over India life and property are more secure, justice more certainly and speedily overtakes the wrongdoer, and crime is far away scarcer than in the great but still far from fully organized or well governed United States.

So Americans who go to India for some of its wild sports will also have an opportunity of seeing the practical working of a wonderful system of government; and, as I have said, any one can camp about anywhere in absolute security. It is a good thing to know that to start with anyway.

For the benefit of the reader who has not got an atlas handy I will mention that the great triangular peninsula which constitutes India is some 2,000 miles across at its broad end and some 2,500 miles long from its southern point away up north to the Himalaya Mountains. This great tract of mountain country which incloses India on the north is not a single range, but rather a belt of mountains, range behind range, the highest peaks being in some places a hundred miles back from the foothills.

Some of the best Indian shooting is among the Himalayas, "hill shooting," we call it, and I may as well begin by giving some account of this and then we can work southward.

The climate of these lofty mountain ranges being of course very different from that of any other part of India, the wild animals found therein are also mostly peculiar to the mountains. The following list will give some idea of the variety of Himalayan game:

Two kinds of bears, the brown and the black.

The snow leopard.

The cashmere stag, a splendid animal, standing twelve or thirteen hands high and bearing horns of twelve or more points and running up to 3ft. 6in. long.

The markhoor is a magnificent wild goat standing eleven and a half hands high; very massive horns, spirally twisted, reaching 4ft. in length.

The ibex, another fine wild goat, some 3ft. high and with horns 4ft. long.

There are some two or three other species of wild goats and also the chamois, but none have horns exceeding about a foot in length.

The wild sheep resembles the American Rocky Mountain sheep, and has curved horns reaching to 2ft. in length and 1ft. in circumference at the base.

Among feathered game the pheasants are very prominent. Seven different species are found, all having the most gorgeous plumage. There are also two or three species of the partridge tribe.

In the lower ranges squirrels, monkeys, hares, etc., are plentiful, but disappear as one reaches the higher altitudes, though the small Himalayan hare is found up to 11,000ft.

The sportsman who proposes a shooting trip in the Himalayas will make his outfitting point one of the numerous hill stations which are distributed all along the line of these mountains at heights of 6,000 to 8,000ft., and the right time for starting will be about the beginning of April, so that he will have the summer before him and can reach considerable altitudes or traverse the higher passes without getting into the snow.

At this time the plains of India are beginning to get uncomfortably warm, and all who are able to do so are escaping from the heat and ascending to spend the summer, more or less, in these cool and elevated stations.

The traveler will here find plenty of excellent stores, where he can buy whatever he needs for his expedition. He will hire a couple of experienced guides (shikaris), who in turn will seek out and engage a cook and one or two servants and a sufficient number of porters to carry the camp. Since human portage is the only means of conveyance, and it is difficult to get and keep a large number of men (let alone the expense), weights have to be kept down. The outfit will consist of one light tent, a light camp bed and about half a dozen leather-covered wicker baskets, each forming one man's load when filled with cooking utensils, some canned provisions, ammunition, spare clothes, etc. Generally speaking, some eight to twelve loads of 40lbs. each will suffice.

The valleys throughout the mountain country are inhabited, so that provisions can be obtained from point to point as one penetrates in. One may have two or three days' rough marching over steep paths and passes, followed by a descent into a cultivated and inhabited valley. The sportsman will usually pitch his camp in a valley or at no very great height up the mountain, and thence ascend to the higher slopes in search of the game.

When he strikes a good place and decides to stop there for some time, he takes the opportunity to send back two or three men to his outfitting point for fresh supplies of provisions, and to get his mails. These active, hardy hill men will cover forty miles a day when sent on an errand, and thus the traveler, though far in the interior of the mountains, can always keep in touch with his starting point. He also takes these occasions to send back for safekeeping any horns and skins that he has bagged and which become a great encumbrance if he tries to carry them around.

The rifle for hill shooting should be not smaller than .45 caliber, many prefer .50, and the trajectory should be flat. British sportsmen in India have hitherto almost exclusively used the double-barreled express rifle, a weapon of immense power, accuracy and flatness of trajectory, and possessing very decisive striking power with its expanding bullet of .45 or .50 caliber. They have so far considered the Winchester and other American rifles as being deficient in power and flatness, the charge of powder being much smaller than in our express rifles. But the Winchester express .45 or .50—the latter for choice with 450gr. bullet—ought to answer very well for Himalayan shooting.

Let us now descend from the Himalayas. We find ourselves in a belt of forest country extending along the foot of the outermost range to a width of some twenty or forty miles. In these sub-Himalayan forests are to be found nearly all the species of large game which India produces, with some few exceptions, which are only found further south. Here we have the wild elephant (which, however, the Government does not permit to be shot), two species of rhinoceros, the wild hog, the wild buffalo, the black bear (different from and smaller than the Himalayan bear), the celebrated Indian tiger and the leopard. Among the deer tribe we have the fine sambur stag, standing thirteen to fourteen hands at the shoulder, and with horns of three points each running up to 3½ft. in length.

The swamp deer stands eleven to eleven and a half hands high, and has antlers of twelve or more points 3ft. long. The spotted deer stands some 3ft. high and has very fine three-tined horns up to 3ft. long. This beautiful deer runs in large herds among the parklike forests along river sides below the Himalayas. Then in smaller sizes there are the hog deer, the four-horned antelope and the barking deer.

The wild peacock is very common and prominent in these forests, especially in the summer, when his train has reached its full length. Here also is the jungle fowl, the original of our domestic poultry, exactly resembling a neat little bantam cock. The black partridge is found in suitable spots among the forest, also hares.

The large rivers which descend from the Himalayas contain the celebrated mahseer, which affords sport fully equal to salmon fishing; while the smaller streams contain trout.

These sub-Himalayan forests are very damp and malarious during a great part of the year, but they become dry and healthy in April and May and those are the months in which to camp there. The long grass has then died down or been burnt over and one can get about with ease; at this time these forests are a veritable sportsman's paradise.
